I sometimes wonder if we appreciate just how fortunate we are in having such an effective local, democratically operated organization, through which to carry on vital undertakings like soil and water conservation. There is much we need to be thinking about, talking about, and doing something about; and it is in the soil conservation districts and neighbor groups that the job is going to get done. I am thinking, for example, of the important matter of water conservation.

As you out here in the Great Plains and Intermountain areas know better than anyone else, we can't put land in one pigeon-

hole and water in another and hope to deal with them separately. You also are well acquainted with the problems of having too much water at times, with erosion and flooding as a result, and too little water at other times, with curtailed irrigation and other water supplies, along with drought and wind erosion. Water conservation, in short, is part and parcel of soil conservation, in Colorado and everywhere.

We all are concerned with the conservation and best use of our water supplies. We have just so much water in any given locality; so we must not waste it but must use it prudently and to the best and most economical purpose. Here in Sedgwick County, for example, you are concerned with improvement of your irrigation systems and with drainage, along with developing stock-water ponds and springs and controlling excessive water runoff. You also are concerned with watershed treatment and management which determine whether you are to have a continued, adequate supply of irrigation water in your streams and reservoirs. Meanwhile, municipalities, hydroelectric power developments, and various other water users, in Colorado as elsewhere, likewise are vitally concerned with the conservation treatment and use of the land and water resources.

In the Soil Conservation Service, we look first at the land within the watersheds—examined the condition of the land, how it is being used, from the standpoint not only of soil wastage but of water wastage, too. More and more farmers and urban interests as well are coming to realize that they need special technical help in planning and applying adequate soil and water conservation programs on farm and ranch lands and watersheds. We are continuing to concentrate, also, on irrigation and other water research and on cooperative snow surveys, particularly through the Service's Division of Irrigation cooperating with the State experiment stations and others. The opportunities and promise are great for most effective accomplishment and results in applying these techniques and information to individual parcels of land and whole watersheds alike through the utilization of soil conservation district organization and facilities. This, as we have seen, is in both private and public interest.

Another important matter in this part of the country—as we were reminded again this last spring—is that of drought and wind erosion. What happened in some parts of the southern and central Great Plains during the past years illustrates rather graphically the importance and the effectiveness of soil and moisture conservation farming, in dry years and wet. The pattern ran true consistently in the 1950 drought areas. Locally there were soil blowing and poor crops, especially on land lacking any conservation treatment, and at least some kind of a crop or cover on adjacent conservation-farmed fields. And, from all reports, most of the area comprising the heart of the old "dust bowl" weathered this year's drought without too much damage.

That was because farmers in the soil conservation districts there, where they were hit so hard in the 1930's, long since had come to the conclusion that you can't safely gamble with the weather, either in the Plains or other parts of the country wherever the conditions favor wind erosion. The conservation farmer operates year in and year out so as to keep his land in the best possible condition to take what comes in the way of weather, from long dry spells to torrential rains. He uses stubble-mulch tillage, strip-cropping, water-holding terraces, rotations of cover crops. On land unsuited to cultivation, he uses grass, which is a crop of steadily increasing importance throughout the country. Such methods constitute the

best insurance he has against drought or deluge.

I realize very well that recurring emergency demands for wheat production, for example, such as we appear to be running into again, bring up some problems of reconciling maximum needed wheat acreage with best land use. There has been a great expansion of this acreage in the Plains country, and logically so; but nobody can deny that some of this was on land that shouldn't have been plowed up. When such land is cropped, yields must be expected to drop off in due time, and, if drought comes—as it may—we can't help having wind-erosion trouble.

But we must not overlook the fact that sound information for wind-erosion control is available. We don't need to have any more of it; we know how to prevent it.

Quite likely, however, we are not going to be able to get everybody immediately to see eye to eye with the plans of meeting the erosion problem head-on, whether it be wind erosion or water erosion, and lick the whole thing. In time, however, I am convinced that everybody will be seeing the situation in pretty much the same light, and we'll go about the job of doing whatever is necessary. This conclusion I have come to with greater confidence than I have ever had as the result of the splendid conservation work I saw out here in Colorado only a few weeks ago. On a big ranch near Colorado Springs I saw, on a large scale, some of the finest soil conservation work I have ever seen anywhere. I had seen this land before, when everything was dry and hopeless looking. Not so a few weeks ago, it was just the opposite everywhere, no erosion, and profitable returns from the perfectly stabilized land.

There are some, perhaps, who feel that only farmers and ranchers need be interested in soil conservation, but it is my conviction we all should be very deeply interested, whether we live in Julesburg, Denver, or elsewhere. As I pointed out earlier, modern conservation farming is closely related to the profitability of industry, the well-being of municipalities, and the health and welfare of all the people.

I believe I can say that our national policy and public thinking, with few exceptions, are agreed on the utter necessity of conserving our interlocking resources of land, water, forest, grass, cultivated crops, and wildlife. The Denver Post Station K1Z soil conservation awards program is one good example of this trend in our thinking. Research, education, land inventories, and the successful use and profitable results of soil and water conservation have brought us to a new concept of the importance of land and water and, also, of the need for keeping the land permanently productive and using our water to our greatest possible advantage.

The land is still the source of a very large share of our original wealth. Manufacturers, bankers, railroads, storekeepers, doctors, teachers, ministers, writers, and all the rest of us are directly affected by what happens to the base of that land-wealth—our productive land. We are affected, basically, as consumers of the things that are produced from the land; and we are affected, also, with respect to our income.

Agriculture is Colorado's biggest business, yet the State's capital assets of productive land have been reduced substantially through water and wind erosion and other damage in the considerably less than a hundred years since extensive development of dry-land farming in eastern Colorado. On both dry farm and irrigated lands, crop yields decline wherever the erosion process is allowed to continue out of control, water supplies for irrigation and other uses drop off as watersheds deteriorate; and range-carrying capacity shrinks when the forage cover is reduced and the topsoil is washed or blown away. If Colorado's or any other State's agri-

culture is to be permanent and profitable, its lands must be used and conserved according to our best ability and in accordance with the capability of the land. This State—any State, county, farm, or ranch—cannot afford to waste either soil or water.

The conservation job we have to do calls for the closest teamwork of everybody: farmers, business and professional people; private and public financial institutions, beet-sugar companies and other processors of agricultural products, radio and television stations, newspapers and magazines, chambers of commerce and other civic organizations; sportsmen's, women's, young people's, and other groups, schools and churches, local, State, and Federal agriculture, forestry, and other agencies and farm organizations—everybody. The constructive interest being taken in this whole matter in Colorado by agricultural and other leaders, from the Governor on down to the youngest soil conservation district board of supervisors, is most encouraging.

And while I am saying this I think I should say, also, that wherever soundly made soil and water conservation farm plans are carried out and maintained, yields have been increased. There have been no exceptions in our experience.

Also, I think it should be pointed out that good per-acre farm and ranch production determines the profitability of agriculture. So, soil conservation is the most basic work that man has to do.

National attention has been attracted, for instance, to the consideration given by your State tax commission to our land capability classification as a basis for assessing rural lands for taxing. I understand this reappraisal of land on the basis of its long-time producing ability has progressed in several counties where the Soil Conservation Service has made detailed land capability surveys in soil conservation districts. We also have been asked by the State agricultural planning committee for this land inventory information for the use of the State and county committees in their planning work.

But there is little point in my going into further detail on such forward-looking conservation activities with which you already are familiar here in Colorado. I want only to remind you that your soil conservation districts have an important responsibility in all this, along with every business and other legitimate interest in this and every community. And one of the jobs we are all called on to share just now is to help dispel certain misconceptions, or loose assertions, about soil conservation that still seem to confuse the thinking of some otherwise well-informed people. Briefly stated, some of these are:

1 That soil conservation is of secondary importance, has already been taken care of, or can be postponed.

2 That there are short-cuts to conservation, that farmers can do all the necessary conservation work without technical assistance, or that district farm plans are too technical for farmers.

3. That soil conservation costs more than it is worth.

4 That we have all the good land we need, and that soil erosion is an inevitable part of nature's scheme.

Not one of these assertions is true, not even near enough the truth to deserve any consideration, except to keep people from being confused by the nonsense.

To complete the soil and water conservation job in time calls for a program of positive action, in which all groups have a natural interest. It includes, among other points, (1) completion of the national land capability inventory at the earliest date facilities will permit; (2) completion of the organization of the Nation's agricultural lands into soil conservation districts, and strengthening district responsibility and work—with

a scientifically developed soil conservation district plan applied by a conservation farmer to every farm in the country at minimum public cost, (3) active participation of all interested rural and urban groups—business, professional and patriotic—in achieving Nation-wide conservation; and (4) making a real conservationist out of every farmer in the country.

Among the rewards of which we are assured for successful completion of such a program is continued national security for our free people in a free America and the very survival of all the generations to come after us.

Pension Plans in Private Industry

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 2, 1951

Mr. VAN ZANDT. Mr. Speaker, furthering my study of a uniform system of pensions, the Library of Congress has furnished me with a most interesting analysis of pension plans in private industry.

I am deeply indebted to Mr. Meyer Jacobstein of the Legislative Reference Service, Library of Congress and to Mary R. Heslet of the senior specialist section, Library of Congress, for their aid in compiling the following report.

To those interested in the question of providing a uniform pension system as advocated by many pension groups, it will be well worth the time required in analyzing the following report, covering pension plans in private industry.

PENSION PLANS IN PRIVATE INDUSTRY

GROWTH OF PENSION PLANS

An accurate account of the number of private pension plans in existence in industry in the United States and the extent of coverage cannot be determined. There is no one particular source of information nor any central agency which gathers complete data relating to pensions which have been provided throughout the country. While there has been some means of accounting for pension plans formally established through collective bargaining or written provisions, there are many informal retirement pension plans, voluntarily established by employers, the number of which is unknown. It can be seen, however, from the data that have been compiled in various places that there has been a trend toward an ever-increasing number of plans in operation, particularly in recent years. The changing sociological picture, governmental activities, and organized labor's interest in the problem of old-age security are responsible for the added momentum. There will be discussed further in this report.

One source of information on pension plans in private industry is the data compiled by the Bureau of Internal Revenue. This Bureau reviews pension, profit-sharing and stock-bonus plans, established or proposed by employers, for the purpose of determining whether the plans are qualified to permit the deduction of contributions to funds from income subject to tax. Submission of plans is not compulsory, however, and not all companies avail themselves of the Bureau's services to obtain rulings as to qualification under section 165 (a) of the Internal Revenue Code (employees' trusts—exemption from tax), as amended by section

162 of the Revenue Act of 1942. The records of the Bureau, therefore, by no means give a complete report on the number of existing pension plans. Nevertheless, the figures released by the Income Tax Unit of the Bureau are significant for the light they shed on the growth of pension plans. The following table, prepared by the Income Tax Unit in 1946 (the latest compilation that has been published), shows the changes that took place in the number of pension plans¹ and the number of participating employees over a period of approximately 20 years.

Period in which plan became effective ¹	Number of plans ²	Number of participating employees ³
Prior to 1930.....	105	1,394,184
1930-39.....	517	530,606
Jan. 1, 1940, to Sept. 1, 1942.....	843	450,008
Sept. 2, 1942, to Dec. 31, 1944.....	4,208	714,681
1945 and 1946 ⁴	1,180	201,129
Total.....	6,862	3,290,608

¹ Represents the period in which the "effective date" of the plan fell, which often preceded or sometimes followed date of actual adoption. In cases where plan was very materially amended, may represent period in which effective date of amendment fell.

² Includes 17 plans combining pension and profit-sharing features.

³ Represents employees covered by the plan at the date as of which information was submitted in connection with application for ruling on the plan. Includes all employees nominally covered under the plan even though a large number of such employees may never receive any benefits under it.

⁴ Excludes a substantial portion of plans effective in 1946 and some plans effective in 1945 for which favorable rulings were not issued and processed until after Aug. 31, 1946.

At present the Bureau of Internal Revenue keeps a record of the number of plans presented for rulings in its Income Tax Unit office. As of April 1951, the Bureau reports, 16,502 plans (including profit-sharing plans) have been received. Of this number, 1,100 plans have been disapproved or have become inactive, leaving a balance of 14,402 approved plans in existence. However, it has been found from past experience that income tax returns from employers reporting deductions because of amounts expended for pensions to employees show that there are more pension plans in existence than have been submitted for rulings. The number of plans in operation is estimated to be 20 percent greater than the number reported, and as a consequence there are perhaps between 17,000 and 17,500 formal and informal plans being administered. It is further estimated that approximately 8,000,000 workers are presently covered.

There are other sources of statistics on the number of pension plans in operation and the number of workers involved. These unfortunately are as of different dates and were compiled in incomparable ways.

The Bureau of Labor Statistics of the Department of Labor reported that as of mid-1950 the number of workers covered by pension plans within the scope of collective-bargaining agreements had increased to about 5,100,000 from 1,650,000 in mid-1948. Although increases in the number of plans and in coverage has continued since mid-1950, it was not at the pace in mid-1948 to mid-1950. It is a reasonable surmise that the Bureau of Labor Statistics figures for mid-1951 will be over 6,000,000 covering those within collective-bargaining agreements only.

Another estimate was made by the New York Legislative Committee on the problems of the aging. In its report, *Youth at Any Age* (Legislative Document No. 12, 1950), it

¹ A portion of the plans submitted for approval for tax deduction to the Bureau are profit-sharing plans, not pension plans. These involve about 10 percent of the number of employees covered by pension plans.

places the number covered by pension plans in industry in the summer of 1950 at 11,500,000, approximately one-fourth of all industrial workers.

As shown above, the number of employees participating in pension plans varies in estimate from 5,100,000 (under collective-bargaining agreements) to 11,500,000 (under formal and informal plans). The figure 8,000,000 as estimated by the Bureau of Internal Revenue, is, however, the one generally used in current material on the subject, and the one that in all probability is more nearly accurate. The number of persons actually receiving pension benefits through private plans is 300,000, according to a recent estimate made by Robert M. Ball in connection with a study of private pension plans being conducted by the National Planning Association.

REASONS FOR GROWTH IN PENSION PLANS

Pensions in industry were inaugurated about 75 years ago in the railroad industry. The pension program of the American Telephone & Telegraph Co. started in 1913. New plans started here and there in industry but coverage remained comparatively small before World War II. The demand for materials for warfare resulted in a great industrial expansion, which created among other shortages a shortage of manpower. Moreover, the labor market was drastically cut by the absorption of millions of workers into the Armed Forces. Despite the fact that at the beginning of the war in 1941 there were seven or eight million unemployed persons, by the end of 1942 the supply of labor had decreased to such an extent that competition for their services became increasingly sharp. However, the customary avenue for obtaining and retaining workers by payment of higher wages was blocked by action of the Government through the War Labor Board. This Board was given the job of formulating a wage-stabilization program. Under its policy, wage increases, though not prohibited, were restricted to a rise of no more than 15 percent above rates as of January 1, 1941. In lieu of raises in wages (benefit payments not being considered as "wages" at that time), pension plans were established in many industries as an incentive to secure workers and to dispel labor unrest. Coupled with the fact that the current cost of pension programs was nominal in view of the high excess-profits tax, the establishment of pension plans became widespread. Further encouragement to the growth of pension plans has been given by the Social Security Act of 1935 as amended, the 1942 Revision of the Internal Revenue Code, the Lewis-Krug settlement in the United Mine Workers welfare fund issue in 1946, the court decision in 1948 upholding the NLRB's ruling that pensions are a proper subject for bargaining, and the Steel Fact-Finding Board's recommendation in 1949 that a pension plan be established in the steel industry on a noncontributory basis.

Before discussing these activities of the Government in the field of pensions, it may be of interest to note the changing sociological and economic conditions that have influenced the trend toward more liberal use of plans to help provide much-needed security in old age.

The need for a promise of financial security in old age has been stimulated by the changes that have been taking place in the age groups of the population. The number of persons in the older age group has increased and will continue to grow. Not only has the number of people who attain the age of 65 (the normal retirement age) increased, but life expectancy after age 65 has lengthened as well. To the end that this ever-increasing number of persons in the older age group may be given assurance of financial security based on past earning capacity and not on need, the movement for developing pension plans has become of

greater importance to workers. At present there are a great number of older people without adequate means of support who must rely upon old-age assistance funds. It is hoped that in the future that those who are now working may be afforded independent support in later years by presently participating in some form of pension plan so that upon retirement enough benefits will have accumulated to provide an income. The number of recipients of old-age assistance has grown steadily since the inauguration of the Federal social security program in 1935—from 603,710 in June 1936 to approximately 2,700,000 in July 1951.

The extension of the old-age and survivors insurance system under the Social Security Act to the greatest number of workers possible, and the elimination of old-age assistance, except in cases of unusual need, have been recommended by such representative body as the Advisory Council on Social Security to the Senate Committee on Finance.² This recommendation was incorporated in the report of the Senate Committee on Finance on the Social Security Act amendments of 1950.³

In conjunction with this change is the changing economic situation. The number of self-employed persons has been giving way to the increasing number of those who are dependent on incomes from outside employment. Fixed incomes, when subjected to higher taxes and rising prices, cannot be relied upon to provide a surplus to be put aside as savings for future care. It is also true that urbanization has brought about a change in family life, and where formerly older members were taken care of in the homes of younger relatives, now there is no room available for them, and the added cost of providing food and care has become prohibitive. These factors have contributed to the drive for pension plans.

SOCIAL SECURITY ACT

The Social Security Act of 1935, as amended, helped promote a further expansion of industrial pensions. The old-age and survivors insurance program inaugurated under the act is intended to provide "a basic measure of protection against the major hazards of old age and death." The publicity given the whole subject of pensions at the time of the enactment of the social-security law brought to the attention of the industrial world the need for greater old-age security for all workers. It became recognized that private pension plans would be necessary not only to provide protection for the workers excluded from the Federal legislation, but also to supplement the old-age and survivors insurance payments under the social-security system to the level of existing living standards. Although the 1950 amendments have extended old-age and survivors insurance coverage to include about four out of every five jobs, and have increased the benefits to about double the former amounts, the pressure for the establishment of private plans continues. In general, labor has maintained that \$100 a month is the minimum amount that could adequately support a pensioner. By combining social-security benefits with those allowed under private plans, this minimum has been met in many industries, it has been exceeded in some companies. The Ford Motor Car Co., for example, pays a minimum monthly retirement benefit of \$125. The increased social-security taxes as scheduled in the act may act as

² U. S. Senate, Recommendations for Social Security Legislation. Report of the Advisory Council on Social Security to the Senate Committee on Finance. Washington, Government Printing Office, 1949; p. 1 (80th Cong., 2d sess., Doc. No. 208).

³ U. S. Senate, Social Security Act amendments of 1950. Report of Committee on Finance to accompany H. R. 6000. p. 2 (81st Cong., 2d sess., Rept. No. 1669).

a stimulant to the growth of private pension plans, because the cost of the latter to the employer will be lessened where the benefits are tied in with old-age and survivors insurance payments.

Moreover, private pensions have advantage over social security in that benefits can be based on earnings of the various salary groups whereby pensions may be paid that bear an equitable ratio to the income received at time of retirement. Also, provisions for permanent and total disability benefits, not now included in the Federal law, can be embodied in private plans. It does not seem likely that private pension plans will show any signs of diminishing either in number or interest, except in the event of an over-all system providing universal coverage, adequate monthly payments, and inclusion of disability benefits.

1942 REVISION OF INTERNAL REVENUE CODE

A clarification of the provisions relating to pensions in the Internal Revenue Code served as a stimulus to the promotion of pension plans. Prior to 1942 the law provided that an employer's contributions to an employees' pension trust were a deductible expense for tax purposes, the beneficiaries of the trust fund were not taxed on the contributions made in their behalf until the trust was distributed, and earnings on trust funds were also nontaxable. It was also provided that the trust and any income thereof could not be used for any purpose other than that for which it was intended. These provisions, however, applied to a trust forming part of a plan of an employer "for the exclusive benefit of some or all of his employees." This phrase left the way open for the employer to use his own discretion in the matter of selection of employees who were to participate in the plan. As a result, it was found that a number of trust funds were created which benefited only a few key officers and employers, for the primary purpose of obtaining the income-tax advantages. It was chiefly to eliminate the discriminatory power of employers acquired under this section that the law was amended in 1942.

The 1942 revision continued the provisions noted above, but struck out the words "some or all of his employees." The new law required that employees must be selected by rules that would eliminate discrimination before a trust could qualify for tax exemption. The revision defined methods of taking tax deductions for contributions to a pension trust, and gave authority to the Commissioner of Internal Revenue to approve or disapprove trust plans. A clearer understanding of the provisions relating to pension trusts and the tax advantages and the spreading of information resulting from the publicity given to the legislative revision, created a quickening interest in the establishment of pension plans. The growth of pension plans was further extended.

1946-49

After the end of World War II, the wartime controls on wages were lifted. The interest of labor became focused on pay increases and the issue of pensions fell into the background. However, the subject did not remain dormant for long. A phase in the development of pension systems which had not received a great deal of attention became a major problem after 1946. The question of including the subject of pensions in collective-bargaining negotiations developed. The issue was sparked by the Krug-Lewis agreement of May 1946, which provided for the establishment of the United Mine Workers welfare fund to be financed through royalties on tonnage of coal mined and to be administered by three trustees. The success of the UMW in obtaining such an agreement prompted other unions to seek similar benefits through collective bargaining. Their aim was to gain participation in the drafting

and administration of pension programs in which they felt they had a vital interest.

The demand for the inclusion of pension plans as a subject for collective bargaining grew considerably, causing the legality of such activity to be questioned by employers. The question was settled in 1948 by the decision of the United States court of appeals upholding the National Labor Relations Board's ruling in the *Inland Steel Case*.^{*} The Board ruled that pensions are a mandatory subject of collective bargaining under the National Labor Relations Act. The majority opinion was that benefits paid under a pension plan are within the meaning of the term "wages" and that the age and term of retirement are within the scope of "conditions of employment." The refusal by an employer to bargain on pensions was held to constitute an unfair labor practice.

The decision that pensions are a proper subject for collective bargaining was given greater emphasis in 1949 by the recommendations of the Steel Industry Board appointed by the President to settle a dispute in the steel industry over demands for a wage increase, pensions and group insurance benefits. The Board recommended that no wage increase be granted, but that a group insurance program be incorporated into bargaining agreements, and that pension plans on a noncontributory basis be established in the steel industry—the details of such plans to be determined through collective bargaining. The recommendations were finally accepted. They greatly influenced the spread of the establishment of pensions plans through negotiation to other industries, such as automobiles, glass, chemicals, and rubber.

CHANGES IN CHARACTER OF PENSION PLANS

Prior to 1925 the pension plans that were in existence had been voluntarily established by the employers and were financed and administered by the company. Labor for many years opposed the establishment of company benefit plans and unions were urged to set up their own plans. It was contended that pension plans were established by employers to discourage union organization and also that they were instrumental in curtailing the freedom of employees to seek other and perhaps better employment of their own choosing because of potential benefits that would be forfeited upon leaving the employ of a firm which had an established pension system. The operation of these company financed and administered plans did not prove to be very satisfactory. Payment of pensions under them was subject to fluctuations in business and there was no certainty that pensions would be paid if business conditions were such that a company could not lay aside funds from operating income sufficient to meet pension costs. The companies generally had complete discretionary power as to whether an employee qualified for a pension and could either grant or continue a pension as it so desired.

During the early twenties there developed a method whereby the financing of pension plans became more stable, providing greater assurance of payment of benefits when due to employees. Through the use of insurance companies employers were enabled to transfer their financial and administrative responsibilities with respect to pensions. Insured group annuity plans in lieu of the former pay-as-you-go and uncertain methods of providing pensions were established. By payment of a premium each year, adequate pension funds could be guaranteed and be available to pay retirement benefits. The discretionary power of employers had limitations placed upon it. In setting up a group annuity plan, data had to be supplied

which included a list of employees who would be eligible. The selection of such employees at the outset was discretionary, but once an employee's name was included, refusal to pay a pension practically became an impossibility. The introduction of the contributory feature in group annuity plans, whereby joint contributions were made by employees to the cost of pensions, also helped to eliminate the discretionary control by employers. Employers still retained managerial prerogatives with respect to the right to take the initiative, to prescribe the formula for determining the amount of pension, to select the employees to be covered, and to set the amount of contribution to be paid by employees. If the plan was the contributory type, but the participating employees gained greater security by the guarantee of payment of benefits upon retirement and the continuation of such payment.

Group annuity plans were used by the larger companies, and could be applied only where 50 or more persons would benefit. The use of individual annuities, whereby employers of small numbers of employees could provide policies offered by insurance companies, was developed during the thirties. Individual annuity policies did not constitute a pension plan, but were an insured method of financing a pension plan. The policies were either subject to the direct control of the employer or could be placed in a trust, in which case there was a trust agreement providing for carrying out the terms of the pension plan. The individual annuity policy plan resembled the self-administered plan in that both were formulated by the employer and his advisers. Self-administered plans, however, are not operated through an insurance company. Such plans were growing in use before 1942, generally in the larger corporations, but it was not until 1942 that self-administered plans were definitely defined as those whose funds are placed in trust with an outside agency, other than an insurance company and which provide that benefits are funded actuarially and on a contractual basis. By contractual it is meant that there is an agreement that an employee who qualifies for a pension will actually receive and continue to receive a pension upon retirement.

Although the plans progressively evidenced a sounder financial basis, there still continued to be some discriminations regarding classes of workers covered and eligibility requirements. A corrective for this practice was included in the list of requirements necessary for a pension plan to qualify for tax deduction purposes given in the 1942 revision of the Internal Revenue Code. The 1942 revision stipulated:

- (1) A plan must be for the exclusive benefit of the employees or their beneficiaries.
- (2) It must be in writing.
- (3) It must be permanent.
- (4) It must not discriminate in favor of managerial personnel.

(5) The income from a trust fund must not be used for any purpose other than the benefit of employees and their beneficiaries, and

(6) The contributions to a trust must be for the purpose of distributing accumulated funds to the employees according to an approved plan.

Plans which met these qualifications brought to the development of pension plans increased vitality and dependability. While the risks of a plan's possible failure and cessation of benefit payments have diminished due to careful preliminary studies of the factors involved and the methods of funding a plan, either in the form of insurance or a trust, the establishment of a plan prevents many problems and poses many questions. Such problems occurring under company sponsored and administered plans were worked out by actuaries and advisers

^{*}*Inland Steel Co. v. NLRB* (170 F. 2d 247 (1948)).

in conjunction with employers, who supplied the data necessary to the formulation of a plan. The complexities have been further augmented by the advent of the issue of collective bargaining on the subject of pensions and welfare programs. The Supreme Court's decision upholding the ruling that pensions are a proper subject for collective bargaining, and the recommendations of the Steel Fact-Finding Board for the establishment of a noncontributory pension plan in the steel industry have had a far-reaching effect on the changing pattern of pension plans.

The questions of administration, financing, eligibility, selection, vesting, age of retirement, etc., are no longer settled unilaterally where collective bargaining has encompassed the issue of pensions. However, the difficulties encountered have not been insurmountable and during the past 2 years negotiated plans have been successfully agreed upon in industry after industry. Some of these plans are new, but a number of them had been in existence under management operation and were incorporated in the collective-bargaining agreement after acceptance of such action by management and labor. In some instances previously existing plans were amended and liberalized through negotiation.

The major characteristics of pension plans negotiated in 1949 and 1950 have been summarized by Prof. Harold W. Davey,⁶ as follows:

- 1 The great majority are of the noncontributory type
- 2 The great majority provide for a total pension that recognizes and includes probable benefits from the Federal Social Security program.
- 3 Most of the newer plans call for pensions of \$100 to \$125 a month for workers after 65 with 20 to 30 years' service.
- 4 Most recent plans provide for joint administration.
- 5 A strong preference for a funded, actually sound plan is evidenced.
- 6 Employers are insisting on a compulsory retirement provision in most recent plans.
- 7 Employers are successfully resisting union proposals for vesting.
- 8 Most recent contracts provide for a re-opening of the pension agreements after 5 years.

The National Industrial Conference Board has published periodically analyses of new pension plans. These are comparable to the analysis in Davey's book. The article appearing in the Conference Board Management Record for January 1951 shows that the issue of compulsory retirement has been somewhat modified because of the scarcity of labor at this time. In a number of cases the age for retirement has been raised above 65. There have also been a few plans which outline a retired member's status under the plan in the event it may be necessary to recall him for work. It is also brought out that there is a tendency toward tailoring plans to meet the needs of individual companies, rather than patterning them to a standard plan, as appeared to be the case after the installation of the steel industry plan.

An earlier issue of the Management Record (June 1950), pointed out another development in the pension plan field. This is with reference to area-wide pensions, such as developed in Toledo and Detroit. In these cities a number of employers have agreements with unions for pensions financed by employer contributions. These contributions are pooled in a common fund, and workers of the participating employers

may change jobs within the companies covered without forfeiting pensions.

Experience has shown there is no simple pattern that can fit all types of industries. Each business and industry has its own set of conditions which must be taken into consideration in laying the foundation for a system that will be most effective, financially sound and easily administered. One thing is certain; the trend is definitely in the direction of more widespread application of pension plans in private industry; and at the same time we shall undoubtedly see the development of a still greater variety of pension plans.

Don't Sell the Party Down the River to Satisfy Personal Hatred

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, October 1, 1951

Mr. EDWIN ARTHUR HALL. Mr. Speaker, for nearly a quarter century the Republicans were eclipsed in Albany because of the agility on the part of the little New Deal to outsmart them at every whirl of the political turnstile. They were definitely on the outside looking in with nobody to blame but their own stupidity.

When the people of New York decided on a change in 1942, the whole country looked to the Republicans to rip up the floor in Albany. This they did but they limited their political firing squads to Americans in their own party.

Their golden opportunity appeared last year when the vital subject of reapportionment came up. They got a few contemptible characters together in a smoke-filled room and talked over the situation.

New York State has 45 congressional districts. The little dictators determined to cut the number to 43, without firing a shot or without putting up a single objection.

All well and good, but their real chance came when they were faced with the bright hope of making their own party strong for the next 10 years by drawing the districts in compact form, as they should legally be, into at least 25 and even 30 sure Republican constituencies.

Their smarter brethren, the Fair Dealers, would have looked upon such an opportunity as heaven-sent and would have diminished the Republicans for all time to come.

That great Republican stronghold, up-State New York, which has stood the test of storm after storm, and still votes Republican, could have been made a mighty fortress, giving to the House of Representatives at least three or four more Republican Congressmen.

But no. The Albany pirates preferred to muffle their chance, to scuttle their ship, to saber and liquidate members of their own party whom they hate.

A year ago, a man in the know told me that he had talked with the State chairman about the whole up-State picture.

"There's one man who's got to go," said Pfeiffer, "and that is the Congressman from the Thirty-seventh District."

"But he's a Republican," the man objected, "and his voting record is among the most loyal and regular of all the Republicans in Congress."

"That makes no difference," Pfeiffer retorted, "he's got to go."

After I heard that, I concluded that the Albany gang would stoop to just about anything.

What my personal fate or fortune may be as the result of reapportionment is unimportant. Petty personal hatreds and intolerance have been applied to me ever since I have been in public life, and I have been able to overcome them.

But the fate of our Republican Party in the hands of these dagger throwers is a horse of another color. I am tremendously concerned with the course of action on the part of a leadership which will thrust aside the good of the party to indulge in the sadistic pleasure of liquidating a whole congressional district from the Republican fold simply because they hate me.

Up-State New York should not be deprived of a single Republican Congressman. It is too important an area and the Republican Party must have every last member elected from that area in order to carry the House in 1952.

I repeat, my own political future is of small import but I protest having my district swallowed up and the numerical strength of the Republicans up-State lessened by even one.

The truth is, these outlaws who pose as Republicans in the State capital are afraid of offending the O'Connell gang and the New York City Democratic machine. They prefer to limit their political sanctions against individuals in their own party.

The local newspaper accounts are as insulting to Broome County as they can possibly be. They refer to our great county as being thrown into the Thirtieth District. Actually, the Thirtieth is being attached to Broome.

Naturally, I dislike having to run against a Republican colleague in the House. But the arrangement is not mine, it is theirs, and I have no choice in the matter. However, as long as Broome County remains, I will be in the running regardless where they gerrymander us.

But to get back to the importance of a Republican victory next year. These despots are putting petty hatred above the great prospect of taking the House.

Such a race is bound to be close. Then why not add five Republican districts to New York State, instead of dividing the party, and throwing away the election because they want to settle a score with an Abraham Lincoln Republican like me, just because they do not happen to like me. I do not happen to like them either, but I stomach their existence for love of the party.

God help America if passion such as theirs rules the land and blots out sweet reason. Let us make these pirates walk the plank and save the two-party system for our Nation.

Who Owns Your Child's Mind?

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 2, 1951

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an article by John T. Flynn, appearing in the October 1951 issue of Reader's Digest.

This famous and noted writer calls attention to some facts that every citizen should know, facts that are characteristic of the trend to bring socialism to America through our educational institutions. I am bitterly opposed to it, and every other American should be.

The article follows:

WHO OWNS YOUR CHILD'S MIND?

(By John T. Flynn)

Who owns your child's mind? I would assume that the child owns its own mind. And that the parent is the guardian of the child. Our American system is based on the belief that the State does not own anybody's mind—whether of the parents or the child.

When boys and girls enter a public school does the State have the right to teach them any religion it chooses? Does it have the right to indoctrinate the child in a political philosophy? If it has, who in the school has the right to decide what religious or political doctrines will be drilled into the child's mind?

The function of education in our public-school system is to train the child to use his mind, to give him information, train him to think and inculcate in him those principles of moral conduct which are the accepted code of our society.

What of the teachers? Do they possess an authority which transcends the authority of the State? The State has no right to direct teachers to slant their teachings in the direction of communism, socialism or fascism. Do teachers have the right to decide that they will use their positions to indoctrinate children in a religious or political philosophy alien to our society?

This problem is stirring up controversy in many communities.

I do not say that our schools have been taken over by either Communists or Socialists. I do insist that there are schools where the invasion has been started, and that where this exists in a school it is apt to be found chiefly in the social-science departments (where only a few teachers can do immense harm).

Even where it exists, I do not charge it is being promoted with the consent of the authorities; in most cases they are profoundly ignorant of the whole subject.

Finally, I do not charge that even the guilty teachers are teaching communism (though a few may be Communists). I say they teach socialism.

Few, I think, have had so unusual an opportunity to observe this as I have had. The drive to infect our public schools with collectivist propaganda began between 1933 and 1935. I was then, and for 9 years thereafter, a member of the board of higher education in New York City, administering four large public colleges. I participated in the selection of hundreds of teachers. I was chairman of a committee which formulated a new code to protect the academic freedom of our teachers. In this task I visited many colleges and I know that my colleagues will

testify that I was one of the leaders of the liberal attitude.

In the midst of my tenure, charges of left-wing activities on our college campuses in New York City were made which led to an investigation by the State legislature. Specific charges were made against numerous teachers. I knew many of them. I could not believe the charges and I said so publicly. But I had the humiliation of seeing them proved to the hilt. Some 35 leftists—not just Socialists but card-carrying members of the Communist Party—were, after trials by a board made up largely of liberals, held to be guilty and were dismissed.

Let me state precisely what I now allege. A group of educators—not numerous but influential—has set out to introduce into the social-science courses of our high schools a seductive form of propaganda for collectivism—chiefly of that type which we call socialism.

This propaganda takes the form of teaching openly if possible, cautiously if necessary, three things. First, that our American system of private enterprise is a failure. Second, that our Republic of limited powers is a mistake. Third, that our way of life must give way to a collectivist society in which the central state will own and operate, or plan and finance and control, the economic system.

I do not deny that teachers have a right to examine and hold such views personally, just as they have a right to hold whatever religious views appeal to them. I merely maintain they have no right to mold the minds of students in their religious or political philosophies. There are teachers that do this, and their numbers grow in influence. Furthermore, various outside organizations seek to promote this propaganda by slanting textbooks in that direction. This is a grave charge, but I can prove it.

In 1932 George S. Counts wrote a little book called *Dare the Schools Build a New Social Order?* Dr. Counts is professor of education at Teachers College, Columbia University. In this book he said we live in an age of revolution, and are witnessing the rise of a civilization built on science and technology which is "rapidly making of the world a single great society." He said we are in an era which has shifted from considerations affecting human liberties to considerations that "have to do with the production, distribution, and consumption of wealth."

He declared that "capitalism no longer works." He said there is no longer a choice between individualism and collectivism. "It is rather between two forms of collectivism; the one essentially democratic, the other feudal in spirit." And then he says that the society of the future is to be "a planned, coordinated, and socialized economy."

How will it happen? "Powerful classes must be persuaded to surrender their privileges." He fears they may refuse to do this, but he has a hope, it may be accomplished through the schools.

There the child must get his ideas from the teachers. And Counts declares boldly: "That the teachers should deliberately reach for power and then make the most of their conquest is my firm conviction. To the extent that they are permitted to fashion the curriculum and procedures of the school they will influence the social ideals and behavior of the coming generation."

Counts and some of his associates did not rest here. A small group of educators got money from the Commonwealth Fund, set up by the wealthy conservative Harkness family, to make a study of social-science teaching. Later the Carnegie Foundation made a grant of \$300,000 to complete this study of the social sciences in use in our schools. The enterprise was sponsored by

the highly respected American Historical Association.

In due course the study emerged in 17 volumes. Dr. Counts was the research director, and some eminent names were associated with it. One of its conclusions was: "The age of individualism is closing and a new age of collectivism is emerging." The report then proposed that the teachers go to work upon the minds of their pupils to prepare them for the new collectivist society.

The late Harold Laski, Socialist and leader of the British Labor Party, wrote of this study "Stripped of its carefully neutral phrases, the report is an educational plan for a socialist America . . . It is a direct criticism of the ideals that have shaped American capitalism."

Here, then, was a plan to sell a socialized America through the teachers by working on the minds of the pupils.

One of Dr. Counts' colleagues in the commission which first promoted this idea was Dr. Harold Rugg. About this time Rugg brought out a book called *The Great Technology*, which argued that the schools must be used to create a new social order. He declared that the first step "must be to develop a new outlook on life and education among teachers." A new public mind, he said, "must be created by creating tens of millions of new individual minds and welding them together in a new social mind."

Dr. Rugg outlined his plan of campaign. The job was not to be done by preaching "socialism"; the way to do it was to condition the child's mind to accept socialism by planting in his mind a few root ideas.

You must fascinate him with the dramatic wonder of change.

The student must be told that there is not much greatness in our history, the American revolution was in reality nothing but a brawl between the British nobility and American landlords, and most of our statesmen in that period were interested chiefly in their property.

Students must be told that our economic system has, after all, been a failure. Behold the poverty, the depressions. This is not a land of opportunity; the Government must provide the good life for the masses. On this point the book gives tricky statistics about income, wealth distribution, etc.

Finally, Dr. Rugg said that to correct our economic system we must have a designed economic system, that is, a planned economy. The Government must take over the big industries; the rest must be operated under State plans.

All this is seductive, and it appeals to the generous instincts of the pupils. But it is socialism, sold under a deceptive label. And they are not instructed about any of the "bugs" in this idea.

Rugg's book was written for professional educators. But he became the pioneer in bringing out textbooks in accordance with the theories in his great technology. He wrote 14 textbooks, 14 student workbooks, and 14 teacher guides. All deal with the social sciences; all are heavily charged with socialist propaganda. I am informed that at least 5,000,000 copies of these have been circulated in the schools of the Nation.

Following the publication of Rugg's textbooks and guides, a steady stream of books on government, economics, and history were published for high-school use and slanted in varying degrees in the direction of different forms of collectivism.

In 1940, Dr. Ralph Robey made an examination of high-school textbooks, to extract passages which indicate the authors' attitude toward the system of private enterprise. The extracts were selected by three experts who examined 600 social-science textbooks—90 percent of those used in United

States high schools. The results were published without comment. Later, after an interview with Dr. Robey, the New York Times said "A substantial proportion of the social-science textbooks used in the high schools tend to criticize our form of government and hold in contempt the system of private enterprise. * * * There is a notable tendency to play down what has been accomplished in this country and to stress the defects of our democracy."

That was in 1940. The situation is worse now.

When objection is made to such books the cry is raised that we are invading the teacher's "academic freedom." That trick term means that a teacher can teach anything he or she wishes in the classroom. This theory is quite indefensible. Teachers have the same fundamental rights as other people. They have the right to write what they wish, and to hire a hall or stand on a soapbox and say what they wish.

The public-school classroom, however, is not a hall in which to exploit a teacher's religious or political theories. There are other rights in the classroom besides the teacher's. The students, the parents, the community all have rights there. The children are compelled to sit in the classroom and listen. They are not a voluntary audience. They have a right to be protected in these rights to the extent of keeping the classroom as an educational instrument and not an agency to turn our children into Socialists.

What can parents do about this? The best procedure in any given community is for a group to get the facts, and make criticism only where it is clearly warranted.

The first thing to do is to examine the textbooks, especially those used in the social sciences. History, government, economics. Then determine whether the books, or certain teachers, advocate leftist policies.

Citizens and parents must not make wild, unsupported charges or brand teachers as Communists where there is no proof. (As a matter of fact, most of the offenders are either Socialists or believers in some vague sort of collectivist scheme.)

On the other hand, citizens who know nothing of this sly and dangerous movement should not be apologists for offenders. Abide by the facts. The future of your country and your children is at stake.

Tass and the Press Gallery

EXTENSION OF REMARKS OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial written by a great American newspaperman, Hon. Dolph Frantz, editor of the Shreveport Journal. This editorial appeared in the Shreveport Journal, issue of September 25, 1951:

DON'T BELONG IN GALLERY

Representatives of newspapers and news-gathering systems recognized as having connection with or sympathy for communism have absolutely no business in the congressional press galleries or in any other American news headquarters. Our Nation runs serious risk when it permits the enemy to have press courtesies in this country.

The absurdity of the practice of allowing unfriendly foreigners and their agents to at-

tend American newspaper conferences and kindred gatherings has been stressed lately in regard to representatives of Tass, the Soviet news agency, which is generally considered to be an adjunct to the Reds' espionage system. Their particular purpose is to gain information for the benefit of the anti-American propagandists and other enemies of American ways. They should be barred from sources of official information at Washington, just as American newsmen are barred from such sources in Communist countries.

There should be no more privileges for Tass or any other Soviet news agency in the United States than are granted the American press representatives in Moscow and other Soviet centers. This evidently was considered by the president of the American Society of Newspaper Editors when he suggested that the sources of information at our national capital be denied Tass representatives. The same idea no doubt motivated Senator O'Connor, of Maryland in offering a resolution to bar the Tass reporters from the press galleries of Congress. The prohibition should be enacted and strictly enforced. It would be absurd to continue granting the enemy any such favors.

America has been too lenient too long. It must tighten its defenses. One way to do this is to exclude from information sources news representatives serving the enemy.

Recent Developments in United States Policy Toward the Near East

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Tuesday, October 2, 1951

Mr. HILL. Mr. President, on Sunday, August 26, 1951, I had the great pleasure of attending a banquet at Birmingham, Ala., given by the Southern Federation of the Syrian-Lebanon American Clubs and the National Association of Federations of Syrian-Lebanese Clubs. On that occasion Mr. Samuel K. C. Kopper, Deputy Director, Office of Near Eastern Affairs of the State Department, made a most interesting and able address. I ask unanimous consent that the address be printed in the Appendix of the Record.

There being no objection, the address was ordered to be printed in the Record, as follows:

Mr. President, Dr. Malik, Senator Hill, Congressman Battle, and members of the Southern Federation of Syrian-Lebanon-American Clubs and the National Association of Federations, it is a real pleasure and privilege to be here with you this evening and to participate on this program with the Minister of Lebanon, Senator Hill and Congressman Battle. I bring to you the greetings of Assistant Secretary McGhee who looks forward to addressing your national convention in Atlantic City in October.

On behalf of the Department of State, I would like to pay tribute to the fine work which your organization is doing to increase understanding and promote good relations between the peoples of the United States and the Near East. We in the Department and our missions in the field followed with great interest your convention in Beirut and Damascus a year ago. We all believe that your efforts there made a valuable contribution toward the theme of this convention

which is to increase the good relations between the United States and the Near East.

As Mr. Frank Marin stated before the convention in Damascus, you did not go to preach, to seek material gain or to support certain political groups, you were simply returning to the land of your forefathers to dedicate yourselves to the service of your people in all walks of life. By the ties of ancestry and common heritage, you were also in a position better to approach your friends in the Near East and to interpret America's role in the Near East awakening. By your own example you could demonstrate the value of freedom for individuals, a tenet which is basic to the development and maintenance of freedom for nations. This was a solid basis from which only good could result.

To an audience so familiar with the Near East in all its phases of life and society, there is little unknown to you that I can present as general background. However, I should like to give you the picture as we in the Department of State see it today. If I start with what seems to be common knowledge to all, it is because the area we are considering is of such importance to the United States today.

The strategic location of the Near East is self-evident. This is the axis of three continents which credited western civilization, gave birth to the three great monotheistic religions, and sheltered the existence of culture and learning during the Dark Ages of Europe. Its territories are the crossroads of the Eastern Hemisphere. Every major international airline connecting Asia, Europe, and the United States passes through the Near East. The Suez Canal is a vital artery of world shipping.

Moreover, the Near East provides access to south Asia with its tremendous sources of manpower and raw materials, and to the continent of Africa whose resources of uranium, manganese, chrome, and copper we import in large quantities. The Near East itself contains one-half of the proven oil reserves of the world, and it supplies a large proportion of the oil requirements of Europe, Asia and Africa.

As has recently been graphically demonstrated in one of the leading American weeklies, the heartland of Islam, a religion of 300,000,000 people who inhabit the warm belt from the Atlantic shores of Africa to Indonesia and the Philippines in the Southwest Pacific, is found in the Near East.

The peoples of the Near East have today three strong aspirations: (1) They wish fervently to retain and strengthen their recently won independence—although the recorded history of the area is older than any other part of the world, it contains more new nations, and the spirit of nationalism and pride of sovereignty which spread through Europe and the Western Hemisphere during recent centuries is now growing in all of this region; (2) the peoples of the Near East strongly desire to play their part as equals in the family of nations, and (3) these people seek to raise their standard of living and to eliminate disease, poverty, and backwardness which have been prevalent over most of that area for centuries.

One important element which has added to the complexity and disturbing picture throughout the Near East is the neutralist, anti-Western tendency prevalent in certain of these countries. Several of these nations have emerged as sovereign entities only since the close of World War II. The struggle to gain independence is still vivid in the minds of their governments and peoples; relations with the rest of the world are still connected in their minds with external tutelage. Therefore, a belief exists in some circles that the best course for development lies in neutrality and disassociation from the west politically and economically.

Our efforts to assist the Near East are often labeled as attempts at political domination or economic penetration. Russian propa-

ganda has seized upon this suspicion and sought to strengthen it. The suspicion remains despite United States pursuit of a moderate and sympathetic role with regard to self-determination of people, such as in Syria and Lebanon, the lands of your ancestor. To overcome this antipathy and to substitute widespread belief in the mutual interests and common welfare of the West and Near East will require a good measure of understanding, patience and tact on our part. It will also require a good measure of realism and critical self-examination on the part of the near eastern countries. Your organization is well qualified to assist in bringing about a better understanding between the United States and the Near East.

As you are well aware, there have been a number of disturbing developments in the general area of the Near East during the past year. At the present time there exists a problem of negotiation between the United Kingdom and Egypt regarding the future of the British forces in Egypt and the future of the Anglo-Egyptian Sudan. Since the end of World War II the Egyptians have been seeking a revision of the 1936 treaty, not due to expire until 1956, to the end that the British would evacuate both the Canal Zone and the Anglo-Egyptian Sudan. With respect to the latter the Egyptians claim historical ties and consider that the Sudan should be reunited with Egypt under the Egyptian crown. In early 1950 the Wafd Party came into power as the national government and negotiations which had been going on were resumed, Egypt's case before the Security Council not having succeeded in 1947. We consider that this question is essentially a problem between the United Kingdom and Egypt. Nevertheless, we are deeply interested in the matter because of its relation to general peace and stability in the area. Both the United Kingdom and Egypt have important roles in the security of the region. We, therefore, earnestly desire to see the matter settled through normal negotiations.

With regard to the problems remaining from the Palestine mandate, we continue to support the U. N. in its efforts to achieve a settlement of differences between Israel and the Arab States. There can be no question, however, that the problems arising from Palestine continue to dominate the near eastern scene. As you know, there are several U. N. organizations in the area at the moment which are charged with reconciling the parties and promoting peace and stability. The United States has given considerable support to all three of these organizations in the form of diplomatic backing, financial and material assistance, and manpower.

The organization which comes first in point of time is the United Nations Truce Supervision Organization. You may remember that this body was established by the late Count Folke Bernadotte in June-July 1948 to supervise the truce which he negotiated with Israel and the Arab States. It consists of military personnel from France, Belgium, and the United States, and is headed by Lt. Gen. William E. Riley, United States Marine Corps, retired. The Truce Supervision Organization was continued in existence by the Security Council resolution of August 11, 1949, to provide the necessary U. N. supervision for the four armistice agreements which were signed under U. N. auspices, in the first 7 months of 1949 between Israel on the one hand and Egypt, Lebanon and Syria and Jordan on the other. These agreements, which were entered into voluntarily, put a definite end to the hostilities in the Near East, and are considered tantamount to nonaggression pacts. These armistice agreements are the only negotiated settlement which has so far been worked out and agreed to by Israel and the Arab States.

The second U. N. body is the Palestine Conciliation Commission. This organization is made up of United States, French, and Turkish representatives and was established by the General Assembly on December 11, 1948, to assist the Arabs and the Israelis in getting together on an over-all settlement, as well as to facilitate the repatriation, resettlement, and rehabilitation of the Palestine refugees and the payment of compensation to them.

On August 10 the PCC invited the four interested Arab States and Israel to meet with the Commission in Paris on September 10 to discuss problems. The United States, as a member of the PCC, strongly supports this step, in the hope that something positive could be done.

The last U. N. organization in the Near East—and certainly one of the most important—is the U. N. Relief and Works Agency for Palestine Refugees in the Near East. The GA on December 2, 1950, approved a resolution which called for \$20,000,000 to continue direct relief by the Agency from July 1, 1951, to June 30, 1952. The resolution also instructed the agency to establish a reintegration fund of not less than \$30,000,000 for the same period. The fund would finance projects requested by the near eastern governments for the permanent establishment of the refugees and their removal from relief either through repatriation or resettlement. Both the Arab States and Israel supported the resolution. By their acceptance of the reintegration fund, moreover, all of the parties have taken a public step toward the settlement of the refugee question. We consider this to be a hopeful sign, for the longer the refugees remain in camps, destitute and inactive, the more danger they will constitute as a source of unrest and a field for Communist infiltration and agitation. I might add that the United States has contributed approximately \$45,000,000 to refugee relief and works projects in the Near East.

Like many attempts at impartiality, United States and U. N. policies in Palestine are often interpreted as partial to one or the other of the parties involved. However, our actions and aims in this situation have been consistently designed to favor neither one nor the other, but to remove as much as possible of the bitterness, rancor, and intransigence caused by the hostilities and to promote an atmosphere of cooperation which will benefit all. In December 1948 at the Paris meeting of the General Assembly, it was my privilege to be present during a conversation between Mr. John Foster Dulles, acting chairman of the American delegation, and one of the leading Arab spokesmen. Mr. Dulles recounts this conversation in his recent book *War or Peace*. He assured the Arab statesman that the United States position on Palestine involved no unfriendliness whatever toward the Arab countries, and that the future would demonstrate this. I believe that these assurances have been upheld since then by our record in the United Nations. At the same time it must not be forgotten, as Mr. Dulles pointed out, that the United States supported the establishment of Israel and that Israel is a going concern in the family of nations.

The challenge of Soviet imperialism has made more apparent the weakness in the military, economic, and social structures of a number of states in the Near East. Where people are barely existing on an income of often less than \$100 a year per person, as compared with our average of \$1,400, the grandiose and illusory promises of communism are accepted in desperation and embraced in expectation. Where people have never developed a sense of personal participation or interest in their government, but have

come through the centuries to fear governmental authority as an abstract body of interference and subjugation, the development of responsibility in government takes time to achieve, but achieved it must be to prevent chaos.

These three aspects of weakness must be removed before there can be any effective resistance to communism or any permanent progress in man's state in the Near East. The social shortcomings can be righted only by responsible action from within: the military and economic weaknesses call for assistance from without.

The United States Government is keenly conscious of their need for external help in development and planned utilization of resources, and has proposed programs of financial and technical assistance in that field. Unfortunately, in attempting to render aid of this kind, we encounter charges of internal interference. These charges are made by antiwestern elements and Communist propaganda, charges which are unfairly labeled against our country in view of our traditional and unswerving adherence to national self-determination. . . . The United States Government has no desire whatsoever to encroach upon the sovereignty of these lands in any way, but rather desire to see these peoples become economically, socially and politically stable and immune to subversive influences which seek to undermine them and to deprive them of their legitimate personal and national rights and freedoms.

In January 1949, President Truman proposed in his inaugural address what has since become known as the point 4 program, to make available technical assistance for the underdeveloped countries. This program has already been accepted by most of the countries of the Near East, including Lebanon, and is now well under way. Because of its relative prosperity last year owing to the cotton boom, and for other reasons best known to itself, Syria has not so far seen fit to seek point 4 aid. It is recognized that the Syrians have a perfect right to seek or to reject this aid, and their stand on this question will in no way affect their good relations with the United States. We were encouraged to note the public statement by Syrian Prime Minister Hakim on August 15 that "the Arabs cannot face the dangers of this perplexed world alone, for neutrality is imaginary when we are weak."

The program remains as a means of extending aid to those nations who seek it of their own volition. The response to point 4 throughout the area has been generally favorable. However, even assuming that all the near eastern people should be enthusiastic over the idea, there would still be no assurance of not running into some snags in the ordinary housekeeping aspects of the program which by their very nature might easily run counter to the traditional practices of the area.

In spite of the encouraging progress of the point 4 program, events in Korea since June of 1950 underscored heavily the sobering reality that the economic and technical aid envisaged in that program alone would not be enough to meet the present challenge to the security of the Near East. Because of the urgent need to strengthen a number of non-Soviet-dominated areas, President Truman sent a message to the Congress on May 24, 1951, recommending that further steps be taken to build up these countries under a Mutual Security Program. In his message to the Congress, President Truman pointed out that no part of the world is more directly exposed to Soviet pressure than the countries of the Middle East. He stated further that the incessant pressure on the middle east can be overcome only by a continual build-up of armed defenses and the fostering of

economic development. He then recommended that \$415,000,000 in military aid be granted to Greece, Turkey, and Iran, a portion of this aid to be available for other middle eastern nations if necessary. He recommended that an additional \$125,000,000 in economic aid be allocated for Near Eastern countries, exclusive of Greece and Turkey, for whom economic aid is provided as part of the program for Europe. * * *

The President stressed the problems of economic development in the Near East, putting particular emphasis on the problem of the Arab refugees. He said that the program envisaged for the refugees has the threefold purpose of assisting in their resettlement, of strengthening those states wherein they settle, and removing this threat to the peace of the area. An expansion of needed food production was envisaged through the development of land and water resources. Under the proposed plan up to 10 percent of the \$415,000,000 requested for military and economic aid to Greece, Turkey, and Iran could be utilized in the near eastern states if the President were to determine such aid essential to the security of the United States. This would permit the United States for the first time to assist those countries directly in building up their defensive capabilities. This demonstrates the belief that it is in the interest of the United States to preserve and strengthen the relations of these states with the United States and the West; to increase the will of the near eastern states to cooperate in resisting any expansionist tendencies of the U. S. S. R.; and to develop the strength and stability of the area as a whole by encouraging the countries to increase their capacities for defense, strengthen internal security and reduce rivalries between the states of the area.

Under the Mutual Security Program as recommended by the President, economic aid would be * * * directed in the main toward the following fields: Improvements in public health and sanitation; agricultural extension services designed to increase food production by the use of better tools, seeds, fertilizers and methods of cultivation; increased opportunities and better training in vocational education and improvement of the highway facilities in the area, and finally toward the relief and rehabilitation of the Arab refugees.

As I have already stated, it is proposed that up to 10 percent of the total military aid earmarked for Greece, Turkey, and Iran might be drawn upon for military assistance to other near-eastern countries. The allocation of such assistance would be contingent upon the President's decision that such a course is essential to the security interests of the United States. In this connection I should like to quote from Assistant Secretary McGhee's statement to the Foreign Affairs Committee of the House of Representatives on July 20. He said, "In all candor, I should like to say that it is now the Department of State's view that the President may well find it necessary to utilize this authority, if it is granted in the very near future. Events in the Middle East are moving rapidly. The United States cannot afford to allow the forces of neutralism and antiwestern sentiment to gain any further ground, nor to allow these forces to be captured and exploited by international communism."

Near-eastern statesmen would do well to remember that among German Foreign Office documents captured after World War II was a report dated November 26, 1940, from the German Ambassador to Moscow, Count Von Schulenberg. Von Schulenberg disclosed in this report that, subject to certain conditions, Molotov was ready to enlarge the Nazi-Soviet agreement into a four-power pact with all Axis nations. One of these conditions was that "the area south of Batumi and

Baku in the general direction of the Persian Gulf be recognized as the center of the aspirations of the Soviet Union." Today all indications are that this area, long sought by czar and commissar alike, remains admittedly a center of immense expansionist pressure by Russia.

In his announcement of the mutual security program, the President emphasized that the Soviet threat to free nations today is world-wide, total, and of indefinite duration. With our assistance the free world as a whole will be able rapidly to strengthen its military defenses. Without our help, the necessary build-up would be protracted, perhaps impossible. Our economic aid and technical assistance will help in the development of the resources of underdeveloped countries, help to raise their living standards and strengthen their resistance to Communist subversion.

The President pointed out that the mutual security program has been examined from the standpoint of the availability of supplies, materials and equipment required to carry it out. The recommended assistance is necessarily limited to what is absolutely necessary to help these countries build essential military and economic strength. We believe that the program is based on a balanced, impartial approach and will be so administered. When the Supreme Commander of Allied Forces in Europe, Gen. Dwight Eisenhower, was asked by members of the United States Senate earlier this month what he believed should be done about Greece and Turkey, General Eisenhower said that Turkey is only a part of the great Middle East problem and that we should try to bring in the Arab world on our side * * *

As far as the sheer value of territory is concerned, there is no more strategically important area in the world than the Middle East. This area is tremendously important in terms of what it could contribute for our whole effort. We should use our resources, our power, our organizational ability and, above all, our leadership down there to get some kind of an organization that would rally all of them to go in with us.

In his last public statement before his tragic death, Admiral Forrest P. Sherman said: "I regard the strategic importance of the eastern Mediterranean and Middle East as almost equal to that of the North Atlantic Treaty area itself, as related to efforts to resist world-wide Communist encroachment."

Much of the cultural and religious heritage of the American people has its roots in the Mediterranean World and the Near East. This means that, although the pace of industrial and technical progress here seems to have advanced beyond that of the Old World, the two peoples have a common basis to build upon, a philosophy in direct opposition to the dialectical materialism that is the foundation of the Marxian philosophy.

The resources of the free world are indeed adequate to enable it to solve its problems, difficult though they may seem, and to guide the world into a new era of prosperity, security and opportunity for the individual which will not interfere with his essential dignity and freedom. In the face of this tremendous challenge there is no room for apathy on the part of any of us. We should have no illusions that this job can be done merely by the outlay of America's material resources. It cannot be done by the Government alone. We in Washington need the support of the American people in waging the world-wide campaign against poverty, despair and the delusive forces of subversion. You who have family ties with the Old World are in an especially favorable position to help in this effort. We recommend your efforts and will follow your progress with a lively interest.

The Legion Commends Congress

EXTENSION OF REMARKS

OF

HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 2, 1951

Mr. DAGUE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am pleased to include the letter which I presume all of the Members who voted to override the Presidential veto of H. R. 3193 received from Mr. Erle Cocke, Jr., national commander of the American Legion.

The press has been particularly intemperate in its denunciation of the action of Congress in this matter and has apparently purposely omitted pointing out that this legislation applies only to those helpless veterans who require the care of an attendant and who are without income adequate to their minimum economic needs.

I yield to no one in my insistence on governmental economy and while I shall continue to be critical of proposals for cash hand-outs to able-bodied veterans I will not knowingly join in economizing at the expense of those of our fellow citizens who have answered their country's call and are now in physical and financial distress. I commend you to the careful reading of Commander Cocke's fine statement. It follows:

THE AMERICAN LEGION,
OFFICE OF THE NATIONAL COMMANDER,
Indianapolis, Ind., September 25, 1951.
Hon. PAUL B. DAGUE,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN DAGUE: This is a letter of congratulations and of thanks.

It is intended to convey to you some sense of the appreciation on the part of 3,000,000 legionnaires of the important role you played in the enactment over the President's veto of H. R. 3193, now Public Law 149.

We believe that you acted not only in the veterans' interest but in the national interest. We are convinced that a very great majority of the American people join us in applauding this action.

For some time now, we have noted in the press a strangely belligerent and resentful reaction to anything having to do with maintenance and improvement of veterans' benefits. The attitude is one of impatience bordering on disdain. It is reflected in editorials and articles which all too often emphasize astronomical cost projections rather than basic facts.

Because passage of H. R. 3193 was greeted in this fashion in many areas, I want to place on your record a brief review of the matter.

The American Legion advocated a reasonable pension for helpless and bedridden war veterans long before the introduction into Congress of the measure which last week became law. Three successive national conventions, in 1948, 1949, and 1950, reiterated the plea. We studied the question, we debated it, and we concluded that it was morally right and economically necessary.

The most severe objective scrutiny will disclose the new law to be just that.

The \$120 monthly benefit is reserved exclusively for those veterans who are in fact unemployable, who are blind, helpless or otherwise so disabled as to require the full-time attendance of another person. In addition, the beneficiary cannot have more than

\$1,000 income if single or \$2,500 if with dependents.

This law will add not a single penny to the tax burden of the American people. I cite this fact merely to refute the outlandish implications of cost that have been used against it. Every veteran who qualifies for the benefit will have already exhausted the last possibility of self-support. The only question, then, is how needed public assistance shall be provided: Whether through county or State taxes or through Federal taxes. It is obviously fair in the case of those who have served all of the people to distribute responsibility for their care among all of the people.

The burden, therefore, rests squarely upon the Federal Government. Public Law 149 recognized this obligation.

Pension based upon identical principles has been awarded by the Congress to veterans of the War Between the States, the Spanish-American War, the Philippine Insurrection, and the Boxer Rebellion. A policy precedent thus has been four times affirmed by different sessions of the Congress in different periods of our history. Fifty-five years elapsed between the end of the War Between the States and provision of this type of benefit for veterans of that conflict. The Eighty-second Congress, by acting now, has assured that the intended beneficiaries of the World Wars and Korea will have full opportunity to claim their right.

The President in his veto message complained that the measure would grant a special award to veterans "whose disabilities are in no way connected with military service." The complaint is as ill-founded as it is misdirected. Advisers to the President are in a position to know better.

The veterans who will receive the new payment are in large part those who have been and are drawing part III pensions for permanent and total disability. The latest Veterans' Administration hospital census conducted by the VA showed that of 19,632 patients in the general, medical, and surgery (non-service-connected) category, 5,532 were receiving part III pensions, and 6,554 had disabilities connected with their war service. Who can say that the service disability did not play a big part in bringing about the conditions that made these men permanently and totally disabled on a non-service-connected rating? To assume the contrary is crass speculation.

According to the same VA census, 1,808 patients among the 19,632 rated as non-service-connected were then awaiting the outcome of claims filed for the purpose of establishing service connection. As you can well realize, the margin of human error in the process of adjudicating such claims is great. How much greater the error to imply a pre-judgment against the claimant.

As of July 31, there were 312,000 veterans drawing pensions for permanent and total disabilities rated as non-service-connected. This included 30,406 World War II veterans. Less than 8 percent—or only 8 out of 100—of the total group are expected to qualify for benefits under the new law.

Were they all bedridden and therefore eligible for this new pension, the obligation upon the Government would be just as binding.

The American Legion is concerned about the high cost of government. But the American Legion is equally concerned about the high responsibility of Government, and we condemn and deplore the double-standard viewpoint of those who would make cost the all-important index of the merit of veterans' legislation while assigning it only moderate importance in other sectors.

Of all the legislative proposals which came before you, those affecting veterans are the only ones which are consistently presented to the reading public on the basis of cost in

the year 2000. Most Americans knew the projected cost of the pension bill by the end of the century before they knew the nature of the bill itself. And the basis of the projection in this instance as in many others remains a highly mysterious question.

The Congress within the week has approved a salary increase for Government workers. We are in sympathy with your action. But so far as we can determine, no voice has been raised to point out that the consequent cost to the taxpayers will be some \$25,000,000,000 by the end of the century.

Certain elements of the population long have regarded veterans' benefits as the soft underbelly of Government spending. Organizations have been formed under varied and attractive aliases for the sole purpose of dulling the public sense of responsibility as regards veterans' rehabilitation. We sometimes wonder if individuals who lead such groups consult either their conscience or the realities of human suffering.

Public Law 149 is a good law. It is a law to be proud of. And it is to the lasting credit of Members of the United States Congress—a mark of your moral and political courage—that you resisted the pressures put upon you to forget these needy veterans.

Sincerely,

ERLE COCKE, JR.,
National Commander.

Charles R. Robertson Lignite Research Laboratory

EXTENSION OF REMARKS OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, October 3, 1951

Mr. LANGER. Mr. President, I ask unanimous consent that there may be printed in the Appendix of the RECORD the dedicatory address by Richard D. Searles, Under Secretary, Department of the Interior, at the dedication of the Charles R. Robertson Lignite Research Laboratory, Grand Forks, N. Dak.

I may say that this was an outstanding event. It was attended by scores and scores of scientists from all over the United States of America. The laboratory which was dedicated is one which will be available to scientists not only from this country but from all over the world, for their use in studying the possibilities of the use of lignite coal.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The occasion which brings us here today is a significant step in the industrial development of this State. It also marks an important advance in the scientific program of the Department of the Interior and the Bureau of Mines.

The Charles R. Robertson Lignite Research Laboratory commemorates the vision and foresight of a statesman who maintained throughout his life confidence in the future of North Dakota.

Charles Robertson knew and understood the importance of lignite in the world's energy reserve, and during his career in Congress he persistently and intelligently brought to the attention of those of us in government and to his fellow members of Congress the necessity for increasing research on this fuel.

It is tragic that Congressman Robertson did not live to see this laboratory completed. However, we who stand here today realize that he, more than any other person, was responsible for the construction of this fine edifice. It will stand as a lasting memorial to his faith in this State's important resource.

A brief glance at the position and future of lignite shows the profound importance of the work which this research laboratory will do.

The Geological Survey finds that this State has the stupendous quantity of 300,000,000,000 tons of recoverable lignite. That is approximately 10 percent of the entire world's supply, and it constitutes a natural resource of incalculable importance to North Dakota and to the Nation.

The existence of this rich lignite deposit has been known for many years. In the Journals of Lewis and Clark, written about their explorations in 1804-6, there is reference to the coals which they found in this region. As early as the 1850's lignite was being mined to furnish heat for the forts and fur-trading posts of western North Dakota. The Geological Survey began to report commercial production in 1884, and in the 67 years since then more than 70,000,000 tons of lignite have been produced.

At a conservative estimate, this mining industry had added \$100,000,000 to the wealth of the State. Currently, more than 3,000,000 tons a year are being mined, an output valued at almost \$8,000,000.

Yet this production barely scratches the surface, and this great resource thus far has hardly been touched. Lignite has been a difficult fuel to bring into widespread use, because of certain difficulties in handling it. Compared with the better grades of bituminous coal, it has always been ranked as a low-grade fuel. It has been hard to store and to transport, and when burned as fuel in its raw state, a great deal of expensive energy is used up in steaming out the water.

North Dakota lignite deposits are so enormous, and their potential uses are so immense, that it is of the highest importance to find efficient ways to put it fully to work. True conservation of our natural resources means using them in such a way that they make their best possible contribution to our well-being. We in the Department of the Interior, like many people in this State, believe that lignite can contribute far more to the American economy than it has ever yet done. This laboratory is a concrete expression of that belief.

For once it becomes possible to increase the use of this vast store of lignite as a commercially available low-cost fuel, and as a source of valuable chemicals, this entire region will reap immense benefits.

For one thing, we need lignite to firm up and supplement the hydroelectric power which is to be generated at Garrison Dam and distributed by the Department through the Bureau of Reclamation. It is conceivable that lignite may yet offer a rich new source of low-cost electric power. Unquestionably, if the industrial development which conservative investigators set as a minimum actually takes place, the expansion of power facilities in this region will sharply increase the demand for lignite.

Scientists and engineers of the Bureau of Mines have been concentrating on the problem of synthetic liquid fuels. Since 1948 this country has been using more petroleum than we are producing from our own wells. Despite the great strides which the petroleum industry has made in increasing our domestic supplies of oil, the demand for petroleum and its products has risen so sharply that we must depend on foreign sources for part of our supply.

I do not need to remind you of the hazards which can beset an overseas source of supply. We need very greatly to make certain

that in case of need we can obtain the oil we want, and in our hunt for additional sources we have been turning to solid fuels. By processes developed by the Bureau of Mines, we now know that we can produce liquid fuels synthetically, from lignite, which is a most reactive raw material. It will give a net yield of approximately one barrel of gasoline per ton. In addition a considerable amount of liquefied petroleum gas is also secured.

Nor is that all. The coal hydrogenation process, in addition to motor fuels, can produce substantial quantities of essential chemicals, such as benzene, toluene, naphthalene and others. The demand for these chemicals is increasing rapidly, and the chemical industries are constantly developing new products which need these chemicals as starting materials.

They have been in use for some time in the production of synthetic rubber and plastics, and for enriching high-octane fuels.

Fortunately the processes by which these chemicals can be produced from lignite are now ready for industrial development. The door is open for a new and important industry—an industry which will help ease the burden placed on the petroleum industry and which will contribute to the prosperity and security of our country.

The Department of the Interior, as authorized by the Congress, has conducted extensive research into the production of critically needed chemicals and liquid fuels from coal, lignite, and shale. High-quality liquid fuels are being produced in our demonstration plants and more than 300,000 gallons have met the severe tests of the military. Liquid fuels produced at the Department's Louisiana, Mo., demonstration plant from North Dakota lignite was first used to propel a Diesel locomotive on the Burlington Railroad several years ago. An efficient Diesel fuel has been produced also from coal and shale.

The Secretary believes that it is time for private industry to enter this business. I concur in this view. A privately financed synthetic liquid fuel and chemical industry will have available to it the years of research conducted by the Bureau of Mines. This research proves that the production of liquid fuel from coal, lignite, and shale is not only feasible but can be financially profitable. It is the responsibility of the Department of the Interior to see that research in this field is continued as long as Federal funds are available. It is likewise our responsibility to encourage the development of this new industry by private industry, in commercial size plants. We firmly intend to meet this responsibility. These great resources must be developed for the benefit of all the people and for the enrichment of the national economy.

This new industry can mean much to North Dakota's future.

Approximately 8,000,000,000 tons of lignite—less than 3 percent of the 300,000,000,000 recoverable tons known to exist in this State—have been earmarked for processing; yet this represents a liquid-fuel potential of 11,000,000,000 barrels of products, made up of approximately 8,000,000,000 barrels of gasoline and 3,000,000,000 barrels of liquefied petroleum gas.

The process of gasification, upon which much valuable work has been done by the University of Minnesota, can produce the hydrogen needed for ammonia and fertilizers. This will enable lignite to make a direct and invaluable contribution to the agriculture of this region. This same hydrogen, incidentally, either with or without the accompanying carbon monoxide, can be used in processing the vast quantities of low-grade iron ores in Minnesota. If it should be desirable, the lignite itself, either in the natural state or dried, can also be so used.

Now, it is obvious that a great deal of research has already been done on the way

in which lignite can be put to work. Ever since its organization in 1910—and previously through the Technologic Division of the Geological Survey—the Bureau of Mines has been interested in the problem.

Over the years it has cooperated with the State of North Dakota, with the Minnesota-North Dakota Resources Development Commission, with Texas, and with other States, in the investigation of the properties and possibilities of lignite. Particularly fruitful has been the cooperation with the scientists of the Universities of North Dakota and Minnesota.

In that connection I particularly want to mention E. J. Babcock, who is rightly called the father of lignite research. His vision and enthusiasm made the University of North Dakota the center of such work, and he sent into industry and research work many men who have contributed much.

The late Dean L. C. Harrington served the Bureau for many years as a consultant and gave generously of his time and interest and wisdom. The ability and devotion of these men and their coworkers had their counterpart among the staff members of the Bureau, and the joint accomplishments created the foundation upon which this laboratory was erected.

The present period of cooperation began in 1943. In 1945 the present gasification pilot plant went into operation. In 1947 the work here at Grand Forks was separated from that at Golden, Colo., and placed under its own supervising engineer. It was then that Charles Robertson introduced the bill for the establishment of this laboratory. In preparation for the laboratory the University Memorial Corp. presented the Government with this site of 11 acres.

Provision has been made for you to inspect the laboratory this afternoon. At that time details of lay-out, design, and construction will be evident, and I will not try to describe them to you. I would like to mention one fact, however: that this is preeminently a building for service. Over 92 percent of the 683,000 cubic feet in this building is active, useful space, and 81 percent is devoted directly to research and research services.

We have reached the point now when we know what some of the great possibilities in the lignite resources are—the point at which we can begin to count on widespread commercial and industrial development of the resource. The opening of this great laboratory, of course, marks the beginning of a new program. I think it is worth our while to consider briefly some of the phases of the research which will take place here.

To begin with, the development of the lignite industry has been delayed by three factors—the location of major deposits in regions of relatively sparse population and little industry, the limitations on the use of lignite as a raw fuel, and the high moisture content of lignite.

A research program is under way to minimize the effects of these three handicaps.

Through this program we hope to accomplish a number of extremely valuable results.

We want, for instance, to find economically feasible ways to substitute natural lignite for oil and gas firing in the domestic, commercial, and industrial fields, and to substitute lignite for coking coal in the production of manufactured gas. If we can do that the country can save high-rank fuels through the substitution of lower-rank fuels.

If we can successfully expand the use of lignite in power and industrial plants, if we can introduce dried lignite, and if we can adapt lignite in one form or other to regional metallurgical and other industries, this entire area will save in transportation costs by using a locally produced fuel rather than one which must be imported from great distances. Incidentally, this would materially help to relieve the recurring transportation difficulties, particularly in wartime.

As lower-cost electric power is developed from lignite, more industries will be able to move into this region. This involves new conceptions in power plant design and the development of new methods for the treating and use of lignite, but the result would benefit the Nation as well as this region by promoting industrial decentralization, thereby aiding the country from the standpoints both of economic and national security.

One of the most important goals is using lignite as a source of chemical raw material. This development, which would serve as the base for an extensive economic development, involves perfecting methods for the gasification and carbonization of lignite, acquiring basic knowledge about its chemical and physical properties, and designing the necessary processes and equipment.

In this entire program there will be the cooperation of the Fuels Technology Division of this region with the other division, agencies, and organizations within the area. The goal of this program is the adaptation of lignite in its various forms to many new uses, metallurgical, domestic, and industrial and chemical, through a reduction in the cost of mining, processing, and utilizing lignite.

Here is a situation, therefore, which presents at the same time a great opportunity and a great challenge. These appeal equally to the research man, to the technologist, and to the industrialist.

The cooperative efforts of all three, each in his own sphere, can and undoubtedly will produce results of far-reaching consequence.

Consider what has already been done. When the congressional subcommittee was holding hearings on the legislation to establish this laboratory, the late Dean Harrington presented a list of 38 reports of investigation on lignite from this area. These reports represented studies by members of the university staff, by their students, and by the Bureau of Mines.

They contain a great deal of basic information on lignite and the ways to use it, but to a certain extent they are on isolated, limited problems. There is still a great need for a broad, well-coordinated attack on the basic, fundamental properties of lignite, employing the new and more penetrating scientific skills of today.

The major job to be done in the building being dedicated here today, and by the staff of this Bureau station, is the development of technology—and, I might add, of technologists. These will have to provide the processes, machines, and equipment, working principles, and data that will enable engineers and industrialists to apply them to the vast basic resource of lignite.

Only then can come the broad utilization of this resource, the attainment of the common goal and the fulfillment of the purposes and objectives of this institution which we are dedicating.

Along with technology we need one other quality, which I am sure will not be lacking—vision. Vision, in the sense of imagination—the capacity to make a practical projection of laboratory ideas. In the long run the full success of this undertaking will depend to a large extent upon that quality.

The technical staff here will need vision, not only in a strictly scientific way, but in the analysis and appraisal of projects to be initiated and investigated, and in their application to our regional and national technological and economic needs.

When the basic research and technological advances have been made, I have no hesitation in saying that the industrialist himself will be found ready and willing to put sound developments from this research undertaking into practice. And it will be from that practical application that the great enduring benefits, for this region and for the Nation as a whole, will be obtained.

We can see how that works by looking at events in the recent past. There are many

living examples of contributions to the Nation's welfare made by the Bureau of Mines' studies. I need mention only a few, such as those arising from its combustion research, which has materially aided in the development of more efficient coal-burning equipment; the coking coal surveys and coking studies, which have proven invaluable in times of peace and war alike, and the synthetic liquid fuel researches and plant demonstrations.

The latest addition to this list of practical accomplishments comes in connection with the large development of power and tar from cheap Texas lignite, done in cooperation with the Texas Power & Light Co. The electric power is to be used to produce vitally needed aluminum, while the tar is a material in very short supply for many parts of our great chemical industry. Both products are extremely important to our defense programs during these troubled times.

So, as a result, we now have a huge industrial development taking place in the heart of our major oil and natural gas producing areas. It is a striking tribute to the way in which the industrialist will move in when the possibilities of research and technology have been fully explored. In this case, it is the Bureau of Mines with the cooperation of a power utility which supplied the basic and fundamental data—through its research, the technology through its process, and pilot-plant development and operation.

That is the background against which we dedicate this great new laboratory here in Grand Forks. This institution, with its facilities and staff, both in being and still to be, is a new member of the Bureau of Mines. It has a proud tradition to live up to, and this entire region expects much of it.

This whole area, with its matchless reserves of lignite and its nearby highly mineralized territory, its array of dams to be supplied flaming-up power from thermal plants, its growing diversification of agricultural crops and raw materials and its need for chemical fertilizers—this entire region, therefore, with its desires and ambitions for a stronger, better balanced economy, presents to everyone concerned with this new institution a great challenge and a marvelous opportunity.

It was that challenge and that opportunity which were seen by the late Charles R. Robertson, who applied his intelligence, his enthusiasm, and his vision to the project which is coming into reality today. It is to meet the challenge and the opportunity that this laboratory and its scientists and technicians are being called into service.

On behalf of the Department of the Interior I hereby name this the Charles R. Robertson Lignite Research Laboratory, and dedicate it to the service of the industry, the State, and the Nation.

Tell All?

EXTENSION OF REMARKS OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 2, 1951

Mr. SIEMINSKI. Mr. Speaker, I should like to quote an editorial from the Jersey Observer of Monday, October 1, 1951. It concerns observations over demands made by President Truman that Members of Congress be included in the list of top officials who should submit annual statements swearing to their outside sources of income and the amount of such income.

It is regrettable that the President did not include the publication of normal expenses incurred in serving in Congress, as well as the kinship of a Congressman's staff; such information would no doubt lend public support to the pay-increase bill for Members of Congress introduced by the distinguished gentleman from Massachusetts [Mr. McCormack], provided certain ground rules were recognized; that is, no relatives on staff, upkeep of two homes, no lecture fees, and so forth.

The editorial follows:

MUCH CONGRESS DO ABOUT LITTLE

Currently, Members of Congress are in a stew over demands made by President Truman that they, too, should be included in the list of top officials who are to submit annual statements swearing to their outside sources of income and the amount of such income.

If the lawmakers have nothing to hide from the publicity that would result when their sources of income outside of the Government salaries are published, why all the opposition to the plan? Have not Members of Congress, just as others, decried the moral corruption being evidenced in certain Government circles? This would be one effective method in the efforts to put an end to such corruption.

They must remember that their own house is not too clean. Was not a Member of Congress, representing a New Jersey district, convicted of accepting salary kick-backs from employees of his own office? Was not another Member of the same House from a district in Ohio also convicted of the same charge? Do they forget the scandal surrounding Congressman May and the Garsion brothers involving war contracts?

Don't they recall that a Senator and his wife have been mentioned in connection with huge profits made in the sale of commodities to which this Senator, as a member of an important committee, had access to so-called inside information concerning prospective Government purchases of the commodity?

Have they forgotten that another Senator, recent author of a bill affecting pipeline interests, killed by Presidential veto because of the cry that went up that the lawmaker, himself an independently wealthy man, held huge interests in pipeline corporations and would be feathering his own nest when the bill went into effect?

A Miserable Record

EXTENSION OF REMARKS OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 26, 1951

Mr. REED of New York. Mr. Speaker, it has been established by the most thorough examination of our fiscal affairs that a revenue measure such as the one now pending is absolutely unnecessary in the light of the savings that could be made by the executive department.

This attempt to distribute our resources to all parts of the world is indefensible and unworthy of those who are deliberately leading the people down the road to socialism and its ghastly consequences. The fight that has been made by many of us to stop this spending, waste, and corruption in Govern-

ment circles cannot succeed unless the people of the country become aroused, and take a firm stand to remove from public office those who have been dissipating not only the funds of the citizens, but the liberties of the citizens.

Under leave to extend, heretofore granted, I am inserting an editorial which appeared in the Washington Times-Herald of October 2, 1951:

A MISERABLE RECORD

There is a particularly bitter irony in the fact that the amount of new revenue that House and Senate conferees propose to extract from taxpayers and the sum the Citizens Committee for the Hoover Report estimates could be saved by better Government are exactly the same—\$5,400,000,000.

For while the administration together with its servants in Congress have busily passed two tax increases since the start of the Korean war and now clamor for a third, they have almost wholly disregarded the committee's bipartisan plan for squeezing the water out of Federal spending.

During this same period of dawdling over efficiency plans, the Eighty-second Congress and Mr. Truman increased Federal expenses 70 and the Federal civilian payroll, 30 percent.

Now Congress proposes to go home, once the new tax bill is passed, and it is too late for President Truman to submit additional reorganization plans to this session of Congress.

This miserable record destroys President Truman's boasts of a water-tight budget and irreducible Federal spending. The fact is that the whole time he was putting these statements into the record, the means to reduce spending were awaiting action by him or Congress.

Since President Truman has done little this year about Federal reorganization, Dr. Robert L. Johnson, chairman of the committee, rightly demands Congress remain in session at least long enough to lay the groundwork for respectable progress on Federal reorganization in 1952. He notes that Congress can finish up considerable parts of the program on which it has already completed hearings and other preliminary steps, and lists such examples as these:

1. The Senate bill taking politics out of postmaster appointments could be passed in the next 48 hours. It is now on ice in the Senate Post Office and Civil Service Committee.

2. A bill separating airline subsidies from payments to airlines for carrying the mails is now before the House Committee on Interstate and Foreign Commerce. There is no reason why the bill cannot be reported out and passed by the House this week.

3. The Hoover Commission's recommendation that the rates on penny postal cards and special services be set at a level to make these parts of the post-office program self-supporting is now in conference between the Senate and the House. It should be enacted into law promptly.

4. There is no reason why the Senate Post Office and Civil Service Committee cannot report immediately the Federal recruitment bill permitting departments to select certain specialized personnel under civil service standards.

Dr. Johnson also believes the Senate Committee on Expenditures could report the bill to reorganize the sprawling Department of Agriculture and the bill be passed by the Senate before adjournment. This would enable the House to pass the measure next January.

Obviously, much of the reason for congressional dawdling over these measures has been the time spent on publicity-producing investigations. Another reason is understandable reluctance of administration Congressmen to dry up the gravy in Federal employment.

But if Congress fails to make at least a partially creditable record on Federal reorganization during the remainder of this session it may be faced with the horrible possibility of an investigation of Congress by the public next year at the polls. The new taxes will serve to keep the public memory fresh.

**Address by Hon. Wayne Coy, Chairman,
Federal Communications Commission,
at One Hundredth Anniversary Celebration
of Sending of First Train Order
by Telegraph**

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Wednesday, October 3, 1951

Mr HILL. Mr President, on September 21 last, Hon. Wayne Coy, Chairman of the Federal Communications Commission, delivered an address at the one hundredth anniversary celebration of the sending of the first train order by telegraph, at Harriman, N. Y. This address is filled with the story of historic events of 100 years ago. It is most informative and interesting, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This celebration of the anniversary of sending of the first train order by telegraph by Charles Minot from this spot 100 years ago gives us a welcome opportunity to pay tribute to a real pioneer and to raise the curtain of time for a review of progress in railroading, in communications and in our Nation.

The year is 1851.

Millard Fillmore is in the White House.

The agitation over slavery is moving toward its climax. The feeble and aging Daniel Webster, now Secretary of State, is at the height of his fame and of the controversy over his historic oration on behalf of Henry Clay's Compromise of 1850 designed to forestall a civil war and preserve the Union.

The echoes of the hundred-gun salutes in leading cities in joyous celebration of the Compromise have barely died away before there is rioting in northern cities over the fugitive slave law.

And more fuel is added to the flames by the installments of a serial story appearing in a Washington-weekly newspaper. It is being dashed off by a little mother sitting at her kitchen table between taking care of six children. Her name is Harriet Beecher Stowe and her serial is Uncle Tom's Cabin.

Despotism is causing trouble abroad.

Louis Napoleon, after serving as President of France for 3 years, makes himself Emperor Napoleon III. For approving this coup d'etat, Queen Victoria dismisses her foreign minister.

The Spanish consulate in New Orleans is wrecked by sympathizers with Cuban independence.

Louis Kossuth leads a revolt for the independence of Hungary from Austria. Russia intervenes. Kossuth escapes, is brought to the United States by a naval vessel and greeted by enthusiastic crowds over the Nation. There are Kossuth hats, Kossuth

overcoats, Kossuth beards, Kossuth streets, and Kossuth clubs.

Secretary of State Webster prepares to send a bristling note to Austria telling her that the people of the United States always sympathize with democratic revolutions, especially with the Hungarian uprising against government imposed from without.

Cyrus McCormick receives a gold medal at the Crystal Palace Exhibition in London for his reaper.

John James Audubon, James Fenimore Cooper, and J. M. W. Turner die. James Russell Lowell is traveling in Europe.

Among the books being published this year are Child's History of England by Charles Dickens, The House of Seven Gables by Nathaniel Hawthorne, and Moby Dick by Herman Melville.

A new newspaper, The New York Times, edited in a windowless, candle-lighted building, makes its first appearance. The first issue carries four columns of foreign news which, the publisher is proud to boast, is, thanks to steamship and railroad, only 2 weeks old.

The Illinois Central & Rock Island Railroad is trying out a new lawyer—by the name of Abraham Lincoln.

The Vigilantes are organized in California and Maine goes dry.

In the field of transportation, canals are connecting the East and the West and the South. The success of the Erie Canal built 26 years ago has led to the recent building of the Chesapeake & Ohio Canal, the Illinois & Michigan Canal and 800 miles of canals in Ohio and many other projects.

But things are booming on the railroad front. Some people are even saying that railroads may some day supplant the canals.

It is only 25 years since the first railway corporation began to operate a railroad in the United States—a 3-mile road to haul stone from a quarry in Quincy, Mass., for the construction of the Bunker Hill Monument. It used horse power and iron plates on wooden rails. It is only 21 years since the first common-carrier railroad was started in Maryland, first powered by sails and later drawn by horses. On Christmas Day of that same year the first steam railroad began running out of Charleston.

And now in this year 1851 we have 11,000 miles of steam railroads in operation, nearly three times the number of miles of canals.

The locomotives burn wood. The more progressive railroads are substituting whale oil for candles in their lamps and headlights although few of them travel at night. Sleeping cars are coming into use. But there are still no dining cars. In this year of 1851 a train running from Ogdensburg, N. Y., to Boston makes history by hauling the first refrigerated car carrying several tons of butter.

The second of the two lines connecting the Ohio River and Lake Erie is being completed this year.

Chicago is to be linked by rail in two more years.

President Fillmore, Secretary of State Webster and other notables come from Washington in May to make the first trip on the New York and Erie Railroad, linking the Atlantic Ocean and the Great Lakes, hailed as the first long-distance railroad trip ever made in the United States.

Secretary Webster in a way invents the observation car on this trip. The famous orator, racked by rheumatism and hay fever, and 69 years old, only a year from his death, insists on being seated in an easy chair tied onto a flat car.

Included in the party of 300 is General Superintendent Charles Minot of whom more later.

It takes 2 days with a night stop-over to make the trip from Piermont, 26 miles north of New York City, to Dunkirk on Lake

Erie, a distance of 446 miles. The first trip linking the Atlantic to the Great Lakes over one unbroken line of railroad is completed. The successful run is celebrated with a barbecue of oxen, sheep, fowl, and loaves of bread 10 feet long.

Agriculture and industry everywhere are calling for the Iron Horse to carry their produce and products to markets. The westward expansion is accelerated day by day.

In the field of communication, great strides are being made although in some parts of the world semaphores are still being used for telegraphing. Russia, for example, is operating a system out of St. Petersburg employing 220 stone towers located 5 miles apart, manned by 6 men each and costing millions of rubles. In America various semaphore systems have been in operation. A proposal to Congress to build a semaphore system from Washington to New Orleans has been abandoned mostly because of the opposition of the portrait painter, Samuel F. B. Morse, who argued for the adoption of his electric telegraph system. It is now 7 years since Morse sent his "What Hath God Wrought" message over the newly completed telegraph line between Washington and Baltimore on the Baltimore & Ohio right-of-way.

Already small telegraph companies are stringing up wires in many parts of the country.

The possibilities of cooperation between the railroads and the telegraph are arousing the interest of men in both fields. But no railroad man grasps these possibilities as comprehensively as Superintendent Charles Minot of the New York & Erie Railroad—now the Erie Railroad.

Minot, the son of a Massachusetts supreme court justice, has abandoned the law for railroading and is an expert telegrapher himself. He has persuaded the directors to build a telegraph line along the Erie right-of-way, training the depot masters and clerks to act as operators.

Now comes the great day in September when Superintendent Minot is to give his conclusive demonstration of the utility of the telegraph in railroading and is to take an action that will make his name go down in history as a most significant contributor to railroad progress.

The telegraph has been used on the Erie heretofore to facilitate freight and passenger handling and incidental business but never in train dispatching.

Minot is riding an express train westward and is scheduled to meet an east-bound express here at Harriman, N. Y., where we are gathered today to celebrate his feat.

He waits here a few minutes. Then, apparently being an impatient man, as I understand many railroad executives are, he telegraphs up to the next stop at Goshen, 14 miles away, to ascertain if the train has arrived there. Discovering that it has not, he wires Goshen to hold up the east-bound express for further orders. This is the first telegraphic train dispatching in history. He then instructs the conductor and the engineer of his train to proceed on to Goshen regardless of the opposing train.

Now, since the advent of railroading, engineers have been running their trains according to the timetable. Whenever an emergency disrupts their schedule, they send a flagman trotting down the track ahead with a red flag. Minot's engineer has visions of a disastrous collision. He can't see committing suicide. His reply is: "Do you take me for a damned fool? I won't run by that thing!"

Whereupon Superintendent Minot takes the throttle himself and speeds ahead to Goshen.

No collision—no catastrophe.

The first train order by telegraph is a success.

So now we are here a century later to celebrate that event and the stimulus it

gave to communications, to railroading and to the general growth of our Nation.

In doing this we are only adding to the well-deserved tribute bestowed when Mrs. E. H. Harriman, the mother of W. Averell Harriman, erected a tablet to Charles Minot's memory here at Harriman in 1912.

Despite Minot's success, there was plenty of distrust of this new medium for dispatching trains. Two years later, for example, when Andrew Carnegie was a telegraph operator on a railroad, he discovered that the officials were so skeptical that they permitted only the superintendent to give a train order by telegraph.

For a long time the telegrams on the Erie began with "Dear Sir" and ended with "Yours respectfully."

More than 10 years were to pass before the telegraph came into general use for dispatching.

From then on the telegraph and the railroads worked so well together that they were referred to as the Siamese Twins of Commerce.

The iron cord and the iron horse teamed up to revolutionize America.

The telegraph came to serve as the nervous system of the railroad. It virtually doubled the capacity of a single track. It flashed time signals, storm and damage warnings over entire systems.

At the peak of telegraphy on the railroads, around 1910, 80,000 telegraphers, including station agents, were employed.

In 1882 railroads began to employ another invention—the telephone—for dispatching and other uses—and today there are 900,000 miles of telephone wire as compared to 550,000 miles of telegraph wire. The number of telegraph operators is about half the figure of the peak year. Today 70 percent of all train orders are transmitted by telephone.

In addition to serving the needs of the railroads themselves, the railroad telegraph systems were indispensable in building up the commercial telegraph industry. Even today the railroads act as agents for Western Union in 10,000 communities and transmit 4,000,000 public telegrams a year.

But perhaps railroads and telegraph have a relationship ahead of them that is far more dazzling, not to say dizzying, than anything that has gone before. Certainly a whole new world of cooperation between the two is opened up by the possibility recently advanced by Norbert Wiener, professor of mathematics at the Massachusetts Institute of Technology. In his book *The Human Use of Human Beings*, Professor Wiener gives us a glimpse of what may be ahead:

"Let us admit that the old idea of the child that in addition to traveling by train or airplane one might conceivably travel by telegraph, is not intrinsically absurd, far as it may be from realization. . . . The difficulties are, of course, enormous. In other words the fact that we cannot telegraph the pattern of a man from one place to another is probably due to technical difficulties, and in particular, to the difficulty of keeping an organism in being during such a radical reconstruction. It is not due to any impossibility of the idea."

Well, suppose Professor Wiener's theory works out. Presumably, you would walk into a railroad station and simply be asked to be telegraphed to Chicago. If this system works, if you can telegraph a person, you can probably telegraph freight likewise. Railroads can tear up their tracks and rely entirely on their telegraph wires. The big gun of the railroads will not be the engineer—it will be the telegrapher.

Personally, I am vastly intrigued by this idea. I am wondering what I would look in Morse code.

Suppose that the telegrapher on some occasion violates rule G and mixes up some of his dots and dashes? You might arrive in Chicago with a misplaced eyebrow, or a few teeth missing or your hair might be

brunet instead of blond. But what would that matter compared to the speed of your journey—the speed of electricity—thousands of miles a second? Certainly you can afford a few changes in your physiognomy in the light of that.

But perhaps this idea isn't any more daring than the idea of sending the human voice and the human image thousands of miles through the ether without any wires would have seemed to Superintendent Charles Minot in 1851. And after all, when you get the voice and the image, what more do you want?

And we must remember, too, in considering Professor Wiener's idea that when the bill to appropriate money for Morse's telegraph line was up in Congress in 1842, 22 Members thought to ridicule it to death by voting to include experiments in mesmerism. The bill passed by a close vote of 89 to 83. Seventy Congressmen didn't vote at all, many of them leaving their seats to "avoid the responsibility of spending money for a machine they could not understand."

In pondering Professor Wiener's idea we must also remember that the Czar of Russia as late as the year of Charles Minot's feat considered the telegraph dangerous. And even some American newspapers helped spread the rumor that the newfangled telegraph lines were responsible for the cholera epidemic of 1849.

After telegraphy and telephony, the next big step for the railroads was radio.

It was in 1915 that railroads began experimenting with the use of radio which had already proved so valuable in dramatic disasters at sea.

Beginning in 1930 the trend was to carrier current or induction radio in which signals are carried on telephone lines along the tracks without physical contact. A dozen roads are using this system today.

But the real advance in radio communication on the railroads dates from 1945 when the Federal Communications Commission established the Railroad Radio Service designed to use space radio or signals traveling through the ether without relation to wires. Very high frequency (VHF) channels were allocated in the 152-162 megacycle band.

Today one-half of all the larger roads use radio. Up to date the Commission has issued authorizations for 400 land stations and 5,200 mobile units. The number of stations authorized has increased by more than 60 percent during the past year.

Radio is rapidly becoming a foremost tool for enhancing the safety and efficiency of railroad operation.

Radio can be used for communication from caboose to engine, from train to train, from train to wayside crews, from train to wayside stations to connect with an entire system over perhaps hundreds of miles. The value of radio is pointed up by the fact that some of today's trains are 2 miles long or more than twice the length of the entire routes of three American railroads.

Radio has proved particularly useful in increasing the efficiency and economy of yard and terminal operations.

Congratulations are due the Erie Railroad for its leadership in the use of radio. It is a curious historical coincidence that the railroad that first used the telegraph for dispatching should also be in the forefront in employing this new art of radio to speed its operations. It is now using radio over its entire main line from Jersey City to Chicago. In its train service it has 62 base stations and 350 mobile units. In its yard-terminal service it has 4 base stations and 86 mobile units.

I appreciate the problems that must be solved before radio's full potentialities can be realized in railroad operation. However, the scarcity of channels in the radio spectrum makes it necessary that the widest possible use be made of them. I am sure that an industry that has solved as many difficult

problems as the railroads have will soon discover the techniques for the fuller application of radio in its operations.

So important has radio become in modern life that the supply of channels isn't nearly big enough to meet the demand. Besides the railroads, other users of radio in our safety and special category now include ships, airplanes, police and fire departments, electric and gas companies, highway and forestry agencies, streetcars, taxicabs, highway trucks and busses, geologists, newspaper reporters, lumberjacks, motion-picture directors, manufacturers, distributors, and individuals.

Railroads cannot afford to let tracks or rolling stock remain idle or to get less than the maximum utilization from them. Neither can the Nation afford to let valuable and scarce electronic highways remain idle. Conservation is imperative.

Radio, like railroading, is a dynamic field and new ideas are constantly arising. I shall discuss a few of these ideas.

For example, there is the possibility of multiplexing on the mobile service frequencies allocated for railroad use—putting several voice circuits on a single radio signal. There is a possibility that such an innovation could do two things: First, provide a larger number of talking channels than the present railroad allocation under present techniques can provide; and, second, permit greater flexibility in the use of those VHF channels. This would be an especially desirable improvement in a particularly congested area. In the world's largest terminal area at Chicago, for instance, there are 200 freight yards with 8,000 miles of track which handle 40,000 cars a day. Experimentation should provide valuable information on this possibility.

Another idea attracting increasing interest is the use of microwave frequencies which are higher in the spectrum—above 1,000 megacycles. Radar operates in these frequencies. The Commission has allocated some of these frequencies for experimentation by the railroads. If such experimentation provides us with adequate information, we can greatly increase our present supply of usable frequencies.

The rapid expansion of the usable spectrum space in the last few years encourages us in these hopes. We are using frequencies now that seemed to be beyond the pale of possibility only a few years ago.

If equipment and techniques can be developed to employ channels in the as yet largely unused microwave region of the spectrum, I can foresee many new applications of radio in railroad operations.

Facsimile, to eliminate all possibility of error in the instantaneous transmission of complicated messages, tabulations or diagrams might come into wide use.

Radio teletype so that train orders or other messages can originate at any point and be received directly on teletypewriters which will type the messages is another possibility.

Microwaves could be used to bring readings to a central point of pressure gauges, speedometers and other indicators.

Whole yards or terminal areas might be made visible to a dispatcher by television. The television cameras located at strategic points throughout the area and perhaps even along the main line would bring the operations to a battery of screens in his control room. The activities of the yard crews, the freight house handlers, the track men, and the signal gangs could all be observed by the appropriate executives.

Then, as the art of radio advances, since we have guided missiles and robot airplanes, why not automatic, unattended or robot freight and passenger trains? A complete push-button operation with the train traveling from coast to coast without engineer, fireman or brakeman, but controlled all along the route by dispatchers using radio signals?

The Casey Jones of the future would not be a flesh-and-blood hero but a robot—a tiny control box of vacuum tubes and wire.

Can you imagine anybody writing a song about a contraption like that?

And how will these robot trains be powered?

Since the middle nineteenth century year of Charles Minot's first telegraphed train order we have progressed from wood burning steam locomotives, to steam coal burners, to Diesels, and to Diesel electrics.

Today with an atomic submarine already under construction and with Chairman FRANK McNAMON of the Joint Congressional Atomic Energy Committee proposing an atomic Army, an atomic Navy, and an atomic Air Force, there can be only one answer—the atomic locomotive.

It will, of course, be equipped with radar to detect all obstructions or emergency signals ahead.

I am sure that if Charles Minot were railroading today he would look forward enthusiastically to operating such a radio-controlled, radar-equipped, atom-powered train.

In the 100 years since Charles Minot sent the first train order by telegraph the Nation has grown from 23,000,000 to 154,000,000. The railroads have grown from 11,000 miles of road to 224,000, employ more than 1,000,000 workers, and haul more than 2,000,000 light and passenger cars.

Passengers on some trains who, unlike Daniel Webster on the Erie 100 years ago, aren't interested in the scenery can divert themselves by watching movies, listening to the radio, watching the television, or picking up a telephone and calling their friends anywhere around the globe.

Communication remains the nervous system of our railroads. Freight and passengers will move with increasing speed and safety as the art of railroad communication is developed from year to year.

We honor Superintendent Charles Minot for the impetus he gave to safer and faster railroading when he pioneered telegraphic dispatching back in 1851. He took a great forward step that redounded to the benefit of his road, of his industry and his Nation.

We in communications and in railroading can continue to honor him in the future by emulating his imagination, his vision, and his boldness in the application of new ideas to problems peculiar to our own time.

India's Anxiety Over Japan: Attitude Examined

EXTENSION OF REMARKS
OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 27, 1951

Mr. POULSON. Mr. Speaker, I wish to insert in the RECORD this article on India and some of the probable reasons for her recent action.

THIS WORLD

(By Volney D. Hurd)

INDIA'S ANXIETY OVER JAPAN ATTITUDE
EXAMINED

PARIS.—Does not India see the new Japan as its greatest competitor for the leadership of Asia rather than as a threat to India's physical safety?

It was the Japanese with their "Asia for the Asians" campaign who unleashed the rise of nationalism in the Far East, showing thereby their potential as a modernized nation capable of leading Asia. The only other

Asiatic nation with an equivalent potential of industrialization and the influence and leadership that go with it is India. Its vast natural resources and a British training make this possible.

But India is a case of mere potential against a proved capacity. India is a nation of strongly divided elements, churning around in a vast political turmoil. Further, it has no chance of gaining the astronomical sums needed to compress into a relatively few years the huge program of industrialization which the situation demands.

Japan, on the other hand, is a compact, unified, hard-hitting nation which has successfully challenged even the mighty west with its industrialization, and can do so again. Further, the nations of Asia have the raw materials this great island factory needs. Here is the two-way trade which can tie these nations into the Japanese economy.

When I interviewed Prime Minister Jawaharlal Nehru here last February he spoke of the fact that the west did not understand Asia and that the Asiatic nations must all be freed to permit their full development. But when I asked, "How about Japan?" Mr. Nehru's face quickly clouded over and he replied, "Japan is something else again. She should not be given the right to be completely free and rearm because she constitutes a threat to the rest of Asia." A further effort to run down the logic of this kind of "freedom for all"—that is, all except one—got me exactly nowhere.

However, having just played the role of attempted mediator between China and the west, and in so doing becoming more and more the self-appointed spokesman for Asia, Mr. Nehru gave the impression that he considered India, with its industrial potential and its middle-ground position, as the logical leader of Asia. The accompanying implication was that the real Japanese threat perhaps was not quite so much military as one might be led to think.

India has been strongly supporting the Chinese Communists in its effort to play this mediator role. It has favored the Communists in Indochina because they are trying to throw off the French controls. India is opposing all French moves there, including the formation of the associated states of Vietnam, Laos, and Cambodia.

The question of Asiatic leadership also brings up a third possible nation—China. Peiping frankly has announced its intention of "freeing" Asia. It thereby clearly proclaims its intention to take over the leadership of Asia on a communist basis.

India obviously is playing a dangerous game in stringing along with China considering its own great poverty, which attracts communism. It is apparently acting on a long gamble that it can industrialize quickly enough to eliminate the poverty on which China's communistic imperialism could feed, and in the process overtake China and gain the leadership of Asia.

However, if Japan is freed and becomes dominant in Asia, as now looks likely, thanks to the treaty arranged by the United States, then any Indian hopes for Asiatic leadership would be severely bent, if not broken.

Censorship of News

EXTENSION OF REMARKS
OF

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Wednesday, October 3, 1951

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article

pertinent to the remarks I made yesterday in regard to the gag order of the President. The article is entitled "Suspicion of News Tinkering Overcasts Edict on Secrecy," written by James Reston, and published in the New York Times of today.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SUSPICION OF NEWS TINKERING OVERCASTS
EDICT ON SECRECY: APPROACH OF THE ADMINISTRATION TO PUBLIC INFORMATION
LIKENED TO A PRESS AGENT'S

(By James Reston)

WASHINGTON, October 2.—Several events of the last few weeks indicate why the press and radio have been slightly skeptical of President Truman's recent order authorizing Federal civilian agencies to withhold information from the public for security reasons. Among these events were the following:

1 At the recent meeting of the North Atlantic Council in Ottawa, Secretary of State Dean Acheson not only opposed publication of limited and officially edited summaries of the general debate on the world situation, as proposed by public relations officers of the North Atlantic Treaty Organization, but also opposed publication of the agenda of the meeting. Incidentally, the official agenda had already been published when he opposed publication of it.

2 The State Department placed a "restricted" stamp on a catalog of the names and hotel addresses of the delegates at the recent Japanese Peace Treaty Conference in San Francisco. This prevented reporters from getting the list until other delegations, objecting to the ruling, made the list public.

3 The White House recently blocked publication of a report by one of its own top officials because the report was critical of some aspects of the administration's rearmament effort, and presumably because it coincided with the dismissal of General of the Army Douglas MacArthur.

4 The Treasury Department recently held back news of irregularities in the Internal Revenue Bureau in St. Louis until compelled to acknowledge the problem by disclosures on Capitol Hill.

5 After many weeks of negotiation with the NATO countries on sharing the cost of certain bases in Europe, an agreement was signed at Ottawa last month. Not even the principles of this agreement or the percentages of the cost have been made public.

6 State and Defense Departments repeatedly denied reports of differences with General MacArthur over the conduct of policy in the Far East, though these eventually led to a dismissal for which the public was entirely unprepared.

7 The Department of Defense sat on the recent disclosures of the death of two officers of the Office of Strategic Services in the famous Holohan case until forced to release the information by an article in True magazine.

These are all run-of-the-mine cases. They do not compare with the administration's secret deal to bring the Ukraine and Byelorussia into the United Nations. Nor do they raise security questions, as did the Kuriles-South Sakhalin-China Railroad deal, which was designed to bring the Soviet Union into the war with Japan.

SUPPRESSIONS OF CONVENIENCE

Most of them were suppressions of convenience, designed to ease the process of negotiation, as in the cost-of-bases deal, or to save the administration embarrassment, as in Nos. 3, 4, 6, and 7, above.

President Truman's new order on handling security information was not intended to protect or encourage suppressions of convenience. On the contrary, it specifically condemned such suppression.

Nevertheless, the order created some apprehension here because the administration's approach to public information is very much like a press agent's approach.

That is to say, the administration's tendency is to turn the flow of information on or off in accordance with the tactic of the moment, flooding the wires with news when it wants to put something over, and closing down on information if disclosure might prove embarrassing.

There were some security angles to the Ottawa conference that had to be handled carefully—although it is doubtful if any NATO military scheme can be put into effect in Europe without the Communists, who are part of almost every continental army, knowing all about it—but in the main that conference dealt with several basic criticisms of United States policy, which our officials did not particularly want publicized.

Therefore at Ottawa a strict security policy was invoked. The following week, however, Premier Alcide de Gasperi, of Italy, came to Washington and the Government wanted publicity. So the big information machine was put to work. Background press conferences were held all over the place; communiqués, speeches, statements of approval were issued galore. Officials who wouldn't look at a reporter in Ottawa were suddenly amiable and even loquacious on those aspects of the visit they thought would impress opinion in Italy.

MATTER OF NEWS VALUES

Just why this visit was more newsworthy than the visit of the Canadian Prime Minister Louis St. Laurent a few days later was not clear, but in the de Gasperi case the administration decided to make news while on the other visit—during which Mr. St. Laurent made the decidedly newsworthy suggestion that Canada build the St. Lawrence seaway herself if necessary—the administration gave him short shrift and even sent Maj. Gen. Harry Vaughan to the airport to meet him.

In short, there is a widespread suspicion here that the administration tinkers with the news over and above the requirements of security, and partly as a result of the rearmament program, partly in response to Congress' emphasis on security regulations, is now more security-minded than anybody except the Russians.

At Ottawa, the United States Embassy was protected by the Marines, who went to elaborate security checks before allowing reporters to enter the building, even in the company of high United States officials. At the Japanese Peace Treaty Conference in San Francisco, the State Department placed steel-helmeted soldiers of the Sixth Army on the stage until the Australians pointed out that, after all, this was a peace conference.

Thus the new administration security-information order has received the raised-eyebrows treatment because, regardless of its intent, it must be implemented by many men who have been playing heroes and villains with the news over last few years.

Automobiles for Rehabilitation of Disabled Veterans

EXTENSION OF REMARKS OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 26, 1951

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the National Service

Headquarters of the Disabled American Veterans:

DISABLED AMERICAN VETERANS,
NATIONAL SERVICE HEADQUARTERS,
Washington, D. C., October 2, 1951.
Hon. EDITH NOURSE ROGERS,
House of Representatives,
Washington, D. C.

DEAR MRS. ROGERS: Please find enclosed herewith DAV Resolution 190, adopted at our last national convention held during the month of August 1951, in Milwaukee, Wis.

Resolution 190 clearly expresses the position of the Disabled American Veterans with respect to the bill H. R. 4233.

With kind personal regards, I am

Very sincerely yours,

CHARLES E. FOSTER,
Assistant National Legislative Director.

Rehabilitation Resolution 190

Whereas the House of Representatives, on June 20, 1951, passed and sent to the Senate H. R. 4233, a bill authorizing the Administrator of Veterans' Affairs to furnish automobiles to arm amputees, leg amputees, blinded veterans, and those who have suffered the loss of the use of a limb as the result of service in World War II and including the present Korean conflict; and

Whereas it is the intent of the generous American public to assist in the rehabilitation of the severely disabled veterans: Now, therefore, be it

Resolved, That the Disabled American Veterans in their thirtieth national convention assembled in Milwaukee, Wis., August 13-17, 1951, go on record as being in favor of the passage of this legislation which would benefit a great many of our most severely disabled comrades and thereby help them on the road to rehabilitation.

What Secrets?

EXTENSION OF REMARKS OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 26, 1951

Mr. REED of New York. Mr. Speaker, under leave to extend, heretofore granted, I am inserting in the RECORD an editorial from the Washington Times-Herald of October 2, 1951, entitled "What Secrets?":

WHAT SECRETS?

We have been trying to find out what secrets were revealed by what Government department to justify Mr. Truman's recent censorship order. He has directed each department to classify its official papers to make sure that important secrets will not be disclosed through the newspapers and the radio to potential enemies.

Mr. Arthur Krock, of the New York Times, says that "recent breaches of security by a few executive officials and some Members of Congress seem to have led to the President's latest efforts." That is not very enlightening in the absence of specifications.

Secrecy in the military departments makes some sense, though there is ample reason to suspect that it has done the country more harm than good. But what sense is there in supposing that the Department of Agriculture, the Interstate Commerce Commission, the Bureau of Engraving, and all the other civilian branches of government have any secrets that ought to be kept from the

American people? What facts do these agencies possess that, if revealed, would weaken us and strengthen a potential enemy?

We passed the question along to an expert, Mr. Walter Trohan, the head of the Chicago Tribune Washington bureau. We quote from his reply:

"Remember that the British made the carrying of gas masks compulsory during the early days of the war and later admitted the things were no good except for morale? Just so, this censorship is calculated to keep up war morale.

"The Commerce Department publishes figures on the production of air frames. From this it can be determined how many planes we are producing. However, since officials boast about production from time to time or report it to Congress, there doesn't seem to be much sense to hiding the figures.

"The Agriculture Department has dope on food shipments abroad, from which one may calculate how much is going to troops, but since we know how many troops there are, suppressing the figures wouldn't make any sense."

There is more to the memorandum, but it all comes to the same point. The Government today does classify all specifically military information and releases only what it chooses to release. There was more censorship before the President's latest order than can be justified. The new censorship is not needed for the national security. It is needed for the protection of the thieves in the administration from exposure of their crimes.

The appropriate remedy is impeachment. As this Congress isn't virile enough to do its duty, the people will have to wait until November 1952 to rid themselves of this tyranny.

Dr. Walter Reed, One of the Greatest Benefactors Mankind Has Ever Known

REMARKS OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. RANKIN. Mr. Speaker, today is the one hundred anniversary of the birth of Dr. Walter Reed, of Virginia, one of the greatest benefactors mankind has ever known.

He deserves a monument almost as high as that of George Washington for the great services he rendered to mankind in saving human lives and reducing human suffering.

It was Walter Reed who discovered, and demonstrated, the cause of yellow fever, one of the most devastating, one of the most horrible diseases of all times. It almost depopulated Philadelphia, at one time, killing 1 out of every 10 persons. Dolly Madison's first husband died from it, as did untold thousands of others, not only in the Philadelphia area, but all down the Atlantic and the Gulf seaboard, and far into the interior. During that horrible disaster, carts drove up and down the streets, picking up the dead and hauling them away by wagonloads.

In the words of the poet:

The sick man started in his bed,
The watcher leaped upon the floor
At the cry, "Bring out your dead,
The cart is at the door."

Approximately 200 years after this malady virtually depopulated Philadelphia, Dr. Walter Reed, of Virginia, a medical officer in the Spanish-American War, discovered the cause of the malady. He found that it was spread by the *Stegomyia* mosquito. He like to never got the authorities to give him the right, and the funds, to put on the demonstration. But when he did, he proved his point, showed them how to eliminate the malady, and forever prevented its spread in the years that were to come. That started the inquiry as to what was causing malaria, and it was found that it was caused by the *Anopheles* mosquito, which has also been eliminated. That inspired the investigators to go a step further in their investigations and they found the cause of typhoid, and how to eliminate it.

In the year 1900, there were 1,000 people died from typhoid fever in the State of Mississippi alone.

In the year 1948 only one person died of typhoid fever in that State.

During the year 1900, almost 2,000 people died of malaria in Mississippi. In 1948, only 12 people died of that malady in the State. This discovery of Walter Reed's also caused an investigation of the spread of pellagra, of which 1,850 people died in Mississippi during the year 1900. In 1948 there were only 30 people died of pellagra in that State. This revelation of Dr. Reed's also inspired a study of the cause and prevention of tuberculosis. In 1900, a total of 3,450 people died of tuberculosis in Mississippi. In 1948 only 668 people died of tuberculosis in that State—less than one-fifth of the number who died in 1900. This investigation led to the discovery, the cause, and the cure of hookworm, which has now been practically eliminated.

What has been accomplished in Mississippi in the eradication of these diseases, as a result of the start made, and the example set by Walter Reed, has also been accomplished in every other Southern State, as well as in many States of the North and in foreign countries throughout the world.

Today, as a result of these developments Mississippi, and in fact the entire South, has become the healthiest section of the world.

The entire world should pause today and pay homage to the memory of Walter Reed, that great Virginian who did so much for mankind. He was one of the greatest individuals our country has ever produced.

Rent Hikes—Rent Clinics

EXTENSION OF REMARKS

OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 2, 1951

Mr. SIEMINSKI. Mr. Speaker, for the benefit of my colleagues who represent districts containing congested housing areas, I should like to list below two articles on rent hikes and rent

clinics which appeared in the *Jersey Observer*, Monday, October 1, 1951. They show the extent to which Federal and local authorities are cooperating to ease difficulties caused tenants by the recent lifting of rent controls. I regret that in Congress the will of our democratic administration did not prevail on this issue. Nevertheless, it is to the credit of my distinguished colleague from New Jersey, Congressman EDWARD J. HART, and of the officials in Jersey City, under the leadership of Mayor John V. Kenny, that the confused and alarming rental situation in Hudson County is being tackled:

JERSEY CITY RENT CLINICS OPEN TONIGHT

Sixteen local rent clinics scheduled to open tonight in the various ward organization headquarters in Jersey City will be manned by a staff of 30 lawyers who have volunteered their services. It was announced this morning by Mayor John V. Kenny's office.

The work of the voluntary staff will be under the supervision of Ralph P. Messano, director of the local Rent Control Bureau, and his assistant, Herman Brandes.

The clinics will remain open on Tuesday and Thursday evenings, starting at 7 o'clock. Decision to open the clinics came as a result of having the facilities of the local Rent Control Bureau swamped when it was announced that office would be open to help local residents get information concerning rent increases.

HART PROTEST BRINGS ACTION ON RENT HIKES

Acting on the protest of Congressman EDWARD J. HART on what he called the confused and alarming rental situation in Hudson County, Tighe E. Woods, Federal Director of Rent Stabilization, has moved into the area rent-control office at Newark through a personal representative, with a staff of five investigators, to correct reported abuses in thousands of rent increases asked by local landlords since the lifting of rent controls.

Congressman HART carried his protest to Director Woods last Wednesday and by Friday the review of affairs at the Newark office in charge of Michael Pecora, local rent-control director, and his staff, was well underway, according to a letter forwarded to Congressman HART by Director Woods.

At the same time that Congressman HART revealed that Director Woods had promptly taken cognizance of his protest, the Fourteenth District Representative also revealed that he had arranged for an immediate review of the cases involving more than three hundred-odd tenants in the old Hoboken estate properties in Hoboken with a view to correcting what appears to be many inequities.

SEES EARLY ACTION

Congressman HART said, "I expect that many of the orders issued by the Newark rent office will be modified by the early part of next week and made retroactive to their effective date, namely, September 10."

He further said, "While the law authorizes automatic rent increases to landlords up to 20 percent, minus certain increases that they may have already received, there is no justification for any increases beyond that amount and where orders have been issued increasing rents based upon false information concerning required service supplied, where in fact they are not modifications and rectifications will be speedily made."

In his written report to Congressman HART, Director Woods says: "Thank you very much for calling the Newark situation to my attention early this week. As a result of your alerting me, I sent a personal representative, together with a number of staff members, to the Newark office so that I

could have a first-hand report on what was developing there.

SEVENTEEN THOUSAND COMPLAINTS

I found the situation substantially as you had reported it to me although there was a considerable exaggeration of the number of tenant protests filed. News stories and other accounts indicated 50,000 to 70,000 tenant complaints but a check of my staff representative disclosed the actual figure was closer to 17,000 tenant complaints.

"We both recognized that this whole problem is basically due to a shortage of manpower. Yet, we must do something about it, and we will. I have worked out some administrative changes in the office to handle this temporary workload, and we have asked Governor Driscoll for nominations to provide a balanced Rent Advisory Board in each of the counties of the northern New Jersey defense-rental area.

"I am satisfied that with these steps and such others as may be necessary we will shortly be able to report to you a satisfactory settlement of the problem. I will follow through personally on this matter.

"My sincere thanks for your constructive and continuing interest in rent control."

Censorship

EXTENSION OF REMARKS

OF

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Wednesday, October 3, 1951

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the *RECORD* an article entitled "New Type of Censorship," written by Roscoe Drummond, chief, Washington news bureau of the Christian Science Monitor, and published in the *Christian Science Monitor* of September 27, 1951, appearing on the first page of that newspaper, and an editorial entitled "Step Toward Tyranny," published on the last page of the same newspaper.

There being no objection, the article and the editorial were ordered to be printed in the *RECORD*, as follows:

STATE OF THE NATION

(By Roscoe Drummond)

NEW TYPE OF CENSORSHIP

WASHINGTON—The White House has applied a meat ax when it needed only a scalpel in order to cut out the weak spots in the Government's efforts to safeguard information affecting national security.

The President has avowed that there is no intention to add any element of censorship through the directive establishing a new, all-agency set of rules for controlling secret information.

This is an honest avowal. This is a good intention. But the experience of Washington newspaper and radio correspondents suggests that the chances of making good that intention would hardly be visible to the Mt. Wilson telescope at close range.

Mr. Truman himself recognized that the new authority to classify data and documents as "top secret," "secret," "confidential" and "restricted" by departments and agencies which normally have nothing to do with operations which affect security, is a dangerous invitation to abuse. In his letter to the Federal bureaucracy the President did his best to warn against the worst in order to avert it. He wrote:

"To put the matter bluntly, these regulations are designed to keep security information away from potential enemies and must not be used to withhold nonsecurity information or to cover up mistakes made by officials or employees of the Government."

The matter needs to be put bluntly and it is not putting it too bluntly to make it clear that the tentlike application of the security rules of the sensitive departments, such as Defense, State, and Atomic Energy, to the entirety of the Federal Government opens uncharted avenues of concealment—more likely by paths, detours and super-highways of concealment.

And everyone will avow that censorship and concealment are not intended—from the President, who sincerely doesn't believe he believes in censorship, to the fifth assistant in the weather bureau who may be frightfully tempted to stamp "confidential" on the file of bad prognostications.

It is the effect, not the theory, of the all-inclusive secrecy rules which caused the President to feel that he must warn against their misuse before they even had gone into effect and which make Washington correspondents view them with a reserve bordering on alarm.

The theory is that it is reasonable to apply to the whole Government—Army, Indian Arts and Crafts Board, Navy, Fish and Wildlife Service, Atomic Energy Commission, and the Smithsonian Institution—uniform authority and uniform regulations for classifying security information.

The theory is that officials will classify only that information which would endanger the security of the United States by becoming known to potential enemies.

That's the theory. But the consequences of the new order are these:

It gives into the hands of literally thousands of Federal officials and employees the power to decide what portion of the information which emanates from their offices shall be deemed secret—secret from potential enemies, secret from the press, secret from the public.

It leaves with these same thousands of Federal officials and employees the authority to determine that information which reflects on the competence of any agency or discloses its mistakes ought not to be allowed to get into the hands of potential enemies—and as an unhappy byproduct of that determination simply couldn't be allowed to get into the hands of the public.

It makes serious penalties applicable to officials and employees who allow any information, which has been classified, from becoming known and, by bringing the entire Federal bureaucracy under this new order, tends to create a mass mood of play-safe censorship.

For a directive which doesn't intend any of these things, it seems to have left little undone calculated to bring them about.

STEP TOWARD TYRANNY

President Truman has just put into the hands of all Federal officials a favorite weapon of tyranny—the power to censor. He undoubtedly believes this is necessary for security reasons, and he declares it is not censorship. But it is the power to censor.

In extending to other departments of Government the authority—hitherto exercised only by the Defense and State Departments—to withhold information on security grounds he is opening the way to serious abuses. He recognizes that there is danger, for he warns officials that the purpose is to keep information out of the hands of potential enemies, not to "withhold nonsecurity information or to cover up mistakes made by any official."

But what adequate means are provided for preventing these very abuses? The chief damage may be done by officials who merely wish to play it safe. But if one should wish to cover up, what chance has the public or

the press of preventing him? Mr. Truman rejected a proposal to permit appeal to the courts against an official's refusal to give information.

Bureaucratic government has been growing apace. The complexities of modern society and political pressures have led to a situation where administrative agencies enjoy very great discretionary and arbitrary power. Their decrees are law for multitudes. These agencies already exercise one form of control over information—they have an army of public relations officers to give out a favorable account of their activities. To hand them power also to clamp the lid on unfavorable facts is indeed dangerous.

The scandals now coming to light in connection with the Reconstruction Finance Corporation and the Internal Revenue Bureau underscore the point. They lift a corner of the curtain on continuing efforts to influence official actions by gifts and political pressure. Surely there are ways to tighten legitimate security requirements without taking this long step—unconscious though it may be—toward tyranny.

The Need for Financial Aid to Medical Schools

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Wednesday, October 3, 1951

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article concerning America's need for additional doctors, written by Dr. Alan Gregg, of the Rockefeller Foundation, and published in the September 1951 issue of the Scientific American as part of a series of articles on America's human resources, and a statement I have prepared regarding the article.

There being no objection, the article and statement were ordered to be printed in the RECORD, as follows.

DOCTORS

(By Alan Gregg)

Anyone who undertakes to assess our medical manpower situation must first consider the question, "medical manpower to do what?" The work of doctors is not, and never will be, a fixed and unchanging task, particularly in a dynamic country like the United States, where not only the national scene but medicine itself is constantly in motion. To understand what is implied by such an idea as the shortage of doctors we need to examine the nature and amount of the services they will be expected to perform. Let us, then, look at some of the broader aspects of medical care—at the trends rather than only the latest figures, the dynamics rather than the statistics of the situation.

Medicine has much more to offer today than it used to have. The Harvard biological chemist, Lawrence J. Henderson, once remarked that somewhere around 1910 the progress of medicine in America reached a point where it became possible to say that a random patient with a random disease consulting a physician at random stood better than a 50-50 chance of benefiting from the encounter. In the 40 years since then the chances have improved a good bit beyond that. The 14,000,000 Americans who served in the military forces in World War II were given a notable demonstration of how far

medicine had progressed, among our military personnel during that war there were only 6 deaths from disease per year for every 160 such deaths in World War I, 250 in the Spanish-American War, and 650 on the northern side in the Civil War. Turn to an example from civilian life: Chicago 20 years ago had 6,012 reported cases of diphtheria with 513 deaths, last year 5 cases with no deaths.

Most people, however, seem to ignore an obvious but nonetheless remarkable consequence of the steady improvement in the quality of medical service, namely, the more doctors can do for people, the larger becomes the demand for medical services. I can remember the heated debates I heard in my childhood as to whether the automobile would ever take the place of the horse. Very few foresaw then that advances in automotive technology and manufacture would make the automobile less expensive, more dependable, more durable, more powerful, more useful, less noisy, and less smelly. Almost no one seemed to realize that with better cars roads would be multiplied and improved. Improvement increases demand, and increased demand in turn creates and rewards still further improvement. This is as true in medicine as in technology. The love of good medical care seems to follow Shakespeare's observation that "love grows by what it feeds on."

As a result, the entire horizon of medical care has changed. An increasing number of people want the better care that is now available. Whereas medical care used to be considered a privilege of the rich or a boon given in the name of charity to the poor, it is now coming to be thought of as a necessity that more and more people insist on having, if necessary by taxation. And at that point a revolutionary change occurs in the horizon of medicine. Instead of calculating increases in the demand for medical care, we face the task of estimating the need for medical care.

No doctor needs to be told that the number of persons who need medical care is at present immeasurably greater than those who are asking for it or getting it. We have no detailed census of the defects and diseases (what the doctor calls "morbidity") among the American people, or even of how much of that need ever turns into explicit demand for the services of doctor, dentist, or nurse. But such samplings as have been taken suggest that the unrecorded need far exceeds the recorded demand. So if the trend of the times is clearly toward meeting the need, we can sensibly dispense with the spurious accuracy of close figuring based on the records of demand. Witness the pressure on the Veterans' Administration to include medical care of non-service-connected disabilities and dependents. If you supply "free" (i.e., tax-supported) medical care to 14,000,000 young persons in the service, who are now civilians and voting, and maintain a growing Veterans' Administration medical service the while, and now plan for a military establishment involving 3,500,000 more young people in the immediate future, you have started changes in the citizens' attitude toward medical care that are worth thinking about in terms that transcend mere arithmetic. By all odds the most important change in the horizon of medicine as a whole is its improved and improving potential value and the increasing realization of that value by an increasing number of people in need who are coming to consider medical care as a civic right.

Here, then, is one factor that has vastly increased the need for doctors. There are others. In the decade from 1940 to 1950, we added 19,000,000 to our population. At the current ratio of 1 doctor to 850 civilians, this population increase alone would call for 23,000 more doctors than we had in 1940, and the need may continue to rise at a comparable rate in the coming decade as our population goes on growing. There is also the fact

that the life span of our people is lengthening, which means that we have more elderly people. As we master the acute infectious diseases, we are seeing more people reach the age when chronic and degenerative diseases are likely to call for medical care; to some extent we have traded mortality for morbidity.

To all this we must add the increased need for doctors imposed by the present military mobilization. If the Armed Forces are to have 35 doctors per 10,000 men under arms, then the planned Military Establishment of 3,600,000 men will call for 12,250 doctors. This is just about three times as many doctors as would be needed to take care of the same number of people as civilians, because the military doctor-to-population ratio is three times that in civilian life. Nor is that all. In the event of war the need for doctors would rise at home as well as in the Military Establishment, for civilian populations in wartime have their own peculiar demands. Civilian defense measures call for doctors. And 1 doctor killed or severely injured in an air raid leaves 850 civilians in search of another doctor, whether or not the bombs have fallen on them. Also, when industry is geared to war production, we must have more industrial physicians and more doctors to rehabilitate some of the 4,000,000 handicapped persons who could be reclaimed for productive work.

Not all of the trends in medicine or our national life are in the direction of piling up demand for more and more doctors. Medicine and health work are becoming more efficient in the use of manpower. By means of surer and earlier diagnosis, more effective drugs and forms of treatment, more preventive medicine, a higher standard of living, more widespread knowledge of hygiene among the laity, better hospital organization, more auxiliary personnel to save the doctor's time—by means of all of these, today's doctor can take effective care of more patients than ever before. There are far more hospitals than there used to be, and the average stay in the hospital is shorter. Automobiles and better roads have enormously reduced the time a doctor spends in mere travel. Group practice, when the standards of the group are high, is an economy of time, effort, and money to all concerned. Yet there are factors that offset these aids. The practice of medicine at its best still requires personal service that is not that of the assembly line. A doctor cannot communicate with his patients over a public-address system, and medicine cannot be very efficient where the population is sparse and scattered and without adequate hospitals. In these areas we have a chronic shortage of doctors, which cannot be corrected by the airy generalization that all we need is a redistribution of the doctors. If the demand for doctors' services were not increasing everywhere, the problems of distribution might stand a better chance of solution without any increase in the total number of doctors. But as long as the interesting opportunities in the profession exceed the number of well-trained men, the well-trained men will prefer to go where those opportunities are—that is, the cities and industrial centers.

The story of the unequal distribution of doctors can be told in a few figures. In 1949 nearly two-thirds of the Nation's 180,000 active physicians in private practice were concentrated in the populous regions of the East, the Midwest, and the Pacific coast. The Middle Atlantic States, for example, had 1 doctor for every 625 people, while the so-called deep South had only 1 for every 1,300; in other words, half as many in proportion to population. But the problem of medical care for the underprivileged areas will not be solved until those regions are provided with more hospital beds, medical facilities, and auxiliary help—and until the Nation as a whole gets more doctors, more dentists,

more nurses, more trained persons in every health service.

Now what are the prospects for increasing our supply of doctors? It can be said at once that the profession of medicine in the United States does not suffer from the handicap of unattractive pay, as some other intellectual occupations do. A survey just completed by the Department of Commerce and the American Medical Association shows that the average net income of physicians in civilian practice in 1949 was \$11,058. There is no dearth of potential candidates for medicine in our colleges. The bottleneck lies in the matter of medical education.

In the first place, the length and cost of medical training are a formidable barrier. No one knows how many able and apt young men and women in the United States renounce careers in medicine for economic reasons, but the number must certainly be large. Even if they can afford the fees in medical school, many cannot afford to spend the long period of their lives in preparation that medicine requires. To speak of a medical education as a matter of 4 years recalls the English philosopher Francis Cornford's definition of propaganda as "the art of lying in such a way as nearly to deceive your friends without ever taking in your enemies." The doctor-of-medicine degree is only the first step; its holder must then spend 1, 2, or more years in internship and further training to become a really competent, fully prepared doctor. The fact is that a good medical education takes not 4 years but 8 or 10, whether it be for practice as a physician, for teaching or for research.

Little can be done to shorten the time of training. Nor can the medical schools, on the present basis of support, reduce the price of a doctor-of-medicine degree. Even in those that receive the highest tuition fees, the fees pay only from one-quarter to one-seventh of the actual cost of instruction. In 1949 the average tuition fee in our medical schools was \$548, but the schools spent, on the average, \$2,577 per student. In a sense, therefore, all medical students are on part scholarships.

In spite of the economic barriers, the medical schools have nearly four times as many applicants as they can accept. Yet here again, paradoxically, difficulties arise. As the Greeks observed, there are only two groups in a peaceful society who may kill human beings with impunity—judges and doctors. The selection of candidates for medicine requires care. Since every student receives an education that costs far more than he pays for it, medical-school admissions committees are loath to accept students who are likely to disappoint their teachers or later disappoint or exploit the public. Candidates who rank below average in their class as premedical students are not the sort they want to admit. Yet scholastic grades alone do not tell everything about a student's qualifications to practice medicine. Among all the M. D.'s who have passed muster scholastically there are still too few real doctors. In weighing candidates the admissions committees must take into account health, motivation, tenacity of purpose, character, and emotional stability. They are always conscious of the necessity for controlling the wastage involved in the fact that about 10 percent of the students who start in medical school drop out before they finish, because of ill health, collapse of economic resources, inadequate scholastic performance or loss of interest, especially among those who never really wanted to become doctors but were pushed into it by parental pressure.

There are 72 4-year medical schools in the United States and 7 others that provide only the first 2 years of medical instruction. At the beginning of the school year last fall the 79 schools had a total enrollment of 7,187 first-year students, 6,720 second-

year students, 6,256 third-year students, and 6,030 fourth-year students. This fall probably 7,500 new students will be admitted to the first year.

The first-year class last year ranged in size from twenty-odd in the smallest of the 2-year schools to more than 160 in one of the State universities. The teaching of medicine calls for individual instruction in small groups, for student participation in laboratory work and for teaching by example and controlled experience under close supervision. This means that enrollments must be kept small; a class of over 100 students begins to put a heavy load on the heads of teaching departments, and a class of 150 is commonly regarded as excessive, especially when the laboratory facilities were built for only one-half or two-thirds that number. The quality of instruction suffers when the student's identity is lost in a class too large for the professor to know his students.

During the 4 years of medical school a student studies some 20 required subjects. The teacher's load is increased by the fact that in almost every subject in the medical curriculum new knowledge steadily adds to or refines the information he must offer the students. The younger teachers have another worry, they must carry on original laboratory or clinical work, because they know that promotion is influenced by the quality and quantity of their published research. Besides all this our medical schools are now feeling the pressures resulting from the rising costs of equipment, supplies and building, from the dislocations and interruptions of teacher training due to the war and from the loss of endowment income during the last depression.

How could the medical schools increase the number of their graduates? If time were not of the essence, the wisest course would be to fill out most of the 2-year schools by adding the two final years and to create new 4-year schools in States possessing none, such as New Jersey and Florida. But this will be slow and extremely expensive, and the new schools could not be expected to produce any graduates before 1957. Furthermore, with at least 250 teaching vacancies already in existence in the present medical schools, it would be no small feat to staff the new ones.

The medical schools have undertaken to increase their output by admitting more students (about 1,000 more this fall than 2 years ago) and reducing the losses of students who fail to finish. But the only way to produce a substantial increase in the number of graduates in the immediate future would be to resort to acceleration, as the medical schools did during World War II. They reduced the 4-year course to 3 by operating continuously, without stopping for the summer quarter. Both in promptness of results and in volume of production over a period of years, the numerical gains of acceleration are certain and obvious. But the experience during the war showed that in nearly every other way acceleration is unsatisfactory. True, it increases the total tuition income per year. But it imposes a tremendous load on the teachers and students, which during the war was reflected in the quality of student performance. Acceleration proved so exhausting to both teachers and students that probably nothing short of a declared war would induce the medical schools to repeat the experience; their attitude toward acceleration ranges from reluctance to bitter opposition. In the main they have voted against the adoption of acceleration in the academic year of 1951-52. Needless to say, acceleration eliminates in large measure the opportunity for research and for the training of future teachers, and therefore it places our long-term medical progress in jeopardy.

We are driven to the unescapable conclusion that the most important thing we can do

to increase the number and quality of doctors is to give more financial support to our medical schools. We allow them to languish and retrench for lack of a pailtry \$10,000,000—which was the medical schools' deficit in 1948. This in a country that spent more than \$4,100,000,000 on tobacco and smokers' supplies during that same year of grace. And 2 years later, with the financial clouds still darkening over medical education, a public fund appeal for \$5,000,000 for the schools that prepare our future doctors for practice finds difficulty in raising \$1,000,000.

The essential fact is that the cost of medical education is a part of the cost of medical care. Perhaps we shall have to find out what a shortage of doctors really means before we realize the importance of supporting enough and good enough schools to prepare young men and women to meet our need for medical care.

STATEMENT BY SENATOR DOUGLAS REGARDING
ARTICLE ENTITLED "DOCTORS," BY ALAN
GREGG

There are several points in this excellent article which I should like to highlight.

The first point concerns the question of whether or not there really is a need for more doctors, which, surprisingly enough, has been made a matter of controversy. Dr. Gregg aptly compares the growing need for and demand for medical care with the advent of the automobile. While initially there was some question as to whether the automobile would replace the horse and carriage, as the quality of automobiles went up and their price down, automobiles became available to more and more people, and it was found that there was an almost unlimited demand for them. The same is true of medical care. It is constantly improving and becoming more widely available; and the demand and need for it grows in a way that is difficult to measure, but is real nevertheless.

The second point concerns the question of why we do not have more doctors than we do today. The answer does not lie in a dearth of interest in the medical profession, since there are four applicants for every place in our medical schools.

As Dr. Gregg puts it.

"There is no dearth of potential candidates for medicine in our colleges. The bottleneck lies in the matter of medical education."

Recognizing the medical schools as our bottleneck, Dr. Gregg proceeds to consider ways and means of breaking it, such as added enrollment in existing medical-school facilities and acceleration of program, to do away with the summer vacation period and complete the 4-year course in a shorter time. But these are limited solutions to the problem, and Dr. Gregg concludes:

"We are driven to the inescapable conclusion that the most important thing we can do to increase the number and quality of doctors is to give more financial support to our medical schools."

Mr. President, I hope I do not need to elaborate on my continuing interest in holding Federal expenditures to a minimum during this period of heavy defense spending, and my interest in eliminating waste.

In my opinion, however, our failure to make an appropriate investment in breaking the bottleneck to adequate medical care for future Americans by providing the financial aid to medical schools embodied in S. 337, now before the Senate, is actually a wasteful saving and does not deserve the name of "economy."

Many of our defense procurement items have very long so-called lead times—that is, a lag between the planning and the placement of the contract and the delivery of the items. Airplanes are a notable example, and we are now programing and appropriating funds for planes that will not be delivered

until mid-1953. A cut in our current appropriations for airplanes would have no immediate effect; the dip in production would only be visible some months hence. It takes foresight to plan ahead.

The lead time for doctors is not 18 months; it is four or more years, considering the time required for internships and residencies. Our failure to provide adequate facilities for medical education will not make itself immediately apparent. But it will rike to haunt us within a very few years.

Mr. President, I urge the passage of S. 337.

The Japanese Peace Treaty

EXTENSION OF REMARKS

OF

HON. H. ALEXANDER SMITH

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Wednesday, October 3, 1951

Mr. SMITH of New Jersey. Mr. President, at the Governors' Conference, Gatlinburg, Tenn., Monday, October 1, Mr. John Foster Dulles, who, it will be recalled, was the representative of the United States in negotiating the Japanese Peace Treaty, made a memorable address on the subject of the peace treaty. It is of such importance, in light of the coming consideration of the ratification of the treaty, that I ask that it be inserted in the Record.

I am informed by the Public Printer that the manuscript is estimated to make 2¼ pages in the Record, at a cost of \$184.50.

There being no objection, the address was ordered to be printed in the Record, as follows:

ADDRESS BY HON. JOHN FOSTER DULLES, AT THE GOVERNORS' CONFERENCE, GATLINBURG, TENN., OCTOBER 1, 1951.

During the last month some good blows were struck in the cause of world freedom.

We signed with Japan a treaty of reconciliation and liberation in a great drama of peace-making unity such as the world has never seen before.

The Soviet delegates, who had come to San Francisco in the blustering mood of wreckers, were made to seem insignificant for the first time in conference history, and in the end they faded almost unnoticed from the scene.

The United States made a series of collective-security treaties which formalized its determination to join with the peoples concerned to hold the island chain which, from the Aleutians to New Zealand, marks the western rim of the Pacific.

What happened is good. But it is not good enough so that we can relax in a mood of contemplative admiration. In Japan and Asia, we have made only a beginning. The future is obscure and there are signs that are ominous. There will be continuing need of the driving power which we have developed. Therefore, it will perhaps be useful to analyze how that came about, so that we can more surely sustain our momentum.

I

A first ingredient was the will to reach a clearly defined goal, namely, peace with Japan. When I speak of "will" I mean more than a lachrymose hope; I mean a resolute determination which had behind it the full power and authority of Government.

That will was born in 1950 out of a growing realization of the danger of perpetuating

the existing situation in Japan. China had gone and, unless we acted positively, it seemed that Japan might go, too. Stalin had boasted with Japan, "we are invincible." We do not have to admit that. But we must admit that Japan was formidable when it fought alone in Asia, and if its manpower and industrial resources could be joined with those of China and exploited by Soviet Russia, the total combination could be extremely unpleasant.

A principal source of danger lay in the continuance of the military occupation of Japan. That occupation, begun in 1945, had by 1950 fully served the purposes specified in the Japanese surrender terms. From then on the occupation would become alien interference in the internal affairs of a proud and sensitive people. It would be increasingly resented and that resentment would be fanned by all the propaganda skills of which communism is master. The free world would be in the position of jailer; while the Communist world would be jangling what it claimed were the keys to freedom.

General MacArthur had seen danger coming. He had warned that the occupation could not safely be continued beyond 5 years. In 1950 the 5 years were up. But we seemed to be caught in a trap. We were committed to occupation until there was peace, and the Soviet Union had thwarted the peace proposals which the United States and the United Kingdom had made in 1947.

Between 1947 and 1950 we were without any strong purpose. Then in June 1950 the Secretary of Defense, Mr. Johnson, the Chairman of the Joint Chiefs of Staff, General Bradley, and I went to Japan to study the problem with General MacArthur. General MacArthur emphasized the danger and he made concrete proposals for surmounting it.

The need of positive action was further driven home by the armed attack on the Republic of Korea which occurred while we were in Tokyo. That attack was probably made because of the strategic importance of Korea in relation to Japan. It showed the lengths to which Soviet communism was prepared to go to dominate Japan. It made it imperative that we should put equal resolution behind a program for peace.

On our return, the President decided that the United States should proceed with all possible vigor to set Japan free, and do so in such a way as to make it likely that Japan would use its freedom to join its destiny with that of the free world. On September 8, 1950, the President formalized his decision and asked me to carry it out.

One year later, to the day, the peace treaty was signed. During that year there have been many moments of difficulty and of concern. We had had to be firm with friends, and we have had to be courageous in facing up to threats from nonfriends. Never, however, has there been any wavering on the President's part. Having made his decision, he put behind it the full power of his office, and at all times he, with Secretary Acheson and Secretary Marshall, gave me 100-percent support. That fact deserves to be recorded. Without that kind of determination there could not have been success.

II

It was, however, necessary to have more than the determination of the administration. National unity was an essential ingredient. What had to be done could not be done as a partisan affair nor could I, as a Republican, have operated on those terms. Fortunately, we found national unity. Governor Dewey, the titular head of our party, Senator Tamm who is chairman of the Republican Policy Committee in the Senate, and Senator MILLIKIN who is chairman of the Republican conference in the Senate, were well aware of the grave issues; they approved of my mission and gave me support and counsel. I worked with complete intimacy

with Republicans and Democrats alike on the Foreign Relations Committee of the Senate and the Foreign Affairs Committee of the House.

At the time of General MacArthur's relief, our national unity of purpose was severely tested. A lesser man would have wanted to see confusion and failure follow his abrupt elimination from the Japanese scene. But, from his plane leaving Tokyo he spoke to me, on my plane Tokyo bound, and his message was "Carry on with the peace." With the President's knowledge and approval I continued regularly to consult with General MacArthur and I was constantly strengthened by the pledge of his support.

There were four United States signers of the Japanese Peace Treaty and of each of the three related Pacific security treaties. Of the total of 16 signatures, 9 were Republicans, 7 were Democrats.

What happened proves that when responsible Americans see for themselves that their country faces a great danger, when they know that their help is needed to avert that danger, then they will help, if they are permitted to do so in ways that they can justify to their reason and conscience. That unity is often indispensable in these grave times. Friendly nations will not adjust their policies into concert with ours, and unfriendly nations will not give way before our policies, if those policies are merely party policies, which may be reversed in a year.

III

So, we developed here at home a will for positive action, and national unity behind it. Starting with that powerful impetus we sought as a third ingredient, the enlightened qualities of the free world. We tried to avoid the usual sordid aftermath of victory. We proposed a peace of reconciliation, of trust and of opportunity. We invited Japan to return as a free and equal member of the society of nations. That meant a treaty without economic limitations, and without military limitations. Any such limitations would not only be discriminatory, but we felt that in the case of a country situated as was Japan they would, in the long run, be unenforceable and even provocative of violations.

Japan, under the surrender terms, had already been divested of its colonial possessions. This the treaty confirmed. The only abnormal liability to be placed upon Japan was a reparations liability, which she willingly accepted, toward the countries she had invaded. This liability was carefully restricted so as not to undermine Japanese solvency, or to destroy Japanese initiative, or to prevent the Japanese, by their own efforts, from improving their standards of living.

We tried to write treaty terms which would not violate the high ideals which the free world professes, but which often are cut across by lower motives when the time for action comes.

Also, in our dealings with the Japanese we recognized their personal dignity and worth, and sought to break down the wall of division which war had erected between us.

I had witnessed the treatment of the Germans at Versailles. It was so humiliating that the treaty never had a chance to make real peace.

In 1919, the Germans sent a distinguished and liberal delegation to Versailles. They were put into a barbed-wire enclosure. They were forbidden to have any personal meeting with any allied delegate. When the treaty had been finally drafted they were shown a copy and given a few days within which to submit written observations. These, when received, were almost wholly disregarded. Such indignities created bitter resentment and it took the utmost pressure of a starvation blockade to produce any Germans to sign for Germany.

We were not going to repeat that blunder in the case of Japan. In January of this year our Presidential mission went to Japan, where we consulted fully with the Japanese Government and with representatives of the principal political parties, of the labor unions, of business and of cultural institutions. Again in April our mission renewed such consultations in Japan. In addition, I was in frequent communication by cable and mail with Prime Minister Yoshida. He made many suggestions about the treaty which we accepted and, throughout, the Japanese nation knew that its opinions were sought and judged on their merits. We tried to show qualities of courtesy and humanity which the free world uniquely possesses, and which make men want to belong to that society. In the end, the Japanese Prime Minister headed a distinguished parliamentary delegation to the San Francisco Conference and they gladly made Japan's commitment to the free world.

IV

The fourth ingredient of our action was unity with our free allies. We won that unity by making proposals which were simple and inspired by ideals which they shared equally with us. In order, however, to translate that unity into the terms of an agreed treaty text, we had to invent some new procedures.

There were over 50 allies. Normally, all or some of them would have met at one place, at one time, to negotiate the treaty. This was the course which had been proposed in 1947 and which the Soviet Union had blocked. Since then we had had 3 years of Russian sabotage of efforts to conclude treaties with Germany and Austria. It was evident that there would be great difficulty in concluding a Japanese Peace Treaty at a Soviet-attended conference, even assuming that the Soviet Union would renounce the veto power which, in fact, it continued to demand until the end. We did not, however, want to call a conference from which the Soviet Union would be excluded by our act. Many allies were willing to go along with a peace from which the Soviet Union excluded itself, but they shied away from a peace from which the Soviet Union was excluded by others.

The situation was further complicated by allied differences regarding China.

In the end, the President established a special mission which, with the use also of diplomatic channels, would deal directly and independently with each of the allied powers. There was no precedent for using this procedure in an affair of this magnitude, but it worked. It solved the problem of dealing with Russia. We were willing to and did discuss the treaty with Russia, but since Russia was not a party to our talks with others, it lost its best chance to be obstructive. Also, our procedure let us consult with the National Government of China, without this involving the many allied governments which do not recognize the National Government or which, even though they continue to recognize it for certain purposes, would not deal with it in relation to peace treaty terms.

The treaty was negotiated into final form without any general conference whatsoever and the procedure was found generally acceptable. The Soviet Union, Poland, and Czechoslovakia continued to the last to claim that the procedure was illegal, but the overwhelming majority paid tribute to it.

It was not always easy for our friendly allies to embrace the kind of treaty that we sought. For example, in Australia, New Zealand, and the Philippines there were many persons who felt that the peace treaty should limit any future Japanese military establishment. In the Philippines, Indonesia, and elsewhere many persons felt that we were unduly solicitous in protecting Japan from their vast reparation claims. In Allied countries located in and about the Pacific Ocean,

many wanted the treaty to prevent the Japanese from fishing generally on the high seas. In Allied nations which were industrialized, many wanted to restrict Japan's power to compete, particularly in the fields of textiles, shipbuilding, and shipping.

However, the governments of the Allied signatories saw the problem in true perspective and they placed the common good of the free world above local advantages. They showed that the Allies can wage peace together as they waged war together, and that they will make sacrifices for peace as they made sacrifices for victory. That is something that needed showing, and all honor is due those who showed the will and made the sacrifice.

The United Kingdom cosponsored the final text of the treaty. That was not easy for it to do, because the United Kingdom faces a difficult economic future, and Japan can be a dangerous competitor. Great Britain, in a victor's role, might well have sought trade advantages. Yet Britain played the larger role of leadership within a commonwealth whose membership included many Pacific and Asian countries.

Joint action by the United States and Britain may not be wholly popular in either country. When I first discussed this with Foreign Secretary Morrison last June, I remarked to him that probably we would both be acclaimed at home if we took separate courses regarding Japan. But I knew that the place where that would be most acclaimed would be the Kremlin, and we could not afford to give satisfaction there or invite the boldness which would surely follow. The United States and the United Kingdom agreed, and we gave leadership together. That I rate as one of the good byproducts of our endeavor.

We sought the approval not merely of the great nations and those which were directly concerned in the Pacific war, but of all the Allies. Most of the nations of the Americas, Europe, West Asia, and Africa had not been physically damaged by the Pacific war. Their contribution to victory has been more political and moral than military. It had become customary to exclude such countries from any genuine part in the peace making. But why should we seek broad moral support for making war and then exclude that moral influence from making peace? So our proposed peace terms were submitted to all of the Allied Powers in time to permit each to express its views. Many did so and changes were made as a result of their good suggestions.

Our efforts resulted in a striking display of Allied unity. Fifty-four Allied Powers were invited to San Francisco. Three—India, Burma, and Yugoslavia—did not attend, preferring, for different reasons, to make peace separately. The Soviet Union and its two satellites, Poland and Czechoslovakia, attended but did not sign. Forty-eight Allied Powers signed.

Some will perhaps wonder why so much time and effort were expended to get Allied unity. The United States could conceivably have written its own treaty of peace with Japan, imposed it upon Japan through its forces of occupation, and left it to others to take it or leave it as they saw fit. Some few argue that this should have been our course.

There may come times when a nation must act wholly on its own responsibility. But usually the decision to act alone springs from a desire to do what, it is feared, world judgment would condemn. Nations which align their policies with moral principles do not have to act furtively or to stand alone. Therefore the Allied Powers and Japan, 49 nations, stood together and made publicly and in unison their great covenant of peace and liberation; and the drama of that act stirred the hearts of men everywhere who love freedom, peace, and justice.

The fifth ingredient of our action was courage without recklessness. Communist propaganda had been openly threatening that if Japan signed a so-called separate peace, i. e., a peace which was not joined in by the Soviet Union and Communist China, that act would touch off a revival by these two countries of active war against Japan. The Soviet and Chinese Communist Governments had hinted the same thing.

We could not tell certainly whether this was bluff or whether it was serious menace. Those best qualified to judge felt that there was at least some risk that the Soviet Union and Communist China would make Japan's signature of a peace treaty and security treaty the pretext for reviving open war.

That was a risk which the President and his responsible advisers weighed. To have given in to the threats would have been to invite immeasurable disaster. They did not give in, but went ahead.

That was a solemn and necessary decision which required courage; but it equally called for an avoidance of recklessness. There was a duty to proceed in a way that would reduce, not increase, the risk of the awful disaster of general war. We believed that the risk would be reduced if the peace obtained general world approval. Contrariwise, the risk would increase if we alienated world support.

In these matters the Soviet Communists seem to take into account the morale factor which plays a decisive part in the outcome of long wars. They treat propaganda and subversive possibilities as weapons of equal importance to military weapons. So, while free world unity is no insurance against general war, free world disunity probably increases the risk of general war, particularly if the disunity involves the United States being condemned by a large part of free world opinion.

That is the additional reason why we sought a peace which would win general support and why we negotiated patiently and in simplicity in an effort to consolidate that support into a climactic demonstration of world unity.

In that connection the attitude of India was a disappointment. We had scarcely expected that India would sign a peace treaty that was rejected by Soviet Russia and Communist China. That might have involved a departure from a policy which the Indian Government, within its rights, has judged will best serve its national interests. But the reasons given by India for declining our invitation seemed at that time to give encouragement to the Chinese Communists who had revived, for their own imperialist purposes, the old battle cry of "Asia for the Asians," and who were demanding that all United States influence should be eradicated from Japan.

If India's position had in fact been followed generally by the other Asian States, there might have resulted the grave breach in world unity which the Soviets had been seeking.

Fortunately for peace, this did not happen. Over a quarter of the Allied Nations at San Francisco were Asian States, and Zafrulla Khan, of Pakistan; Subardjo, of Indonesia; Jayewardene, of Ceylon, and Charles Malik, of Lebanon, voiced eloquently and authentically the overwhelming determination of Asia to seek peace through world unity rather than to divide continents and races into hostile camps.

However, as Secretary Acheson said in closing the San Francisco Peace Conference, while we regretted that some were unwilling to work with us and criticized our efforts, "for those people we feel no bitterness; but we urge them now to join in the great effort which lies before us all."

All who heard the moving statements made at San Francisco by the delegates of

the 49 signing states will understand why the Soviet delegation did not present there any warlike ultimatum and why September 8 passed without any new outbreak of war.

Some, when they heard that the Russians were coming to San Francisco, thought we had blundered. They said we should never have invited the Russians and should have had no speaking conference, but only a silent signing. They overrated the Russians; they underrated the allied unity that had been achieved, and they developed timidity at the point where boldness was our best insurance.

We knew what we were doing when we invited a Soviet delegation to be at San Francisco. We were confident that we had built soundly and that nothing the Russians could do would enable them to pull down what had been built. We were not afraid. We wanted the Russians to hear what they heard, to see what they saw, and to fail as they failed.

VI

What happened at San Francisco has been called a diplomatic success. That is true—in the best sense of the word "diplomacy." In a larger sense, the results came simply from following in the way of American tradition. I like to think that in some measure we did the kind of thing that our forebears would have expected of us.

When I speak of our tradition I am not thinking merely of our historical interest in the Pacific, although this, too, can usefully be remembered. Nearly 100 years ago Commodore Perry made a treaty with Japan which was the first modern link between Japan and the West. Further, if you will permit a personal reference, I cannot forget that it was my grandfather who, in 1895, negotiated a treaty of peace between Japan and China.

The ground we are today traversing is not new to Americans. But I am thinking primarily in terms of our spiritual heritage.

We achieved national unity; and surely it is nothing new to have national unity in the face of external danger. Today we argue about unity in new-fangled terms: "bipartisanship," "nonpartisanship," "unpartisanship." To me it is old-fashioned Americanism.

We sought for Japan a peace of reconciliation; and that is nothing new to a Nation whose every child has memorized Lincoln's immortal appeal for a peace of malice toward none and charity toward all.

We sought a peace which would liberate Japan from occupation; and that is nothing new to a Nation whose Declaration of Independence, as Lincoln has said, offered "liberty, not alone to the people of this country, but hope for the world for all future time."

We sought a peace which would deserve and receive the approbation of the free world, and that is nothing new for a Nation whose own independence was expressly based on the proposition that all people in great affairs should act with a "decent respect for the opinions of mankind."

We discomfited the despots, and that is nothing new to a Nation which, when it was still young and weak, defied the Holy Alliance formed by the great Czar Alexander and, by the moral courage of its Monroe Doctrine, threw those despots into retreat.

Our troubles today stem from too much reliance upon what is new—our bigness, our material power. We are overly entangled by the complexities of our modern industrial civilization. What we need is more reliance on what is old, and what should be enduring. If the San Francisco Conference succeeded, it was because our Nation operated naturally and simply, in accordance with the faith and the works of our fathers.

Private Cooperative and Public Housing Combine to Clear Slum Area and Erect New 2,600 Family Apartment Project

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 27, 1951

Mr. JAVITS. Mr. Speaker, I am appending news items and other information describing how the Federal law is being utilized in the best spirit of private and public participation by nine neighboring education and religious institutions for a slum-clearance project to clear a blighted area and to house 2,600 families on two square blocks in the Manhattanville-Morningside area of Manhattan. Having been a sponsor of the Housing Act of 1949 it is deeply gratifying to see this magnificent development in my own district combining private cooperative housing and publicly assisted low-rent housing with slum clearance under title I of the act. The project is being pursued under the distinguished leadership of Father George B. Ford, rector of Corpus Christi Roman Catholic Church in my district, who is chairman of the Manhattanville Community Advisory Committee and secretary of the board of directors of Morningside Heights, Inc.:

[Press release from Morningside Heights, Inc., Morningside Committee on Cooperative Housing, New York, N. Y.]

Nine of the leading educational and religious institutions in Morningside Heights and Manhattanville, on the west side of Manhattan, have joined in sponsoring a cooperative housing project in their area, according to an announcement made today by Father George B. Ford, rector of Corpus Christi Church, chairman of the Manhattanville Community Advisory Committee, and secretary of the board of directors of Morningside Heights, Inc. The project is to accommodate about 1,000 families and will cover the two blocks north of One Hundred and Twenty-third Street between Amsterdam Avenue and Broadway which have just been recommended for redevelopment by the mayor's committee on slum-clearance plans. The cooperative project will be bounded on the east and north by a 15-acre public housing project for approximately 1,600 families. "The completion of these two projects," Father Ford said, "will be a tremendous step toward improving our community, and will be notable for combining public and private housing in keeping with the needs of the community."

The institutions which will sponsor the cooperative project include Barnard College, Columbia University, Corpus Christi Church, International House, Jewish Theological Seminary, Juilliard School of Music, the Riverside Church, Teachers College, and Union Theological Seminary. With the aid of data obtained in a previous community survey, representatives of these institutions organized a joint committee early in the year to study the possibilities of such a cooperative. In May the committee requested the mayor's committees on slum clearance plans, through its chairman, Robert Moses, to advance their project in its program. The report of the mayor's committee, recommending the project in conjunction with the adjacent public housing project, has just been released.

The land for the cooperative is to be purchased and cleared with the aid of Federal funds under the provisions of title I of the 1949 Housing Act. The institutions will assist in the initial development of the project, which will eventually be owned and managed by its tenant-cooperators. Both the city and the Federal Government require that the project must be free from discrimination or segregation.

In making his announcement, Father Ford recalled that present site residents have priority, under the law, in obtaining apartments, and stated that applications cannot be taken now, but will be at a later date, which will be announced.

Tentative plans for the cooperative call for 6 20-story buildings containing almost 1,000 dwelling units, ranging in size from 1½ room to 3-bedroom apartments. The average monthly charges per room after the down payment, will be about \$23.

The residential buildings will be so situated as to provide play areas for children, sitting space for adults, off-street parking and plenty of light and air. New stores on Broadway will separate the residential buildings from the IRT subway.

"This project and the public housing units are no surprise to the members of the community, they've been in on the plans for over a year," Father Ford said. To determine the need for new housing, a survey was conducted in the summer of 1950 by 250 teachers college students under the direction of the staff of Morningside Heights, Inc. Representatives of over 50 local community organizations formed the Manhattanville Community Advisory Committee to assist the survey wherever possible. Every third household was interviewed and the other citizens learned of the survey through meetings, pamphlets, and their advisory committee. The findings of the survey appear in a Report to the People which is being distributed throughout the community by the committee in cooperation with Morningside Heights, Inc., and the Manhattanville Neighborhood Center.

The survey revealed that Manhattanville is one of the most densely populated communities in New York City—735 people to every residential acre.

Morningside Heights, Inc., is a nonprofit organization founded 4 years ago to make plans for the improvement of the local community. In addition to the institutions sponsoring the cooperative project, Morningside Heights, Inc., members include Woman's Hospital, the Cathedral of St. John the Divine, St. Luke's Hospital, St. Luke's Home for Aged Women, and the Home for Old Men and Aged Couples. Representatives of many of these same institutions are on the board of directors of Manhattanville Neighborhood Center, which provides educational and recreational services in Manhattanville, in addition to working for the community's physical improvement.

REPORT TO MAYOR IMPELLITTERI AND THE BOARD OF ESTIMATE BY THE COMMITTEE ON SLUM CLEARANCE PLANS

This Morningside-Manhattanville slum clearance report under title I of the National Housing Act of 1949 is the last of the eight originally authorized by your board on March 30, 1950. The reports on Washington Square South, South Village, Delancey Street, Corlears Hook, Harlem, North Harlem, Williamsburg, were submitted in January of this year.

Three of the seven plans recommended to you by the committee have been approved and submitted to the Housing and Home Finance Agency in Washington for their approval. These are the North Harlem, Harlem, and Corlears Hook projects. In all three cases, reliable sponsors are anxious to proceed and we expect action in the near future.

This committee was appointed on December 17, 1948, to study and expedite specific slum clearance projects by private capital under anticipated Federal law, later known as title I of the National Housing Act of 1949. We made a preliminary report on July 14, 1949, and were instructed to continue our studies and prepare a definite program for public discussion.

On January 23, 1950, a further interim report was made, outlining the problem and recommending eight specific projects for further investigation. Two resolutions were adopted by the board of estimate on January 26, 1950 (Calendar No. 170), one requesting the reservation of \$16,000,000 in Federal funds—being the city's share of \$200,000,000 available Nation-wide for 1950-51—and the other directing the committee to continue with its work. Subsequently the Federal Housing and Home Finance Agency reserved earmarked funds for this purpose and the city of New York set aside its share, \$8,000,000 in capital funds, to meet the proposed Federal grants.

As stated in our previous reports, this field is new, untried and experimental. The initial procedure therefore is necessarily slow and cumbersome. Neither Federal nor municipal funds are available in sufficient volume to do more than blaze the way for a large future program. The size of New York's problem can be measured by the acres of recognized slums, which cannot be eradicated by ordinary private, speculative building. This slum acreage is over 9,000. The present clearance program through public and quasi-public housing completed, under way, and scheduled will be approximately 1,328 acres by 1955—15 percent of the total. Obviously, private capital under a new Federal law must be brought into the picture on a large scale if we hope to escape a tremendously enlarged public housing program with all the implications which go with it. Following is a review of the law and procedure:

Title I of the National Housing Act of 1949 provides that any loss incurred by a city or local agency in acquiring and clearing slum sites and making them available for private redevelopment will be shared two-thirds by the Federal Government and one-third by the local government. To enable the city to proceed with this program, this committee advanced, and the State legislature, at the request of the city administration, adopted chapter 784 of the laws of 1949. Local law No. 104 of 1949, amending section C41-10 of the administrative code, authorized the mayor to execute Federal slum clearance contracts. To remove completely any further doubts of our authority to take advantage of the Federal law, at the request of the Federal Housing and Home Finance Agency, the city administration requested, and the State legislature adopted, chapter 790 of the laws of 1950, which amended section 72K of the general municipal law.

Briefly, the procedure under the Federal, State, and local legislation is to present the data analyzing these slum areas to establish eligibility under the National Housing Act of 1949 for clearance and redevelopment by new private and public facilities mainly devoted to housing, but including also, if and where desirable, business and manufacture. A comprehensive plan for the redevelopment of each area must be prepared and approved by the city planning commission and board of estimate on behalf of the city, and by the Administrator of the Housing and Home Finance Agency of the Federal Government. This redevelopment will then be subject to an agreement between the city and Federal Government under which the Federal Government will absorb two-thirds of any loss incurred in acquiring and making a site available, and the city one-third.

Provisions of the Federal law permit guaranteed loans for acquisition and site

clearance, and construction of various site improvements such as utilities and public facilities, as well as the planning advances already provided. To induce private investors to redevelop these sites, losses will be incurred in offering the property for sale or lease. Normally it is anticipated that these losses would represent the value of the existing old buildings, cost of demolition and the expense of relocating tenants.

Tenant relocation, the cost of which will be borne by the developers, will be under control of the board of estimate through this committee and the bureau of real estate. Tenant relocation offices will be established on each site and site tenants will be interviewed as to their needs and preferences. Experienced and reliable real estate firms, such as the firm which made the tenant relocation studies on these projects, are available and will be employed by the director of the bureau of real estate. Low-income site tenants will have first priority in the 55,000 dwelling units of Federal public housing provided for New York City in the National Housing Act of 1949, and will be eligible also for other New York City Housing Authority projects. Moderate-income site tenants will have priority in the 15,000 dwelling units proposed to be constructed in the slum clearance program. Further, they will receive special consideration for admission to tax-exempt developments throughout the city. Financial assistance will be given to tenants where necessary.

This report outlines the plans for the Morningside-Manhattanville redevelopment project. The plan provides for a little less than 100 families per acre. A limited number of shops and offices will be included to replace those demolished and meet the needs of residents of the project and the surrounding neighborhood. In order to avoid the congestion common in this section of the city, the buildings, including shops, will cover only about 16 percent of the land.

From a general point of view, this area requires redevelopment because all existing residential buildings are old, overcrowded, and either deteriorated or badly run-down. Because of small lots and diversity of ownership, redevelopment without condemnation and Government aid under this program would be impossible.

The site is readily accessible by rapid transit and buses. But even more important is its location near some of the country's leading medical, educational, and religious institutions. These institutions employ some 6,000 people, most of whom, in a survey conducted by Morningside Heights, Inc., in 1949, indicated a preference for living near their place of work. These personnel provide a substantial market for any new housing, both middle and low income, in the area. In addition, the industries a few blocks to the north provide excellent employment opportunities for those people who are not directly connected with the institutions.

Adjacent to the redevelopment site, the New York City Housing Authority plans a large-scale public housing project for about 1,600 families. The two projects will be a major step toward the redevelopment needed within the general neighborhood from One Hundred and Twenty-second to One Hundred and Thirty-fifth Streets, Riverside Drive to Morningside Avenue.

This report recommends construction of 981 dwelling units in six 20-story fireproof buildings and the demolition of almost 1,600 substandard tenement dwelling units. The final residential population density per gross acre of the entire site will be about 357 persons as against a present gross population density of 491 persons. The long sides of the buildings will be over 300 feet apart with landscaped sitting and play spaces between them.

Prices used in the estimates of the architects are current, and rental rates for the

various projects are based upon them. In the light of possible national emergency conditions, construction costs may need to be revised before completion of these projects. The project could support somewhat higher rentals if necessary. It has been the aim of this committee to keep rentals down.

Financial analysis indicates that under a standard rental plan a rent of about \$31 per room will be required if the land is sold at \$3 per square foot with the sponsor assuming demolition and relocation costs. On a cooperative basis, the sponsor anticipates rentals could be about \$23 per room with favorable financing. The real estate consultants advise that there is a market at such rents and that the proposed reuse value is proper.

The committee recommends that offers be accepted at \$3 per square foot, subject, of course, to the required public auction, the purchaser to demolish buildings and relocate tenants as outlined in the following report. There will be no discrimination in the selection of tenants because of race, creed, or color in this or in any other project.

An offer has been received from a non-profit cooperative housing group sponsored by the universities and substantial institutions in the area. They propose to develop the property in accordance with the plan recommended by the committee in this report and are prepared to purchase the land at the recommended reuse value. Upon approval of the plan by your board and by the Federal authorities and prior to acquisition of the land, this group will enter into a firm agreement.

We recommend that the board of estimate approve this redevelopment plan, after a report by the city planning commission, and that after approval by the board, the committee be authorized to apply to the Housing and Home Finance Agency for approval of the plan and for a grant.

RECTOR PHRASES MANHATTANVILLE HOME PROJECTS—JUST "PRACTICING WHAT WE PREACH," HE SAYS OF NINE SPONSORING INSTITUTIONS

(By Francis Sugrue)

The Reverend George B. Ford, rector of Corpus Christi Roman Catholic Church, 520 West One Hundred and Twenty-first Street, yesterday described the rather novel idea of nine educational and religious institutions sponsoring a housing project in the Morningside-Manhattanville area as just a "matter of practicing what we preach."

On Sunday, Father Ford announced that the nine institutions were joined in a plan to build with Federal help a \$12,567,226 co-operative housing project for 1,000 middle-income families on the 10 acres bounded by Broadway, La Salle Street, Amsterdam Avenue and West One Hundred and Twenty-third Street. But this was not all. A public-housing project sponsored by New York City and financed by the Federal Government is planned in the same neighborhood to go along with the private project. This low-income project will take care of 1,600 families.

THE WAY THINGS SHOULD BE

In Father Ford's conception of housing projects, this is the way things should be. The Catholic priest believes that when a community such as Manhattanville desires both public and private housing, the two needs should be linked both physically and in the spirit. Father Ford is chairman of the Manhattanville Community Advisory Committee, and secretary of the board of directors of Morningside Heights, Inc., and both groups have a keen interest in improving their community, which has "become a bad jumble of businesses and homes."

"When we build one project and say this is for the poor," Father Ford explained, "and then build another and say this is intended for the more well-to-do, we are creating ghettos. This is a form of segregation. It doesn't help our democracy one bit. The projects should be close together so that the people of the community can live together."

Since in his view the Manhattanville-Morningside Heights neighborhood is one of the largest cultural centers in the world, it is Father Ford's opinion that the sponsoring institutions ought to be conscious of their community.

But previously each institution—religious as well as educational—was concerned only with its own problems, its own individual way of life, he said.

OUTLINES HOUSING NEEDS

"They preached the theory that students and citizens should be aware of their community and active in making it a better place to live," Father Ford said. "But they were not aware of their own community. It was a case of not practicing what you preach. I think it is about time the institutions did some practicing with their preaching."

The institutions sponsoring the housing plan are Columbia University, Barnard College, Corpus Christi Church, International House, Jewish Theological Seminary, Juilliard School of Music, Riverside Church, Teachers College, and the Union Theological Seminary.

And on the need of housing in the area Father Ford said that after visiting some tenement flats in his parish, he is ashamed to return to his pleasant rectory and to his own comfortable room. A survey made by 250 students of Teachers College under the direction of Morningside Heights, Inc., showed that Manhattanville is one of the most densely populated communities in New York City—735 people to every residential acre.

"Good housing may not make everyone a saint," Father Ford said, "but it would develop better character, * * * better citizens. It would affect me if I had to live in some of those places—I'd want to shoot someone. As the houses in a neighborhood deteriorate the poor people out of necessity move in and take the consequences. That's where your radical ideas are hatched."

The AFL's Blacklist

EXTENSION OF REMARKS

OF

HON. WALTER NORBLAD

OF ORLEON

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 27, 1951

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith an editorial by Fred Andrus in the Astorian-Budget, of Astoria, Oreg.:

THE AFL'S BLACKLIST

Organized labor fought for years against blacklisting of workers by employers, considering it to be a highly reprehensible practice.

It is therefore somewhat incongruous to have the American Federation of Labor publish its own blacklist of 19 Senators, whose principal crime seems to have been their support of the Taft-Hartley Act back in 1946 when it became law.

This blacklist indicates the bitterness still pervading labor ranks regarding the Taft-Hartley Act.

Any man who voted for it seems to have thereby automatically classed himself as an enemy of labor.

The Taft-Hartley Act was denounced as enslavement of organized labor and a weapon for destruction of unions.

It is perhaps noteworthy that in the years since its enactment unions have continued to grow, to strike, to win higher pay for their members, and otherwise continue to operate apparently as effectively as in the past.

Furthermore, no specific cases of enslavement have come to our attention. There may have been such, but certainly no great outcry has been made about them.

It is therefore sometimes difficult to understand this continuing bitterness.

Birthday Congratulations to Hon. Theodore Francis Green, of Rhode Island

EXTENSION OF REMARKS

OF

HON. ALLEN J. ELLENDER, SR.

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, October 3, 1951

Mr. ELLENDER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial entitled "Senator GREEN: 84," which appeared in today's issue of the Washington Post. It gives much deserved credit to one of our esteemed and distinguished colleagues, the senior Senator from Rhode Island [Mr. GREEN], who yesterday celebrated the eighty-fourth anniversary of his birth.

Let me say that the junior Senator from Rhode Island [Mr. PASTORE] joins me in this request and in these remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATOR GREEN: 84

On his eighty-fourth birthday, which he celebrated yesterday, THEODORE FRANCIS GREEN could lay claim to being, in years, perhaps the oldest and, in spirit, perhaps the youngest Member of the United States Senate. He was born in Rhode Island—which he has served as Senator since 1936—shortly after the Civil War, on October 2, 1867, no senatorial incumbent antedates him in birth with the possible exception of Senator McKILLAR whose biography in the Congressional Directory discloses respecting his age only that he "moved to Tennessee in 1892 after graduating in law at the University of Alabama." Senator GREEN has packed a good deal of living into his 84 years, scholar, university teacher, linguist, lawyer, banker, businessman, governor, and Senator, his career is scarcely to be matched in diversity and achievement.

Years haven't slowed down the senior Senator from Rhode Island appreciably. He never takes a train if he can fly; and he has no hesitation about flying to faraway places to have a first-hand view of developments for himself. As a member of the Foreign Relations Committee, he has taken four trips

overseas since 1949—pretty grueling trips, including one around the world, one to Australia and India, two to Europe, the last of them this past summer. They contributed, no doubt, to the enlightened and sophisticated approach he has consistently brought to problems of foreign policy.

None of the convenient, conventional labels designating position in the political spectrum fully fits Senator GREEN. A Democrat, he has been a staunch administration supporter—sometimes when there were few in the Senate to support the administration; he was one of the gallant half-dozen who voted against the McCarran Act last year. And he showed the same sort of courage when he served as a member of the Tydings subcommittee which reported that Senator McCarthy's charges concerning the State Department amounted to a fraud and a hoax on the Senate.

If no notable legislation bears the special imprint of Senator GREEN's sponsorship, a great many of the soundest and most humane acts of Congress have been helped along by his wisdom and enthusiasm. His latest legislative effort—in which he teamed on Monday with Senator TAFT—was in support of the International Children's Fund of the United Nations. The country can congratulate itself that Senator GREEN is still going strong—he gave a diving lesson last week end. He has never married; but when this energetic young fellow gets ready to settle down, he would make an admirable catch, we think, for any young woman capable of keeping up with him.

International Monetary Fund To Utilize Idle Resources

EXTENSION OF REMARKS OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 27, 1951

Mr. JAVITS. Mr. Speaker, a few weeks ago in an address on the floor of this House I pointed out the enormous advantages to be gained by a merger of the International Bank for Reconstruction and Development and the International Monetary Fund whereby the fund's almost unused resources of about \$3,000,000,000 might be utilized in loans for development abroad, thus easing the great international burden which has been assumed by this country. The appended article, from today's New York Times, tells of plans by the fund to utilize this \$3,000,000,000 in unused liquid available capital. What the fund does in this regard—and how it does it—is of vast importance to us in view of our own foreign-aid efforts and deserves the close interest of all Members.

WORLD FUND PLANS MUCH BIGGER ROLE—EUROPEANS HEAR IT IS GOING INTO BUSINESS OF MAKING SHORT-TERM LOANS TO NATIONS
(By Michael L. Hoffman)

GENEVA, October 2—For the first time since it was founded in 1945 the International Monetary Fund is about to become an active factor in international economic affairs.

European central bank and Government circles are just now learning of decisions taken at various levels within both the fund's own hierarchy and the principal governments that are members of the fund the cumulative effect of which would completely

change fund policies in important respects. As a result European member countries that have always been skeptical of the fund and its principles are becoming convinced that the fund is really going into business.

In the briefest terms the fund has decided that it should in the future operate as a short-term lending institution in cases in which it can, by doing so, aid member countries to achieve the fund's basic objectives. These remain as they were laid down at Bretton Woods, N. H., in 1944—the establishment of stable international currency relationships unhindered by exchange controls on current transactions and free of discrimination.

TO ABANDON PASSIVE ATTITUDE

In cases in which the fund can use its nearly \$3,000,000,000 worth of resources to aid a country willing to take some risk on removing discriminatory controls it intends in future to do so.

What is perhaps at least as important from a practical viewpoint, the fund has decided to abandon its passive attitude toward member countries. The fund staff in future will be permitted to make proposals to countries about revising their foreign-exchange or central-banking policies. These suggestions can ultimately be backed up with the largest single pool of uncommitted resources available in the world today.

It is in accordance with this recently established policy that the fund has begun discussions with Yugoslavia on a whole series of internal monetary reforms designed to reintegrate that country's economy with world trade and monetary channels. It is widely expected that one result of these discussions will be the establishment of a more realistic rate for the Yugoslav dinar.

But hand in hand with any such change, if it is agreed upon, will come changes in Yugoslavia's exchange-control system and methods for controlling inflation that may or may not, as the facts determine, be assisted by aid from the fund's resources.

CONSULTATIONS SET FOR 1952

This new departure is directly related to the approach of what the fund freely acknowledges to be its great testing period. In the early months of 1952 consultations will be held with all those member countries not abiding by the fund rules such as to non-discrimination and removal of exchange controls. At present this includes nearly all the fund's membership.

Since the beginning of the Marshall plan the United States, which has the controlling voice in the fund's affairs, has opposed the fund's giving dollar aid to countries that were receiving extraordinary United States aid. The United States has now been persuaded that unless the fund has something to offer countries entering into the consultations next year the chances that those consultations will be marked by progress are slim. Therefore, the United States has approved the new policy of careful and selective use of fund resources when furtherance of the fund's objectives can be advanced thereby.

Dedication of New Steam Plant of the Minnkota Power Cooperative

EXTENSION OF REMARKS OF

HON. MILTON R. YOUNG

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, October 4, 1951

Mr. YOUNG. Mr. President, I ask unanimous consent to have inserted in the Appendix of the Record an address

by the Senator from Ohio [Mr. TAFT] at the dedication of a new steam generating plant of the Minnkota Power Cooperative at Grand Forks, N. Dak., on September 21, 1941. This is an able and forthright appraisal of the over-all farm question which I earnestly hope will be studied by not only Members of Congress, but also by the public in general.

I also ask unanimous consent to have printed in the Appendix of the Record an excellent editorial entitled "Taft's Visit Shows His Strength," which appeared in the Bismarck Tribune, of Bismarck, N. Dak., under the date of September 29, 1951.

There being no objection, the address and editorial were ordered to be printed in the Record, as follows:

ADDRESS OF SENATOR TAFT

It is always a pleasure to return to North Dakota, particularly at this time of harvest and autumn weather. I cannot come to the Red River Valley without being again impressed with the tremendous fertility of its soil and the advantage which nature has given to you. I have heard plenty about North Dakota from my good friends in the Senate, BILL LANGER and MILT YOUNG. I have to remind them from time to time that Ohio also is a tremendous and fertile agricultural State, the fifth in the Nation. A Senator from Ohio has to study the agricultural problem, and the proper Government action with regard to it, just as earnestly as a Senator from North Dakota or Minnesota. I have always cooperated there with the representative farm organizations and have had the support of their members in my various contests because they believed that I approached the problems of the farmer with understanding and sympathy. In 1950 I received gratifying support in rural counties running to as high as 77 percent of the total vote cast. I carried every rural county except two.

It is encouraging to participate in the completion and dedication of a great cooperative enterprise built by the farmers themselves to give them and their families adequate heat, light and power, and the means of relieving so much household drudgery. You have a right to be proud of this great enterprise which you own, and which in time will come, with good management, to be a debt-free asset.

When the REA program began I was somewhat doubtful whether it could be worked out on a business basis. The first year I was in the Senate, I stated that if necessary I was prepared to have the Government provide rural delivery of electricity just as it had undertaken at a loss the rural free delivery of mail. In the beginning the Washington REA was very secretive as to the financial condition of the various cooperatives, and I thought perhaps the money loaned should be carried as a Government expense rather than a loan to be recovered. When the secrecy was removed, however, it appeared that practically every cooperative in the country was operating at some profit, that the interest and the principal were being paid on the loans and that the Government in the end could count on practically a complete repayment. This was due in part to good management, and in part to the tremendous development of the use of electricity which occurred when it was brought to so many thousands of farms.

Today the REA program is moving rapidly toward completion not only here in North Dakota and Minnesota, but throughout nearly all the rural sections of the United States. I had something to do with running the eightieth "do-nothing" Congress, and I am proud of the fact that among its many constructive and progressive jobs, it appropriated more money for REA than all

previous appropriations put together and that it breathed life into the program from which you are now reaping the benefit. And the Eightieth Congress did that while bringing about a Government surplus of \$8,000,000,000, the first surplus in 18 years, and the largest in the history of the Nation.

There are some who have feared that the REA program might develop into a socialistic enterprise. I think that some have even hoped that the REAs might fall down so that the Government could take them over, and wield them into a great national utility power system. That certainly is directly contrary to the real purpose of the REA. The ideal of the REA is exactly that of other farm cooperatives—to establish facilities owned by the farmers themselves, so that they may get a better price for their crops and pay less for those things which they have to buy.

It is true that in the case of the REA, the money to establish these facilities, which in the power field are very expensive, has been loaned by the Government. But that should not change the cooperative character of REA. So the Government also subsidized the first transcontinental railroads and other enterprises where, for one reason or another, private capital could not undertake the complete support of new and risky development. The REA ideal is to pay off these loans so that the farmers themselves may own the facilities.

A true cooperative is just as much private enterprise as a private utility. It is essential that the rates be fixed high enough to pay off the loans in order that this result may be brought about. And there is no justification for the loaning of Government money which has to be raised from the taxpayer where electric power is already adequately available at a fair price. In Ohio I assisted our cooperative in buying a plant which was for sale. As a general proposition in Ohio private power is available in adequate amount.

The REA is only one phase in the whole cooperative movement, that movement which has accomplished great things in the best interests of the farmers. Like every business project, it has had some faults and some proper criticism has been directed against it, but its justification is clear.

Under a free economic system prices and wages are made in the market place on the basis of supply and demand—negotiations between a willing seller and a willing buyer. We have found, however, that when thousands of people deal each for himself with one or more large dealers or enterprises, or even with a completely free market, he may well find himself at a disadvantage, and the price ultimately fixed may have more relation to his relative economic weakness than to the general processes of supply and demand.

Thus in the field of labor, both under the Wagner Act and the Taft-Hartley Act, we have recognized that the way to fix wages at a fair level is to permit the thousands of workmen to unite in collective bargaining so that the employer may not have too great an advantage in dealing with one individual after another. So, in the farm field, we have recognized that to establish fair prices it is desirable to permit a number of farmers to act together as a unit in disposing of their products in the national market and in their purchasing, particularly of those supplies which they require in the farming business—to some extent in consumers' goods.

In developing this general theory there is some danger that the unit action of labor unions or cooperatives may become too powerful. In the labor field we have gone far toward a monopoly of labor in certain industries. I do not see at the present time that the farm cooperatives have reached any position of danger where they approach a monopoly

position, but we must always remember that the whole purpose of encouraging collective action is to place small units in a fair and equitable position, and not put them in a position where they can dominate the employer or the consumer. Today some feeling has been built up against the largest cooperatives similar to that felt against monopolistic unions and monopolistic business, and the wisest leaders of the cooperative movement are anxious to avoid any justification for such charges.

We are involved at the moment in the highly controversial problem of the taxation of cooperatives. I have supported the Senate bill, which provides for the taxation of so much of accumulated earnings as are not definitely assigned to the members in cash or certificates of interest. If a corporation assumes a personality of its own separate from that of its members, and accumulates property of its own, there seems to be no reason why it should not be taxed like other corporations. But the very principle of cooperatives, which has had the sympathetic interest of most of the people of the Nation, is that a number of farmers shall be permitted to act jointly with at least the same advantages they would have if they were acting separately. If the principle is to remain effective, there should only be one tax, and not two taxes, as in the case of the operation of private business for profit. I quite agree that there is too much duplication of taxes in the case of corporations and their stockholders, but that hardly justifies the same inequality where duplicate taxation is contrary to the very principle of cooperatives. Reserves allocated to farmers, at least in the case of producer cooperatives, are clearly taxable to farmers under the law. They should not be also taxed to the cooperatives. If they are not allocated to farmers, they are taxed to the cooperatives and not to the farmer under the Senate proposal.

I think it is possible that in the future the farmers may find it more convenient to have their taxes withheld and paid by the cooperative instead of by themselves. That is the position of some of the eastern cooperatives, but that can be determined better in the future after the full system is tried out.

It is true that the cooperatives may be able to accumulate reserves and build facilities from those reserves, but, again, if the farmer is to have his fair bargaining power in the market place he requires some physical facilities, and there is no place where he can get the necessary capital except from the operations of the cooperative itself.

The REA is fortunate in having Government money available in the form of loans, but even this is not permanent capital and can only be paid for out of the profits of the enterprise. Cooperatives are entitled to a system of taxation based on the sound principle of cooperatives, but they are not entitled to exemption.

The cooperative movement is important to the American farmer because in the end it enables him to work out his own problems with less and less reliance on the Government. I am convinced that the ultimate success and happiness of the farmer depends on the free economic system which lies at the basis of all American progress. The farmer will be better off the more freedom he has to work out his own ideas and to conduct his own business.

This country has achieved the greatest production, the greatest productivity, the highest standard of living because of its freedom of ideas and of action. Last year I went through many industrial shops in Ohio, and every one of them was proud of some particular machine or method of the product which they had developed. The businessman has been free to try out his own ideas without getting Government approval as would be required in a socialist ownership of industry, now on its way to completion in

England. The competition of free ideas has resulted in the adoption of the best of those ideas.

The more we can produce per person, the more there is to divide up among the people, and therefore the higher is our standard of living. The American workman is paid about two and one-half times as much as the British workman. His standard of living is about two and a half times as high. The American farmer is just as far ahead of the European farmer as the American industrialist is of the European industrialist, and he is there because he has had the right to run his own farm. The future of the American farmer depends on maintaining this freedom of action and a minimum of Government regulation.

While the problem of price support often excites greater political interest and has a more immediate effect on the farmer's income, the best long-term help the Government can give the farmer is in the nature of education and assistance to meet the continuous readjustments which are ahead. American agriculture has none of the static qualities of foreign agriculture. We are constantly developing new plants, improved livestock, better pastures, more grassland farming, a better and greater use of fertilizers, weed killers, and pesticides.

Underlying any permanent program must be the proper conservation of natural resources and land use. The farmer has been aided, I think, to a greater extent than even he realizes by the Agricultural Extension Service. It has been helpful in the past, and it should continue to be a great educational force of benefit to farmers, and in fact to all Americans. In order that it may be better and freer to develop different ideas, I believe very strongly that its control should be on a State basis through our great land-grant colleges. I should not be held down by the deadening effect of central control from a Washington bureau.

In this great effort to improve farming and farm production, American agriculture today faces a great opportunity and a great challenge. Our population is increasing at the rate of about 1,700,000 people per year, and yet essentially there has been no increase in agricultural production since 1945. This is true in part because during World War II agricultural production increased nearly 40 percent, but we ought to be resuming the improvement instead of falling off as we have. The fact that we have such a growing population is likely to bring us soon to the point where agriculture is going to do well to supply food and fiber enough to meet our own needs. That condition in itself is going to help in solving the surplus problem which has been so disastrous many times in the past.

One improvement which seems to be very promising for the farmer is the deliberately organized expansion of livestock agriculture and the increased sale of animal products to the American people. We have heard a lot about the stimulation of our export markets, and certainly the Government can do a better job in that field. But, after all, the big field is the American market. Ninety-five percent of American production of all kinds—industrial and agricultural—is sold right here in the United States. We have the greatest market in the world. With Government assistance, especially in research and education, a determined effort should be made to sell more animal products to the American people.

If we could increase the sale of animal products by 6 percent, there wouldn't be any surplus grain. Animal products are better food. They are more tasty and more necessary to give completely satisfactory nutrition. From the farmers' standpoint, it is the type of business which is safer and not so subject to violent price fluctuations. It is a means by which farmers can make a better living.

It tends to improve and build up our greatest heritage—productive soil. One reason that farm property in Ohio has been somewhat more stable is because over 70 percent of our production is marketed in the form of animal products. You are reaching toward the same goal in the Red River Valley.

Of course, in our legislative field we have been much more concerned with the controversial problem of farm-price supports with relation to parity. I have supported the program written into the Aiken-Anderson Act which is now in effect, although I do not believe it is the ultimate solution. In general, the principle of Government minimum-price support for any commodity is inconsistent with the free-price competitive system, just as maximum price fixing and the minimum wage are opposed to such a system. But I believe that special considerations justify a farm-price-support program at a reasonable level, just as I also believe that they justify a minimum wage.

The farmer after all is a manufacturer and his problems are very much the same as those of industry, except that he must know more about more things, and has certain obvious disadvantages. Besides the gamble of the weather, he has to sell in a market which fluctuates much more violently than does the market on manufactured goods. If a depression comes, its first effect is to reduce the prices of commodities, including farm commodities, in the various free markets. If the bottom drops out of farm prices, as it has in times past, all agricultural purchasing power is destroyed and this soon brings about unemployment in industry and a downward spiral of deflation. Nothing is so likely to start a depression as a disastrous fall in farm prices. I believe that at some point the Government ought to step in to prevent any such dangerous drop in farm prices and to maintain them at some reasonable relation to other prices. Just where the price support should begin is difficult to determine, and no exact formula can be written to apply to all crops. It ought not to be too high, because if it is too high it means acreage limitations and marketing quotas on every principal product. Under a Government guaranty of 100 percent of parity on all products as recently proposed, the farmer will be told not only how many acres he can plant of wheat, corn, cotton, soy beans, but even how many hogs he can raise, how many beef cattle he can feed, how many dairy cattle he can keep. In effect the Department of Agriculture would be telling every farmer in detail how he must run his own farm just exactly as the labor-socialist government runs the farms and the farmers in England.

Furthermore, I do not think any plan ought to involve a subsidy from the taxpayer. The support price ought to give the farmer a fair price, but if it is a fair price to the farmer, it must also be a fair price to the consumer. Of course there may be a Government loss involved in support price operations, but such operation ought to be designed at a price at which the product bought can be ultimately sold to the consumer and which will be a fair price for him to pay. The price should be high enough to encourage adequate production and protect agricultural purchasing power. It should not be so high as to encourage farmers to plant more than can possibly be used, or to raise a crop for which their farms are not well adapted.

I have always thought that this subsidy business was a fraud. It enables an administration to promise a farmer high prices and a consumer low prices at the same time. The idea is that the difference is charged to the taxpayer, but in the long run the consumer and farmer pay most of the taxes and so they really do not get the benefits which are promised them—in fact, they get a bill

for the benefits almost before they receive them, including the cost of a vast Government bureau engaged in working out the subsidy idea. I do not believe that the farmer wants a subsidy. He merely wants a fair price from the consumer for his product.

In emergency situations production control may be necessary. Again the farmer is at a disadvantage. The manufacturer who can't sell his product closes down his plant and his employees get unemployment compensation. The farmer can't shut down his plant and if the unfortunate time comes when there is no market for his goods, he can only escape disaster by some limitation on production which can only be effective through Government regulations.

But any such regulation effort ought to be confined to very serious emergencies. After all each farmer knows best how to make his farm productive. He knows the correct crops to be sown each year, the number of animals he can handle. Production controls are imposed on an arbitrary basis which will always be unfair to many, particularly the small farmer.

In short, we have progressed in this country because the American farmer has been free—free to learn, free to try his own methods, free to experiment with the productive value of his own farm. In this complicated modern life freedom must perhaps be sometimes modified, but if we are to progress at all its essence must be maintained.

Liberty has been the basis of all American life, it has been the cause of the tremendous success of our people. The Department of Agriculture itself has taught the farmer that his improvement lies in better methods and increased production. Let us not turn to a regimented system in which the Government shall direct all agriculture as it also proposes to direct commerce, industry, and the daily lives of 40,000,000 American families. The issue is somewhat obscured at this moment by the war emergency, but the farmer faces the same fundamental issue as the rest of the American people—liberty against socialism. I have no doubt of the result because the American farmer thinks for himself, and proposes to act for himself.

[From the Bismarck (N. Dak.) Tribune of September 29, 1951]

TAFT'S VISIT SHOWS HIS STRENGTH

ROBERT ALFONSO TAFT made a big impression in North Dakota, particularly among Republicans, during his visit to the State last week for the dedication of the new Minnkota REA cooperative power plant at Grand Forks.

His words in defense of cooperatives indicated an understanding of the cooperative tax problem that will be appealing to many others than farmers. They were the more significant because they came from a Republican conservative who had just helped lead a successful Senate fight to resist taxation of cooperative reserves.

His comments relative to the farm price support program, if not the kind of talk usual on the part of a politician because of their frankness, will appeal to many because they also indicated that the Ohio Senator appreciates the importance of price supports to farmers.

Farmers are among the most ruggedly individualistic people in the country and think for themselves a lot more and a lot straighter than do many businessmen and professional men. There are many among them who have long doubted the wisdom of a support level so high that it makes it appear to consumers, who far outnumber them in their representation in Congress, that price supports are the cause of high food prices. They also have been able to see as well as anybody the fallacy of a program, such as that espoused

by Secretary of Agriculture Brannan, which promises high prices to the producer and low prices to the consumer without cost to anybody. Furthermore, they respect a fellow who speaks his mind.

TAFT's very willingness to come into an agricultural State and speak forthrightly on two topics as vital as these is an indication of why he cuts as much ice as he does in Congress and why he is deemed the outstanding Republican Presidential prospect. Much of his strength lies in his candor and courage, and those who think the Republicans should nominate him think that his willingness to speak out boldly on issues will prove popular with the voters at the polls.

The Republicans have gone into three past elections with Presidential candidates who have had little more for a platform than a smile and a promise to be a nice guy. Result: They haven't put one of their boys in the White House since 1928.

TAFT may not be a personality-plus gladiator. But his nomination by the GOP in 1952 might prove that the people of the United States would like to have something besides a fellow with a big smile and a resonant voice in the mansion on Pennsylvania Avenue.

Address by Nellie Tayloe Ross, Director of the Mint, on Democratic Women's Day

EXTENSION OF REMARKS

OF

HON. WILLIAM BENTON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Thursday, October 4, 1951

MR. BENTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address delivered by Nellie Tayloe Ross, Director of the Mint, on Democratic Women's Day, September 27, 1951, at Washington, D. C.

I believe that all of us, as we enter politics, particularly those of us who enter rather late in life, are enormously impressed by the great interest and activity of women in both political parties. Mrs. Ross' stirring address helps bring home this fact.

Her address also mentions something which I had not previously realized, although I have been well aware of President Truman's insistence on the appointment of able women to high posts, namely, that he has made more appointments of women to highly important policy-making positions than any other President, and more than have been made by all Republican Presidents combined. I congratulate the President on his determination which resulted in these merited appointments, and on his leadership, and I congratulate Mrs. Ross on her admirable address which deserves a wide reading.

There being no objection, the address was ordered to be printed in the Record, as follows:

If anything were needed to confirm my confidence that the Democratic Party will continue to be the dominant party of this country—of course I am thinking of the oncoming election—just to find myself in a large group of Democratic women like this

would suffice, so great is my respect for the effectiveness of Democratic women's efforts.

I feel sure that no political party ever before had among its women an organized force so strong, so well-informed on issues, so influential in politics and government, as our party has now. I also am inclined to believe that the women of the country on the whole lean pretty strongly toward the Democratic Party. I understand that in all States where a check was made on the relative registration of men and women in the last national campaign, that women in all of them outnumbered the men. We may assume, therefore, that more women voted than men, and the majority democratic, inasmuch as President Truman and a Democratic Congress won the election, though there is no way of proving this.

It is not surprising that the Democratic Party has a strong hold upon women, for it stands for things in which women are vastly interested. Women always are keenly interested in conditions that vitally affect the well-being of their families and of the community-at-large. The community-at-large, to the modern woman, means almost the world-at-large. Before women ever had any political power, able aggressive leaders among them, as groups and individuals, tried to influence conditions under which they lived, by bringing persuasion upon men.

The policies of this Government of ours and the action of those who conduct it bear directly and inescapably, we all know, upon the physical, spiritual, and material welfare of every man, woman, and child in this country, and in this period they involve the well-being of people all over the world. It is plain then that if women are to be influential and helpful in shaping the course of this Government, now when there is needed the best effort that both men and women can give, the place for them to start is in the political party, inasmuch as the party system prevails in this country. There it is that candidates are launched for the Presidency, the Vice Presidency, for Congress. There it is that platforms are drafted which define the party's position on great public questions and on which candidates are to stand before the people. The Democratic Party encourages the political activity of women. It has taken the lead in bringing women into its policy-making councils. It has taken the lead in giving them equal representation on its national committee and gave equal representation on the platform committee 8 years before the opposition party followed suit. Down the line into the precincts, generally speaking, women work shoulder to shoulder with the men. I have seen them in many places supplying most of the leadership.

As for women's participation in the Government itself, there is no doubt that President Truman has made more appointments of women to highly important policy-making posts than any other President before him, and more than all Republican Presidents combined. It is no longer unique to see a woman in a high-level, high-salaried Federal post on involving responsibility which calls for exercise of judgment and independent decisions. That is a development which we Democratic women are entitled to gloat over a little.

One year from now the two great political parties will be pitted against each other in a fiercely fought contest for control of the National Government. The "outs" are desperately wanting to get in. Some of their leaders, especially in the Congress, are already striving to break down public confidence in the administration by fair means or foul. Some use means so foul indeed that the more scrupulous party colleagues refuse either to sanction or condone them. It remained though for the one woman in the Senate to speak out in scathing condemnation of these unfair, unscrupulous tactics.

It now appears that the vicious attack waged of late upon the President's policies has only served to strengthen him with the people. However, the bombardment, we may be sure, will increase in the months ahead and propaganda, designed to discredit the administration, will be released in all directions. We, avowed supporters of the administration, will do well to recognize the power propaganda has to sway public opinion and that public opinion sways elections. It is surprising how gullible really intelligent people can be. I was impressed with this when a few months ago I found myself in a company of friends in a Midwestern State and was asked to tell something about important people and happenings in Washington. Is this true, is that true, I was asked about one high official and another, questions that revealed the most fantastic ideas gleaned from rumors, broadcasts, and probably the Chicago Tribune. I was happy to have the opportunity to set my friends straight on a number of things, which I flatter myself, I did. A bright woman visiting Washington last week mentioned to me an able highly placed official and asked what about him? "The rumor in our State," she said, "is that he is senile." The State being Wisconsin, it was easy to guess the source of that rumor.

We Democratic women can, and should, constitute ourselves a Voice—with a capital "V"—to correct misapprehensions that come to our attention and to refute unwitting or willful misrepresentations about our high officials, their policies, and official acts.

No better-qualified women could be found for such service than you in this company. You are interested in public affairs, as your presence here bears witness. You read, you listen to discussions of issues over radio and television, you follow closely, no doubt, important developments in the Government.

We Democratic women can hold our heads high with pride in the good account of itself our party has given in this crucial period, as it has done in other crucial periods when the country looked to it for leadership.

No President ever before faced conditions and problems so complex, so difficult to cope with, so challenging, as those that confronted President Truman when he took over the Presidency. He has handled them with commonsense, statesmanship, and such courage as is seldom matched in the public life. He has shown the vision for which the times called and boldness in action.

The President has, at all times, been forthright with the people, letting them know his position on controversial and non-controversial matters, in down-to-earth language that cannot be misunderstood. When he takes a stand on an issue, he stays by it. Not all the badgering of critics can force him to recede from it or to compromise. As for the President's major policies, those of greatest importance to us and the world outside, he inspires confidence in them by his own unshakable confidence that they are right and critics, try as they have, have been unable to show that they are not sound.

It is extremely doubtful whether a President of the opposition party would have had the courage, the daring, to commit the might of this Nation, its material and human treasures, to remove the threat of communism to our liberties, and to stop its inroads upon the liberties of other people of the world. Not since Theodore Roosevelt's day has that party put in the White House a strong, courageous leader, and it repudiated him.

It is clear, by now, to the American people that only by powerful, costly measures can the march of communism be stopped. No longer do we think of it as a vague concept far removed from us. The country sees it for what it is, a real, live danger, and is taking Stalin and his cohorts at their word in declaring their intention to bring the whole world into subjection to their doc-

trine; that is to say, to cast us all into one mold, our spirits, our minds, words, and acts, to be subject to domination by the state.

The horrors of that domination have been brought home by word-of-mouth account of the experience of a fine, self-respecting Latvian family, displaced persons, whom my son and I have had for a year on a farm down in Maryland. To hear our tenant tell in broken English, as I did last Sunday, of the physical hardship, the mental anguish, inflicted upon him and his family by the Russian Communists would wring your heart, loss of brothers, sisters, parents, presumably killed or sent to Siberia, loss of home and all of their possessions. He and his family fled from their country in two horse-drawn wagons to the Baltic Sea, there to take a ship to the American zone in Germany. Pointing to dishes on the table and furniture, I interrupted to ask if they took any such things with them. "Only clothes," he said. "I said good-by to my home, good-by to my furniture, good-by to my dishes, my cows, my sheep." Imagine the feeling with which they said good-by to their native land, upon reaching the Baltic Sea. Another Latvian at our farm was a bookkeeper in a small Latvian town. His wife and three children were at the farm of her parents some distance away when the Iron curtain dropped between him and them. Said he, it was as if Mr. Ross were in Washington—referring to my son—and his wife and children were at the farm, expecting him to come down, and the Russians came in between them and he never saw them again. Since this thing happened to that Latvian, he has never seen or heard of his family, except once through a Communist who, taunting him with friendliness to capitalism, told him that his wife had been sent to Siberia to be given over to a Mongol. One wonders that these people could ever smile again. We cannot make them believe that such things will not happen here. They live in constant dread. The man says the Communists will come, asking first for Charles (that is he) and then it will be for Mr. Ross.

It is accounts like these from victims that make us realize the enormity of this evil thing we combat. A matter so grave involving the liberty, the soul's welfare, even the lives of countless human beings, transcends in importance any partisan, political considerations or the political fortunes of individuals. It is shocking that any element among us would try to make political capital out of any phase of it.

In seeking to exalt the merits of Democratic policies and of our leaders, we women, it is safe to say, will adhere strictly to honest, ethical measures. We will not represent that this administration has made no mistakes. We will not contend that every person connected with it is able and worthy. In an organization so enormous as this Government it would be impossible to prevent unworthy persons creeping in here and there; and certainly the President cannot keep his eye on every person down the line.

We can in all good conscience urge the truth that the country has, in President Truman, an able courageous statesman, who is actuated by one single purpose, that is to use the power of his office to serve the best interests of this country, to keep its social and economic structure sound and stable, and to help countries in the outside world gain the strength to join hands in the effort we are making to bring an end to this menace which hangs over them and us. We can also exalt the fact that the President has surrounding him in his Cabinet and in all the high-ranking posts related to Defense persons of outstanding ability whose integrity cannot be questioned.

The progress the country has made under President Truman's leadership is evident. Never before was the country as a whole so

prosperous, so contented, so far as domestic affairs are concerned. The effectiveness of foreign policies is already evident in the Western World and the promise they give of further effectiveness merits, we believe, the sanction of the public.

We have reason for faith that our Nation will emerge in due time from the long seige of strain and sacrifice occasioned by the Communistic threat, to fulfill its destiny as a free country. My own confidence in such an outcome is strengthened by my conviction that God Himself had a hand in founding of this Government, intending that here the souls of men and women might be free and that here they might develop their God-given faculties of mind, body, and soul in ways of their own choosing. Otherwise, how can we account for there having been raised up from so small a population such a large number of brilliant, high-minded, self-effacing statesmen to lay the foundations strong and deep as they did? We have kept faith with them. By our attitude toward the outside world, we have shown that we are the Christian Nation we profess to be; and recognize that we are our brother's keeper. We have defended and preserved our heritage. We know that we are right in the position we are now taking upon this evil thing called Communism. Therefore, we have reason for confidence that if we trust in divine guidance as our forefathers did in launching this Government, that we shall see a victorious end to our struggle to assure no interference from a foreign power with our form of government, or any of our affairs, and to release the hold it has already gained in the outside world.

The Federal Youth Corrections Program

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, October 4, 1951

Mr. LANGER. Mr. President I ask unanimous consent to have printed in the Appendix of the RECORD a very fine article entitled "The Federal Youth Corrections Program," written by James V. Bennett, Director of the United States Bureau of Prisons, which appeared in the January-February 1951 edition of the Prison World.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Our preoccupation with the war in Korea and our preparations to meet the serious national emergency with which we are confronted have served to obscure somewhat an important new piece of Federal legislation. Late in September, the President approved the Federal Youth Corrections Act and opened the way to a more intelligent approach toward the treatment of young persons who come into conflict with the laws of the United States. The new legislation rejects the basically punitive approach which has characterized much of the administration of justice for hundreds of years. It recognizes that the traditional methods of handling young men and women have fallen quite short of their objective and do not offer full protection to society.

The act applies to persons under the age of 22 who have committed Federal offenses and places a completely new tool in the hands of the judges. They may, of course,

continue to place more hopeful offenders on probation and they still may sentence under the provisions of adult laws. But there are three important new provisions: (1) The court may commit to the Youth Board a young offender for treatment for an indefinite period up to 6 years or; (2) if the court believes the youth requires treatment or supervision (e. g. a sex offender) for a period of more than 6 years it may commit him for an indefinite period not to exceed the maximum penalty provided for the offense; and (3) if the court is uncertain as to how he should proceed he may place the youth in the custody of the Attorney General for study, diagnosis, and recommendation prior to the imposition of sentence.

When a youth is sentenced under one of the new provisions, he will be placed in a classification center where he will be studied intensively by a group of trained specialists. Their reports will be forwarded to the Director of the Bureau of Prisons who will recommend to the newly created Youth Correction Division of the Board of Parole a program of treatment for the consideration of the Division. The Board, in cooperation with the Director will determine the institutional program. Reports and recommendations of the Bureau of Prisons will be submitted periodically to the Youth Division for their consideration and action. The Board will determine whether further institutional treatment is necessary and under what conditions he may be released. The conditional release of all youth offenders and their unconditional discharge rests exclusively with the Division.

This new procedure recognizes that not a few young men who come before Federal courts are like Bob:

Bob was a completely irresponsible 20-year-old youngster. Enormously egotistical, lacking in respect for authority, maladjusted sexually he began having difficulties in early childhood. Teachers found it virtually impossible to maintain order when he was in their classes. He was 14 when he was first committed to a training school for car theft. Within a few months he was back in the community where he was involved in a continual series of burglaries, robberies, and sex offenses, which were interrupted briefly by periods of juvenile institutions and jails. Because of his behavior his parents refused to permit him to return home although they continued to provide him with money and clothing. When he finally came to Federal court, after stealing a series of cars and driving them across State lines, he received another sentence of a few months. Studies by psychiatrists and psychologists and other professional people held out some hope for reclaiming the young man if there were sufficient time for treatment. However, almost before Bob's problems could be properly understood by the staff, he was on his way back to the street. He resumed his predatory activities and now is back in prison for a long term.

Had Bob been committed as a youth offender there would have been adequate time to study him and plan a program for him which might have held greater promise of his eventual adjustment in the community.

The case of Joe was a bit more spectacular, perhaps, and also presented problems which were almost without solution under the traditional method of sentencing. Joe's name flashed briefly in the headlines when at 22 he staged an armed postal robbery in Chicago. By any standards, he was a pretty good youngster. The oldest of seven children, he had gone to work after finishing high school to assist in supporting the family. His father was in poor health and was chronically unemployed. Financial pressures in the home mounted. Finally Joe, who had never before been in trouble, got a gun

and tried a direct approach to financial security. The law is inflexible in cases of this sort. The result, a mandatory sentence of 25 years. Joe is still in the penitentiary. He must serve eight and one-third years before he may apply for parole. He's doing pretty well in the institution, but whether when he has finally squared his "debt" to society he will still be a decent person with a healthy respect for law and order is a matter for conjecture.

The cases of these young men represent the extremes of the problems which have confronted correctional authorities both in State and Federal systems for years. The practice of sentencing youthful offenders to definite prison terms has hamstrung progressive correctional methods. The result has been a steadily mounting number of youths who once having been committed to an institution returned time after time.

The act also contemplates the establishment of a wide variety of institutional programs for youths—schools, hospitals, forestry and other camps, and also authorizes the treatment of these young and sometimes accidental offenders in specially selected training programs under public or private auspices.

Every youth will be returned to his home or some place selected for him on conditional release at least 2 years before the end of his commitment period. Thus, continuing help will be provided in applying the training and education which he has received. The responsibility for providing the necessary guidance after the youth returns home will not rest with professionally trained workers alone. The act makes provision for enlisting volunteer sponsors—intelligent, stable, well-adjusted private citizens—who can thus share in reclaiming young lives. This is a significant provision because it recognizes that the community must accept some responsibility for the problems of its young people. Also, it recognizes that many private citizens are equipped to make real contributions to the lives of youngsters who have previously been deprived of the counsel and help of parents or capable adults.

A final provision of the act looks beyond the problem of youth and crime and focuses attention on the fact that adequate care of youth offenders is but one segment, though a tremendously important one, of the vexing problem of crime. Recognizing this, the act creates an Advisory Corrections Council comprised of United States judges and administrative officers who will meet to study the prevention of crime and the treatment and correction of all offenders. The committee will also make recommendations to Congress for the improvement of the administration of criminal justice and bring about closer relations between the courts, the prisons, and the law-enforcement agencies.

The new legislation had its origins in the work of two important committees. In April 1938, the American Law Institute, because of its concern about the alarming increase in the number of youthful offenders, appointed a Committee on Criminal Justice for Youth. Two years of work on the part of this committee culminated in the drafting of the Model Youth Authority Act which proposed the creation of a new agency for the treatment of young men and women. Shortly after the publication of the report of that committee, the Chief Justice of the United States Supreme Court appointed a special committee to study the punishment for crime. The studies of this committee enabled them to adopt many features of the model act to Federal usage and led to the drafting of the present statute. When the legislation was before the Congress, it was given the active support of many national groups—the American Bar Association, the American Prison Association, the American

Law Institute, veterans' groups, labor organizations, and many of similar groups. The endorsement of the bill by these organizations served to give evidence of the strong interest of the public in providing more adequate resources for the care of young people in trouble.

Taken all in all, the act has been hailed by judges, lawyers, and workers in the correctional field as one of the most progressive steps in improving the administration of the Federal criminal law. Plans are currently under way to organize the facilities necessary to the administration of the act as promptly as funds permit. It is expected that the Advisory Corrections Council will be organized within the next few weeks and that the President will appoint the members of the new Board of Parole. At the outset, the Bureau of Prisons expects to set aside several existing institutions for youth offenders and to establish its new classification centers at those units. Further experience in the administration of the act will provide the necessary background for the long-range planning of additional facilities.

Small Business Gets Smaller

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, October 4, 1951

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Small Business Gets Smaller," published in the Boston Traveler of October 1, 1951.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

SMALL BUSINESS GETS SMALLER

When the defense production program got into first gear it was announced that every effort would be made to protect the stake of small business. Official statements of Defense Department policy were pledges that there would be no unwarranted concentration of defense contracts.

Defense Mobilizer Wilson has verbally bolstered that policy by repeated assurances that every effort would be made to safeguard the normal peacetime economy.

Unfortunately developments have belied these pronouncements.

It wasn't until last week that President Truman got around to nominate Telford Taylor to head the Small Defense Plant Administration to watch over the interests of small business. Yet such an agency was provided for in the Defense Production Act, which has been in force for many months.

This belated action followed extremely disquieting reports from the Senate Small Business Committee—reports that should be of tremendous concern to New England, where, for all its giant corporations like General Electric, 85 percent of its 20,000 firms employ less than 100 workers.

These reports told a story of unprecedented concentration of defense contracts. Whereas in the last war 30 percent of the contracts were absorbed by 10 huge corporations, since the Korean invasion 40 percent of the defense contracts have gone to 10 companies. Whereas in the last war two-thirds of the defense contracts went to 100 giant firms, the

present allocation is nearly two-thirds to only 50 companies.

It is understandable that the large companies with their systems of multiple subsidiaries would be efficient outlets for a major share of defense work. Unfortunately, however, the Senate committee found that the top 50 concerns have received many contracts for which there were alternative sources of supply equally competent to perform the work satisfactorily.

Moreover, the committee reported that many of the larger firms have refused to contract to smaller concerns, preferring to hoard their contracts, and that as a result their backlog of orders has piled up and the pace of defense production has slowed down.

It appears from such findings that America may have been asleep and that the administration may have welched on its original assurances. It is vital for the Nation, especially so for New England, that the position of competitive small business should not be impaired. It appears, however, that impairment has occurred, both to the detriment of our normal economy and our arms program.

How alert is our New England delegation to the need for reversing this trend?

Farmers Home Administration Has Fine Record in Minnesota

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 27, 1951

Mr. HAGEN. Mr. Speaker, I would like to call to the attention of the Members the fine record of accomplishment of one Government agency.

The Farmers Home Administration has done a fine job in my State of Minnesota and I believe the agency should be commended so as to encourage other governmental departments to do the job they are set up to do in the best possible manner.

I have found the officials of the Farmers Home Administration cooperative at all times when I have called upon them for reports or explanations. The people of my district have received good results in dealing with the agency in the matter of farm loans.

The following report of the activities of the Farmers Home Administration in Minnesota for the fiscal year 1951 indicates the extent of the operations there and I offer it as an example of what a good agency can do in giving real service to the people:

On June 30, 1951, the Farmers Home Administration closed its loaning and supervisory activities for the fiscal year. We feel that you may be interested in our presentation of a brief over-all picture of the main activities of this agency as it operates in the State of Minnesota during the year just passed.

As you know, the Farmers Home Administration operates three distinct types of loan programs wherein supervised credit is offered to that segment of farm population which is not eligible for local credit, namely, the production and subsistence loaning program (chattel loans), the farm ownership

program including insured real-estate loans and the farm housing program.

Production and subsistence loan program— Number of loans made and amount of funds loaned, 1951

Type of loan	Number of loans made	Percent of funds loaned to veterans	Average size of loans	Amount of funds used
Initial adjustment.....	683	0.61	\$2,700	\$1,846,230
Subsequent.....	971	.63	790	764,125
Annual.....	635	.25	580	366,825
Disaster.....	86	-----	760	65,045
Farm.....	3	-----	2,130	6,480
Total.....	2,378	.57	-----	3,048,665

Of the 683 initial P. & S. loans made in 1951 a total of 399 loans in the amount of \$1,085,100 were made to World War veterans. The balance of \$761,130 was advanced to 284 nonveteran families. You will also note that 971 subsequent loans were made to borrowers who were already on our rolls. Of this number 585 were war veterans who received a total of \$466,615. The balance of \$297,510 was advanced to 386 non-veteran-borrower families. Of the 721 annual and disaster loans made in this State for crop production purposes only a very small percentage were made to World War veterans, in the majority of instances their needs were taken care of through regular loan channels.

As in past years the above summary clearly points out that veterans are receiving the major portion of FHA-loan funds in this State, this being in accordance with requirements set forth by the Congress in their annual appropriations to the Farmers Home Administration. During the fiscal year of 1951 over 60 percent of all production and subsistence loan funds made available in this State were granted to veterans. Since the end of World War II 4,835 loans were processed for eligible veterans for a total of \$10,162,048.

Size of operating loans

	1937	1942	1943	1948	1949	1951
Number of loans						
Type of loan:						
Initial.....	1,718	3,118	1,189	596	1,504	675
Subsequent.....	2,171	2,703	1,806	556	1,019	971
Annual.....	(1)	(1)	(1)	134	252	635
Disaster.....	0	0	0	0	41	86
Farm.....	0	0	0	0	0	3
Total.....	3,889	5,821	2,996	1,286	2,816	2,370
Amount (in thousands of dollars)						
Total operating loan funds.....	\$2,340	\$4,333	\$2,563	\$1,605	\$4,334	\$3,038

1 Not available

The foregoing table is set up to illustrate the amount of funds used to establish a borrower family in the business of farming over the past 14-year period. You will recall at the present time the maximum amount of money that can be advanced to a borrower in any one fiscal year is \$3,500. Generally speaking in the south half of the State of Minnesota this amount of money is quite inadequate for establishing an operator in the business of farming under present conditions. A tenant farmer must have reliable and satisfactory equipment if he is to stay in competition for good farms and productive soils. The two bills now in Congress, namely, the Magnuson bill in the Senate and the Jones bill in the House of

Representatives proposes to eliminate some of these difficulties.

TREND OF OPERATING LOAN CASE LOAD

One thousand six hundred and eight active, operating loans were paid in full during the fiscal year of 1951. During the preceding fiscal year final payments were made in 1,157 accounts. Whereas a total of 638 new loans were made during the past fiscal year we actually ended the period with a decrease of 523 operating loans. The 1,608 families who paid their accounts in full in 1951 did so either from farm income or have reduced their indebtedness to a point where they could be readily refinanced through local commercial credit channels. In the year just past the sum of \$4,416,000 was collected and returned to the United States Treasury from chattel borrowers in the State of Minnesota. In looking toward the fiscal year of 1952 our field personnel estimate that they expect to make 1,138 initial-adjustment loans which is approximately 468 more than those made during the past year. The total dollar consideration for these loans would be \$3,333,400. The total number of all types of operating loans estimated that would be made for the 1952 fiscal year is 2,484 for a consideration of approximately \$4,494,450. However, we do know that the appropriations for this fiscal year will in no way permit the aiding of this number of eligible needy farm families.

In November 1946 the Farmers Home Administration was created by the merger of the Emergency Crop and Feed Loan Section of the Farm Credit Administration and the Farm Security Administration. At that time the agency was charged with the responsibility of collecting approximately 32,000 unsecured accounts which were created during the drought and depression years of the thirties. Under the provisions of Public Law 518 and 731 cancellations, compromises, or adjustments were permitted in dealing with borrowers whose financial conditions did not permit payment in full. Of the 32,000 accounts approximately 23,000 have been processed at the end of this fiscal year. Of the 23,000 settled 8,670 have been paid in full and approximately 14,330 settled through compromise, adjustment, or cancellation.

FARM-OWNERSHIP PROGRAM

During the fiscal year of 1951, 204 farm-ownership loans were made for a total of \$1,843,326. Of this number 102 direct farm-ownership loans were made to eligible veterans in the amount of \$996,160. Seventy-two of these 102 loans were made for the purpose of purchasing family-type farms, 11 loans for the purpose of farm enlargement of non-economic units, and the remaining 19 for the development of farms presently owned by veterans. A total of 93 insured loans in the amount of \$624,501 were also processed. The foregoing sum represents the amount of cash advanced by insurance companies, local banks, and private lenders. To this amount could be added 10 percent or more which represents the down payment or equity the borrowers had in their real property at the time the loan was made.

Of the 93 insured loans made during the past fiscal year 42 were for the purpose of purchasing farms, 17 for the purpose of enlarging present units and 34 for the development of either land or placing of adequate buildings on the tracts. In addition to this amount, nine subsequent loans were processed in the amount of \$22,665.

As of June 30 there were 1,788 active farm ownership loans in the State of Minnesota. Of this number there are 326 insured and 1,432 direct loans. During the fiscal year of 1951 there was collected the sum of \$760,-952 from direct farm ownership loan borrowers and from insured loans the sum of \$128,175. In the fiscal year of 1950 the sum of \$655,166 was collected. This would indi-

cate that during the year just ended we have collected \$234,081 more than that which was collected in the previous fiscal year of 1950.

In the year just past 111 farm ownership borrowers paid their real-estate loans in full. It may be interesting to note that the average size of the farm ownership loan made in Minnesota during 1951 was \$9,337.

FARM HOUSING PROGRAM

During the past year we made the following farm housing loans: Section 502-62 for \$252,939, section 503-14 for \$45,140, section 504-2 for \$1,855, section 504-1 for \$1,000 (\$500 loan and \$500 grant), totaling 79 loans for \$300,934. Veterans received 30 percent of the housing loans made during the past fiscal year; 40 percent of the borrowers were full-time operators, 37 percent part time, and 2 percent landlords. The Government holds a first mortgage on 29 of the total 79 loans made during the year. The average size of the farm housing loan is \$3,809. Of the 79 farm housing loans made 24 were for construction of new dwellings, 13 for the construction of new barns, the balance for enlargement and alteration of dwellings and outbuildings. As of June 30 there was a total of 185 farm housing loans made in Minnesota and of this number there were no delinquent installments.

Disposition of Surplus Populations

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, October 4, 1951

Mr. LEHMAN. Mr. President, I have been deeply interested in the problem of the refugees in Western Europe, as well as the general question of excess populations in some of these countries. On October 3 the Washington Post contained an illuminating editorial on the subject. I ask unanimous consent that the editorial be printed in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

MIGRATION CONFERENCE

One price of economic stability and prosperity in Europe, says the International Refugee Organization, is the migration of 5,000,000 surplus people to other lands. At least 3,000,000 of these potential emigrants are in Italy and 1,500,000 in Germany. Others are scattered through Greece, Austria, and the Netherlands. The effect of the IRO's report is to emphasize the international character of the problem and to center great interest in the international conference on migration that opened in Naples yesterday.

Surplus population in any country means unemployment, poverty, and unrest, which put an unnatural strain upon any social or economic system. In Italy, for example, an exceedingly high birth rate keeps the population growing faster than economical opportunities. Italians are emigrating at the rate of about 175,000 persons a year, but this falls short of siphoning off the annual increase in the working population. Consequently, Italy is bedeviled by a chronic burden of about 2,000,000 unemployed out of a population of 46,500,000. While the main burden of this economic wastage falls upon Italy herself, the repercussions are felt throughout the free world. The discontent gener-

ated by such conditions is certain to spread, and population that should be an asset remains a liability because it is misplaced.

Many countries in Latin America as well as Canada, Australia, and New Zealand have a direct interest in absorbing the population overflow from Europe. They have unclaimed land to be cultivated and growing industries in need of manpower. It is of great interest to the free world that the overpopulated countries be strengthened by reducing their surpluses and that the underpopulated countries be strengthened by increasing their manpower. Certainly these interlocking interests should dictate the acceptance of an international program that will extend and systematize the migratory movements which the IRO has sponsored in a rather limited fashion.

The chief hurdle to clear, of course, is the financing of this great shifting of peoples. The IRO estimates the cost of moving a migrant to a new home at \$276. The International Labor Organization, however, has placed the shipping costs of migrants going to South America or Australia at \$700 to \$800. These expenses cannot be loaded upon the United States. For the most part they should be borne by the countries directly benefiting, or by the migrants themselves when that is possible.

This country can do a great deal, however, by taking the initiative and by supplying some of the tools required to make the migrating families assets instead of liabilities. The mutual security bill authorizes \$10,000,000 that could be used for this purpose. When this bill has been passed, the State Department plans to call a conference of the interested governments in line with the recent appeal from Queen Juliana, of the Netherlands. Joint efforts can go a long way toward curing this maladjustment in the free world without any change in present immigration laws.

Repeal of Tax Exemptions For Certain Government Officials

EXTENSION OF REMARKS

OF

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Thursday, October 4, 1951

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "One Improvement," published in the Raleigh (N. C.) News and Observer of October 1, 1951, favoring the Senate action in the adoption of the Williams amendment to the tax bill to repeal the special tax privilege extended the President, Vice President, Speaker of the House of Representatives, and Members of Congress.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

ONE IMPROVEMENT

Generally speaking, the tax bill now pending in the Senate is a great deal worse than the bill previously passed by the House, which was itself inadequate.

Not only is that true, but most of the efforts to improve the bill on the floor of the Senate have failed.

However, one important floor amendment, offered by Senator WILLIAMS, Republican of Delaware, was adopted and that amendment improves the bill passed by the House, as well

as the one reported by the Senate Finance Committee. The Williams amendment, if approved in conference as it should be, would end the practice adopted a few years ago of paying the President of the United States and all Members of Congress a portion of their salaries in tax-exempt allowances.

There should be no tax exemptions to any taxpayer beyond the small sums (now \$800 for each person) allowed for purchase of the barest necessities of life.

Senator WILLIAMS has started at the right place as exemptions to high officials are the least excusable of all exemptions and should be the first to be eliminated. However, there are other tax exemptions which in the aggregate are far more costly than the indefensible tax-free allowances now granted to the President and Members of Congress. The worst two of these exemptions are those given the owners of tax-exempt securities (issued by States and political subdivisions) and to charitable trusts which are charitable only in name and are actually tax-dodging trusts. There are numerous other exemptions in the tax law.

There should be no tax exemptions of any kind. Senator WILLIAMS with the support of the Senate, has made a good start toward eliminating them. But neither Senator WILLIAMS nor the Congress should stop there. The principle involved in the Williams amendment is important. But the amount of money affected by the amendment is trivial when compared to what escapes through other loopholes in the tax laws. All of the loopholes should be closed.

Owen Lattimore's Position on Far Eastern Policy

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES
Thursday, October 4, 1951

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "Vigorously Denied Often Before," by Constantine Brown, published in the Washington Evening Star yesterday. It deals with the charge by Harold Stassen regarding the attitude of Owen Lattimore on far eastern policy.

These being no objection, the article was ordered to be printed in the Record, as follows:

VIGOROUSLY DENIED OFTEN BEFORE—STAMP OF "ARCHITECT OF OUR FAR EASTERN POLICY" PLACED ON LATTIMORE BY TESTIMONY OF STASSEN AT HEARING

(By Constantine Brown)

Former Gov. Harold Stassen, now president of the University of Pennsylvania, testified under oath on Monday before the McCarran subcommittee that the State Department had tended to implement the program advocated by Prof. Owen Lattimore in regard to the Far East. He also testified under oath that this line was intended to help the Communist domination of China.

Had it not been for the fact that in 1950 Senator JOSEPH MCCARTHY denounced Professor Lattimore as the architect of our far eastern policies, a statement strongly denied by the Baltimore professor and the State Department, the testimony of Mr. Stassen would have been interesting but not spectacular.

In the light of the accusations and counter accusations which have been exchanged since Senator MCCARTHY pointed his finger at Professor Lattimore, the Stassen documented testimony has become sensational. The president of the University of Pennsylvania is a highly respected national figure. He has kept completely out of the picture in the political battle around McCarthyism. Moreover, he is considered a liberal Republican.

His background gives weight to the testimony he presented undramatically to the McCarran subcommittee. Mr. Stassen was a member of the conference group invited by the State Department to discuss the policy of this country in the Far East with particular emphasis on China. The witness presented to the committee the stenographic notes of his own statements at the meeting which lasted from October 6 to October 9, 1949. This document was considered secret until Monday. Mr. Stassen put it in the record because he said this classification did not help the security of the country and the minutes of all the proceedings should have been made public at the end of that conference.

The former Governor of Minnesota told the Senators that the conference was dominated by a group headed by Professor Lattimore. It recommended that we consider the formulation of a policy in the Far East as a long-term problem because Russian communism was not nearly as aggressive as Hitler's nazism. And in any event, whatever aggressive intentions Moscow might have they were directed primarily at Europe. This is a point of view which is debatable. But Professor Lattimore also urged strongly that America recognize at an early date the Communist regime in China. Because of the anti-Communist hysteria in the United States the public might not approve of such a step, so Professor Lattimore advised the State Department to have Britain and India move first and we would follow shortly thereafter. He also insisted that we turn over Formosa to the Reds and if they wanted the British crown colony of Hong Kong we should allow them to take it. Mr. Stassen also related that the Lattimore group urged that we suspend all assistance to Nationalist China, that we oppose the blockade of the China coast by Chiang's navy, and that we extend all possible economic help to the Chinese Communists while cutting off all support to the non-Communists. All these points were strongly opposed by Mr. Stassen and the few others who shared his views, but without success. At the end of the 3-day round-table discussions, presided over by Ambassador at Large Philip C. Jessup, Mr. Stassen approached him and urged that Professor Lattimore's policies should not be followed. "There is a lot of logic in what Lattimore proposes," was Dr. Jessup's reply, Mr. Stassen said.

All these discussions would not necessarily have meant that Professor Lattimore was the architect of our policies in the Far East had not the State Department attempted to follow them fully. Evidence shown in the last 12 months indicates that we intended to recognize the Red regime at Peking and would not oppose admission to the United Nations, that we had decided to write off Formosa, that the State Department considered the Pacific of little importance to our security until the outbreak of the Korean war.

Mr. Stassen related a heretofore unknown dramatic episode which occurred at the White House when Secretary Acheson and Mr. Jessup urged President Truman in December 1949 to stop, with a "dramatic" statement, five ships which were on the high seas with arms and ammunition for Chiang's forces. Both diplomats said such a statement would help further the cause of peace in the world. The late Senator Arthur Vandenberg, who attended that White House

conference, protested violently and carried the day. Mr. Truman refused to recall the Navy transports "dramatically" or otherwise.

Mr. Stassen pointed out the speech made by Mr. Acheson in February 1950, defiling our line of vital interests in the Pacific—with Formosa and Korea excluded from that line; the secret circular sent to our diplomatic officers abroad to prepare foreign governments for the idea that Formosa might fall into Communist hands and that we did not consider that island of importance to our security as full acceptance of Professor Lattimore's "line." Its implementation was hampered by the aggression of the Communists in South Korea on June 25, 1950, when we engaged our Armed Forces.

Mr. Stassen's testimony places on Professor Lattimore the stamp of "architect of our eastern policy," which he has heretofore so vigorously denied.

Bowles Fills the Bill

EXTENSION OF REMARKS

OF

HON. WILLIAM BENTON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES
Thursday, October 4, 1951

Mr. BENTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record, the column of last Saturday by Marquis Childs, entitled "Ambassador to Nehru." This is a most interesting column by one of our most distinguished journalists. It deals with one of the great problems of our times, the relations of the American people with the Indian people, and I am glad to see that this most knowledgeable writer and observer advocates for India "a distinguished citizen who can talk to the Prime Minister with some sense of equality." I have only one reservation about inserting this column in the Record. I cannot believe that Mr. Childs knows enough about Ambassador Loy Henderson's career in India to say that he was not "a conspicuous success." There are hazards which surround any able man, on any job which he may undertake. Mr. Childs suggests that Ambassador Henderson operated "under certain grievous handicaps." I do know from my own first-hand observation that Loy Henderson is one of our very ablest foreign service officers. I shall go further. In my close to 3 years in the State Department, and in my service at international conferences, I did not meet another foreign service officer for whom I formed a higher regard. I am sure that ex-Governor Bowles would be the last to ignore Mr. Henderson's experience, and I am sure he will rely heavily on his judgment and guidance.

There being no objection, the article was ordered to be printed in the Record, as follows:

AMBASSADOR TO NEHRU

(By Marquis Childs)

BOWLES FILLS THE BILL

In the good old days when sovereigns were sovereign, an ambassador was the personal messenger, intelligence agent, gift or insult bearer of the ruler. There was no nonsense about the advice and consent of anybody else in this highly personal relationship.

In the minor controversy over the nomination of Chester Bowles to be Ambassador to India the curious in-between status of present-day ambassadors is apparent. Today's envoy is certainly not the personal messenger of the President. But at the same time his closest relation is with the Chief Executive and the Secretary of State.

Senator ALFRED SMITH of New Jersey, a Republican who tries conscientiously to take a responsible part in carrying out bipartisan foreign policy, believes the Senate Foreign Relations Committee should have been consulted in advance about the naming of an Ambassador to India. He says he has nothing against Bowles personally.

Senator JOHN SPARKMAN, of Alabama, equally conscientious in working for bipartisanship, disagrees. In committee session he explained his belief that ambassadors are more or less in the classification of Cabinet officers, with the President having the right to make a personal choice. If the individual selected is of good moral character, then the Senate is obligated to approve the nomination.

No one can dispute SMITH on one point. That is the supreme importance of an able representative of the United States in New Delhi. In the current issue of *Look*, John Cowles points out that India is the last stronghold of democracy in Asia and adds:

"We will be making a blunder almost as calamitous as the one we made in China if we don't support the Nehru government in India, even though we may be irritated over what we think are inconsistencies in Nehru's attitude . . . If the United States is so foolish as to undermine Nehru's already weakened regime in India, the government or the chaos that comes after it in the world's second most populous nation may be far less to our liking."

To be Ambassador to Nehru—and that is what it comes down to—is not easy. He is a brilliant and often temperamental genius who proved a resourceful leader in the long revolution against British rule.

One of the keenest observers in New Delhi told me when I was there a year ago that Nehru has a prejudice against civil servants. It will do no good, so this advice went, sending a career diplomat. You must, said this knowledgeable foreigner, send a distinguished citizen who can talk to the Prime Minister with some sense of equality.

In many respects it seems to me that Bowles meets this prescription. He was a successful businessman, acquiring a competence making it possible for him to go into public life with a sense of independence. That had long been his ambition. As Price Administrator in Washington and later as Governor of Connecticut he showed political ability and finesse.

Loy Henderson, a career diplomat formerly Ambassador to India, was not a conspicuous success in New Delhi. He was under certain grievous handicaps and he never seemed able to enter into any real understanding with the Prime Minister.

In times of ferment such as the present, however, too much cannot be expected from an ambassador. Henderson is in an even tougher spot now as American Ambassador to Iran, where the oil crisis is boiling up so violently as to suggest the possibility of open conflict. The Iranian upheaval is fed by the same kind of violent nationalism that is, in part at least, at the root of Nehru's belief in Asia for the Asians.

While certainly most posts should be filled by career diplomats, no inflexible rule can be laid down. Incidentally, the State Department has figures to show that more career service men are today in top diplomatic jobs than ever before. Occasionally men outside

the Foreign Service have qualifications that especially fit them for a difficult assignment.

The task in India calls not only for an able ambassador but for a larger and more efficient staff than we have had there. It is an opportunity, above all, for the skillful presentation, through the United States Information Service, of the true picture of America in its relations with Asia.

Perfect ambassadors are like perfect marriages. They exist in heaven if they exist at all. It is important to get on as quickly as possible with the kind of bridge building essential between India and the United States.

Acheson-Stassen Conflict

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, October 4, 1951

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the *RECORD* a very timely article entitled "Acheson-Stassen Conflict," written by David Lawrence and published in the Washington Evening Star yesterday.

There being no objection, the article was ordered to be printed in the *RECORD*, as follows:

ACHESON-STASSEN CONFLICT—MINNESOTA'S FORMER GOVERNOR PUTS NEW LIGHT ON DISCUSSIONS OF OUR CHINESE POLICY

(By David Lawrence)

Not long ago a slight discrepancy in the testimony of former Communist Louis Budenz—something that will be cleared up in a future hearing soon—brought on an artificially developed furor. Demands were made by administration Senators that the whole thing be subjected to a new investigation and that perjury might be involved.

Now, however, something far more serious has occurred which led Representative TIMOTHY P. SHEEHAN, of Illinois, Republican, to demand in the House of Representatives that there be an investigation of "possible perjury" by Secretary of State Acheson in connection with contradictions in testimony that he gave on American policy toward China.

The administration is strangely silent and shows no such interest in conflicting testimony as it did in the Budenz incident.

Mr. SHEEHAN made it clear that the testimony of Harold Stassen, former Governor of Minnesota and now president of the University of Pennsylvania, "completely contradicts" Mr. Acheson's statements before the Senate Armed Services Committee when it was investigating the ouster of MacArthur last spring.

Mr. Acheson testified then:

"I said that throughout and up to the present time we have always recognized and supported this government (the Nationalists), and we have not aided, abetted, made plans to recognize or anything in that field, this other (Communist) government."

But former Governor Stassen has just testified before the Senate Internal Security Committee that he learned from the late Senator Vandenberg of Michigan that Ambassador Jessup and Secretary Acheson once urged President Truman in 1949 or early 1950 to dramatize a plan to give no more aid

to Generalissimo Chiang Kai-shek by unloading ships of supplies meant for the Chinese Nationalists.

(*Error's Note.*—The State Department yesterday denied that either Mr. Acheson or Mr. Jessup had made such a proposal.)

Mr. Stassen also uncovered another contradiction far more sensational. He revealed that Owen Lattimore had far more to do with the shaping of State Department policy than Mr. Acheson, by his testimony, has heretofore led the public to believe.

Testifying under oath, Mr. Stassen swore that, until the Korean war broke out, the State Department followed 9 out of 10 of the recommendations made by Mr. Lattimore at an informal round-table conference held under the auspices of the Department of State in October 1949. The tenth recommendation was that the Communist regime be recognized.

Senator MCCARTHY has charged that Mr. Lattimore was the "architect" of American policy in China and that only the exposure of the whole trend of policy prevented recognition of the Communist regime in Peking by the United States.

The State Department has sought up to now to give the impression that the October 1949 conference was just an informal gathering of 31 outside participants—presumably scholars and experts in far-eastern affairs—and that Mr. Lattimore's part was quite insignificant. It seems that a stenographic record of the conference was kept, but the State Department a few days ago declined to furnish a copy of it to the Senate Internal Security Committee when it requested the document. So Mr. Stassen revealed what he knew of the conference. It developed that, when he was told in October 1949 that a stenographic record would be taken, he asked for a copy of the complete transcript but was refused, and he declined to participate unless he was to be given afterward at least a copy of the stenographer's record of what he himself said at the conference.

So Mr. Stassen supplied the Senate committee with his own remarks and then a summary of the notes he took at the conference. It seems strange that the State Department would attempt to suppress what was said by 31 persons outside the Federal service, but such is the behavior of bureaucracy that a secret classification was given to the conference record. When Mr. Stassen was given the copy only of what he himself had said it had on it a label warning him that the document contained "information affecting the national interest of the United States within the meaning of the Espionage Act."

Neither Mr. Stassen nor the Senators could see any security reasons for suppressing this. Certainly it wasn't in a class with that famous stenographic record of the Wake Island conference which the administration surreptitiously supplied to a newspaper. It was subsequently learned that the record by the stenographer at Wake Island was done on a keyhole basis, without any of the principal participants knowing it was being transcribed.

This is an excellent example of the abuses which the new Executive order by President Truman, requiring suppression of news at the source, makes possible. It helps the administration cover up any inaccurate statements any Government official may make and enables the administration to prevent the disclosure of facts that contradict testimony before congressional committees by administration witnesses. These are strange goings-on for a left wing administration which boasts of its interest in freedom of information.

Address of Hon. Katharine St. George,
of New York

EXTENSION OF REMARKS

OF

HON. CECIL M. HARDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mrs. HARDEN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include the following address of Hon. KATHARINE ST. GEORGE, Republican, of New York, at a luncheon of the Eastern and Southern States Republican regional meeting at the Mayflower Hotel, Washington, D. C., on Monday, October 1, 1951:

These meetings of Republicans from all parts of the country are necessary and good for the soul; they are also necessary to keep the party alive and if they are properly conducted they might even be instrumental and helpful in winning the next national election.

Of course it is very pleasant to meet old friends, to indulge in plenty of back-slapping and to tell each other that all is right with the world and the party and that we are on the road to victory.

Well, this audience is adult and the facts are that we have lost five consecutive elections and that we had better pause and reflect on how and why this happened.

Our party is divided. It is split in two just as much as the Democratic Party is split in two and no amount of cheering is going to change the fact.

In my humble opinion, the Republican Party has lost the last three elections because it has shied away from the main issues and refused to face them, on account of the cleavage in our own ranks.

The Republican Party will never win an election and may become nothing more than a useless appendix in the body politic if it does not take a strong stand on the important issues facing this Nation and the world.

First it must stand for the ideals of the Republic versus democracy and it must proclaim that difference and teach it. Too few people know it and our young people are completely confused on the subject.

This country of ours was founded as a Republic. With the vision of true greatness, Benjamin Franklin answered the question as to what form of government the new Nation was to have with the reply: "A Republic, if you can keep it." In a republic the representatives of the people stand between them and the encroachments of government, they represent the rights of the individual, they are free to use their best judgment and by the same token, the people can remove them from office when they no longer fulfill the functions for which they were elected. In a democracy, which means direct rule of the people, or Demos, the representative is subject wholly to the will of the organized majority. He or she is nothing but a puppet parroting the ideas of pressure groups and therefore an easy pawn of the all-powerful state who curries favor and remains in power by the old method of giving the people bread and circuses in the days of ancient Rome. The modern version is: Tax, tax, spend, spend, elect, and elect. There is nothing new under the sun.

Democracies have always failed; that is an historical fact. They have always ended in

dictatorship or national socialism, which is the negation of individual freedom. The late Lord Lottian, at the beginning of World War II said, "There will be one certain victor in this war, whichever side wins—national socialism."

But in the last 12 years we have not proclaimed these facts, we have not stood for the basic principles of the Republic, with its well-designed checks and balances. Why? The answer is plain and obvious, because we have been at war. War and liberty cannot exist together. War economy cannot be a free economy and we have been living in a war economy for years. We have a generation, that has now grown up, who have never known anything else.

Why have we been at war almost continuously? Because we have been incapable of making a just and lasting peace. After both wars we lost the fruits of victory and now we are fighting in Korea because of the blunders caused by our lack of a sound foreign policy.

The reason for our losing the peace in both wars—the reason for our high taxes and our planned economy—the reason for our army of bureaucrats and our keeping of one party in power so long that it has become corrupt and arrogant is our foreign policy.

The Republican Party has got to take a firm and definite stand on foreign policy, win, lose, or draw. It must give the people a clear-cut choice on the only issue that holds the key to our present problems. If it does not do this it will not win and it will not deserve to.

It is not our place, nor is this the time to spell out what the foreign policy should be, but one thing is certain: it should be American.

This it has not been for a long time. We have a group of very intelligent people, many of them young, who have been educated in foreign ideologies. They are not patriotic because they consider patriotism a crude kind of nationalism that they despise. They are cosmopolitan, world citizens, they are the nationals of various other countries where they have lived and for whom they hope to be mistaken. They are pathetic because they are men and women without a country, they are laughed at abroad and not a part of their own people at home. Yet these people have been shaping our foreign policy for the past two decades.

The proof and the record are there and undeniable, that we have had traitors in places of high trust. Never, in any other modern state has any great nation had its foreign affairs in the hands of people, who through stupidity or lack of patriotism, or allegiance to other groups or nations, seemed bent on destroying them.

What has the Republican Party done in all this? Very little.

We have been afraid to discuss the subject, although you have to go back to it always as the root of all our troubles.

We are scared off by the silly talk of not changing horses in the middle of the stream. Well, the poor old nag has been in the middle of the stream for nigh on 20 years now, and I think it would be best to leave it to drown and try to swim to shore.

This administration is going to be hard to beat, let no one have any illusions on that.

They have the money, limitless money and they can always get more out of the taxpayers' pockets. They have fomented class hatred, something that had no place here, because if there ever was a classless society we have it. Any man can aspire and can become President and it is equally true that there are only three generations from shirtsleeves to shirtsleeves.

I would like to quote the words of a great American spoken in 1936. "What are these dangers that I see? The first is the arraignment of class against class. It has been freely predicted that if we were ever to have civil strife again in this country, it would come from the appeal to passion and prejudices that comes from the demagogues that would incite one class of our people against the other."

"In my time I have met some good and bad industrialists; I have met some good and bad financiers, but I have also met some good and bad laborers, and this I know, that permanent prosperity is dependent upon both capital and labor alike."

"And I also know that there can be no permanent prosperity in this country until industry is able to employ labor, and there certainly can be no permanent recovery upon any governmental theory of 'soak the rich' or 'soak the poor.'"

"The next thing that I view as being dangerous to our national well-being is government by bureaucracy instead of what we have been taught to look for, government by law."

"Just let me quote something from the President's message to Congress."

"In 34 months we have built up new instruments of public power in the hands of the people's government. This power is wholesome and proper, but in the hands of political puppets of an economic autocracy, such power would provide shackles for the liberties of our people."

"Now I interpret that to mean, if you are going to have an autocrat, take me; but be very careful about the other fellow."

"There is a complete answer to that, and it rises in the minds of the great rank and file, and that answer is just this: We will never in this country tolerate any laws that provide shackles for our people."

"We don't want any outcasts, either in or out of office. We wouldn't even take a good one." Those are the words of Alfred E. Smith, who was a man of courage and a good Democrat.

The issues are big. Will we seize them boldly and honestly? Will we wage a fight for principles or will we lose the battle because we were afraid? Will we fight to keep the Republic and to keep Government in its proper place as the servant of the people, not their master? Will we demand an American foreign policy strong enough to make and keep peace in the world, and for that our watchword must be "let none but Americans be on guard?"

Let us not be afraid to lose, let us give the people a clear-cut issue and we will abide by the result. If we give them no choice on the big issues why should they entrust us with the Government of the Nation? A friend of mine who is well-known to many of you and a life-long Republican, told me after one of the last elections, "Oh, yes I voted, but it was hardly worth taking the trouble to put my hat on and crossing the street to do it."

We must make up our differences, we have enough to fight without fighting each other, before it is too late.

We must fight for great principles, not for little personalities. We must be unafraid though our dangers and perils are very great. We must put our country first at home and abroad. Our loyalty must be to her and no other loyalty can count.

This is a great task, a hard task in which we may well fail again. If we do, the fault will be ours. The cause is just, the principles are high. "We must lift up our eyes to the hills," the hills of integrity, patriotism and justice and from them we will get the strength to win.

How Much Does the Individual Count?—

Sermon by A. Powell Davies, D. D.

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr CURTIS of Missouri. Mr. Speaker, the Reverend A. Powell Davies preached a sermon the other day which should be of great interest to all persons who believe in government of the people, by the people, and for the people, whatever their station in life.

Abraham Lincoln was not posing a rhetorical question when he stated four-score and 8 years ago that the question involved in his time was whether this Nation or any nation so conceived, as ours was, and so dedicated, could long survive. There was, indeed, a deep question in his mind and heart, although his faith was strong.

I believe Reverend Davies' sermon discusses the very heart of whether this Nation, which has grown complex with a population of 160,000,000 human beings, can long survive, bearing in mind the principles through which it has been conceived and to which it is dedicated.

How Much Does the Individual Count?

(A sermon by the Rev. A. Powell Davies, D. D., All Souls' Church, Unitarian, Washington, D. C., September 30, 1951)

I received a letter, not long ago, from a man who thought he knew what should be done about some of the evils with which we are afflicted. "But," he said, "I myself, am powerless to begin these things; I am unknown, I have no reputation; I am just an ordinary individual."

His attitude, I am afraid, is rather typical. People have come to believe that, except in small and insignificant ways, what they think and do is unimportant. They may have opinions but there is no way to give them weight, they may believe in a course of action but they feel helpless to initiate it. Decisions of consequence are all made by leaders—the very few who are vested with authority, and these few are not attentive to the opinions of ordinary people; they are affected only by mass opinion, and mass opinion can be manipulated.

If it happens, therefore, that something is being done that is clearly wrong, it is useless being incensed about it, what can you do? Wrongs can only be set right by legislative committees or crusading newspapers or through the personal tour de force of someone with commanding influence.

Suppose the government of your city is corrupt, its agencies of law enforcement undermined by bribery and graft—well, what can you do, except groan about it, and commiserate with your neighbor when you talk to him over the fence? You certainly can't fight your city government, and least of all its agencies of law enforcement. You would get nowhere—unless it was into trouble. Who are you? Nobody at all, just an ordinary individual.

Suppose you think that the behavior of some of those who have been elected to high places is foolish or hysterical, or even perhaps mean and sordid, well, you can tell your wife about it or the men who ride with you in your car pool, but what can you do about it? Except endure it, hoping that something will

happen somewhere, sometime, that will change it? You are just one of the many, the vast multitude doomed to be helpless and inarticulate.

It may be that your school system is being attacked, that organized perfidy is secretly conspiring to destroy the reputation of your teachers, degrade your educational standards, shatter the confidence of the people in administrators who deserve to be trusted. This has happened in several American cities in the last few years. Well, what do you do? If you take a stand, will there be others to join you? Or will everyone be afraid—as you are—of having their loyalty impugned, of being called a traitor or a fellow traveler on the testimony of someone who saw you glance at a copy of the Daily Worker that had been left on the seat beside you on the train.

You are only an individual, an ordinary person with no influence, an anonymous member of a voiceless, faceless multitude, someone who doesn't count.

This, apparently, is the prevailing feeling. And if it persists, the Marxists will have scored a victory. What else is it but Marxist: the intimidation, the subjection, the complete subordination of the individual. To the extent, therefore, that we have this state of things in America, we are sick with the same disease that has cursed the peoples of the iron curtain countries. The virulence is less but the malady the same. We have come a little closer to being ants in an ant hill.

Democracy as contrasted with Marxism is founded upon the significance of the individual. It is this significance that is fundamental, and not the collective significance of the society. A democratic nation is not a field of grass, or a flock of sheep, or a colony of yeast cells; it is an association of free men and women. That was what was intended by the words, "life, liberty and the pursuit of happiness." Not totalitarian life, or collective liberty, or the pursuit of promulgated happiness, but individual life, individual liberty, and individual happiness. This does not mean, of course, that the individual exists apart from society, or that his life and liberty are unconnected with social relationships, or that all alone he can achieve his happiness. What it does mean is that the society shall liberate the individual and not dominate him; that it shall enhance his significance and not belittle him; that it shall invite his free participation and not enslave him; that it shall respect him and not demean him. The government is his servant, not his master, his leaders are his agents, not his rulers, his fellow men are individuals like himself, his neighbors and his fellow citizens, not fellow subjects. For democracy is founded upon the significance of the individual.

If this significance diminishes, if the individual feels weak and helpless, if he is afraid, intimidated, enfeebled by the palsy of futility, his society is to that extent Marxist rather than democratic, and has become infected with the virus of its enemies.

This is something to be thoughtfully considered. It was John Stuart Mill, one of the greatest exponents of individual significance, who warned us in his *Essay on Liberty* that "a state which dwarfs its men in order that they may be more docile instruments in its hands even for beneficial purposes—will find that with small men no great thing can really be accomplished."

The state that dwarfs its men deliberately, and claims to do so for beneficial purposes, is, of course, the Communist state. But it is possible for people to become dwarfed without deliberate intention, without its being part of a plan. We become dwarfed when we suffer the state of things that is now obtaining in our own country. Listen again to John Stuart Mill: "Whatever

crushes individuality is despotism, by whatever name it may be called." Yes, despotism because despotic in drift and inclination, despotic in spirit and temper, despotic in tendency.

Ah, but, you say, how can you be an individual in a world of parties and factions? You have to go along with what exists, and choose from what there is, accepting its limitations and endorsing the evil with the good. I wonder if you do? Must a man be gagged by a lesser loyalty when his conscience commands him to speak out for a higher one? According to Thomas Jefferson, such a restriction is beneath contempt. He never submitted his opinions, he says, "to the creed of any party of men whatever, in religion, in philosophy, in politics, or in anything else. Such an addiction is the last degradation of a free and moral agent" (letter to Francis Hopkinson, 1789).

According to Jefferson, the individual may have a place in a party and not be subject to the party. He can work with other individuals in an organized movement and not be restrained by the limitations of the group. Is this correct? Or must we modify it? Well, I will say this: It is not certain that Jefferson, writing in his own time, and out of his own exceptional experience, entirely understood how difficult this sort of independence might become. It is not candid, I think, to pretend that an individual can work with a group and not be disciplined by its procedures. Indeed, we should go further and admit that sometimes the individual will be submerged, temporarily, and his chosen purposes distorted if he works with a party or a movement. But I think Jefferson would have replied to this that it is a matter of proportion, that beyond a certain point, the individual should rebel. His controlling loyalty should be to his convictions, and he should not get his loyalties confused. And it is inconceivable to me that Jefferson would not exhort us, if he lived today, to reassert ourselves in character and conscience, as individuals. Only so can any of our associations—parties, movements, citizen groups, churches, or anything else—be carried to a higher level. There is no such thing as a society apart from the individuals who compose it. We speak of churches doing things, or of the Senate doing something, or of some other entity taking action. But this can be misleading. What happens is that the people of the churches do something, or the Members of the Senate, or the individuals that form a group. It is clear, therefore, that you cannot raise the social level unless you raise it through the individual.

After all, this has always been the case. And besides this, there is the pioneer, the enterprising individual. No reform, no correction of an evil, no advance of any kind in all the annals of history was ever begun without an individual to get it started. When the fires of the American Revolution were burning low and men watched the flame of its hope go down towards the ashes of despair, how were those fires rekindled? Who breathed them back into life? Was it the Continental Congress? Did someone appoint a Committee on Unrevolutionary Activities? Was it an ecclesiastical commission? You know the answer. It was an individual therefore obscure, or almost so, Tom Paine, whom George Washington credited with saving the Revolution.

Who in the nineteenth century reformed the prisons and established humane treatment for the insane? Was it an outcry from the clergy? An impassioned plea by the medical profession? A committee of prominent citizens who put an advertisement in the newspapers? No; it was a relatively unknown girl from Hampden, Maine, Dorothea Dix.

Who got the American public school system going? Did someone arise in the House of Representatives and declare with his fist pounding his desk that a great Nation deserved an educated citizenry, whereupon the House of Representatives, instantly persuaded by such impeccable logic, unanimously voted both an authorization and an appropriation, and the Senate declared itself mortified because it had not thought of it first? No; it was a lone enthusiast—a Massachusetts lawyer named Horace Mann—who did, incidentally, arrive after a while in the House of Representatives.

And so we might continue with name after name. Christianity was not established by people of prominence, people who wielded influence and who had evolved a plan to save the world. Jesus of Nazareth was an individual. So was the apostle Paul, and so were the people who formed those early Christian congregations.

When anyone asks, What does the individual count? surely the first of the answers is this: It depends—and always must—upon the individual. If you have the conviction, the courage, the patience, and the persistence, and if you are willing to put everything you have into the venture, win or lose, you can go immense distances, in this time or any other, as an individual.

But still, it may be objected, these that we have mentioned were after all outstanding people. They had unusual talent, conspicuous ability—or at any rate they had a sort of boldness that the majority cannot claim. Say something, Mr. Preacher, that applies to John Doe or even to Caspar Milquetoast. None of us, of course, admit to being John Does, and certainly none of us are Caspar Milquetoasts; but still we know a lot of people who are one or the other. People who are timid—who don't in the least want to save the world, they just want to buy a television set. What do they count for as individuals?

I will answer frankly. At present, not much! Caspar Milquetoast is an appealing little figure and it's natural to be sorry for him. But just the same, he is responsible for a large part of what is the matter with us. He reads the wrong newspapers, believes lies, follows his prejudices, wraps himself up in his fears. And worst of all, he doesn't know when to be angry.

That is one of the truly serious things that has happened to the multitude of so-called ordinary people. They have forgotten how to be indignant. This is not because they are overflowing with human kindness but because they are morally soft and compliant. When they see evil and injustice, they are pained but not revolted. They mutter and mumble, they never cry out. They commit the sin of not being angry.

Yet, their anger is the one thing above all others that would make them count. If they cannot lead crusades, or initiate reforms, they can at least create the conditions in which crusades can be effectual and reforms successful. The wrath of the multitude could bring back decency and integrity into public life; it could frighten the corrupt demagogue into silence and blast the rumormonger into oblivion. It could give honest leaders a chance to win. If the multitude of ordinary people would rise up in righteous indignation and let the sound of their anger be heard, we should no longer have to read in the newspaper of a district attorney, flouted by criminals, who puts his head in his arms and weeps; or of a Senator who groans aloud when his motives are distorted in careless debate and the toll of weeks is heedlessly cast aside. Nor of a hundred other things of which these two are representative.

It is frequently said that there are no longer good leaders: men and women with

the force of character, the mentality, the vision, the integrity to steer us through the dangerous waters all around us and the storms ahead. I am not so sure that this is true. I think it should be put as a question, not stated as a fact. I am doubtful, very doubtful, whether good leadership is as widely welcomed as it used to be, and whether it is recognized when it appears. However, this may be, leadership in a free country is not rulership; nor is there any ruling class. Leadership must emerge from the people. People who believe that the individual counts must produce the outstanding individual—and then help him to count. He is their agent, their representative. Only as such individuals emerge, and are encouraged and supported, can a society based on individual significance maintain its special character, and only so can it endure. It is indispensable that all of us together provide the conditions under which we shall be well and wisely led. And as I said before, this means that at least we must be willing to be angry—at lies and cheating, venality and corruption; at least, we must stand up for common decency. If we will not do that much, what hope can there be for us? What good are we? Why should God or history preserve us? Why should we be saved?

But besides regaining the capacity for righteous indignation, the individual—who ever he is, and no matter how anonymous—can exert continuously, and indeed, must exert continuously, the entire influence of his life and character. There is not one of us who does not every day appreciably affect our total situation. Individuals are every hour making a difference in other individuals and therefore in all of us. By the stand we take—or refuse to take—in ordinary conversation, we encourage either the true or the false, the good or the bad; we make it either easier or harder for other people to have courage, to deepen their convictions, to make right choices. It is out of the vast complex of the relationships of individuals that the impulse comes to raise our standards—or the willingness to let them drop. When we express our own prejudices we deepen prejudice in others. When we counter them, prejudice everywhere receives a setback. If we stand by our convictions, gently but firmly refusing to be intimidated, either to please a friend or placate an enemy, conviction finds a stronger rootage. It is not necessary to be too much bothered by the things that people say at such a time, the irritation or annoyance they express. Something has happened within them that they could not prevent; something that whether they wished it or not, made them believe more deeply that character is a reality; that there are things in life to respect.

How much does the individual count? It is a question that he himself must answer, that all must answer, each by the manner of his life.

"What can I do?" asks Horace Traubel in his Chants Communal. "I can talk out when others are silent. I can say man when others say money. I can stay up when others are asleep. I can keep on working when others have stopped to play. I can give life big meanings when others give life little meanings. I can say love when others say hate. I can say every man when others say one man. I can try events by a hard test when others try it by an easy test."

"What can I do? I can give myself to life when other men refuse themselves to life."

He is entirely right. He, or you, or I, or any of us can do precisely that—and it will determine how much we count as individuals. Let us pray: O God, who has given us powers we seldom use and possibilities we all too easily renounce, lead us to see how much better we might be than we are, and help us to be willing for it. Amen.

Address of Hon. Joseph W. Martin, Jr., of Massachusetts

EXTENSION OF REMARKS OF

HON. CECIL M. HARDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mrs. HARDEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. JOSEPH W. MARTIN, Jr., Republican leader of the House, at a luncheon of the Eastern and Southern States Republican regional meeting at the Mayflower Hotel, Washington, D. C., on Monday, October 1, 1951:

Madam Chairman and fellow Republicans, it is a privilege to be here today to join in this discussion of the 1952 campaign. Once more we find ourselves preparing for a victory that has eluded us in five consecutive Presidential elections.

In the disappointment of our defeats we have emerged each time stronger and more determined than ever that America must embrace the essential principles for which the Republican Party stands if our country is to survive as a free nation. Such vigilance, such determination, cannot fail, and it will not fail. Because Americans love their country, because they want to preserve the basic liberties which made it great, they are going to elect a Republican President and a Republican Congress in 1952.

Yet, as we approach the campaign, let no one doubt the gravity of the task that is ahead of us. We are dealing with one of the greatest threats to liberty that America has ever known—entrenched government. Nothing less than a complete awakening of the American people and a landslide march to the polls will bring about the victory that is so essential.

In the field of politics, we are often too prone to use old yardsticks for measuring new circumstances.

You hear it said that the Republicans cannot win in 1952 because of the phony prosperity that war-making and bloodshed have created.

You heard it said that the voters have been bought with their own money and that we will go up against a controlled vote.

Finally, you hear it said that the American form of government, as we know it, is gone, that the people have been drugged into an acceptance of socialism.

My colleagues, I cannot subscribe to such despair and defeatism. I, for one, cannot believe that the American people are yet ready to sell out their 175-year-old heritage of freedom for the thoroughly discredited shackles of socialism—a yoke already thrown off by the people of Australia and New Zealand and about to be thrown off by our British friends across the sea.

The truth is that the Republican Party will enter the 1952 campaign with three of the greatest political issues of modern times. I want to talk to you about these issues, which if we face up to them and meet them squarely will bring us a victory of unprecedented proportions.

The first of these great issues—and it is the most fundamental—can be summed up in four words: Lack of national security.

Americans at various periods in their history have experienced fear for their economic security—fear for their pocketbooks

Today, for the first time, they are experiencing fear for their national security—fear for their lives.

Even in the darkest days of the American Revolution the American people never lost faith in the outcome. Today we are a Nation assailed by doubts and insecurity.

Due almost wholly to the blundering of our so-called leaders, to their policies of appeasement and softness, we have witnessed the Soviet Union expand its domination in five peacetime years from 170,000,000 to 800,000,000 people. Simultaneously, we have witnessed American prestige and American leadership deteriorate at an alarming rate.

The effect on the American people has been devastating.

For the first time in our history, Americans go to bed wondering if they will be alive when the dawn comes. They gaze at their homes wondering when they will be reduced to rubble. They gaze upon their children, wondering more about whether they will be alive than whether they will rise to be outstanding citizens.

Under this administration, fear has become a national policy.

The second of the great issues can also be summed up in four words. Lack of Executive leadership.

Never in the annals of our Nation has America had so little leadership when so much was needed, both in the field of international relations and domestic affairs.

On the international scene, we have been out bargained, out smarted, and out maneuvered. We have undergone humiliations unparalleled in our history.

The bankruptcy of the present leadership can best be measured by the President's own confession the other day that he knew no other answer to our problems but the use of force.

The American people are already asking themselves: Is the price of little men in big places to be endless war and endless bloodshed?

The third great issue—an issue which is the bedrock of our civilization—can also be summed up in four words: Lack of public morality.

Let me say now that this issue is far deeper than mink coats, deep freezes and flasks of perfume. This is an issue which reaches to the very vitals of our social system. It strikes at our homes, our communities, and our churches.

We cannot hold up the defalcations of obscure hangers-on and petty bureaucrats when the whole philosophy of government is based on appeal to the pocketbook and the belly instead of to the heart and mind. How can we expect idealism and morality to survive when government itself is dedicated only to the socialist principles of materialism?

The Republican Party would fall in its duty if it did not grasp this issue in its broadest implications. Petty crime is the work of petty people, but the Godless materialism which this administration embraces can lead only to social suicide.

Yes, we have the issues. We must have the courage to meet them. And above all else, we must exercise the wisdom to resolve them.

These three great issues—lack of national security, lack of executive leadership, and lack of public morality—are interlocked and interwoven.

The task of arriving at solutions for the problems they create rests with the Republican Party. Certainly no one can expect the party in power, as the authors of our mistakes, our humiliations, and our failures, to provide the answers.

In the field of international relations, the Republican Party must prepare itself to restore statecraft to its rightful place in government. It must regard force as the weapon of failure. In this age of atomic horrors,

there can be no hope for civilization if war is the only answer.

In our deliberations on principles and in our choice of candidates, we must never lose sight of the fact that America needs most of all statesmen and leaders who not only can evolve wise policies but who have the courage and integrity to carry those policies through to a successful conclusion.

In the field of domestic affairs, the Republican Party must provide leaders and policies that will stabilize our economy, stop inflation dead in its tracks, restore national solvency, and infuse our Government with integrity and moral principle.

In short, what America needs is strength—not the strength of the mailed fist, for we have that, but strength of character and purpose.

All the armor in the world will not save a nation shot through with corruption, political greed, and vacillating leadership.

A Maginot Line could not save a demoralized France, nor will atomic weapons save a demoralized America.

Across the sea in Britain, our English friends are about to hold an election. In many ways, the problems of the British electorate parallel the problems of the American voter. They are beset by socialism from within and the threat of the world Communist conspiracy from without.

My colleague in the House of Representatives from Massachusetts, the Honorable RICHARD B. WIGGLESWORTH, dropped me a note the other day and enclosed an editorial from a leading British publication, *The Economist*. The editorial forecast defeat for the Labor government and then stated a conclusion which I think we in the Republican Party might well weigh in our deliberations.

I quote:

"The majority of people seem to see the ways to better living in lower government expenditure, hard work, and more competition. They now have little faith in controls and subsidies, still less in nationalization. If on these points the government makes further concessions to the (left-wing) views of Mr. Bevan or of the TUC, it will not be earning popularity, but drifting farther away from the trend of public thinking. . . .

"The swing in opinion demonstrates once again a truth that is not less evident because politicians are generally too timid to believe the evidence. The popularity of a government depends on facing up to its difficulties, even if toes get stepped on in the process. In a crisis, the British people respond, now as in the past, to firm leadership, providing it is honest. They do not expect to be soothed and left alone.

"The Labor Party is too tied to its preconceived notions for anyone to hope that it will take lessons of the past month to heart. The Conservative Party has no excuse for ignoring them."

The truth is that not only America and Britain are crying for leadership but the entire world is demanding it. If, as the *Economist* suggests, wisdom may be born out of watching the blunders of others, then certainly after watching 18 years of government by guess, gouge, and gun, we should be wise indeed.

Finally, let me suggest to you that the 1952 campaign must be conducted on a plane transcending ordinary politics.

Members of the Republican Party have no corner on patriotism.

Millions of Americans who have been voting the Democrat ticket are just as deeply concerned about the future of our country as any one of us.

They are anxious to join with us in restoring America to Americans.

They are just as fed up with the alien philosophies of this administration as any one of us.

As Republicans, it is our duty to extend the hand of fellowship to every American, regardless of party, who wants to join us in our crusade to save America. In no case should we let a narrow partisan view becloud the fact that it is the American form of government to which we are dedicating the 1952 campaign.

We must conduct ourselves in such a fashion that the popular will shall prevail. The best way to do it is to conduct an honest, straightforward, hard-hitting, and fearless campaign so that no one can mistake where we stand.

If we have the courage to meet the duty which is ours, there can be only one result: A landslide victory in 1952 for the Republican Party and America.

Investigation of the State Department

EXTENSION OF REMARKS

OF

HON. GEORGE MEADER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. MEADER. Mr. Speaker, under leave to extend my remarks in the Record, I include the following letter:

CONGRESS OF THE UNITED STATES.

HOUSE OF REPRESENTATIVES,

Washington, D. C., October 3, 1951.

HON. WILLIAM L. DAWSON,

Chairman, Committee on Expenditures in the Executive Departments, House of Representatives,

Washington, D. C.

DEAR CHAIRMAN DAWSON: On Wednesday, August 1, 1951, at the last meeting of the committee, I offered the following resolution:

"Resolved, That a subcommittee of five Members, three of the majority and two of the minority party, is hereby created, charged with the duty of conducting a penetrating investigation of the Department of State, including but not limited to its organizational structure, its procedures, its personnel, its performance, and its relationship to other Federal agencies."

At your request, I have prepared a statement of the reasons why I believe this resolution should be adopted by the Expenditures Committee. I urge its immediate adoption by the committee.

It should not require extended argument to establish the fact that the world position of the free nations has deteriorated, and the world position of Russian communism has advanced in the six short years since the close of World War II. We find Russia and her Communist satellites, in fact, in possession of strategic areas and masters over erstwhile democratic peoples, subjugating them against their will. As a result, we find ourselves committed to a back-breaking program of bolstering weak governments and impoverished nations in an attempt to construct a cordon sanitaire against further Communist imperialistic advances. This effort has led us to drain and dislocate our economy, and the end is not in sight.

Without engaging in second guessing, it would seem apparent to any fair-minded observer that we could have done better. It follows that the agency of our Government responsible for the execution of our foreign policy and the conduct of our relationships with other countries, namely, the State Department, has been tried and found lacking the skill, vigor, and effectiveness which the times demand.

Without engaging in recriminations or fault finding for fault finding's sake, it is

incumbent upon this Congress to examine the instrument through which we express and carry out our foreign policies to the end that, in the future, our decisions may be better and our actions more forthright and effective, if we are to avoid the debacle threatening our very existence as a nation or, at least, as an independent nation.

No subject, in my judgment, can merit the concentrated attention of this Congress in as great a degree as the one at hand. It is the obligation of Congress to look into this situation and take such action as may be necessary to improve and strengthen the conduct of our foreign affairs.

So far as I have been able to learn, there has been no penetrating examination of the State Department by a congressional committee in recent years. The Hoover Commission did give attention to administrative problems. Also, a study was conducted by the staff of the Appropriations Committee in the Eightieth Congress. Any investigation conducted at this time should, of course, take advantage of the work done previously. However, it is my belief that something far more penetrating than these previous studies should now be made.

The study should seek to ascertain whether or not the organizational structure and the administrative procedures of the Department of State are such as to enable that agency to make prompt and intelligent decisions and to take effective and forthright action. Failure to act may sometimes be more disastrous than acting mistakenly.

The methods of recruitment of personnel, and the type and caliber of persons in key positions in the State Department, should be thoroughly examined. This examination should go beyond the question of mere loyalty and should be aimed at a recruitment system which would permit us to assemble for this most important aspect of our national affairs the most capable, intelligent, patriotic, courageous individuals that can be found in this country.

A review of the performance of the State Department in important conferences and negotiations in recent years should be undertaken, not so much for the purpose of assessing blame for mistakes as for the purpose of learning in what respects the organizational structure and personnel of the State Department are deficient, so that measures can be taken to strengthen the State Department with the hope that its work may be more successful in the future.

In recent years, the United States has multiplied its activities in foreign areas and has established new agencies for this purpose. Because of the delicacy of relations between nations and the value of marshaling all our potential for the accomplishment of our objectives in foreign affairs, it is extremely important that all our activities be unified and coordinated, and that we avoid inconsistent action and conflict between agencies of our Government operating in foreign areas. There is a problem of administrative relationships here which it would be peculiarly appropriate for this committee to study.

In my judgment, the Committee on Expenditures in the Executive Departments not only has the jurisdiction, but has the obligation, to conduct this study of the operation of the State Department with a view to determining its economy and efficiency. If the committee, or a subcommittee created for that purpose, should undertake this task, acquire an adequate staff, and explore this subject diligently but impartially, the resulting good for the future of the United States could be immeasurable.

A few decades ago, the United States was a self-sufficient, well-protected haven. Now we are thrust into the very center of the maelstrom of catastrophic world events.

The agency through which we conduct our relations with the rest of the world has been suddenly required to assume momentous responsibilities which it has never had in like degree in the past. It is imperative that all steps be taken to strengthen and develop this instrument, the State Department, as rapidly as we can. In such strengthening, the Congress bears its responsibility, which it cannot discharge intelligently and effectively without being well-informed. It cannot be well-informed unless it conducts an investigation of the type I have proposed.

Sincerely,

GEORGE MEADER.

Protecting Vital Information the Right Way

EXTENSION OF REMARKS

OF

HON. ALBERT P. MORANO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the text of a bulletin issued by the Office of Civil Defense, Sacramento, Calif., regarding the printing of confidential information by the press. This bulletin, an example of the democratic way of insuring security of vital information, was brought to my attention by Mr. Niver W. Beaman, Assistant Director of Civil Defense in charge of Public Information and Education. Mr. Beaman was formerly editor of Greenwich Time, a newspaper often referred to as the best suburban daily in America, which is published in my home town, Greenwich, Conn. He was also city editor of the Pulitzer prize-winning Waterbury (Conn.) American-Republican.

This bulletin, when contrasted with the President's decree on the same subject, might serve as an object lesson in the true democratic method of protecting vital information as opposed to the dictatorial method chosen by the President.

The bulletin follows:

OFFICE OF CIVIL DEFENSE,

Sacramento, Calif., September 26, 1951.

To News Associations, California Newspapers, California Radio and TV Stations:

The California State Office of Civil Defense asks your cooperation in keeping a secret for the good of our State and Nation. California has a State headquarters of civil defense and 10 regional headquarters. These are all control centers to meet atomic attack or other emergency.

We are setting up alternate control centers—usually some distance away from the control centers.

The location of these alternate control centers is restricted information within the Office of Civil Defense.

We hope this information does not become public.

Reason: These alternate control centers contain communications and other equipment vital to the safety and security of California, its people, and the Nation—if we are attacked. We must guard against sabotage. Hence the secrecy of location.

As these alternate control centers move toward completion, you are bound to receive

local news tips on them in the areas where they are located.

For security purposes, we ask you not to print, broadcast, or publicly discuss such locations or activity in connection with them.

There is no law nor code nor directive that forbids you to print or broadcast such information. There is no penalty if you do print or broadcast it. We hope, however, that for purposes of security, you will help us keep this information restricted. This office greatly appreciates the constant cooperation and countless courtesies it receives from California's press and radio.

Sincerely,

W M ROBERTSON,
Major General, United States Army
(Retired), Director of Civil Defense.

They Await the Verdict

EXTENSION OF REMARKS

OF

HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include herewith an editorial from the Honolulu Star-Bulletin of September 29, 1951, entitled "They Await the Verdict." The removal of the crosses from the graves of 13,000 World War II war dead buried in the National Cemetery of the Pacific in Hawaii has raised a storm of justifiable protest. I want to join in urging that these symbols of faith and sacrifice be restored and made a permanent part of the memorial at the final resting place of those who gave their lives in the defense of America. I urge that prompt consideration and approval be given to House Joint Resolution 338 which directs the Secretary of the Army to replace the crosses which until recently marked the graves at the National Memorial Cemetery in Hawaii.

The editorial follows:

THEY AWAIT THE VERDICT

The mute white crosses have been taken from the graves of the National Memorial Cemetery of the Pacific—but protests may restore them.

It took only 2 hours for the energetic task force of the Army to remove from the Punchbowl more than 13,000 little wooden crosses. It will require more time to restore them—if they are to be restored.

But there is time for this task of restoration—those who sleep beneath the green turf in the ancient crater have no need for haste. They will wait, in patience, for the verdict.

All the hurry, all the ordered speed and discipline of their training, all the furious urgency of their attacks on the battle lines, all the sudden anguish of their mortal wounds before they fell, are of the past.

For them the sun will rise and will set over that dedicated "Hill of Sacrifice" in long, unhurried procession. The gentle winds and the stars will keep them company, even if in a burst of organized effort as well timed and precise as the burst from a machine gun the 13,000 white crosses came down in 1 unexpected afternoon.

In Washington, D. C., Delegate FARRINGTON has appropriately said that the wishes of the

families of the men who lie in the Punchbowl graves should be consulted.

That can be done, and should be done. It should have been done, and thoroughly, sympathetically, before the order was given that tore the crosses from the ground.

To do it rightly, the families should have a clear picture of the alternatives—the graves with crosses and also with the flat stone marker, or the graves with only that flat, inconspicuous, and unimpressive headstone.

And the families should know—many of them know already—that in our military cemeteries abroad the white crosses still stand.

And these next of kin should feel that it is not a question of economy—our doing fitting honor to those who are buried in Punchbowl.

It is a question of giving to these heroes of our country the greatest possible evidence of respect and devotion we can give them.

It is a question also of developing this National Memorial Cemetery as one of our Nation's most impressive, most distinctive burial places.

It is a question of maintaining the physical facilities so that each Memorial Day the people of Hawaii can pay their distinctive tribute of leis and garlands, appropriately wreathed above the graves.

Yes; those who lie asleep in Punchbowl can await the verdict.

For them all mortal haste is ended. They lie quietly in the ultimate discipline of death, relying upon a grateful country to do them justice.

Relief Publicity Ban

EXTENSION OF REMARKS

OF

HON. CHARLES B. BROWNSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. BROWNSON. Mr. Speaker, that the Governors' Conference at Gatlinburg, Tenn., should discuss the problem of States being permitted to remove the secrecy from public welfare rolls without risking the loss of Federal welfare funds, I believe, is indicative of the importance of this question to all States and emphasizes the general interest in the matter.

I am quoting below a news item from the Washington Star of October 2 and abstracts from the October 3 Washington Post's and Washington Times-Herald's coverage of the conference pertaining to this discussion. It will be noted that on the question, "Should a State have the power to pass legislation on publication of relief rolls without risking loss of Federal funds," all the Governors present raised their hands in assent.

The news items follow:

[From the Washington Star of October 2, 1951]

FORTY-EIGHT GOVERNORS DEMAND END TO FEDERAL BAN ON RELIEF PUBLICITY—AFTER STORMY SESSION WITH EWING, THEY VOTE STATES SHOULD DECIDE

GATLINBURG, TENN., October 2.—The Nation's Governors voted unanimous approval today of a move to reserve to the States the right to decide whether their relief rolls shall be made public.

The action came on motion of Gov. Thomas E. Dewey, New York, Republican, after Gov. James F. Byrnes, South Carolina, Democrat, demanded 11 a stormy session with Federal Security Administrator Oscar Ewing that the Governors act on the question. Georgia's Gov. Herman E. Talmadge was another critic of the secrecy rule.

Federal law now requires secrecy of relief rolls. The Senate has approved a measure to lift the secrecy ban, but the measure still is pending in the House.

LEE CHARGES EVASION

Governor Byrnes asked the forty-third annual Governors' Conference to go on record in favor of relief-roll publicity. Governor Talmadge said such publicity would reduce relief rolls by at least one-third.

But Mr. Ewing insisted that such publicity would do more harm than good.

The Governors sailed into Mr. Ewing after Utah's Republican Gov. J. Bracken Lee had challenged them to discuss the "real problems" of inflation, taxation, communism, integrity in Government and the Korean war instead of what he called the "side issue" of social security.

Governor Byrnes, a Democratic former Senator, Secretary of State, and Supreme Court justice, told Mr. Ewing bluntly he believes Congress ought to pay more attention to what the governors want than to Mr. Ewing's recommendations.

QUEST FOR ADVICE

"The question is not what you recommend," he said; "but will this conference recommend repeal (of the secrecy provisions) and leave to the States the determination of whether there shall be publicity."

Amid cries of "yes, yes," Governor Lee reminded Mr. Ewing that he has said earlier he came to the conference to get advice from the State executives.

"Yes," Mr. Ewing snapped, "but I reserve for myself the decision whether I will take it or not."

Mr. Ewing told reporters Indiana has lost beyond possible retrieving \$3,000,000 in Federal aid because its legislature failed in time to knock out a relief-roll publicity provision for that State.

SAYS COURTS CAN SEE RECORDS

Governor Talmadge complained that the States cannot find out, even through grand jury action, about relief-roll chiseling.

"You are spending billions of dollars of the taxpayers' money and are doing it without the States even being able to find out about it through grand juries," he asserted.

Mr. Ewing said Federal security records are always available to the courts.

Gov. Johnston Murray, Oklahoma Democrat, said he couldn't fire relief workers who connived to put persons on the rolls. Mr. Ewing replied he didn't have much sympathy with civil-service provisions, but they are in the law.

SAYS ILLEGITIMACY IS ENCOURAGED

Governor Talmadge accused the Government of subsidizing and encouraging illegitimacy by refusing to permit Georgia to limit the number of illegitimate children in one family eligible for relief.

"We took the position that one illegitimate child can be an honest mistake," Governor Talmadge said, "but when there is more than one, then it has got to be a habit."

But he said the United States Welfare Agency refused to permit any such limitation.

Mr. Ewing said the Government believed the illegitimate child should not be punished for the act of its parents.

By a vote of 25 to 10, the governors went on record in favor of States having the right to control their own civil-service standards rather than the Federal Government.

[From the Washington Post of October 3, 1951]

The South Carolinian (Governor Byrnes) talked politics with reporters today after a lively session in which the governors voted unanimously that States should be able to pass laws on publishing names on relief rolls without risking the loss of Federal welfare funds. Byrnes had urged them to demand that Congress repeal a provision in the law which prohibits such publication.

When the governors assembled today to consider problems of social security and public welfare, they had in mind what had happened to Indiana when the State Legislature passed a law permitting the publication of relief lists as a means of eliminating possible chiselers and cutting the costs.

Oscar Ewing, Federal Security Administrator, cut off Indiana's share of Federal aid because the State law conflicted with Federal law. Ewing talked to the Governors today and they gave him a rough time of it.

He said the original social-security law did not prohibit publication of names on relief rolls. Congress wrote the ban into the law in 1939, he said, because of flagrant misuse of relief lists in the off-year election of 1938. He said one governor, up for reelection, went to people on the lists and told them they would lose their relief checks unless he was returned to office.

WON'T RECOMMEND REPEAL

Ewing said he would not recommend now that Congress repeal the prohibition against publishing names of those on the relief lists. He said he thought the evils that would flow from publication would outweigh any good.

Gov. Howard Pyle, of Arizona, said the Federal ban had failed to stop political abuses. He said that in his 1950 campaign his opponent had complete lists of those on the relief rolls and used them effectively.

Gov. Herman Talmadge, of Georgia, said if chiselers could be exposed by publishing the names of relief recipients, the cost of relief would be reduced by a third.

Governor Byrnes said he thought governors knew more about what is best for their States than anyone in Washington.

GOVERNORS UNANIMOUS

"We should have a resolution urging Congress to repeal this law and leave the matter to the States," he said. "I think Congress would pay more attention to the governors of the 48 States than to the head of any Federal department or agency."

Gov. Thomas E. Dewey, of New York, who presided, pointed out a resolution could be adopted by the conference only by unanimous vote. He got around this by asking for a raising of hands on the question, "Should a State have the power to pass legislation on publication of relief rolls without risking loss of Federal funds?"

All the governors present raised their hands in assent.

[From the Washington Times-Herald of October 3, 1951]

His (Governor Byrnes, of South Carolina) conference came after the Nation's governors had a stormy session with Federal Security Administrator Oscar Ewing in which both Republicans and Democrats displayed angry impatience with some of the Federal controls in the public welfare field.

With Byrnes taking a leading role, the governors voted unanimous approval of a move to give States the power and authority to publish lists of relief rolls without having their Federal grants withdrawn.

Federal law now imposes secrecy on these relief lists. The Senate has voted to lift the

ban but the measure still is pending in the House.

The action was taken under the leadership of Governor Dewey of New York, who put the question in the form of a motion because a resolution can be blocked by one objecting vote.

TEMPERS FLAME

The governors also voted 25 to 10 in favor of giving States the exclusive right to control their civil-service standards in the Federally aided public welfare program.

As tempers flared at times, Governor Lee, Utah Republican, challenged his colleagues to talk about the "real problems" of inflation, taxes, and communism rather than "side issues."

He threatened to walk out of the conference on social security problems but he remained in his seat when his outburst brought a round of applause from some governors.

Trend Toward Economic Union With England

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to revise and extend my remarks in the Appendix of the Record I include an article by Mr. George Sokolsky.

Mr. Speaker, in this article Mr. Sokolsky shows clearly and dispassionately how we have tied our economy to that of England.

It is very possible that we will not save the English economy but that they will drag us down with them. It is increasingly evident that giving England money is like throwing water down a pipe.

Why must we always follow and help the old and worn-out economies of Europe? We would do better to follow the example of our neighbor to the north, Canada, who is forging ahead economically and politically and is not allowing the Old World to throttle her development, even though England is still her mother country.

The article follows:

THESE DAYS

(By George Sokolsky)

The more international conferences that are held, the more clearly an economic pattern presents itself which seems (and I use this verb advisedly) to tend toward a merging of the Western World into an economic union in which the United States will act as the supplier to those nations which are or seem to be in need.

It is an arrangement for the distribution of wealth on an international level. The obvious manifestation of this plan appeared in lend-lease, the Marshall plan (ERP, ECA) and point 4. In a manner, the World Bank, the International Monetary Fund, the Export-Import Bank, and the RFC have played a part in the development, but even more so, the depression of the American dollar, making it constantly cheaper, is an instrument for leveling values.

The economic union has not in any way been so formalized that it would be neces-

sary to present it to Congress or Parliament for adoption. This would be unsound politically and could create such outraged antagonism as to defeat it altogether. Rather, step by step, acts have been implemented which achieve some movements in the direction desired by those who, in particular, see in the United States a basis for the restoration of British economy even under socialism.

There can be no question but that Great Britain's position is perilous. During this century Great Britain's economy has depended upon banking, shipping, insurance and reexports. The United States, Canada, India, Malaya, the Dutch East Indies, and China played a great part in this business. Britain garnered liquid capital from many quarters in Europe and invested it in Asia, Africa, the United States and wherever in the world liquid capital was required. No other country had developed equal skill in banking, insurance or shipping and the profits were good.

The essential cause for World War I was the German invasion of every field of British economic activity, including heavy machinery and textiles; after World War I, Japan entered these economic areas with startling success, particularly in shipping and textiles. The Japanese were astonishingly competent in China, Malaya, India and North Africa, with the result that a mounting antagonism developed between Great Britain and Japan. This was emphatically notable after the termination of the Anglo-Japanese alliance in 1922.

World War II left Great Britain prostrate and dependent upon the United States. If any country can be said to have lost World War II, from the standpoint of costs, that country is Great Britain. The United States came to the rescue with lend-lease, with various devices worked out at Bretton Woods (1944), with the British loan of \$3,750,000,000, with the Marshall plan which became ECA, with point 4 that aids British-controlled or former British colonial areas, with European military aid which grew into the general term, NATO, with tariff controls favoring British exports to the United States, and with many other economic devices which have assisted the British.

The fact does stand that with all the aid that the United States has given Great Britain, at unbelievably great direct and indirect costs to the American people, the Socialist government of Great Britain is again in trouble and the likelihood is that Great Britain will not be able to meet its obligations to us under the loan agreement. In fact, the situation is becoming so tight that a general election is being held to achieve either a vote of confidence for the Socialists or to produce a government under Winston Churchill, who would then speak to this country in those accents which our people so love. But it will have to do with dollars.

To save Great Britain and what is left of the British Empire, many Americans believe that the solution is an economic union between the two countries. As far back as 1945 there was talk of this. Now that NATO is an actuality, the talk, in private still, is more vehement. One argument is that Europe is accustomed to British leadership, which must be maintained if Western Europe is to be useful in a war or in war prevention against Russia. Europe is, it is said, unaccustomed to American methods and irked by the type of leadership the United States offers.

I do not know whether anyone in American public life will have the courage to propound this program to the American people, but as their economic activities are studied, it is becoming increasingly clear that this is the program and that we are being moved into such a union.

Speech by Prime Minister Alcide de Gasperi at the Arlington Bridge

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 3, 1951

Mr. SABATH. Mr. Speaker, under unanimous consent to extend my remarks, I include the speech of the Prime Minister of Italy, the Honorable Alcide de Gasperi, delivered at the ceremonies dedicating the four gold-plated statues on Arlington Memorial Bridge, Wednesday, September 26. These statues were the gift of the people of Italy to the people of the United States as a token of their renewed friendship and cooperation toward the preservation of world peace.

The friendly and cordial relations now existing between Italy and our country were further strengthened when President Truman, on behalf of the United States, accepted these statues from Prime Minister de Gasperi.

It is apparent now that Italy will finally receive the greatly needed assistance she has sought to bolster her economy so that she might enter into mutual cooperation with the free nations of the world in the grave struggle against communism and the Russian threat to world peace and stability.

The speech follows:

SPEECH BY PRIME MINISTER ALCIIDE DE GASPERI AT THE ARLINGTON BRIDGE

Mr. President, a few months ago at Florence I delivered one of these statues to Ambassador Dunn before it was shipped to the United States.

Now here we have all four of the groups in front of us. And I think that in a certain way they fit into the general picture of our meetings and of my visit to the United States. For here you have portrayed: spiritual elevation, the arts, agriculture, gallantry and sacrifice.

Surely all this can stand for the spiritual and material development of man, his humanity, his traditions and his free determination to defend them if threatened.

That is our common objective and the aim of our Atlantic community.

But they represent something more: I mean the gratitude of us Italians for the generosity of the American people.

These statues, a remarkable expression of modern American art, were cast and finished in four different cities, Naples, Florence, Milan, Rome, by artisans and workers coming from all parts of Italy, some of whom are here with us today. Together, these groups represent, not only the gift of a government, but the action and the skilled contribution of Italian industry and labor which have been so efficiently supported, throughout the land, by Marshall-plan assistance.

This aid is but one of the many proofs of United States friendship. It would be easy for me to recall others. Suffice it to mention the recent evidence we have had in these days that we can count on the sympathetic and effective cooperation of the American people represented by their President and their Government.

We have in fact examined with you, Mr. President, and with your Government many

and complex problems which go from the economic and financial cooperation between our two Governments to the legitimate claims of Italy and the solution to that which, perhaps, is the most important problem, overpopulation. In the framework of our close cooperation and cordial friendship the solution of these problems has accomplished considerable progress during the course of the conversations of these recent days.

You and we, in facing and resolving these problems, aim above all at attaining a better general settlement of advantage to the interests of the community of free nations.

We cannot, however, underestimate the fact that this genuine, loyal, and constructive friendship between our two countries is one of the most promising elements in these troubled times.

It is therefore with pleasure that, on behalf of the President of the Italian Republic and of my Government and—I am certain—of all Italians in Italy and the world over, I offer you, Mr. President, this token of deep gratitude.

At the same time I formulate the sincere wish that your country and mine, under the banner of freedom and justice and in prosperity may always work together for democracy, progress, and peace.

The New Conservatism

EXTENSION OF REMARKS OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to revise and extend my remarks in the Appendix of the RECORD, I include an article by Mr. Raymond Moley appearing in Newsweek of October 8.

Mr. Speaker, Mr. Moley in the following article speaks specifically of the Conservative Party in England, but conservatism is a philosophy and an ideal, and even as it has arrived in England it may also well revive in the United States.

The article follows:

THE NEW CONSERVATISM

(By Raymond Moley)

Unless all portents fail, the voters of Britain will presently return to power one of the oldest political parties in the world. The Conservatives have survived the vicissitudes of generations. The Liberals, their former rivals, have melted away, while the Labor Party, a relative newcomer, is already showing signs of disintegration.

Meanwhile, the accumulated wealth and vested interests which were once identified with the Conservative Party have almost vanished. Why, then, does this party live on and command, as it undoubtedly does, the support of a majority of the British electorate? If we seek an intelligent answer to this question, we shall find perhaps a guide to understanding not only the British but our own American people.

A part of the answer is that over the years the Conservative Party has sustained the institutions under which the United Kingdom, the Commonwealth, and the United States have found that liberty and progress are indivisible.

Twice in its history the Conservative Party has broken away from a popular economic philosophy which put mere material well-being above considerations of nonmaterial

when Disraeli repudiated the dismal economics of his day. It is doing it now in providing an alternative to the crass materialism of the Socialists. It has appealed from the court of economics to the supreme tribunal of patriotism.

André Maurois has this to say of the challenge of the young Disraeli to the old Tory leaders:

"For him to be a Conservative was not just to uphold with an apologetic smile a constitution held to be out of date; it was a proud and romantic attitude, the only one that took into account the authentic England . . . The duty of a Conservative was to him the courage to defend the past so far as it was living and likely to live."

Disraeli succeeded in evoking pride in the nation's past in the lower middle-class voters whom he helped to enfranchise. Then, with the proud and ambitious spirit of a nation behind him, he spread its influence, both political and economic, throughout the world. The Socialists and, to a degree, the Liberals have reversed the order but have found that in putting material concerns first a nation loses both its patriotism and its prosperity.

The old Conservative spirit is finding expression among the younger members of the party today. David Eccles, whom I saw in action while he was winning his election in Chippenham in 1950, has given a fine expression of this new conservatism. At that time, I heard him say that he had scant patience for those who were talking about the tight little island and were content with a future in which the British people were to eke out a living by merely dividing up what they have. The proper destiny of Britain, he continued, is in world trade and world influence backed by the proud spirit of the people at home.

Recently in notable speeches Eccles has elaborated this theme. "Our party," he said at Sturminster, "is the party of new creation. We are proud of our inheritance but not content with it. We mean to add to it and to make it still more glorious and more widespread . . . The Labor Party is the party of the carving knife. The Socialists . . . cut up wealth and parcel it out more or less equally whether a man has worked hard or not."

The London Economist, which despite occasional lucid moments is mostly imbued with materialistic, quasi-socialist economics, took exceptions to the Eccles position. It took a dim view of Eccles's faith in rousing the spirit of the people. To this Eccles replied: "The failure is not economic. What is on trial is the British character . . . you underestimate the rapidity and vigor with which a Conservative government could rouse the virtues of enterprise and patriotism."

This issue, which is to be made in the election over there, might well be made by the Republicans over here. Our political leaders have put the cart before the horse too long. Economic progress follows a revival of the spirit. The body is badly fed and the spirit dies when statesmanship merely divides what we have. Creation, not division, is the need.

Sorry Political Stamp

EXTENSION OF REMARKS OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. HARVEY. Mr. Speaker, under

ORD, I include the following editorial from the Muncie (Ind.) Press of October 1, 1951:

SORRY POLITICAL STAMP

A vein of strong irony runs through President Truman's proposal that all top Government officials, including judges, Members of Congress, and national party officers, be required to declare annually all their income—whether from salary, loans, or gifts.

Mr. Truman told Congress he was offering the plan because "attempts have been made through implication and innuendo and by exaggeration and distortion of the facts in a few cases to create the impression that graft and corruption are running rampant through the whole Government."

It is nice to know, anyway, that the President acknowledges a few cases where everything was not done exactly according to proper moral standard. It is the first real concession to the truth he has made on this score.

But the whole tone of his message suggests that Congress and other critics vastly overplayed the moral missteps of Government officials. And to this extent the President is still persisting in bland denial of the facts.

Read in this light, his proposal for annual income disclosure can only be taken as a cynical diversionary tactic designed to confuse the public and discredit honest investigation of Government immorality.

How unfortunate it is that the President of the United States conceives it his duty in this situation to shrug off charges of corruption merely as efforts to get him politically. How sad that he continues to condone moral wrongdoing in top officials and lesser figures alike.

His plan for coping with the problem is no antidote at all, so long as he fails to act forthrightly in cleaning his administration house when the evidence so plainly warrants it.

Mr. Truman's cavalier attitude toward the mounting testimony of corruption reveals one of his weakest traits as an executive. All he achieves by it is a redoubling of the attacks against him.

He exhibited the same falling in his stand on Communists in Government. Had he not lightly dismissed some of those charges as a red herring, he might not have precipitated the deluge which later descended on him and has done so much harm to innocent men in Government.

The President's message seeks to fasten on Congress the blame for putting in jeopardy the reputation of Government as a whole. The blunt reality is that his behavior is really responsible. Had he acted at all times to enforce a sensible moral code, Government would not today be at its evident low estate in the public mind.

Mr. Truman's new plan merits nothing but a dusty corner on a committee shelf. It is his way of saying that he is more interested in tribal political loyalty to the Democratic Party than in morality in Government.

Employment of the Physically Handicapped

EXTENSION OF REMARKS OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following state-

president, American Federation of the Physically Handicapped:

STATEMENT RECENTLY MADE BY PAUL A. STRACHAN, PRESIDENT, AMERICAN FEDERATION OF THE PHYSICALLY HANDICAPPED, IN CONNECTION WITH NATIONAL EMPLOY THE PHYSICALLY HANDICAPPED WEEK, TO BE OBSERVED THIS YEAR FROM OCTOBER 7 TO 13, INCLUSIVE

We hereby rededicate ourselves to faith in the thundering words of our immortal Declaration of Independence:

"We hold these truths to be self evident: That all men are created equal, and endowed by their Creator with certain unalienable rights; that among these are life, liberty, and the pursuit of happiness."

There is no barrier against the physically handicapped. The founding fathers accepted them to full citizenship and, along with every other citizen, entitled to life, liberty, and the pursuit of happiness.

And what happiness could be greater to the handicapped than that of earning their own way, holding up their end, being a part of the social and economic life of their neighborhood, their city, their State, and the Nation?

But, they cannot, they should not be denied the right to employment because upon that rock all happiness, security, and hope is based.

Therefore we urge all good Americans to lend full support to National Employ the Physically Handicapped Week, knowing that its beneficent operations will bring smiles of gladness to replace tears of sadness, productivity instead of idleness, wealth instead of poverty.

The President's Smoke Screen for Chairman Boyle

EXTENSION OF REMARKS OF

HON. THRUSTON B. MORTON

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. MORTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Louisville Times of September 29, 1951:

THE PRESIDENT'S SMOKE SCREEN FOR CHAIRMAN BOYLE

At the present price of newsprint, it is probably almost criminal to waste space on President Truman's latest message to Congress. But a Presidential message is a Presidential message, and here is what we have to say.

Mr. Truman is the leader of his party in the Nation. The party's national chairman is, for all practical purposes, his national chairman. The President is confronted by a situation in which Congress is investigating the sources of income of the national chairman. What has been revealed so far greatly discredits this individual.

How does the President react? By bouncing Bill Boyle out of office? That would be the right thing to do, and actually the smart thing to do politically. But no, Mr. Truman's reply is a demand for a law requiring disclosure of the sources of outside income of all important members of the Federal Government and national party officials.

The President is not subtle in making his real point. "Unfortunately," he says, "there are sometimes cases where members of the executive and legislative branches yield to

temptation." The italics are ours, but no italics are required when further on Mr. Truman says that the statute he proposes would embrace, among others, "all elected officers of the Federal Government, including Members of Congress." Besides the President and Vice President, Members of Congress are the only elected officers of the Federal Government.

In other words, the President's oblique defense of Boyle is a sly and irrelevant challenge to Congress. Many Members of that body have sources of outside income. Some of them, in fact, have to have outside sources of income if they are to meet the expenses which their office imposes upon them. In almost every case of the kind, these sources are legitimate and ethical. Some Members, for example, have farms. What is wrong with that? Some endure the rigors of the lecture circuit for hire. What is wrong with that, if his lectures express the Member's independent, unbought convictions?

The President is compelled to say that between the two groups in the public service—the majority, who have no independent incomes, and the minority, who do—"no distinction can be drawn . . . in terms of the public good." In short, both are faithful to their trusts. Mr. Truman also says: "The overwhelming majority of the people who are working for the Federal Government in the legislative, judicial, and executive branches are decent, honest, and upright citizens who are doing their very best in the public interest."

That is true. Then, why a sweeping enactment whose very terms would question the decency, honesty, and uprightness of such people? Surely few of them feel their lives are such that they have to prove that they are decent, honest, and upright by publishing their personal affairs to the world. Such a thing is repugnant to many natures, not because of the sources of income to be ashamed of, but because of a natural instinct for privacy.

But why continue? The law the President asks for will not be enacted. He doesn't expect, or even hope, that it will be enacted. His purpose is to take a jab at Congress when his jab ought to be at Bill Boyle.

Family Farm Policy Review

EXTENSION OF REMARKS OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include recommendations made by the Lee County Farm Bureau to the United States Department of Agriculture in regard to Secretary Brannan's Family Farm Policy Review:

MARIANNA, ARK.,
September 10, 1951.

Mr. H. B. PIPER,

Chairman, Lee County Agricultural Mobilization Committee, Marianna, Ark.

DEAR Mr. PIPER: 1. At a meeting of your committee and a group of farmers in this county held at the courthouse September 4, 1951, the Chairman appointed a committee to study and make such comments and recommendations as it will on the so-called "Family Policy Review" as provisionally reported on and tentatively recommended by the Department of Agriculture to the Secretary of Agriculture in a 120 page memorandum under date of June 11, 1951.

2 It is our understanding that it required about 6 months work for the personnel of the Department of Agriculture to prepare the document which is the basis of this discussion. With three copies of the memorandum made available to the present personnel of this committee, it may be said that it has been quite difficult for many of the committee to any more than glance at the memorandum to say nothing of studying it. It is the unanimous conclusion of the committee that much better results could have been obtained if all extraneous matter had been screened and the subject boiled down to an objective to be reached in simple terms. As we see it a large percentage of the subject matter contained in the memorandum is a dissertation on the modus operandi of the various departments of the Department of Agriculture in carrying out the laws of Congress. Everyone, of course, is interested in the departmental functioning of all Government agencies including the Department of Agriculture and the memorandum referred to would be most interesting for its broadening effect to everyone who could have an opportunity to read it. But that is not possible even with all the farmers in this one county.

3. The Secretary of Agriculture in his seven pages of comments lays stress on the fact that the family farm system leads to agriculture progress and good community life. We, of course, subscribe to this philosophy of thinking for it is the fundamental principle of our democracy and is the very backbone of a system of free and unmolested enterprise. We do not feel, however, that this subject should be broadened and extended into the sphere of thinking along the lines that the United States Government can become the godfather of every farmer and other individual in furnishing the money with which to solve their financial ills. We believe in the self-help, independence, and initiative of every American citizen including every able-bodied family. We believe 100 percent in family farm ownership but we do not believe in the Government showing partiality in selection of a comparatively few farmers and other individuals in using the money in the Treasury to buy farms and farming equipment and setting people up under the theory of rehabilitation. We also feel that the acquisition of land and property is an independent function of the individual who should be frugal enough to acquire his holdings without Government aid. We do not favor the welfare state in any of its ramifications or coloring. We now wish to comment briefly on the various subjects as indicated.

1. Family farm system: We approve this plan which has been in existence in this country since the days of the Pilgrim Fathers and is the cornerstone of our American way of life.

2. Family ownership of farms and homes should be upon their own sponsorship and without the direct influence or direct financial assistance of the Government and absolutely free from Government dictation or control.

3. Pilot farms: The theory sounds good but to be effective there would need be one established in each county or smaller area—which would be very expensive either for the State or the Government to establish and maintain. Each State has experiment stations already—many of them have experiment stations for different products. Our State has one parent experiment farm and four branch stations, namely, cotton station at Marianna, rice at Stuttgart, fruit at Hope, and forestry and grazing at Batesville. The cotton branch experiment farm of our State is located in our county. We have been informed that more farmers from without the county visit the farm than do Lee County farmers. The leading farmers in each cotton-growing county of the State visit the farm and they put into practice on their

farms in every community the favorable results from experiments on the experiment farm. The present personnel of our extension service might be well expanded to further supply the needs of a pilot farm. It has already done very valuable work in this direction.

4 We believe in the parity plan in helping to stabilize farm prices but we do not believe in the so-called Brannan plan of the Government committing itself directly to the purchase of many perishable products upon which enormous losses are taken from year to year with no possible solution to the community or the general economy of the land. We do believe that loans through Government-sponsored agencies are helpful in stabilizing the prices of nonperishables such as cotton, corn, wheat, soybeans and many other commodities. This stabilization should, however, be upon the basis of the general economy of the Nation rather than the idea of help to individuals or groups.

5 We favor as a matter of interest affecting the national economy, public control of certain pests such as insects and plant disease which cannot be controlled by individuals or communities.

6 We think the Bureaus and Agencies of the Department of Agriculture are performing needed and valuable service to the public.

(1) Bureau of Agriculture Economics with its subdivisions.

(a) Production and Marketing Administration. This agency is, of course, essential so long as there is an effort to control planting of agricultural crops and to have a crop-insurance program. While this agency in each county is represented by men elected from among the farmers, the activities as well as the thinking of the agency is on a higher level and the function of the personnel is more or less reduced to physical efforts in carrying out policies and decisions made in Washington. There has been a great deal of dissatisfaction over the policies used by PMA in bringing about results in some of the control programs. For example, in 1950 PMA undertook in 1 year to correct the evils of several years in the overproduction of cotton during the war production. Instead of limiting cotton acreage to 50 percent of cultivated land in 1950 with the view of further reductions each year until satisfactory adjustment of reserve of cotton was brought about, high-level thinking insisted that the adjustment be made all in 1 year which has brought about an overproduction in 1951 and too much of a decrease in the price of cotton in 1 year. There has been too much delay in arriving at authorized acreage to be planted to crops. If land measurements are to be done, they should be done accurately. This agency seems to have a lot to do with administrative work of the Soil Conservation Service in each county. It must approve and pay for all soil conservation practices. In view of this fact we can see no reason why the two agencies should not be consolidated with divisional head. There is too much duplication of efforts and spending of money in the two agencies. For example, soil analyses are made by the County Extension Service, the Soil Conservation Service and one other agency—duplication of efforts and spending of money.

(b) Soil Conservation Service. We believe this service should be continued. It is doing an excellent job. Soil conservation is more important to the economy of the future of our country than any other agency. We believe, however, from an economy standpoint, this agency, PMA, and county extension service could well be under one administrative head and one committee of farmers from each county.

(c) County extension service. Purpose and policies of the Cooperative Agricultural

Extension Service as outlined in United States Department of Agriculture memorandum, entitled "Family Farm Policy Review," dated June 11, 1951, appear to be correct and in agreement with provisions as set forth in the Smith-Lever Act, section 2, 1914. Likewise, recommendations appear to be in keeping with those of the land-grant college system and the Cooperative Extension Service. Because of distortion to truths by some segments of the Government concerning ways and means by which employees of the Agricultural Extension Service can best render service to farm people, the following recommendations are submitted:

a. That extension agents be left free to work with and through any general farm organization or group in projecting a program that characterizes good extension teaching and fulfills the provisions as set forth in the Cooperative Extension Service.

b. That descriptive terms such as the "family farm" as defined in recent political publications dealing with agriculture, be completely omitted, allowing extension agents the freedom to work with all segments of the farm society. The term "family farm" as such is being used as a means of political maneuver, it is dangerous in purpose and offers hazards of depression to the intuition of the American farmer.

c. The extension service be strengthened, not by Federal regulations that would enforce regulatory features of a service, but through the expansion of the existing three-way team, i. e., the land-grant college system with its Department of Agriculture, the experiment stations and research center, and the Extension Service. This expansion should come as a county-State-National developed program, having been formulated by the people whom it represents, and fitted to their needs.

d. The land-grant college system, with its extension service is the oldest of all agricultural agencies. Through its years of service offered to farm people it has gained respect of those people as well as those in urban centers. Its program has been sound, locally developed and administered.

Therefore, it appears that the Agricultural Extension Service should be left as it is, strengthened in scope, and that personnel of the service be permitted to cooperate without Federal interference with those of other agricultural agencies in developing a program best suited to the needs, offering maximum services to farmers, with the least amount of confusion and duplication.

(d) Farm Credit Administration. While we think the functions of this agency should be continued, we believe that the original policy which motivated Congress to pass the laws setting up the agency have gradually been weakened by policies of key personnel on a department level. In the beginning of this Administration its functions, as far as farm-production loans—feed, seed, and fertilizer and supply loans—were concerned, it may be said that they were to be made only during disasters. The policy required a man to make application to local financial institutions before applying for Government loans. This practice is no longer required apparently. We think the Government should not finance any individual out of the Public Treasury, in the first place, and certainly not if the man can arrange for local credit. Although the disaster of 1930 which prompted the setting up of the feed- and seed-loan agency in this section of the United States was intended to help farmers in the disaster areas to finance their crops in 1931, this committee is informed that there were still some farmers in this county up to last year receiving the so-called feed, seed, and fertilizer loans. Banks, insurance companies, and private lending agencies are now making

approximately 85 percent of all kinds of loans, including real-estate loans, commodity loans, crop-production loans, etc., which again is the true democratic principles of our Government in action. Except in great disasters, private institutions can and should be called upon to render financial assistance and needs to the people of this country. We think the FHA and GI mortgage plan of financing the building and purchasing of homes is a good example of Government indirect aid and of the local supply of money by private lending agencies. The disaster loans as provided under Public Law 38 of the Eighty-first Congress should be continued but used only during disasters.

a. Long-term farm mortgage loans: Long-term mortgage loans have been made through the Federal Land Banks and the National Farm Loan Associations and have been well received and provided a useful and needed service for the members. They have accounted for some 10 percent or 12 percent of the total loans in this field. The stated objective of the agency, that is, to serve family-sized farms, would hardly seem to be adhered to in the making of loans up to \$100,000. At least in our section loans of this size are out of the area of family-sized farms. Recommendations. That no intensive drive be made to obtain all the business in this field. That loan service be continued in much the same manner as past. Also that possibly an intermediate term loan of about 5 years pay-out period be offered for making improvements and installing equipment which will require longer time than short-term loans to produce the means of paying out. Fencing, ditching, sodding pastures, soil conservation projects and breeding stock are some suggested possibilities of this type of service.

b. Production loans. Short-term production credit has been provided through the Federal Intermediate Credit Banks and the local production credit associations. This agency came into being during the late depression when normal credit facilities were very much restricted. It served a much-needed demand in the credit structure at that time. There is considerable difference of opinion at this time as to the continued need of this agency. We are of the opinion that in our county at least the operation is needed for a few large borrowers who use more than the legal limit of local banks. However, these cases are so few that they could be handled locally through excess-loan handlings by correspondent banks. The information made public by the associations indicates that the business is profitable and it is our opinion that they should return the Government capital still invested in their capital structure rather promptly and should also pay income taxes on their earnings, if they continue to operate as lending agencies.

c. Capital for cooperative associations: The Bank for Cooperatives is designed to furnish capital to small farmer associations for production, marketing, and buying purposes, and is recognized as helpful to the member farmers in many situations and is commended for these services. However, the operations in our immediate section have rather been in the area of large business. It seems unfair to competing businesses that cooperatives be furnished capital on very liberal terms and also exempted from income taxes on earnings. We would recommend that income from large-scale operations in this field be subject to taxes same as privately owned businesses. We further believe that if there is any justification by any reasoning for group borrowing (cooperatives) from the Public Treasury, individuals and corporations conducting a business should be accorded the same privileges. We do not favor the Government projecting itself into

these financial business matters, except in disasters and then only to provide, indirectly, the capital temporarily to agencies set up for this purpose.

d. Farm-purchase loans: Loans to tenants and other qualified persons to purchase family-size farms on very liberal terms and on such time as enables them to pay the loans have been made by this agency for several years with funds appropriated by Congress. While all loans of this type have not worked out successfully, there have been some highly successful cases. It has enabled some worthy applicants to become successful owners and operators of their farms.

e. Enlargement and development loans: Loans of a shorter term have been made by this agency for additional land to some farms too small to be efficient and also for the purchase of animals and equipment to make the farm an efficient operating unit. This type of loan requires very close supervision and technical assistance in working out a program practical for the particular farm and the owners' capabilities and available labor. Like the land-purchase program, not all these loans have been successful, but certainly the good results have more than balanced off the poor ones. Some good has resulted from this program.

f. Recommendations: The details of supervision and assistance required in this program makes the overhead cost very high and it is our opinion that the program is not adaptable to mass operation. We agree that a great deal of good has come from the program; however, we are not losing sight of what the main objective of the Government should be, that being that it can't possibly become the "parents" of 150,000,000 people and that as a matter of public policy should not buy farms and other property for one individual or group and not do so for others.

(e) Rural Electrification Administration: Accomplishments of the Rural Electrification Administration as reflected in reports of the service are commendable. Due to the direct service it has offered and to the increased services provided by independent companies as a result of the stimulation that REA competition has given, the number of farms served by electricity has increased from less than 11 percent in 1935 to 86.3 percent at present. Of the remaining 14 percent of farms without electrical service it is estimated that one-third the number lies within the fringe of commercial power companies and can be thusly serviced, and another one-third is so located that any type of electrical service program would be unfeasible; therefore it is recommended:

a. That REA functions as provided in the original Rural Electrification Administration Act be continued as the present program is outlined for a period of 3 years, or a time necessary to complete existing undertakings and to affect the remaining 5 percent of farms not now receiving electrical service, then to be operated as a maintaining service until such time that all association can be locally owned and operated.

b. That the existing associations be cleared of Government debt and support as rapidly as economically sound to do so, then when free of debt be operated as a corporation, owned and controlled by its stockholders, and subject to governing laws the same as those of other business concerns.

c. That Federal grants of funds be made to organized groups of persons to construct and operate electrical power-producing stations, these stations to be administered in the same manner and with the type program as the present existing REA service lines.

d. That Federal legislation remain in the background of REA administration, i. e.,

executing laws of government and refrain from making such laws, allowing the people to formulate and conduct the kind of program most needed and best suited to the purpose.

(f) Federal crop insurance: This is a very badly needed facility. We endorse the general plan but the policies on a departmental level with respect to arriving at a basis of insurance will have to be changed if it is effective in this cotton country of ours. The program was in effect in this country for about 3 years. Our farmers were none too enthusiastic about the program primarily because of its costs and because of the basis of adjustment of losses. There was some personnel deficiencies in the administration of the program which caused wide dissatisfaction but these should not be charged to the principles of the plan. We do not believe policy of selecting some 200 counties out of a total of over 3,000 in the United States to test out the feasibility of the crop-insurance plan will produce the desired results for the reason that any insurance plan to be successful must be predicated upon the basis of volume and the creation of large reserves for payment of losses. We believe that if a favorable premium rate can be established to begin with, an established basis for the amount of insurance can be worked out. Sufficient farmers throughout the Nation could be induced to take the insurance which would make it big enough to be a success. The amount of insurance per acre was too low and the cost too high to induce our farmers to apply for the insurance.

(g) Commodity Exchange Authority: Your committee is in full accord with the aims and functions of the Commodity Exchange Authority and feel that the Grain Futures Act of 1922, as amended in 1936, has just about abolished the evils of the old-day corners and manipulations to the direct benefits of the legitimate speculator and producer as well as the merchants and processors. It would be difficult indeed to visualize our present commodity economy without the benefit of the exchanges. But it does seem to us far-fetched to ask the small farmer—the family-size farm farmer, if you please—to give opinions and advice on the operations and the legislation needed in the operations of the commodity exchanges. While it is strictly true that he is directly affected by the day-to-day transactions, his operation is such that he just hasn't the time nor the finances to be actively interested. This, we might add, is fact gained through years of association with just such farmers, and not starry-eyed speculation. We personally would like very much to see an educational program instituted upon the workings of the futures markets in all its ramifications and expressed in simple everyday language, but do not feel that this dissemination of knowledge should be another function of Government. Rather, should it come from the brokerage houses themselves of their own free will and not by Government edict, just as some of the larger firms are now conducting investment schools for the relatively smaller investor in stocks and bonds. Certainly they should be better qualified and will gladly do so if the need arises. It can also be part of the educational program of the Extension Service set up in each county without additional cost.

Sound Finances in Government

EXTENSION OF REMARKS

OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. BERRY. Mr. Speaker, South Dakota established a record in financing which might well be used as an example by the Federal Government. South Dakota paid one of the most liberal of all State bonuses to its veterans. By carefully working out its program and levying a 1 cent sales tax, cigarette and liquor tax, the 1 mill general property tax levy, it has financed the bonus payment and interest in approximately 2 years. The State finances are on a cash basis.

Under unanimous consent, I include in the Record the following editorials from the Valley Irrigator, of Newell, S. Dak., and the Sioux Falls (S. Dak.) Argus-Leader describing how sound finances in Government pays.

Valley Irrigator:

Example. The National Congress might well look to South Dakota, also, for the current example of how such policy pays off. This next week (October 1) off go the sales taxes in South Dakota on liquor and cigarettes, and the additional 1 cent of a 3-cent sales tax. Those taxes were levied to care for the State's then-current increased expenditures, and the result was that in a few years they could be dropped.

Argus-Leader:

Almost an epochal event in this era of rising taxes is the announcement from Pierre that certain special South Dakota taxes will be dropped.

The taxes to go by the wayside are the 2-mill State property tax, 1 percent of the 3 percent sales tax and the 3 percent sales tax on liquor, beer, and cigarettes. These will be repealed on October 1 of this year.

That's a welcome announcement and behind it is a story of good government—good government in the old-fashioned way.

A few years ago South Dakota faced the same problem confronting many States—the payment of a bonus to the men and women who served in uniform in World War II.

The voters approved the payment of the bonus at the regular election in 1948. Meeting in January and February of 1949, the legislature proceeded to set up the necessary machinery to distribute the payments to the service men and women. It was estimated that the cost would be about \$28,000,000.

The legislature could have gone ahead in what seems to be the modern manner—pay out the cash and let somebody else sometime in the distant future worry about the payment.

But George Mickelson, then governor, and the overwhelming majority of the members of the legislature felt otherwise. If the money was to be spent, they reasoned, it had to be paid. And, as times were relatively good, they concluded that the payment should be made as rapidly as possible.

So they set up a series of extra taxes, including the 2-mill levy on State property, an increase in the sales tax and the special tax on liquor, beer, and cigarettes.

Now this chapter in South Dakota's fiscal history is about closed. A total of \$27,424,797—a large sum for a State such as

South Dakota—has been paid to the veterans and there is no long-time debt to linger on as a headache. The people have paid the bill for the payments they authorized in November 1948

"The Old-Fashioned Generals and Diplomats as Well Stubbornly Ignore the Plain Fact That if Air Power Had Been Used Properly, and Not Merely as Hedgehopping Cannon, the Communist Masses Could Never Have Reached the Korean Battlefield in Effective Strength"—Chicago Herald-American

EXTENSION OF REMARKS
OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. BOYKIN. Mr. Speaker, a Chicago friend, in writing me a few days ago, appended to his letter an editorial clipped from the Chicago Herald-American entitled, "Air Power's True Mission."

I don't think that any article could, in eight or nine hundred words, sum up the problem of the use, the lack of use, or the proper use of air power in Korea better than does this terse editorial of the Chicago Herald-American.

With penetrating truth, the writer of this article pointed out that—

Air power properly wielded would have dried up Communist strength at its source and rendered the land battles unnecessary.

The crux of the whole matter with respect to the use of air power in Korea is the refusal of those in supreme command to permit the United States Air Force in Korea to bomb the Chinese Communists anywhere beyond the Yalu.

Scores of Russian MIG jet planes can come across the Yalu day after day, and attempt to do what damage they can to the ground forces of the United States and the United Nations—but when engaged in battle by the United States Air Force, the Russian planes streak back beyond the Yalu, while the United States planes—under orders—turn tail and come home. They do not follow the Chinese and Russians in their escape across the river.

How bitter our Air Force men must feel to drive the Russians back over the Yalu River, look down, and see the great troop concentrations, ammunition dumps, marshalling yards, and other strategic points, and go home without dropping a single egg on the many enemy targets in view.

While, for diplomatic reasons, we have not made use of our strategic air power in Korea, nothing can ever detract from the lessons learned by the magnificent work done in tactical use of air power in close battle support.

The plain fact is that no force in the world has ever achieved the seemingly impossible things that the United States Air Forces have, in fighting ground forces from the air. The highest military authorities in and out of Korea frankly

admit that were it not for the United States Air Force, the ground troops of the United Nations would have been thrown out of that country, a long time ago.

While nobody has ever thought of an airplane as a weapon designed to kill individual enemy soldiers and enemy personnel on the ground, authoritative sources report that United States air power has already accounted for more than 47 percent of all enemy casualties in Korea, the destruction of 72 percent of all enemy artillery destroyed, and 81 percent of all enemy trucks destroyed, to say nothing about the destruction of hundreds of bridges, highways, dams, and other enemy delaying actions that have been accomplished by our flying forces.

It used to be thought that the only answer to a new big tank brought out by the enemy was a still bigger, heavier tank, and so, for years, it was a rat race between various nations to see who could bring out and put into action the greatest number of the heaviest, fastest tanks.

Korea has taught the fallacy of that solution. Today, the answer to a bigger tank is a small jet airplane. The records of the Korean war reveal that the American Air Forces have destroyed more than 75 percent of all the tanks that were used against our ground forces with such devastating effect the first few weeks of the war.

The article, Air Power's True Mission, clipped from the Chicago Herald-American, is short, terse, and condensed. Believing as I do that this editorial is something that every American and every Member of this House ought to be acquainted with I am asking the unanimous consent of my colleagues to place the same in the Record.

The article is as follows:

AIR POWER'S TRUE MISSION

When traditional thinking attempts to discredit a novel solution of a difficult problem, the routine technique is to assume that the new method is to be used in a manner entirely unsuited to its nature.

This is exactly what the old-fashioned generals and their political bosses are now doing to the concept of air power.

In hundreds of derogatory statements they persist in the deliberate assumption that airplanes by themselves constitute air power.

They willfully overlook the fact that the airplane is only the instrument of air power, while air power itself means the strategic use of the airplane.

Thus they point to the Korean campaign, in which airplanes have been lavishly used, as one instance where air power was powerless to destroy infantry armies.

They stubbornly ignore the plain fact that if air power had been used properly, and not merely as hedgehopping cannon, the Communist masses could never have reached the battlefield in effective strength.

When pressed to evaluate General MacArthur's urgent pleas that air power be employed to interdict the movement and supply of the Chinese formation, they blandly say:

"He had plenty of airplanes and used them all. Even then, under 'round-the-clock' air attacks, the Chinese kept advancing, fighting and supplying."

What these earth-bound apologists forget is that air power, properly wielded, would have dried up Communist strength at its source and rendered the land battles unnecessary.

Whatever failures occurred in Korea were caused by failure to use air power intelligently. They do not mean failure of air power itself.

As this is true of Korea, how much more true it would be of a general conflict between America and world communism.

For in such a war, there would be actually only two chief targets: the industrial complex of Soviet production, and the industrial complex of American production.

And if either of the antagonists took full advantage of air power, the issue could be decided long before the cumbersome, complicated and enormously costly surface armies got within range of each other.

The Politburo, with its insistence on experiment with new designs, and its much greater numbers and superior organization of military aviation, could then be conceivably the successful contestant.

The United States, with its penurious, short-sighted, hesitant, conventional and surface-minded political view of air power, could very easily suffer disastrous defeat.

It is more than past time that our tradition-bound generals and politicians reorient their thinking or give way to the progressive champions of air power in our national defense.

For nothing is more certain than that the next war, if or when it comes, will be fought almost entirely in the air.

Obviously, whichever combatant is prepared to seize and keep mastery of the air will emerge victorious.

America has the strength, the skill, and providentially still the time, to assure victory for herself.

She must, to survive, immediately establish her claim to undisputed mastery of the air.

Indiana Welfare Funds Mess and Danger to Tax Bill

EXTENSION OF REMARKS
OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. MADDEN. Mr. Speaker, the unfortunate mistake made by the Indiana Legislature in passing, over the Governor's veto, a law in direct conflict with the Federal law concerning welfare funds, has split the Indiana Republican Party wide open. The vast majority of Republicans in Indiana hope the legislature, now in special session, will correct this mistake by amending their recent enactment to be effective if and when the Congress changes the Federal law. The House Ways and Means Committee has already set a date for hearings for the Harrison bill which would make the distribution of welfare funds public. This method is the regular and common-sense procedure for the Congress to take on this matter. The Indiana Republican bosses are making an effort to "come in the back door" and handle this legislation through an amendment to the tax bill. This method is undemocratic and if adopted by the Senate-House conferees will endanger the tax bill. All 47 States are out of step but Indiana. The Ways and Means Committee of the House, in cooperation with the Senate, has spent months in working out a tax bill. Why endanger it by considering an amendment in an effort to lift the misguided Indiana Legislature off its hot seat?

The Gary Post-Tribune, one of the leading Republican newspapers in northern Indiana, has the following comment to make:

USE SOME COMMON SENSE

Some Republicans down-State seem to be placing a great deal of importance on the principle involved in the fight over the welfare law in the legislature. But no principle will be lost if the law opening the welfare lists to inspection is delayed in going into operation.

A great many people are opposed to the concentration of government in Washington, but that is not the only principle involved in that problem. There is another principle of double taxation which is also highly meaningful in this day of very high taxes.

Furthermore, the latter principle can be held without affecting the former. Then there is a third principle which is worth some consideration. That is the business of a representative of the people actually representing their interests rather than taking orders from a few self-constituted bosses.

Who gave the authority to Senator JENNER or whoever is doing the heavy thinking for the Republican bosses to decide who is a rebel and who is not? The idea, of course, is to howl down the opposition. Lacking a sensible issue, the boys are depending on noise to decide the issue.

The Post-Tribune is not interested in party politics, but we are interested in principles and in taxation. We think there is no honest basis for double taxation and no reason to foist this unnecessary expense on Indiana taxpayers. We are also convinced that the principle of opposition to centralized government will not be destroyed by using common sense.

Let us consider all the principles involved. We can still stand against centralized government and not throw away our money. The issue of big government will not be settled by the Republican bosses of the Indiana Legislature. It is a big problem and the excitement of a few little men in Indianapolis will not change the course of history. On the other hand, the use of common sense may help to start a trend in the right direction.

The Senators thought this matter over well, and calmly. They decided not to be hasty. So while the 11-percent boost in income taxes on everybody else is to go into effect November 1 this year, the Senators voted that the end of the tax exemption should not go into effect until January 3, 1953.

In other words, they voted to keep their own tax exemptions but to abolish those of the next Congress and next administration.

What a pretty page of history. The spirit of noble sacrifice exhibited here will touch the hearts of American voters just about as deeply as it touches the pocketbooks of the Senators who voted for it.

Mr. Speaker, much can be said in justification of the tax-free expense allowance now enjoyed by the Members of Congress and it would be as unfair to require a traveling salesman to pay taxes on the moneys he received as reimbursement of legitimate business expense as it is to compel Congressmen to pay tax on the expense incurred incidental to the discharge of their official duties. In fact, the average Member of Congress incurs legitimate expenses far in excess of the annual allowance and if called upon to justify them as provided in pending legislation can undoubtedly do so.

My annoyance, however, stems not so much from the fact that we shall be forced to justify these deductions for bona fide expenses as it does from the implication conveyed by this editorial that Members of Congress do not pay taxes. The statement "So while the 11-percent boost in income taxes on everybody else is to go into effect November 1 this year" conveys the impression that the new tax rise will not apply to Congressmen, which is just not so. Every Member of the House and Senate will have his taxes increased in the same proportion as the rest of the citizenry and any statement to the contrary is simply irresponsible reporting.

derers of history To say this is not to deny that Russia is still dangerous—dangerous as a bear running amuck in a cage would be.

Andrei Gromyko in San Francisco stood more alone than any man in peacetime history. Not even his stooges from Czechoslovakia and Poland could warm the cold that must have run through his marrow.

It is almost unbelievable that Russia could have converted such a glittering opportunity into such disastrous isolation—in six brief years.

When the war ended, Russia was one of the heroic victors. Her prestige was never higher. The western nations were fully prepared to live with her. The Big Five were to spearhead an era of peace and understanding. Trade was open to her in every port of the world. The opportunity, 20 years deferred, was hers then to rebuild her country with the blessing of all men, to give her people the good things of peace so long withheld, to build great dams and to prove that her system had some merit.

Never has any nation before thrown away so much so fast.

Out of a fear refracted back from her own enmities, she remained armed to the teeth. She aggressed constantly for buffers in the Baltics, the Balkans, the Middle East, and Asia. Her stupidity was given impetus by the rigid Marxist concept of historical predestination, a predestination that holds all right and all wrong to be calculable on the bases of classes.

And there was no force to arrest this growth in stupidity, because Russia could not call upon the resources of free men. All decisions were those of Stalin. No man born of earth could meet the test.

So Gromyko stood alone in San Francisco to dramatize for all to see the giant dimensions of Russia's blunders and her tragic losses. He stood before 61 nations. Those nations normally would have represented a dozen clamorous dissents from the Japanese treaty. The Philippines, Indonesia, and all the other smaller Asiatic nations would have registered serious opposition to a reconstructed Japan.

Gromyko drew those nations together. He stilled their dissent. And all that happened this week in San Francisco dramatized what has been happening at an ever swifter pace throughout the world.

Russia has converted trade opportunities into trade restrictions and alliances against her. She has brought into being the organized resources of nations that can outproduce the Red bloc 10 to 1. She has summoned forth the Marshall plan. She has created the North Atlantic Pact, which will shortly extend to Turkey and Greece. She has lost ready access to Japan and West Germany. These two nations, the chief industrial nations potentially apart from America, have gone aggressively into the western bloc. She has started the wheels turning on the most gigantic arsenal of military power ever confronted by any other nation.

In doing all these things, Russia has laid upon herself the burden of continued expenditures for unproductive defense. She must live in fear. She must find her internal strains mounting. She must be confronted constantly by the threat of the rising power against her which may draw away her allies as it did in the case of Tito.

Here in America the tremendous hue and cry arises when anything goes awry in the way we handle things. This outcry helps us correct our mistakes. Such correction helped us pull back from appeasement of Red China and strengthened our whole Asiatic policy. Russia has no such protection. One wonders what the Russian people would do, if they were free to know and act against the Kremlin for the devastation that has occurred in the Russian position.

We stress the monumental blunders of Russia today in order that we may enforce our faith in our own system and in our ultimate victory against all slave systems. Our

Free Press and Editorial Responsibility

EXTENSION OF REMARKS

OF

HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. DAGUE. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I am moved to comment on the following editorial which appeared in the Philadelphia Inquirer last week:

"SACRIFICE" IN THE UNITED STATES SENATE

Strictly notorious has been the tax exemption enjoyed by the President, Vice President, and Members of Congress on their expense allowances, which run into quite a tidy sum.

Now the Senate has voted, 77 to 11, to abolish that tax exemption.

The vote came on an amendment to the new tax bill, which boosts the levies on the rest of us by \$5,500,000,000 a year. It was obvious, even to Members of Congress, that when everybody else's taxes were to be hiked, it didn't look too good for them to go on enjoying this special tax privilege.

The Senate, however, is not made up of impulsive young hotbloods. To the contrary,

Enlightened Confidence in World Crisis

EXTENSION OF REMARKS

OF

HON. CHRISTIAN A. HERTER

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. HERTER. Mr. Speaker, on September 8, 1951, the Boston Traveler printed an editorial concerning the situation into which Russia has maneuvered herself in only 6 years and the type of understanding and confidence which we in the United States must have in order to cope with the Russian threat. I think the editorial is excellent, and, under permission to extend, I include it in its entirety:

ENLIGHTENED CONFIDENCE IN WORLD CRISIS

Russia stood before the San Francisco conference this week—almost a suicide.

Such is not the popular version. Too many of us have got into the habit merely of counting noses. Some 600,000,000 persons added to the Communist sphere of influence since the war. How clever are the men in the Kremlin. How invincible this man, Stalin.

It is more than time that we concluded that Russia has outblundered all the blun-

dangers actually rise as Russia's position grows more critical. There is likely to be a period when Russia may well take the gamble of war rather than watch her position deteriorate further. For that reason General Eisenhower is supremely right when he stresses the necessity for aiding our allies with enough and in time.

Unfortunately there seem to be two policies in America today. One is that of General Eisenhower and the other is that of some Congressmen who are retrenching on our effort. What we are asking here is simply for enlightened confidence. Confidence will come through faith in our own system and an understanding of the invincible stupidity at the heart of all dictatorships. Enlightenment lies in our clear recognition that this very stupidity has maneuvered Russia into a position where for the moment she is doubly dangerous.

Security Information: Government Departments

EXTENSION OF REMARKS OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mrs. BOLTON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the News of September 27, 1951:

SECURITY ORDER ONE MORE BLACKOUT OF PUBLIC BUSINESS

President Truman's extension of the Pentagon brand of security information control to all departments of the Federal Government means inevitably a suppression of news which the public is entitled to have.

It's another step in the direction of keeping the people from real knowledge of what's going on inside their Government.

The military services long have used the classification system to cover up matters which they don't want known for one reason or another, but which have no real relation to security.

The Pentagon, for example, has classified as secret the price contracted for ordinary supplies. It has put the lid on the findings of investigations into alleged misconduct.

The system has its ridiculous side, also. Files branded "top secret" have turned out to be filled with clippings of articles which have had Nation-wide publication.

Service officers in charge of classification have found it safest for their own skins to stamp almost everything secret. That will be the natural inclination of security officers in the civilian departments.

The administration has adopted a policy of linking up every conceivable civilian project with defense, including the pet welfare schemes of the Fair Dealers.

It takes no great imagination to foresee how the Department of Agriculture, the Interior Department, the Commerce Department and others will react to the order that gives a way to prevent prying into affairs which they choose to elect as related to defense. Actually, in these times, almost every activity of the Government can be connected somehow with national security.

The necessity for the Truman directive isn't apparent. The Government got through World War II without a black-out of this extent. We know of no important military secrets that have leaked out through other agencies.

The real reason, we fear, is the instinct of this administration to keep Congress and

the people ignorant of the activities of the mammoth bureaucracy in Washington.

The administration would like to have everything as securely buttoned up as the Atomic Energy Commission. Here is an operation in total secrecy, spending billions of dollars without audit. No one can challenge AEC spending, because no one knows how and why and where it's spending.

Even the Pentagon is envious of the AEC, which has to go through only the barest motions of justifying its budget.

The ideal condition is when "top secret" can be stamped on any project of Government to forbid questioning. The country is getting closer to that through Mr. Truman's so-called security order.

Ye Old Toll Gate

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, October 4, 1951

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Ye Old Toll Gate," published in the Washington (Pa.) Reporter of September 29, 1951.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

YE OLD TOLL GATE

The toll gate is coming back fast and in several places in the East particularly, it has been with us for quite some time.

Despite Federal opposition, which is gradually dying out, and charges that it is "a return to nineteenth century thinking," by the end of this year motorists will be paying to use nearly 1,000 miles of turnpikes, expressways, parkways or freeways, the National Geographic Society reports.

The toll he pays is the only thing today's driver on a super-highway has in common with the nineteenth century teamster on a Conestoga trail. These modern landscaped arteries, free of red lights, intersections, sharp curves, and grades, are a far cry from the wagon trails of 150 years ago.

Construction of the speedways is costly. The United States Bureau of Public Roads estimates an expenditure of \$60,000,000,000 over a 15-year period is necessary to bring United States highways up to minimum adequacy and today's gasoline and license fees cannot touch that figure.

Our own turnpike in this State, 160 miles of it opened in 1940 and to which many more miles have been and are being added, has proved the possibility of financing such express roads by tolls.

After the close of World War II the rush for new toll roads began, with Maine building a 44-mile toll road from Kittery to Portland, bypassing United States 1, as the first section in a proposed 400-mile turnpike to Canada and a 14-mile toll link across the foot of New Hampshire followed in short order.

Connecticut, Massachusetts, Pennsylvania, New Jersey, New York, Oklahoma, and Colorado are among the States using or planning to use the toll gate as a means of getting from one place to another in a hurry. And over the Nation 28 States have considered toll road legislation with 18 passing it.

Time moves on, but it moves in a cycle and it seems that ye old toll gate once discarded by public outcry is here to stay and by public outcry.

The Quest for Peace

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, October 4, 1951

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very timely editorial entitled "We Must Speak of Peace, Peace, Peace," published in the Minneapolis Star of October 1, 1951.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WE MUST SPEAK OF PEACE, PEACE, PEACE

On June 9, 1950, Dr. Niels Bohr, of Copenhagen, wrote an open letter to the United Nations. Though Dr. Bohr is one of the greatest living scientists and philosophers, his letter attracted little attention outside intellectual circles.

The free world at that time was in a fit of fear and desperation over Communist aggressions and, therefore, not in a mood to take long views. The open breach of peace committed by communism in Korea proved that the free world's enemies would not confine their attacks to such propaganda outrages as the Stockholm peace petition, but would shoot people they could not horn-swoggle.

So Dr. Bohr's wise words were lost in the shouts of battle and the clangor of plowshares being beaten into swords. America, while still willing to seek peace, began to prepare to submit its way of life to the test of battle. The country had no choice but to prepare for battle, and still has no choice.

It is not an easy thing for leaders of a democratic country to summon peaceful citizens to prepare for war. People hate to be dragged away from their peaceful pursuits, and to get them to make voluntary sacrifices a nation's leaders must crush peoples' hopes that a show-down can be avoided.

The fact that this is necessary explains many of the recent fearful and uncompromising statements that have been made in Washington. They are justifiable even if they are not based on Russian acts or preparations, because the United States dares not falter in preparing for a test of battle it may have to face.

But leadership has another responsibility in preparing a nation for a test of its way of life. And, because the United States is the leader of the world in which this test may have to be faced, this other responsibility is of profound importance.

It is to say, in inspiring words the whole world can understand, how war could be avoided, and what peace could mean if it were not violated.

America's leaders have not succeeded in doing this—they have not fulfilled their other responsibility to America and to the world. They have not lifted the world's eyes and filled its heart with a vision of the peace we seek as the only goal that could inspire or justify our sacrifices.

John Cowles, president of this newspaper, pointed out in an article in yesterday's Minneapolis Tribune what this failure to describe the peace we seek is costing us. We know the motives of the free world are generous and just. But because we have not sworn our love of peace and declared how we believe it can be attained, we find ourselves in the ludicrous position of being out-paced by the Soviet Union.

We want a disarmed and open world—a world in which men and women will neither have to waste their labor preparing for war nor live in fear that other men and women

are secretly preparing to conquer and enslave them.

This is the summons Dr. Bohr sent the United Nations a year ago—a summons to peace in an open world. "An open world where each nation can assert itself solely by the extent to which it can contribute to the common culture and is able to help others with experience and resources must be the goal to be put above everything else," Dr. Bohr declared.

Dr. Bohr, who speaks with perhaps more authority than any living man, not only believes an open and a peaceful world might be fruitful of almost undreamed material benefits, but that harmonious exchange and blending between the world's varying cultures would deepen the stream of spiritual life.

The time has come, it seems clear to us, to take Dr. Bohr's open letter to the United Nations off the table, and to see if it does not contain the central and galvanic idea this Nation needs to fulfill its other responsibility for leadership to the world.

Projected Executive Order Will Gag Civilian Nondefense Agencies

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mrs. BOLTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cleveland Plain Dealer of September 24, 1951:

PARALYSIS

The paralysis of public ignorance which has been shadowing the American mind through governmental fiat in recent months, on the pretext that defense made it necessary, will receive a further impetus if President Truman issues his projected Executive order to gag civilian nondefense agencies.

This is part of the pattern that the administration has been creating piecemeal to silence criticism and compel the public, by directed information so called, or by absence of facts on public issues to conform to its way of thinking and to support its policies.

The excuse is that the step is necessary to prevent news of mobilization activities, on which military and civilian branches of the Government cooperate, from becoming known.

With sober and plous mien the spokesmen in Washington say that this order will not be employed to withhold information merely because it might be inconvenient to the administration. It will, we are also told, be kept clean of abuse.

Such a system might, in some utopian future, work in this manner. None so far has. But knowing the sensitivity of the present office holders to any suggestion that what they decide to do without public consultation is not divinely inspired, we wish to register a warning that this order will become in application merely another means of preventing the people from learning what goes on, how their money is being spent, and to cloak matters of policy until they are accomplished facts and it is too late, by force of public opinion, to prevent or change the result.

A danger is obvious in the proposed character of the order. What information is confidential, top secret, restricted; what information must be hid in safes or not even mentioned over telephones, will be decided

by the heads of the sixty-odd governmental agencies to which the order will apply.

Obviously, then, what the head of one department may decide is taboo may, to the head of another, be perfectly legitimate public information. The fumbling or worse of one department will be information, surely, of a highly restricted character as far as that department is concerned. And at hand is the powerful order from the President to cover up such mistakes on the excuse that defense might be jeopardized.

When we recall how the administration in the past has put over its pet schemes before the public eye by faits accomplis or by changing the name of some unpopular measure or merely by keeping silent, we fear the consequences of this new gag rule.

We are thinking especially of how the President has declared war without the benefit of established constitutional processes. We recall also the manner in which troops were detailed to Europe. Then there is the history of the program of aid to Greece and Turkey. Only after the step had been taken was Congress consulted. The point is not whether these policies and actions were good or bad—the point is that Truman had his way and public opinion would either come along and conform or be damned.

What, we wonder, will be pulled off under this new cloak of defense security?

Congress, which sits theoretically to protect the rights of the public, should take time out from its various investigations to look closely into this matter. It should raise and debate the issue of Presidential rights by fiat, a dictatorial method that Mr. Truman is making more and more a part of the peacetime operation of the Government.

Regulations Governing Attorney's Contracts With Indian Tribes

EXTENSION OF REMARKS

OF

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Thursday, October 4, 1951

Mr. CHAVEZ. Mr. President, Manuel Lujan, the governor of one of the Indian pueblos in New Mexico, wrote a letter to the Secretary of the Interior under date of August 31, 1951. The letter refers to an Indian problem, and I ask unanimous consent that it be printed in the Appendix of the Record.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AUGUST 31, 1951.

HON. OSCAR CHAPMAN,
Secretary of the Interior,
Washington, D. C.

DEAR MR. CHAPMAN: Recently I received from Mr. Hagberg, the area director, a copy of the proposed regulations governing attorneys' contracts with Indian tribes. I was informed that I and my council could make comments on this to be in your office by September 11.

I first call to your attention the type of protection that we Pueblos of New Mexico need, and, based upon this need, arises our need for an attorney.

We need protection from the Indian Bureau and not so much more from non-Indians. The Indian Bureau has refused to approve Indian contracts here in New Mexico for over six pueblos because the attorney differed with the Indian Bureau. Commissioner Myer has stated that they will not ap-

prove attorneys' contracts, for any attorney is troublesome.

Today even with non-Indians all matters are referred to the Indian Bureau, since we do not have an attorney. As you know, Mr. Hagberg attempted to change our type of government, and it is impossible for us to work with him.

We object to the proposed regulations, since they give the Indian Bureau too much authority, and no attorney can get their approval unless he does what Mr. Hagberg wants. We further object to the Indian Bureau having anything to do with our internal affairs.

Very truly yours,

MANUEL LUJAN,
Governor.

Security Information: Government Agencies

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mrs. BOLTON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Cleveland Plain Dealer of September 27, 1951:

AN EVIL ORDER

The Presidential order setting up "uniform standards" for "security information," an order giving each head of a Government agency the right to suppress information as injurious to national security, has very dangerous potentialities.

The American Society of Newspaper Editors objected to the order when it was first drafted in July, and certain considerations will make clear to the public why the editors took the stand they did.

In the first place, it can be expected that the heads of Government agencies have judgment enough not to release military secrets that would be of advantage to the enemy—judgment enough to hold such matters back without special order.

Secondly, few agencies are doing work which can honestly be classified under the heading of "Secret for security reasons." The atomic projects and direct military operations are already well protected from the public eye. They need no new orders.

The objection comes, therefore, to giving the heads of all agencies the protection of secrecy. President Truman asserted that the "regulations are designed to keep security information away from potential enemies and must not be used to withhold nonsecurity information or to cover up mistakes made by any official or employee of the Government," but his statement serves more to point up the objections than to remove them.

Who is to decide what constitutes mistakes by agencies or employees of Government?

Under our way of life the public ultimately renders the decisions by its votes at the polls. At the moment the affairs of the RFC are a case in point. Congress is investigating many of its loans and the public is reading about them in the papers. There will naturally be difference of opinion as to the morality and legality of many of the transactions, but eventually Congressmen and Senators elected by the voters will render a verdict.

If, however, the RFC had been armed with authority to keep its transactions secret—and it might have done so on the ground

that it was giving assistance to defense industry—that public would not have learned that the Truman politicians have been playing high, wide, and loose with public money.

And the Presidential order empowers the heads of agencies to say what information is related to national security. Whoever has had experience with Government agencies in time of war knows that the tendency is to err on the side of security that Government job holders deem it in the interest of their personal security not to give out anything they can keep locked up.

Isn't it clear that an agency is most likely to escape the fire of public and congressional criticism if it operates secretly? It is to the selfish interest of every bureaucrat to keep his books under lock and key, to give out only what he might desire to give out.

It is on such considerations that the Society of Editors said that the "net effect of this Executive order" will be to "formalize the suppression of news to which the public is entitled."

One of the distinctive and most important features of American Government has been the absence of secrecy, the right of the public to know what its Government is doing. Secrecy will inevitably create conditions of public oppression of the type from which our ancestors suffered in the Old World.

In our crusade for freedom, let's protect our own.

Massachusetts Committee for the Hoover Report

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the address of Col. Edward A. Sherman, executive director, Massachusetts Committee for the Hoover Report, over Station WEEI, Boston, Mass., September 15, 1951:

REDUCING THE FEDERAL WASTELINE

Let's invest a few minutes looking two of our country's enemies square in the eye. The names of these two enemies are inflation and waste. First take a good look at inflation. Inflation means money losing its purchasing power. The result of inflation is that your dollar buys less and less. Because of inflation your dollar today brings just a little bit more than half of what it bought in 1939.

Experience has shown that inflation will, unless checked, make money almost worthless—remember the basketfuls of German marks that would only buy a loaf of bread? And run-away inflation can wreck our country just as it has wrecked others in the past.

Inflation is a habit. We've been slaves of this habit now for nearly 20 years. We got into the habit by inflationary measures seized upon as cures for the great depression.

To show you how the cure was worse than the disease, let me give you a few figures pointing out the cost of the inflationary policies used to cure the depression. The officially estimated total loss by depositors in suspended banks between 1921 and 1933 was less than \$2,000,000,000. Compare this figure of two billion with the total loss because of the depreciated dollar on the average value of life insurance policies, time deposits in banks, and E. F. and G. savings bonds for the years 1941 through 1950. That figure is over 116 billion.

You can see how much worse the cure was than the disease itself.

Now there are only two forces that can hold any economy together and keep it working for any length of time. One is an iron-fisted dictatorship which forces people to work and tells them just what they can have in return. The other force is a system of supply and demand pricing based on the free choice of the people as to what they will produce and what they will buy.

In this land of ours, freedom of enterprise is the guiding star for it measures the result of our plans and our work and determines what we may get tomorrow for what we do today.

When inflation takes the bit in its teeth and prices start leaping up, our normal price system loses its power to hold things together and keep us working for the good of all. Then confusion and frustration takes over as healthy incentives disappear and production drops.

Our present inflationary trend in Government, if left unchecked, will eventually destroy what we know as capitalism—the production through incentive system that has made our country great and which functions best when there is a minimum of governmental interference or restraint and when the value of money is established by competition for various goods and services.

The alternative to our American free-enterprise system is the decay of our military and productive power to withstand the Communist pattern which destroys freedom and human dignity wherever it sprawls.

The Communist strategy of world conquest counts heavily on inflation to reduce the strength of its victim.

Knowing this, let's admit that the time to face up to this danger and do something about it is now. For there is a way for a free and intelligent people to avert disaster.

First, we must put emphasis on production. The genius of our Nation for production is our greatest tangible asset. It should not be shackled—it should be used.

Second, we must have economy in Government. The ever-increasing nondefense expenditures of Federal, State, and local government use up an excessive share of our national income.

Let's take time to get our teeth into some definite specifics on this subject. Ten years ago the cost of government, Federal, State, and local took approximately 14 percent of all our income. When the war ended in 1945 taxation was taking 27 percent of our income. This year the best available figures indicate that taxation will take about 29 percent of our income and next year it is expected to be better than 31 percent of all our income.

These steps are so insidiously easy to take—14 percent, 27 percent, 29 percent, 31 percent—then 40 percent as it is in socialist Britain—then 60 percent as it is in Communist Russia. When Government takes more than a third of the citizen income, he, the citizen ceases to be free and independent. Government which should be the servant of the people becomes the master.

From every source we get new evidence of the relentless growth of Government spending that has no connection with our military preparedness program. For example, the Department of Commerce budget for 1950 was over a thousand percent increase over its 1940 budget. The Department of Labor spent over 1,200 percent more in 1950 than it did in 1940.

Soon our army of civil-service employees will be as big as the combined total of Army, Navy, and Air Force.

Just how long are we to tolerate this sort of thing? When will the voter, the citizens, the taxpayers, discard their false belief in something for nothing government and flock to the banner of those who do not promise handouts but who advocate reduction of nonessential spending, elimination of waste

and a return to common-sense administration of public affairs.

We have too long rewarded the spend-thrifts who have given us nothing but the highest public debt ever dreamed of and still higher taxes.

A word about the public debt—here are a few figures from the United States Treasury Department.

In 1869 after the Civil War our public debt was \$2,200,000,000. In 1919 after the First World War our debt was \$25,200,000,000. In 1929, a boom year, our public debt was \$16,600,000,000. In 1939 it had grown to \$39,900,000,000. In 1951 we find it at the dizzy figure of \$255,000,000,000. How much is a billion? To give you just a little idea of it—there are not quite a billion minutes in 1,900 years.

You do not have to be a long-haired economist to understand that piling up debts is unsound.

For a while most any individual can spend more than he takes in but—there comes an inevitable day of reckoning. Public spending of more than is taken in merely piles up the problem for future generations. Do you want to saddle your children with the burden of ever-increasing billions of debt? Why not embark on a program of increased production, Government economy, taxes to the point where production incentives are not destroyed, prudent military spending, curtailed credit, increased individual savings, and a real serious dedication of every citizen to the cause of freedom through active participation and interest in responsible Government?

Herbert Hoover recently urged reconsideration of some of our older and time-tested and typically American virtues. I think it will bear repeating. He said, "The practical thing we can do if we really want to make the world over again is to try out the word 'old' for a while." There are some old things that made this country.

There is the old virtue of religious faith. There are the old virtues of integrity and the whole truth.

There is the old virtue of incorruptible service and honor in public office.

There are the old virtues of economy in Government, of self-reliance, thrift, and individual liberty.

There are the old virtues of patriotism, real love of country, and willingness to sacrifice for it.

These old ideas are very inexpensive. They even would help win hot and cold wars.

Our only living former President would have us reexamine the pattern of government given us by our founding fathers, who, with great understanding of human nature created a representative government of checks and balances; a Federal Republic of limited power, dedicated to personal liberty.

Our Nation has undergone many changes since our founding fathers drafted the Constitution. In spite of these changes, Jefferson's axiom that the best governed people are the least governed people still holds true even if it does take a lot more government to meet the pressing issues of today than it did in Jefferson's time.

In our zeal to maintain human rights and protect minorities, we should not lose sight of the fact that majorities have rights, too, and strange as it may seem in these days majority rights are often in need of safeguards. It is often proper and sometimes necessary for agriculture or business, or labor or racial and other groups to act collectively to obtain equality of treatment and to prevent discrimination, but when such groups push beyond such legitimate objectives and use their combined strength to reach for special privileges they undermine the very processes that assure their liberties. In following the will-o'-the-wisp security it should be remembered that nowhere in recorded history has any form of government ever

achieved absolute or lasting security for its people.

Our experience—our common sense tells us that security must be built from within. Every man eventually knows both happiness and trouble, sickness and health, success and failure, and all the many conditions that comprise the wide range of human experience.

Some of the popular catch phrases and slogans need to be more closely examined. For example the phrase "freedom from want and fear," usually associated with the four freedoms, was first uttered by a national socialist named Adolf Hitler when he said, "We shall banish want. We shall banish fear. The essence of national socialism is human welfare. There must be cheap Volkswagen for the workers to ride in and broad autobahns for the Volkswagen."

"Rooted in the fuller life for every German from childhood to old age, national socialism means a new day of abundance at home and a better world abroad." Those were the political promises of security given to the German people in exchange for their personal freedoms.

Why do people fall for such slogans? Here is another well-known promise. Karl Marx said, "To each according to his needs; from each according to his ability." That simply means that government will put its finger on every individual and decide just how much he must contribute to society and just how much he will receive in return.

Then there is the slogan of the Labor Party in England, "Fair shares for all." What fair shares? What all-wise power will evaluate them? Or will it elect to disregard individual requirements, tastes, capacities and rights and feed us all from the same public trough? Even within the last month or so, Clement Attlee said, "Our socialist movement is not merely out to change things—it is out to change people."

Now, government is going to take over the job of shaping individual character. Doesn't that come under the category of—omnipotence? If they succeed there will be no further need for God, for then man will be made in the image of his government. Hadn't we better get back to first principles and try to keep our country the way our founding fathers intended?

We can recognize today's urgent need for active militant participating citizenship. We can enlist in the war against waste and irresponsibility in Government. In the Hoover Report we have a complete battle plan. We can let our people in Congress know that half of the Hoover Report already adopted is a job only half done.

We can demand of our Congressmen that they work toward the enactment of the remainder of the Hoover blueprint for better government at a better price. These things we can do.

Security Information

EXTENSION OF REMARKS OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mrs. BOLTON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Cleveland Plain Dealer of September 29, 1951:

BUREAUCRATIC REACTION

When President Truman issued his order establishing uniform methods for the clas-

sification and suppression of alleged security information, he felt impelled to issue a warning to the heads of Government agencies that their censorship authority should not be abused by being invoked "to withhold non-essential information or to cover up mistakes made by any official or employee of the Government."

The very fact that the President thought it necessary to issue such a warning was an admission that the classification order had dangerous potentialities which threatened the free dissemination of news to the people about what their Government was doing.

We did not have to wait very long for a concrete example of this very thing. Within 2 days after the Presidential order was signed, the Office of Price Stabilization issued an order prohibiting the disclosure of internal information "that might cause embarrassment to OPS."

If strictly interpreted, this order might well have prevented the release of any information about OPS activities because we cannot imagine this agency doing anything which will not eventually cause it embarrassment.

Members of the United States Senate had a field day when news of this order reached them. Their denunciations reverberated from Capitol Hill to the White House, with the result that Mr. Truman promptly directed OPS to cancel its order. This was highly commendable on the part of the President. But what would happen, we wonder, on some other occasion, if a similar censorship order were kept secret, or if the President, in one of his stubborn streaks, declined to intervene?

Government suppression of the free press is the first step toward dictatorship. And suppression of news about activities of Government agencies is a step toward suppression of the free press. The President's security classification order is dangerous, and it should be revoked.

Good Advice for All Americans

EXTENSION OF REMARKS OF

HON. J. CALEB BOGGS

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. BOGGS of Delaware. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Wilmington Suburban News of Friday, September 28, 1951.

The Wilmington Suburban News is an excellent weekly publication covering the suburbs adjacent to Wilmington, Del. This editorial is well worth reading and of timely interest.

GOOD ADVICE FOR ALL AMERICANS

Judge Paul Leahy's counsel to a group of 54 foreign-born residents at naturalization ceremonies last week contained injunctions and advice that might well be heeded by all Americans including those in high places. While it was a brief address, delivered to a small group, those who heard it, or read it in the newspapers, can readily recognize that it was not made extemporaneously, or without preparation. The precepts of moral conduct that he laid out might well be made a part of a moral code so needed in these days of hysteria and moral turpitude.

"Respect and obey the laws of the country. Work for peace. Avoid all group prejudice based on class, race, or religion. Try to make the community a better place in which to

live. Practice and teach the principles of good citizenship." Can there be any better advice?

But it was not to the rules of conduct that the judge made his most important contribution. Judge Leahy took occasion, we believe, to issue a word of warning to our leaders in Washington, the Administration, the Department of Justice, the Supreme Court, that they are condoning practices detrimental to the welfare of the country. "This court," he said, "stands ready to guard one of the most precious of our constitutional rights—the right of freedom of speech. It stands ever watchful and ready to protect that right for every one of you, without exception and without qualification."

"There was a time in the history of our country when our American citizens were deprived, out of fear and hysteria, of one of the basic freedoms guaranteed by the Constitution. There was an attempt to stop the free speech of Thomas Jefferson by the passage of the Alien and Sedition Acts of 1790, which imposed illegal restraints, censorship, and gag rule," he declared. "But that law which attempted to bind men's tongues, could not and did not long exist, for such a thing was truly hated by the American spirit."

"The price of free speech is that you must hear unpopular as well as popular statements even in times of stress and tension. This country was founded on the proposition that our citizens are able, after hearing both sides of every question, to sift out the error and accept the truth. One great judge has suggested that the test of truth is its ability to get itself accepted in the competition of the marketplace of ideas," he said.

During these days when the fear and hysteria to which the judge refers has taken such a hold upon our leaders and administrators of justice that they are denying a minority group the right of bail, jailing them, not for what they have done or what they have said, but for their beliefs—contrary to the Bill of Rights—it is heartening to hear a man like Judge Leahy declare that such un-American practices must stop, and that his court "stands firmly to guard" such a precious right.

Security Control of Public Information From Government Agencies

EXTENSION OF REMARKS OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mrs. BOLTON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Press of September 26, 1951:

THIS SECURITY ORDER COULD BE A THREAT TO FREE INFORMATION

May the new and extended system of security control over public information from Government agencies live up to White House promises.

There can be no quarrel with the stated purpose of the Executive order, which is to stop leaks of vital information to a potential enemy.

But there are grave doubts as to how the procedure will work out; whether it will not, in fact, lead to the suppression of news to which the public is entitled.

President Truman emphasized that the new rules were not to be used to deny non-security information to the public, nor to

cover up any mistake by a Government official.

But the practice of sealing up certain information to hide individual or bureaucratic incompetence is an old one.

In the past, the prerogative of classifying information—that is, keeping it from the public—has been mostly in the hands of the Defense and State Departments. Both are directly concerned with military and diplomatic material that unquestionably should not fall into enemy hands.

Now the practice is to be widened to all civilian agencies of the executive branch of the Government. Each agency head, or delegated authority under him, will be armed with four rubber stamps with which he can mark any data he chooses top secret, secret, confidential, or restricted.

The Executive order does not define the four categories or set up standards which clearly show how national security is breached if the information gets out. Nor is there any provision for appeal or review.

That is the big danger. Too much latitude is given to the Government job holder to determine what information truly involves national security.

The natural inclination will be always to decide on the side of caution, and frequently on the side of protection—for himself or his agency.

In the past war, appeal was possible, and often successfully made, through the Office of Censorship.

But the working of this new security order will have to be watched carefully to prevent classification labels from spreading through Government business as a device for hiding information the people should have.

An alert press can only regard the order as a new challenge to its mission of informing the public.

Help Wanted

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr LANE. Mr Speaker, the unemployment situation in New England is serious, while the Nation as a whole is establishing new records for employment. To be jobless, through no fault of one's own, at a time when the cost of life's necessities is becoming fantastic, is a double hardship. No man can feed his family on patriotic slogans. He needs work and income. And he wants to know why he is being deprived of the opportunity to provide for his wife and children.

This is the question that the Federal Government must answer. It is the only agency in a position to find out all the reasons, and then assist in the solution of this grave problem.

I stress the human element because our first concern must be for the welfare of the people—American style.

Big government is sometimes unable to understand the day-by-day struggle to make both ends meet that is being fought in thousands of homes in New England textile communities. It is so accustomed to dealing in billions that it loses sight of the thin margin by which too many people just manage to exist.

All right then, let's get the statistics that will make the Government wake up.

The total work force in the Greater Lawrence, Mass., area is 64,000. Last week, 11,600 of these were drawing unemployment compensation checks. Add to these an estimated 5,000 unemployed who are currently ineligible for benefits, and you get more than 16,000 out of work. This is 25 percent of the labor force.

This means that hated and feared condition—depression—which is weakening the heart of the textile industry.

The Federal Government cannot cure it by pointing to the production-employment health of the nation as a whole.

It must examine, diagnose, and apply remedies as advised by the following editorial from the Evening Tribune of Lawrence, Mass., dated September 28, 1951:

The Federal Government has on hand a plentiful supply of that "wonder drug"—orders to buy—which, if applied promptly can conquer the infection of unemployment in a matter of days.

Will Washington go to work on this case at once, or will it tell the patient to come back next year?

The Evening Tribune brings the story of an economic crisis to your attention:

HELP WANTED

The hopes of Lawrence rode to Washington with the delegation of Wood & Ayer mill workers who empowered by Local 227, TWUA, CIO, to see what could be done about improving employment conditions locally.

Textile workers, as orphans of our abundant economy, cannot fail to take envious note of the general prosperity of the rest of the country, or of the fact that the Government envisions a spending program greater than any embarked upon in time of peace, or that liberal subsidies are being transmitted all over the world to better the lot of people who may be appreciative, and who may not be.

The textile worker has no desire to arrest progress, interfere in foreign policy, or deprive anyone of advantages he currently enjoys, but the textile worker does have a pardonable and understandable desire to make a week's pay now and then. The fact that there are presently some 11,000 workers receiving unemployment compensation in this city indicates that an economic crisis exists which should have almost as much claim upon Federal attention as the depressed circumstances of rice farmers in India or as the rehabilitation of West German industry.

The Government will publish a white paper on anything—China, Italy, the Atlantic Pact, the Marshall plan—at the drop of a hat, and the cost of printing it, alone, would mean relative wealth for a textile family. The Government prepares these white papers without any solicitation on the part of the particular area involved. In fact, many times the particular area involved—China, for instance—would undoubtedly prefer that the Government mind its own business. But (and for some reason this seems supremely ironic to us), in order to call attention of the Government to the fact that textile workers in Lawrence, Mass., have a grave problem, it is necessary that they themselves journey to the citadel of government to urge specific consideration of their problem.

Regardless of the fact that at the moment the Government seems to have no particular need of the services of the textile industry, it shouldn't overlook the fact that textiles are basic and are at least sporadically im-

portant to the national economy. The Government can work up a fine case of alarm over the depletion or deterioration or abuse of our inanimate resources—coal, oil, rivers, forests—but it seems reluctant to take any measures looking toward the conservation of human resources.

It may well be that the concern we feel is coloring our view, but it seems to us that only indifference is at the root of the commonly held opinion that nothing can be done to stabilize the textile industry, that it must intermittently wallow in the slough of recession (at a time of general prosperity) until some natural phenomenon occurs to start a new spurt of production. The situation here and throughout the State is not so bad as it was in 1949 when unemployment in Lawrence reached 23,000. And it probably won't get that bad. But, remembering that even then, when confronted with the undeniable fact of a real crisis and real hardship, the Government wanted no stockpile of fabrics cluttering up its warehouses, we most sincerely hope that there has been enough change in attitude to justify the hope that the problems of the textile industry will interest the world planners in Washington as much as the internal affairs of France, Great Britain, the Netherlands, and points east.

It must be considered that all the planning abroad may go for naught, the beneficiaries of our help can either be with us or against us. But textiles we'll always have with us, and their present and future stability must be assured.

Payments to Disabled Veterans

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the Record, I include the following letters:

AMVETS,

DEPARTMENT OF CALIFORNIA,

Long Beach, Calif., October 2, 1951.

Hon. EDITH NOURSE ROGERS,
Congresswoman, House Office Building,
Washington, D. C.

DEAR EDITH: As State vice commander of World War II veterans, department of California, may I take this opportunity to thank you for your wonderful bill H. R. 4233 which truly helps the disabled veterans of World War I, II, and the Korean conflict.

As a veteran I was proud to read in the CONGRESSIONAL RECORD, of September 17 and 18 your courageous stand on behalf of this measure.

We only hope that you can see this bill successfully through the conference so that it may become law in the immediate future.

With kind personal regards and best wishes for your continued success and happiness, I remain,

Sincerely yours,

PAUL J. DESMOND,

Vice Commander, Department of California

ROBESDALE, LONG ISLAND, N. Y.,

October 2, 1951

HON. EDITH N. ROGERS,
House of Representatives,
Washington, D. C.

MY DEAR MRS. ROGERS: I have written a letter to the joint conference committee with

regards to S. 1864, as amended by the House of Representatives. The following is the letter:

"In a recent statement by Dr. Bertram Feinstein, of the University of California, school of medicine, he states, '95 percent of amputees have experienced sensations that seem to come from their missing members which means "phantom pains." I have mine now for more than 33 years, and if these pains can be entirely eliminated I would consider myself fully rehabilitated and would gladly forego the extra pleasure of riding in an automobile.'

"Also recently there appeared an article in the newspapers about a staggering amount of money appropriated by our Government, for the rehabilitation of foreign countries. Well, to some of us it doesn't seem to add up

"Let's not forget so quickly the men who fought our wars, and who have made rather serious sacrifices. What difference does it make whether they are World War I or World War II, or if they have a leg off or an arm missing? The result of either loss is that they can never be replaced."

I know how you stand on this bill and how you stood for many years on all bills pertaining to disabled veterans. Speaking for many disabled veterans I know it is appreciated

Many thanks and good health.

Sincerely yours,

MORRIS NOVIG CD.

Education Is the First Line of Defense

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. REES of Kansas. Mr. Speaker, under leave granted by the House, I am including a copy of the address delivered by Deane W. Malott upon his installation as president of Cornell University.

President Malott is a native Kansan. Prior to his becoming president of Cornell he was chancellor of the University of Kansas.

I know the Members of Congress will be interested in reading this splendid address:

Education is America's first line of defense. There is practically no other.

Many transient fears are roaming the world today as to what may be going to happen in the years ahead. Dire prognostications are made about dangerous trends or directions. There is a feeling of hopelessness abroad in the land that we are heading for destruction and that nothing can be done about it.

What a difference it would make in the psychology of the Nation, if we could merely be assured that truth would prevail, that people would be sufficiently enlightened to know what to do and how to do it, and to influence others into a like state of mind.

Simply stated, that is perhaps the task, and the whole task, of all education and specifically of us charged with responsibility in Cornell University. Through the hallways and along the gorge-side paths of this beautiful campus, walk today many of the business, professional, and political leaders of tomorrow. The challenge to us is there, in the unfolding lives about us, to transmit something of the imagination, the courage, the self-discipline, the moral strength, the

spiritual faith, and the sense of individual responsibility of the sturdy founders of this institution. Otherwise we have not justified the trust placed in us.

America has always believed in the fundamental value, the veritable necessity for education. President Washington in his first message to the Congress said: "There is nothing which can better deserve your patronage than the promotion of science and literature. Knowledge is in every country the surest basis of public happiness."

And in his Farewell Address he again urged the promotion of institutions for the general diffusion of knowledge and the enlightenment of public opinion.

President Madison believed that popular government without popular information or the means of acquiring it to be the first step toward farce or tragedy or perhaps both, as people who intend to be their own governors must arm themselves with the power which knowledge gives. President Jefferson said that "if a nation expects to be ignorant and free in a state of civilization, it expects what never was and never will be."

This belief on the part of Americans, past and present, in education and in its vital relation to the perpetuation of our American concept of life, has built some 1,800 institutions of higher learning in this Nation. It has provided the motive for millions and millions of dollars to flow into private and public colleges and universities.

Education stands as steward for the accumulated values of our civilization. If it does its part, it will everlastingly set forth the positive values of America; it will make crystal clear the dangers of the widening discrepancy between what the theory of democracy requires of its citizens, and what the function of democracy reveals.

Education must stand sponsor for the free world, and lead our thinking people to understand the price we must pay to maintain that freedom.

We fear today the threat of armed aggression. So did ancient Rome as she sat securely and proudly on her seven hills behind the spears of the Roman legions. But as historians have pointed out, that Empire fell, not by force of arms but by the spiritual collapse of her people, succumbing to the debilitating contagion that the government of Rome could do all things for all people.

The long shadow of that fallen Empire looms over America today, a greater threat than all the schemes of furtive and sinister plotters behind the iron curtain.

Too many are asking our officials in Washington to do what our forefathers would have done gladly for themselves. Old ideas of initiative and thrift and integrity are disappearing. Government, like a giant octopus, is wrapping itself around even more and more phases of our lives. It is the direction of ancient Rome, and its implications stand stark before us.

There must come a new thinking into America which insists that government be not an end in itself but a servant of free enterprise, and expediter for the industry and the energy of a free people. Otherwise an unseen paralysis sweeps over the Nation, and we sink slowly from the free republic of decentralized government, to the welfare state, to the hand-out state, to the police state. Over and over again in the history of man this cycle has repeated itself.

Storm signals are flying in our mounting and uncontrolled Federal deficits, in high costs and high taxes, in our failing to think through these trends and their inevitable result on our freedom.

Education must help and help vigorously, lest we ignore our spiritual heritage. We must not put our faith in mere mechanical skills, in mere material wealth, or in Government paternalism, else we shall perish, strutting

to our doom as has many a civilization before us.

In these sweeping changes, in the thrusts and pressures of a world unstable in its very foundations, education has a task to do, else mankind cannot continue to live securely in the environment which it has created.

Never in the long history of Cornell since that distant opening day of October 7, 1868, has the task been so difficult. In those times, the American way of life was regarded as a permanent conquest of the human spirit. We accepted democracy with scarcely a thought, it was not really a major topic of discussion. We were not then concerned at all as to whether capitalism would survive, the fiscal structure of the Nation, difficult always, was not endangering the very economic life of the country, self-respecting people worked hard and expected to take care of themselves.

But in spite of all the dire predictions of the apostles of doom, the outlook is far from dark as the academic year 1951-52 opens today.

Ralph Waldo Emerson perhaps best stated the mood of America, at its youthful best, when he asked, "If there is any period one would desire to be born in, is it not the age of revolution? When the old and new stand side by side and admit of being compared, when the energies of all men are stimulated by fear and hope, when the historic glories of the old can be compensated by the rich possibilities of the new era?"

If our wish is Emerson's, we have it today. The trouble is that for a number of people the future is a bit too rich in alarming possibilities, and when they take the old and the new side by side, they would much prefer the old.

The fearful ones who hate and condemn the liberalism in our colleges never suggest any additions to the store of human knowledge, but always subtractions. They want us to leave out all that is interesting and vital, the great current social issues, the great controversies in forms of government, systems of finance, and policies of ethics on which they wish neither professor nor student to take sides.

Such a course would not mean free minds. We cannot be free and at the same time preserve ourselves only amid "the gentility of the obvious and the tedium of the uncontroversial." Young people, at least, cannot be expected to reserve their greatest enthusiasm for the status quo. Yet our freedom must always be exercised with tolerance for others, with responsibility for the good name of this great institution from which we of the Cornell staff can never completely dissociate ourselves.

This ceremony today is merely a sort of channel buoy in the living stream of the university, as it flows steadily on its way from the ancient past to the distant future. We who participate for a brief time together, to create the Cornell of the moment, lend our hands to an educational project with deep traditions, buffed slowly by the lifelong devotion of many men and women—teachers who have guided the intellectual life of Cornell to a place among the Nation's greatest; administrators who have dreamed and planned and toiled for an ever better institution, generous benefactors who have left the imprint of their lives in the buildings and collections and apparatus of this far-flung educational venture, the taxpayers whose support has been returned times over in the abilities of the graduates and in the applied research from our laboratories; alumni and trustees who have loved this hill and all for which it stands, and who have given of their time and thought and energy and substance; and students who in endless procession have given character and tradition to their Cornell.

We stand humbly today among this galaxy of the builders of the university, living and dead, mindful of our responsibility not only to them but to the generations that lie ahead. For if we fail in our custodianship of this distinguished center of learning, if for one single generation its standards of conduct and performance are allowed to slip, we shall have obliterated something of the immortality of these founders and builders, we shall have shattered their dreams, and destroyed something that can never be recovered.

On some far future day, another channel buoy in the timeless stream of Cornell's existence will mark another installation ceremony. It is my pledge today, in which I know I am joined by the entire Cornell faculty staff and student body, that we shall transmit to those unknown participants in that phantom ceremony an ever stronger university, where unswilled freedom shall still prevail, where the highest intellectual endeavors shall be nurtured, where character and abiding faith shall be evidence of Cornell's contribution to a better world, and to the continued defense of America through the great forces of liberal and professional education which fear neither truth nor heeey.

On the Job

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. HOFFMAN of Michigan. Mr. Speaker, man is one of the most wasteful creatures. Given virgin territory, all too often he destroys the opportunities which posterity would otherwise have to enjoy the benefits which he, at the moment, values so cheaply. One thing, at least, we might learn from the people of the Old World, and that is the conservation of natural resources.

All too often, valuable forests have been destroyed, and we permit cities and industry to pollute and ruin our streams. The Kalamazoo River in southwestern Michigan has, through carelessness, been changed from a beautiful stream of pure, swift running water into an open sewer with a series of cesspools where dams collect industrial waste and raw sewage.

The Allegan Gazette—a very, very small weekly published in the city of Allegan, located in the horseshoe bend of the Kalamazoo on a peninsula where the Indians for years camped annually to hunt and fish—which successfully led the fight for a municipal power plant and lighting system against the commonwealth and its subsidiaries, is once more, for the benefit of the public and at its own expense, carrying on a battle for the preservation of this river for future generations.

From the September issue of that paper comes the following editorial:

YOUR STAKE IN THE FIGHT TO END RIVER POLLUTION

In the early 1900's the Kalamazoo River in Allegan county was a reasonably unpol-

luted stream. The people enjoyed the natural benefits derived from living in the vicinity of the river, such as boating, swimming, and fishing.

Indeed oldtimers can recall that a fishing and camping trip down the Kalamazoo from Allegan to Saugatuck in 1900 was equivalent to a \$500 trip into Canada today.

Due to the river, this area had a great resort potential. People had a right to expect that as the country became more settled, property along the river would rise in value, tourist and resort business would increase, and the community generally would benefit from the river.

To protect the property rights of riparian owners and to conserve our natural resources the legislature of this state has passed numerous laws forbidding the depositing of polluted matter into the river.

Disregarding the laws, the municipalities located on the river, the paper mills, and even the State of Michigan, have continuously, in an ever-increasing volume, for the past 50 years dumped sewage, paper-mill sludge and chemicals into the stream.

As a result the river from Kalamazoo down to Plainwell is a stinking open sewer, devoid of all fish life, unfit for swimming, destroying pasture lands, unfit for irrigation and destroying real estate values by hundreds of thousands of dollars.

It has been estimated that, as of this date, the de-inking mills alone deposit approximately 180 tons of sludge into the river every day.

The effect of this is to gradually fill the river bed. The sludge has in the past few years reached Lake Allegan situated below the city. If pollution is continued eventually the sludge will reach Douglas and Saugatuck and that area too will be unfit for swimming and resort business.

This sludge destroys all plant and fish life in the stream, gives off an offensive odor, depreciating riparian real estate values, increases flood conditions, destroys pasture land, and in general destroys any practical use of the river for recreational purposes.

Some of the paper mills responsible for this pollution openly state that the river should be made an industrial waste stream. Evidently they desire to use the river for a reservoir for the depositing of industrial waste, regardless of the property rights of riparian owners and the general good of the community. They exhibit little or no interest in the rights of the people of Allegan County to have a healthy, clean and recreational stream and to the benefit derived therefrom.

The various State agencies have miserably failed in their attempts to clean up the Kalamazoo. At the present time the Water Resources Commission is delaying any action it might take against the polluters, for the purpose of receiving and studying a report to be filed by the Kalamazoo City Study Committee. For the most part this committee has dealt with the difficulty of solving the problem confronting the paper mills and it has been rumored that an attempt will be made by some of the mills to have certain sections of the Kalamazoo declared an industrial stream.

The time has come either to enforce the law, clean up the river, or let the polluters have their way.

If you want a normal, healthy river, write your State Senator, Edward Hutchinson, your State Representative, Ben Lohman, the Water Resources Commission, Box 87, Lansing.

If you wish to save the Kalamazoo River, join in our fight against the continuation of pollution by signing one of our petitions, and by joining our Anti-Pollution Association.

WHAT POLLUTION MEANS TO YOU

It endangers your health. Waters polluted with community sewage can carry the germs of many diseases.

Polluted waters peril river property and resorts. Look at the river between Allegan and Kalamazoo. Potentially beautiful, but now it is rotten. What happened to the Camp on Allegan Lake? It had to close. What may happen further downstream? Pollution is moving down there. Even Saugatuck is polluting it's own future.

Polluters have ruined fishing. What was once one of the finest bass and pan-fish areas on the river is now an open sewer.

Can we save what is left?

These are the facts. Forty-five miles of stream is now considered seriously polluted where only a few years ago 32 miles felt the pollution sting.

Some 180 tons of wastes are emptied each day into the stretch of river from Kalamazoo to Otsego. About 90 percent of the solids are from paper mills. About 150 tons a day comes from the Kalamazoo area alone.

These wastes are about the same as the combined wastes from a city of 650,000 people would be if emptied untreated into the river.

There is practically no fish life in about 30 miles of the river below Kalamazoo.

These wastes can be treated and the problem reduced. Studies at Plainwell have proven this fact.

There is no evidence that treatment of the paper mill wastes will break any mill nor even nearly do so.

Many of the mills would probably make treatment pay as the paper mill at Monroe, Mich., is now doing.

The Co-Ops Should Pay

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Commercial Appeal, Memphis, Tenn., for September 9, 1951:

THE CO-OPS SHOULD PAY

The Senate Finance Committee has a feeling that a great many of the so-called co-operatives ought to pay taxes. It has adopted recommendations that would result in taxing about half the multitude of co-ops that are now in business, and the larger ones are those that would be affected.

The co-op idea is about a century old in the United States, but it has been developed into big business within the last 3 decades. In the beginning, the cooperative would be composed of farmers, almost always small operators. They got together in order to take advantage of lower prices on carload lots of feed, fertilizer, and the like. They frequently pooled their production to secure the higher prices that could be obtained for big lots.

These days, however, alleged cooperatives are engaged in almost every sort of business. They trade up to the billions annually. They compete with concerns that do pay taxes, and we do mean pay. It is clearly out of line with common sense and justice to exempt anything and everything that calls itself a co-op from paying taxes. Some of them do pay, as a matter of fact.

The Senate Finance Committee has endeavored to discriminate between the co-ops that help farmers who need help and those that are in business on their own, operating with an unfair advantage over taxpaying competitors. The co-op as such is a good thing for the people involved, but it ought to pay its share of the taxes when it shows large profits and cuts into the revenues of businesses that do pay.

Soil Conservation District's Important Responsibilities—Part I

EXTENSION OF REMARKS OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by H. H. Bennett, Chief, United States Soil Conservation Service, before a meeting of the northeast area soil conservation district supervisors and directors, Philadelphia, Pa., October 5, 1950:

SOIL CONSERVATION DISTRICT'S IMPORTANT RESPONSIBILITIES

It is a pleasure to be a guest this evening of you Northeast area soil conservation district supervisors and directors representing a fourth of all the States in the country. It is stimulating to meet this way with those who hold such an important and responsible position, individually and as a group, in the economy of your own communities and States of the Nation.

That is why I have selected the important responsibilities of the soil-conservation districts as the subject of my remarks, although some of you might wonder at first if that might not be more appropriately a topic for somebody like President Waters Davis of your National Association of Soil Conservation Districts or Mr. George Heidrich, your own northeastern area vice president. Actually, however, the degree to which the supervisors of soil conservation districts exercise their responsibilities of leadership and direction of a highly successful and going conservation program is of utmost concern to the Soil Conservation Service as an assisting technical agency. That, of course, is because we have no authority in any district and have no desire to run the affairs of districts, even though our ability to help get the conservation job done depends directly on efficient district management.

UNDERSTANDING OF THE CONSERVATION JOB NECESSARY

Some time ago I wrote the conservation commissioner of a State where lack of progress in getting soil and water conservation practices applied on the land had aroused considerable concern: "The objective of the Soil Conservation Service, through soil conservation district assistance, is not only to help farmers adopt proper land use practices and to apply protective measures to their land but to bring about such a thorough understanding on the part of the farmer: themselves of the need for and desirability of this work that they will continue to farm in accordance with the conservation needs of the land. The farm conservation plan is a necessary step toward this objective, but the job is never completed until all the practices called for in the plan are applied."

I assume that all of you are familiar with the provisions of the memoranda of understanding between your districts and the United States Department of Agriculture and the Soil Conservation Service, respectively, setting forth our mutual obligations and responsibilities in carrying out soil conservation district work. As you know, every district under these voluntary agreements has important responsibilities, ranging from determining priorities for work in the district to planning the use of and maintaining field equipment. The effectiveness of the Service's technical or other assistance is contingent on the extent to which the district—through its supervisors—lives up to or goes beyond its part of the agreement.

MUCH WE NEED TO BE THINKING ABOUT AND DOING

Right now, probably as much as at any other time since the first soil conservation districts were established 13 years ago, there is much that we need to be thinking about, talking about—and doing something about—both as district officials and as assisting technicians. The one thing that is uppermost in everybody's mind today is mobilization of our manpower and economic resources for national security, notwithstanding our recent successes on the battlefields of Korea. In this mobilization for defense, the Federal Government seems committed to costly outlays in materials and manpower. No one can say, of course, how long the emergency may last. It might be a continuing situation for quite a long time, no one knows.

Productive land is an inseparable and essential part of our first line of national defense; because men with guns and bullets can't fight without food, and there can be little food from poor land. So, we clearly cannot afford to put soil and water conservation "on the shelf" for this emergency or for any other cause. On the contrary, we should redouble our efforts in safeguarding our productive land, and the water which makes it produce. Among other things, in the light of conditions as they are, this would seem to indicate pretty definitely that government and local interests will need to assume an even larger share of responsibility than ever for carrying on the vital conservation program.

SCS WILL CONTINUE FURNISHING TECHNICAL HELP

The Soil Conservation Service, for its part, will continue to use every dollar of its appropriations to the maximum extent possible in providing technical help to farmers in soil conservation districts, as in the past. In fact, 88 percent of our entire personnel is thus engaged in soil conservation work on the land. This enviable ratio of high work performance and extremely low assignment of Service manpower for administrative duties would not be possible to such a degree without the soil conservation districts through which we work. I mean the day-by-day direction given to the soil and water conservation program by the supervisors of each district, and the contributions in man-hours and materials made by all the district farmers, individually and through cooperative group action.

That is why I cannot stress too strongly the importance of positive and vigorous leadership within your soil conservation districts in bringing conservation treatment at the earliest practicable date to every acre of land still needing it—from Maine to California, throughout the United States and the world. This, of course, is neither more nor less than fulfillment of the original soil-conservation districts concept.

In 1935—when Congress passed the first National Soil Conservation Act and changed the name of the Soil Erosion Service to the Soil Conservation Service—we reached the decision that two main things were neces-

sary to insure adequate progress: (1) That the technical services of trained conservationists should be made available to all farmers desiring such help; and (2) that some type of local government unit should be established to assist in bringing about necessary cooperative action and to place responsibility for getting the job done and maintained on the local farm people who are intimately associated with the land problem. Anybody who has taken the trouble to observe or to learn anything at all about the operations of the soil conservation districts since 1937 must agree, I am sure, that the soundness of this democratic concept has been amply borne out in their performance—thanks to the intelligent, responsible leadership of progressive landowners and operators like yourselves, the country over.

STILL ROOM FOR IMPROVEMENT

I want to say, however, that I would be something less than frank in my discussion of this whole matter if I failed to call attention to the fact that there still is room for improvement in many places. That is to say, from the standpoint of the leadership and responsibility that district supervisors and farmers in the districts generally can and should exercise in order to assure maximum, economical results in their district programs. I do not mean to imply that anybody expects the district supervisors and cooperators to do all the thinking and all the work while our technicians just stand around and look wise. But, at the same time, you can't hope to get the service and the production out of these technical men that the district has every right to expect, if they are kept on the jump looking after minor details—making unnecessary repeat trips to individual farms on trivial questions, etc.—while somebody else's farm planning and application of conservation practices wait.

One of the best ways we have found for speeding up the application of the basic measures in a given soil-conservation district is for every farmer to learn as quickly as possible how to carry out as much of his conservation work as he possibly can, and how to keep up his structures and maintain his other conservation developments, with a minimum of technical assistance. In that way—particularly now when the time of our limited number of experienced personnel is so fully occupied in furnishing technical assistance to the still increasing list of soil-conservation districts—each technician can be freed for that much more new planning and assistance in new land treatment. And the immediate outlook in this respect, we might as well admit, just as well could be for the technical manpower situation to become tighter before it gets any better.

Here in the northeastern area, our July 1 reports showed a backlog of 21,693 applications for farm conservation planning assistance in your 12 States. Now, of course, we all want to have a certain reasonable number of applications ahead all the time, for that certainly is a much more healthful situation than to have technicians standing around waiting for customers. Meanwhile, though, you district supervisors and our technical people alike are most anxious to get to every one of those farms with the least possible delay, as well as to the other farms constantly being added to that backlog of requests. It is obvious that the technicians are going to be able to get to more people faster if their time is kept as free as is practicable for new farm planning and application work.

THE FARMER CAN HELP WITH THE CHORES

Also, the best conservation farmer—and the one who gets the highest dollars-and-cents returns from his conservation plan—is the one who goes ahead and takes care

of the day-by-day tasks himself, as a part of the regular farm upkeep. By the same token, there are certain necessary items of daily routine, which we call housekeeping chores, in soil conservation district operations that the farmers—not the technicians—should arrange to do, such as routing, servicing, and other handling of district machinery, materials, labor, etc. In fact, that is why many districts over the country have found it pays them well to hire a manager or secretary to take care of such details as the farmers or the district governing boards haven't the time to handle themselves.

GROUP ACTION

It all boils down to this demonstrated fact: The most efficient way of carrying the soil and water conservation job beyond the planning stage is through the coordinated group action of the landowners and operators—with, of course, the requisite amount of technical, educational, financial, or other assistance from other sources for getting the job done. Your soil conservation districts themselves, of course, are basically group-action devices, with a peculiar adaptability for utilizing the advantages of group action through neighbor groups.

We in the Soil Conservation Service, as all of you know, are putting a great deal of emphasis on the natural group approach to soil conservation, including a group training program under way throughout the country. And I am happy to report that this enormous potentiality for getting effective work done, not only in planning but in applying conservation plans to farms, and maintaining the work, is being taken advantage of more and more. The excellent results we have had through this medium speak strongly for its further use on a rapidly increasing scale; and this presents another important challenge to district supervisors and directors everywhere as the proper leaders.

There is, as we all know, the continuing need for speeding up the application of conservation on the land. There is, also, the necessity of doing the job at minimum cost. I already have spoken of the need for maintaining the conservation practices that are applied to the land. This group approach I have been talking about also provides a means of utilizing existing leadership; it is the natural way to get things done, for which no adequate substitute has been found. And it is a way of getting more done with the same effort on the part of our service technical personnel available for such work.

PROGRAM FOR GREATER SERVICE

National Association President Davis has presented to you a suggested program for greater service—an action program. This program appears to me to offer opportunities to every soil conservation district, and each and every district supervisor or commissioner in the country, to share importantly in the responsibilities and privileges that rightfully rest in such a significant group as your own is in our agricultural economy. There would be no point in my undertaking to review your program for greater service stemming from recommendations originating in all of your districts over the country. But there is one point which is made (in general suggestion No. 3) which I think bears especial emphasis: "Their (soil conservation districts) success depends on the active initiative exerted by the members of their governing bodies with the assistance of all local leaders."

The author of that statement I believe put the keynote of the future success of your whole district's organization into those 22 words. And I think your national association certainly is to be congratulated for the intelligent leadership it has shown in perfecting your program for greater service, and in demonstrating in other ways that it is your association of which each one of you is an

individually important unit striving for this stated common goal: Improving the quality and speed of soil-conservation-district work in the United States while reducing its per acre cost.

That goal can be attained only through your own untiring efforts and making your own decisions. The certain reward will be more efficient production on the farm lands of New England and all America—preservation of our basic soil and water resources, a permanently stable agricultural economy, and multiple individual benefits shared in by every conservation farmer and the entire Nation.

SOIL CONSERVATION DISTRICTS AND DEMOCRACY

We can be eternally grateful that we enjoy in this country an economy that depends on individual freedom and initiative, and the exercise of such individual responsibility as that which has been demonstrated by the scores of thousands of soil-conservation-district landholders like those you represent up here in the Northeastern States. In talking to various groups over the country, and in daily individual conversations, I never miss the opportunity to point out that the soil-conservation-district movement, in my opinion, is the greatest movement relating to the welfare of the land in all history. I sometimes wonder if we appreciate just how fortunate we are in having such an effective local, democratically operated organization through which to carry on vital undertakings like soil and water conservation.

With 2,278 districts, containing more than a billion and a quarter acres and more than 80 percent of all the farms and ranches of the Nation, certainly no other agricultural movement in history has approached it in magnitude. And it is my opinion that there never has been anything to equal the soil-conservation districts to induce farmers to work helpfully together.

Your soil-conservation districts possess another quality which in my opinion is most significant to keep in mind in these trying times. I am referring to the districts as living, working forces of practical democracy in action. The district organization, as it has stood the test of 13 years of peacetime and wartime experience under just about all possible economic, weather, and other conditions, definitely has proved itself to be superior to anything else we know about in coping with our basic land problems in a democratic fashion. Your districts are farmer voted and farmer managed. Between 11,000 and 12,000 of you soil-conservation-district supervisors are giving unselfishly of your time and energies in the furtherance of soil- and water-conservation work throughout the country. You are on nobody's payroll and are obligated to no Federal or other outside authority. That is a mighty healthy and enviable position to be in.

In order to appreciate what this kind of democratic leadership means in the Nation's basic agricultural economy—really means in terms of what we mobilize and fight for when pressed to it by others—you need only to study the contrasting situation in so many other countries, where what the Government says is law, with little or no opportunity for individual freedom of action, assurance of stability, or hope of security. I have observed these things in different parts of the world myself, and, of course, we read about them every day.

Just the other day, 15 editors of important newspapers in different parts of the world arrived in Washington on the start of a tour to try—as the reporter of the Washington Star put it—"to unravel for millions of people abroad one of the world's great mysteries—what makes American democracy tick." I wish they might visit some of your soil-conservation districts and talk with district farmers while they are here; for I am con-

vinced that the district method would be the best approach that farmers of the world everywhere could take for getting to the point where they have more voice in the affairs of their government and less discontent about directions and overlords. It is encouraging to note that bona fide soil-conservation districts are in operation as going programs in several other countries now—is the philosophy of conservation spreads faster, worldwide.

These editors also could go back home and tell their readers that soil-conservation districts bring farmers together in moving ahead with sound conservation treatment of the land. That is, the district provides a recognized central point for carrying forward effective conservation work. Also, that when the farmer has a sound plan for conservation operations for a period of years ahead, as he does have as a soil-conservation district co-operator, not only is he likely to do a better job of farming, but he has the satisfaction of knowing that his efforts will increase his security, in the face of whatever international or other unfortunate incidents the Nation may have to pass through. It gives the farmer pride and satisfaction to be able to look forward to the future security of his family.

Soil Conservation District's Important Responsibilities—Part II

EXTENSION OF REMARKS OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by H. H. Bennett, Chief, United States Soil Conservation Service, before a meeting of the northeast area soil-conservation district supervisors and directors, Philadelphia, Pa., October 5, 1950:

Without a lasting agriculture, there can be no assurance of permanent prosperity, happiness, or peace anywhere on earth. And a prosperous and lasting agriculture depends on an adequate supply of productive land properly used and so protected from erosion that it will remain permanently productive. Lasting soil conservation of the kind you are putting into effect in the 12 Northeastern States, with the technical assistance of the Soil Conservation Service and the support of various other interests, public and private, is mandatory everywhere. It is mandatory here in America, if our Nation is to avoid national weakening, while the enemies of democracy cry out against us.

We have made such remarkable progress in a relatively short time in our own Nationwide soil and water conservation program that perhaps our greatest danger is the temptation to look back on our accomplishments—in conservation research developments, in soil conservation district organization, and in conservation work on the land—and be lured into complacency. District organization, of course, is not an end within itself. Neither is a farm plan for soil conservation, where its provisions are not applied to the land. I am happy to say that I know of few, if any, districts like that and a very few such farm plans. You know better than anyone what the situation is in this respect here in your northeastern area.

My point is that whatever may be true in this regard you constantly need to exam-

ine the situation—not alone from the standpoint of past accomplishments but as to current district progress and vigor, and even more important, where your program is headed in the future. Nation-wide this is what we find today through such an examination:

SOIL CONSERVATION MOVES AHEAD

While we admittedly are not moving fast enough and are still suffering heavy losses of soil, we are, nevertheless, moving ahead at an encouraging rate. In 1943, to illustrate, the Soil Conservation Service assisted the districts in completing 1 percent of the Nation-wide soil conservation job; but in 1949 the annual rate of progress went up to 2.3 percent of the unfinished job. And in 1942 we finished the job on 5,000,000 acres approximately and on 22,000,000 acres in 1949. This was an increase of 340 percent, but we had an increase in facilities of only 43 percent. Moreover, in the fiscal year ending June 30, 1950, the acreage treated with needed conservation measures in the districts jumped to 26,000,000 acres. By these figures you can see that the conservation job not only is progressing but is doing so at an accelerated rate, considerably out of proportion to the facilities.

Here are some of the figures for the last fiscal year which show how we have increased again the yearly rate of conservation surveying, planning, and treatment all down the line. It is simple enough, of course, for any of you to determine the degree to which your own districts have shared in this performance progression.

[Approximate national totals]

	Fiscal year 1950	Fiscal year 1949	Cumulative to July 1, 1950
Detailed conservation surveys, acres.....	31,465,000	25,800,000	334,770,000
Complete farm plans, number.....	132,750	115,000	870,000
Acres planned.....	38,700,000	32,280,000	240,000,000
Acres treated.....	26,000,000	22,000,000	121,000,000

For this northeastern region all together, though, I am most pleased to say that our reports also show noteworthy progress. That is, nearly one-fourth more conservation planning done the last fiscal year than the preceding year (22.8 percent more plans and 23.8 percent more acres planned), and three-fourths more conservation treatment (74 percent). That was with only 10 percent more technical personnel spread over 5 percent more districts than the year before.

Our books, up to June 30, 1950, show that 18.0 percent of the conservation job had been completed, Nation-wide. In addition, there had been a considerable spread of practices to thousands of farms, both inside and outside of soil conservation districts, for which we have no records. Now, if we can raise the annual rate of application of effective conservation measures a little more, which we can do with adequate facilities plus maximum district initiative and leadership, we can begin to see the goal—the possibility of finishing the job on time. This would mean completing the basic conservation surveying, planning, and treatment of the land with the basic conservation measures needed during the next 20 years, or by about 1970.

As a step in the continuing effort to reach the goal on time, we are urging the completion of at least an average of 4 percent of the job annually during the coming 3-year period. Nationally, this would mean an average annual rate of around 80,000,000 acres inventoried (surveyed), 50,000,000 acres of farm land planned for conservation, and 40,000,000 acres treated each year during the fiscal years of 1952 to 1954, inclusive. I am more confident now than I ever have

been before that we can attain this goal if the requisite technical facilities are available.

This confidence in what we can do as a nation in safeguarding our remaining land resources—and putting to best use the water which makes the land produce—is based in major part on the existence and active operation of your soil conservation districts. After all, how and when we get this job done is up to those who own and operate the land; and that means, for all practical purposes, that it is up to the farmers in soil conservation districts.

Farmers over the country are voting new districts into being every month under their State enabling laws, so that it isn't unreasonable to assume that before very long the farmland of the Nation will all be in districts.

LACK OF PUBLIC UNDERSTANDING

The public has not understood these things well enough in the past, either as to the fine progress we have been making or the urgent job that still lies ahead. It is time some of these facts were better known. The continuing need, as it will be for some years yet, is, as you know, for more technical and other manpower, machinery, materials, and so forth, directed to the conservation job, in order to pick up the lag and keep pace with farmers' demands which consistently outrun availability of such facilities. There is great hope and encouragement in the fact that many, varied interests—Government and private—are giving increasing attention, financial and other support to soil and water conservation, especially support to your district programs.

I am thinking, for example, of State appropriations and allocations made for the year or biennium ending this year or next by every State but three, I believe it is, for district assistance (including expenses of State committees). These allowances run as high as the five and a quarter million dollars in Texas for the current biennium, and include nine States in the above-\$100,000 column. I hardly need to remind you that such direct State support for the States' own soil conservation district programs not only is logical and reasonable but is of most substantial benefit in furthering soil and water conservation.

There seems to be pretty general agreement now as to the Government's obligation (local, State, or Federal) to help farmers with their erosion and land-use problems. The Government's interest in the continuing productivity of the land is never-ending, because the land is the individual's property for the moment, but it is the Nation's most priceless and indispensable resource for all time. It is pretty clear, I think, that how much help soil and water conservation receives from government, and for how long, depends on the performance of those entrusted with this important work—individual landholders, district boards, technical personnel, and so on. By the same token, it clearly is part of your legitimate responsibility as district supervisors or directors to keep all who are concerned informed on that performance—interested local, State, and Federal officials; banks and other lending institutions; handlers and processors of agricultural products; farm machinery people, and many others.

I realize that you have some peculiar problems in discharging this particular responsibility here in this area of preponderantly urban population. Preliminary 1950 census figures show that nearly one-third (29.2 percent) of the population of the entire United States is found in your dozen States. Also, of course, one-fourth of the United States Senators and nearly a third (30 percent) of the Representatives, all of whom are quite properly concerned with how you and I use

our part of the money they appropriate for soil and water conservation purposes.

The opportunities for most of these interested people in Philadelphia, Boston, or New York, for example, to get out and see what is going on in your districts and on your farms naturally is limited. The situation is different, in other words, than it is in many areas, where the so-called country banker predominates in that business and where more people generally are in almost daily contact with the farm communities. Yet, all the people here in the Northeast have to eat, wear clothes, and otherwise depend on the products of the land and accordingly have a direct personal interest in its conservation.

In fact, because so much of your States' food products, fiber, and even feed for livestock and poultry has to be imported from elsewhere in the country, the people up here have a broader concern in the welfare of the land, country-wide, than do those in most parts of the country. Add to that interest the vital link between the more distant farm States and your textile mills, wool market, great harbors through which vast tonnages of agricultural products are exported—and you can see what important opportunities you have to demonstrate by word and action the gospel of soil and water conservation among your third of the Nation's people.

In many places in this and other parts of the country, business and other urban interests—professional people, schools and churches, newspapers, radio and television stations, women's and sportsmen's groups, etc.—already have caught up with us in their conservation thinking. Right now, for instance, the national farm-equipment manufacturing and retail people are launching an active program of direct cooperation with the soil-conservation districts, through cooperation of your national association, looking to mutual benefits of improved farm-machinery market, on the one hand, and better equipment for doing the conservation job, on the other. It stands to reason that if it is good business for these business and allied interests to devote their efforts and money to soil and water conservation, it behooves those of us who own or live on the land to put our best energies into this vital undertaking.

WATER CONSERVATION

Among the other opportunities for leadership by your soil-conservation districts as responsible local agencies we need to place high on the list those in water conservation and watershed type of development such as that which is now being given consideration in legislation for New England and New York and for other parts of the country. Water conservation is part and parcel of soil conservation here as elsewhere, and I don't need to remind you, after last year's troublesome water shortages in the Northeast, of the vital concern which municipalities, power interests, and various other water users have in the conservation treatment and use of the land and water resources.

More and more farmers and urban interests as well are coming to realize that they need special technical help in planning and applying adequate soil and water conservation programs on farmlands and watersheds. Land treatment, watershed treatment, is basic and must be done first for conserving our life-giving water supplies, reducing flood damage, and reducing costly siltation of our reservoirs, harbors, etc. I want to emphasize here that the opportunities and promise are great for effective accomplishment in applying conservation techniques and information to individual parcels of land and to whole watersheds alike, through the utilization of soil conservation district organization and facilities. This, as we know, is in both private and public interest.

Whether it is on a major watershed or in a comparatively restricted farming community, to complete the soil and water conservation job in time calls for a program of positive action, in which all groups have a natural interest and in which your soil conservation districts group has a most particular interest and responsibility. This program includes, among other points, (1) completion of the national land capability inventory at the earliest date facilities will permit; (2) completion of the organization of the Nation's agricultural lands into soil conservation districts, and strengthening district responsibility and work—with a scientifically developed soil conservation district plan applied by a conservation farmer to every farm in the country at minimum public cost, (3) active participation of all interested rural and urban groups—business, professional, and patriotic—in achieving Nation-wide conservation; and (4) making real conservationists out of every farmer in the country.

If we had adequate facilities, the basic soil-conservation measures could be applied to the land by 1970. As we are going now, the job could be completed in 35 years. Looking ahead, our computations indicate that if the job were done in the 20-year period, it would save approximately 10 million acres of land from being ruined for any further practical cultivation and around \$400,000,000 in the cost.

Personally, I repeat, I am more than happy over the great progress we have made in soil and water conservation so far. I am encouraged, also, at the initiative being taken by farmers in forming soil conservation districts in areas where previously they had little or no encouragement. And I am gratified over the steadily increasing extent to which district farmers are taking over the many important responsibilities of leadership and direction in the conservation program, which the Government never could do.

We have a long way to go yet, and there is still much for every one of us to do before that job is done. And there are certain misconceptions, or loose assertions, about soil conservation that still seem to confuse the thinking of some otherwise well-informed people. Briefly stated, some of these misconceptions we need to help dispel are—

1. The soil conservation is of secondary importance, has already been taken care of, or can be postponed.

2. That there are short cuts to conservation, that farmers can do all the necessary conservation work without technical assistance, or that district farm plans are too technical for farmers.

3. That soil conservation costs more than it is worth.

4. That we have all the good land we need, and that soil erosion is an inevitable part of nature's scheme.

The quickest and only way to disprove such false and ridiculous assertions for all time is to drive ahead and finish this conservation job with all the dispatch consistent with doing it right. I know that's what we're going to do.

Restoration of Crosses in the National Cemetery of the Pacific

EXTENSION OF REMARKS OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my re-

marks in the RECORD, I include the following communications regarding the removal of crosses from graves in the National Memorial Cemetery of the Pacific:

FRESNO, CALIF., October 3, 1951.

HON. EDITH NOURSE ROGERS,
Congressional Office Building,
Washington, D. C.

Please continue your fight to keep the traditional crosses and Star of David on the graves of our American dead. You have the support of almost all those who served and remember their brothers in arms who are buried in national cemetery.

Very Reverend PAUL J. REDMOND,
Captain, USNR (retired), Chaplain,
Department of California American Legion.

BOISE, IDAHO, October 3, 1951.

Mrs. EDITH NOURSE ROGERS,
Congresswoman, House of Congress,
Washington, D. C.

Just read your article in the Boise paper about your fight for veterans' graves markers. God bless you. Keep up your good work.

SPANISH AMERICAN VETERANS
SOLDIERS HOME.

ASHLAND, W. VA.

Representative EDITH NOURSE ROGERS,
House Office Building,
Washington, D. C.

This community fervently hopes for your success in restoring crosses to the graves of our servicemen.

JOHN CHAPPLE,
Editor, Ashland Daily Press.

TERRITORY OF HAWAII,
TERRITORIAL COUNCIL ON
VETERANS' AFFAIRS,
Honolulu, T. H.

DEAR REPRESENTATIVE ROGERS: Many men from your State who made the supreme sacrifice during World War II have found their last resting place in the National Cemetery of the Pacific. Because of this we feel that you are close to us in our efforts to have permanent crosses decorate the graves of those who gave their lives so that others might live.

As you know, until recently the 13,000 graves were decorated with wooden crosses. The wooden crosses were installed by the Army as a temporary measure pending the complete installation of surface marble markers throughout the cemetery. Recently, the installation was completed and the Army carried out its previously announced orders of removing and destroying the crosses.

However, during the tenure of the crosses they bore into the hearts of the people of Hawaii and to the many, many relatives of the men buried there who came from the mainland to visit the resting place of their son, husband, or brother.

The cemetery, now, without the row upon row of white crosses and Stars of David looks bare and forlorn. It was a distinct shock to the people who visited the cemetery after the crosses were destroyed. To them, the crosses have become an integral part of the cemetery.

May we enlist your assistance in securing a permanent-type cross, either of concrete or of some other lasting material, so that the cemetery may be restored to its former beauty and symbolism.

This we know necessitates congressional action. The veterans' organizations and the people of the Territory and we know the relatives of the mainland men buried here, would appreciate anything that you can do.

We are enclosing an editorial from the Honolulu Star-Bulletin of September 29 that

expresses some of the feeling of the people of the Territory.

Very truly yours,

JAMES A. O'BRIEN,
Director.

THEY AWAIT THE VERDICT

The mute white crosses have been taken from the graves of the National Memorial Cemetery of the Pacific—but protests may restore them.

It took only 2 hours for the energetic task force of the Army to remove from Punchbowl more than 13,000 little wooden crosses. It will require more time to restore them—if they are to be restored.

But there is time for this task of restoration—those who sleep beneath the green turf in the ancient crater have no need for haste. They will wait, in patience, for the verdict.

All the hurry, all the ordered speed and discipline of their training, all the furious urgency of their attacks on the battle lines, all the sudden anguish of their mortal wounds before they fell, are of the past.

For them the suns will rise and will set over that dedicated "Hill of Sacrifice" in long, unhurried procession. The gentle winds and the stars will keep them company, even if in a burst of organized effort as well timed and precise as the burst from a machine gun, the 13,000 white crosses came down in one unexpected afternoon.

In Washington, D. C., Delegate FARRINGTON has appropriately said that the wishes of the families of the men who lie in the Punchbowl graves should be consulted.

That can be done, and should be done. It should have been done, and thoroughly, sympathetically, before the order was given that tore the crosses from the ground.

To do it rightly, the families should have a clear picture of the alternatives—the graves with crosses and also with the flat stone marker, or the graves with only that flat, inconspicuous and unimpressive headstone.

And the families should know—many of them know already—that in our military cemeteries abroad the white crosses still stand.

And these next of kin should feel that it is not a question of economy—our doing fitting honor to those who are buried in Punchbowl.

It is a question of giving to these heroes of our country the greatest possible evidence of respect and devotion we can give them.

It is a question also of developing this National Memorial Cemetery as one of our Nation's most impressive, most distinctive burial places.

It is a question of maintaining the physical facilities so that each Memorial Day the people of Hawaii can pay their distinctive tribute of leis and garlands, appropriately wreathed above the graves.

Yes, those who lie asleep in Punchbowl can await the verdict.

For them, all mortal haste is ended. They lie quietly in the ultimate discipline of death, relying upon a grateful country to do them justice.

BROOKLYN, N. Y., October 1, 1951.

DEAR CONGRESSWOMAN ROGERS: Since you are the ranking Republican member of the House Veterans' Committee, and the Army defended the move as a trend of the times, I want to know who fixed that policy.

Who hates the cross of Christ on the revered graves of our glorious war dead?

Find out what gang was behind this move. They look like Commies to me.

Get those crosses back at once. We Christians are opposed to this dirty piece of business, and I, for one, will be glad to have a United States grand jury look into this—and now. Next thing they will want to omit "In God we trust" from our moneys.

Get after this, Mrs. ROGERS, and God will bless you and yours.

BILL RANDALL.

Comparison of Idaho's Per Capita Debt With Federal Per Capita Public Debt

EXTENSION OF REMARKS OF

HON. JOHN T. WOOD

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. WOOD of Idaho. Mr. Speaker, what a shameful example the administration and the Congress are setting for the States and municipalities.

The per capita debt of the State of Idaho is only \$1.52, but the per capita share of the people of the State of Idaho in the Federal public debt is \$1,696.74, or 1,100 times greater than their share in their own State debt; as you will note from the appended Washington News Bulletin of October 3, 1951

The steadily mounting Federal public debt is a much greater menace to our safety and national security than all our external enemies. No foreign nation can destroy us, but we are making a pretty good job of destroying ourselves. Americans, wake up.

The Washington News Bulletin follows:

**FEDERAL PER CAPITA DEBT MORE THAN 54
TIMES GREATER THAN STATE AVERAGE**
(By Paul O. Peters)

On June 30, 1950, the Federal public debt stood at \$257,357,352,341 or \$1,696.74 per capita. On September 28, 1951, the Treasury reports the debt at \$257,352,895,174 and predictions are that the debt will rise to well over \$260,000,000,000 by the year's end.

By comparison, the total of all State debts at the end of 1950 was \$4,578,500,000, an average of \$31.32 per capita.

Thus it is apparent that the Federal debt on a per capita basis constitutes a tax burden on the American people more than 54 times greater than the State debts, and there apparently is no intention on the part of the present administration to reduce the spending for all kinds of international adventures in various parts of the world.

As a matter of fact, if the administration's announced objectives are to be carried out, practically one-third of the wealth produced by the American people in the next decade will be diverted to the uses of the Federal Government in promoting economic internationalism, and preventing aggression no matter where it occurs.

While the Federal Government has been building up a mountain of debt many of the States have exercised economy and vigilance in their spending without any detriment to their people, and with what economists consider distinct advantages.

Five of the 48 States have practically no State debt. In several States the debt is merely the short-term borrowing to cover a period between tax collections. The States with low per capita debt are:

State	Reported debt	Per capita
Nebraska	\$1,023,000	\$0.40
Georgia	2,790,000	.88
Wisconsin	4,451,000	1.32
Utah	993,000	1.48
Idaho	893,000	1.52
Kentucky	8,280,000	2.89
Kansas	5,500,000	2.90
Indiana	14,946,000	3.81
Nevada	785,000	4.78
Arizona	3,532,000	5.03

The tiny State of Delaware leads the Nation with a State debt of \$36,838,000 or \$122.79 per capita. The complete story of the State debts at the end of 1950 and the per capita amount for each State is shown by the table following:

Per capita debts of the respective States for 1950

State	Reported debt	Per capita
Alabama	\$48,618,000	\$16.75
Arizona	3,538,000	5.03
Arkansas	14,785,000	68.55
California	218,007,000	21.11
Colorado	14,510,000	11.28
Connecticut	70,024,000	35.20
Delaware	36,838,000	122.79
Florida	16,520,000	6.08
Georgia	2,790,000	.88
Idaho	893,000	1.52
Illinois	428,158,000	51.29
Indiana	14,946,000	3.81
Iowa	35,462,000	13.57
Kansas	5,500,000	2.90
Kentucky	8,279,000	2.89
Louisiana	208,657,000	80.54
Maine	8,680,000	9.66
Maryland	57,911,000	27.00
Massachusetts	162,926,000	35.13
Michigan	241,951,000	38.92
Minnesota	140,375,000	4.84
Mississippi	79,851,000	31.77
Missouri	44,708,000	11.48
Montana	21,111,000	41.31
Nebraska	1,023,000	.80
Nevada	785,000	4.78
New Hampshire	8,909,000	17.15
New Jersey	104,861,000	21.90
New Mexico	29,895,000	52.34
New York	824,327,000	57.92
North Carolina	104,824,000	51.29
North Dakota	43,571,000	74.86
Ohio	197,588,000	25.19
Oklahoma	104,173,000	45.40
Oregon	36,710,000	21.78
Pennsylvania	539,620,000	51.50
Rhode Island	51,095,000	68.58
South Carolina	70,251,000	35.41
South Dakota	35,801,000	58.60
Tennessee	101,971,000	32.07
Texas	52,217,000	7.01
Utah	993,000	1.48
Vermont	6,291,000	17.43
Virginia	19,015,000	6.24
Washington	76,194,000	30.93
West Virginia	68,352,000	35.76
Wisconsin	4,451,000	1.32
Wyoming	2,914,000	10.29
Total	4,578,500,000	
Average		31.11

Europe's Will To Resist Grows

EXTENSION OF REMARKS

OF

HON. THOMAS S. GORDON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. GORDON. Mr. Speaker, under unanimous consent, I include in the Record a timely article that appeared in the Washington Star of October 1 telling of the alertness and outstanding leadership of a great son of Illinois, Lt. Gen Manton S. Eddy, the commanding general of the Seventh Army.

On my recent trip to Europe on a study mission of the NATO countries, I had the pleasure of personally witnessing the accomplishments he is making and has made, to bring about understanding as to why our occupational forces are in Europe. The manner in which he has instilled in the minds of the boys the American way of helping out, is beyond all comprehension.

The article follows:

EUROPE'S WILL TO RESIST GROWS—GENERAL EDDY IS MOLDING THE SEVENTH ARMY INTO AN ALERT FORCE THAT SHOWS THE WEST THAT UNITED STATES MEANS WHAT IT SAYS

(By Doris Fleeson)

STUTTGART, GERMANY, October 1.—General Eisenhower must share the credit for stimulating Western Europe's will to resist imperialist Russia with a growing host of American boys who are battle-training on German ground, faces to the east and ready to give a good account of themselves if trouble comes.

Gen Manton S. Eddy, one of World War II's outstanding division commanders, has the job of putting America's first war-prevention troops into that position of strength which will deter the Kremlin from starting what it cannot finish. The exact size of his Seventh Army is a secret. General Marshall has suggested a figure of around 350,000 as the goal.

This is not large enough for an army of aggression; it is large enough to inflict cruel punishment upon an aggressor.

The significance of the Seventh Army can hardly be overstated. The actual physical presence of American doughboys fanning out over the critical areas which confront the Russians and their satellites affords Western Europe decisive and irrefutable proof that the United States means business. The fleet is striking and impressive but it is at sea. Airpower, the modern weapon, needs no introduction to Europeans. But GI Joe, in battle dress, appearing among them in person, not a talking picture, tells the story of United States determination in a manner that impersonal power cannot match.

No one familiar with American tradition can possibly imagine that this Army will ever be betrayed or abandoned by the people who sent them there. They are a charge on the conscience of every American.

What probably needs to be emphasized at home is America's commitment in this potentially perilous region. Politics as usual seems knocking from the vantage point of the woods of Wildflecken.

General Eddy's task has been a hard one. He began with a small army of occupation, centering in the larger cities, physically and psychologically oriented toward winding up its business and going home. The change had to be sweeping, abrupt, and efficient. Fortunately General Eddy is an experienced commander who won many battles in this same general area.

The general in person tells the Seventh Army story to the arriving battalions. It is a privilege to be present when he does it. Between them, the wise veteran and the alert, fresh-faced young soldiers give a moving demonstration of the American system at its best.

Illinois-born Manton Eddy carries his 6-foot height and 200 pounds lightly and his blue eyes are kind. But there are authority and iron determination in his plain speech. He takes his men into his confidence. They know the truth of their situation, they share with him his estimates of the future. He tells them bluntly what they will be required to do—and it is hard—but he tells them why. Fortunately he doesn't seem to know any long words or platitudes and when he has told his story, he quits. The growing confidence of the men as he talks is almost tangible.

Perhaps the most interesting of General Eddy's problems is that he has to keep an army at fighting pitch that he and his country fervently hope will never have to fight. The most he will say and he says it very quietly is "We shall give a good account of ourselves."

Recently General Eisenhower inspected the Seventh Army. Walking toward the rear he picked out a young soldier at random. "Why are you here, son?" he asked kindly. "I'm here to protect America," replied the soldier firmly.

Steel Cut-Backs Could Bring Rationing, Hunger

EXTENSION OF REMARKS

OF

HON. THOMAS S. GORDON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Moline Daily Dispatch of September 28, 1951:

STEEL CUT-BACKS COULD BRING RATIONING, HUNGER

If the National Production Authority continues its stubborn policy of reducing the amount of steel for manufacture of agricultural implements, the Quad-Cities and other farm implement manufacturing areas not only would face unemployment and its resultant economic ills, but those and the entire country could come face to face with the first real hunger in years and most certainly unprecedented rationing.

As C. D. Wiman, president of Deere & Co., told the Senate Agriculture Committee earlier this week, Congress must meet the situation now, not next year. The food of 1952 must be planted, cultivated, and harvested with machines built this fall and winter. An increased allotment of steel next spring would be of value only to crops in 1953.

And NPA need not shout about food surpluses taking up the slack in the coming year. Records of the Department of Agriculture expose the myth of surpluses.

For example, the department figures show butter stocks down from 185,000,000 to 42,000,000 pounds; dried milk down from 469,000,000 to 130,000,000 pounds; cheese down from 254,000,000 to 195,000,000 pounds; canned vegetables down from 75,000,000 to 64,000,000 cases; canned fruits down from 21,000,000 to 16,500,000 cases. Total stocks are down 50 percent since Korea.

The cotton carry-over is at a 25-year low, according to the department, corn carry-over has dropped from 860,000,000 bushels to 735,000,000, and the 1952 estimate is only 20 percent of the annual requirement, a dangerous situation in such critical times. The wheat estimate for 1952 is only 33 percent of annual requirement.

Senator HICKENLOOPER of Iowa, who has carried a large portion of the fight for more steel for the implement industry, charged this week that there is sentiment in Washington among Pennsylvania Avenue farmers that nature will take care of the food supply.

At a recent hearing before a subcommittee of the Committee on Agriculture of the House of Representatives, Dr. J. T. Sanders, legislative counsel for the National Grange, testified

"But there is popular belief that we are certain of all the food we need. There is no such certainty, as will be seen from a few facts. We have 20 percent more people; each will be eating around 20 percent more food than we ate before the war, and we now have around 22 percent less workers on farms to produce this added food which must be produced on the same acres of crop as we used prewar.

"In fact, we shall need 75 percent greater production per farm worker than we had prewar if we are to meet these food requirements.

"During the last decade we had much above the average growing weather. What would occur to our food supplies if we had a series of drought years as in the year 1930? Weather as much below average as we have

had above average could easily reduce total output and food prices surely would soar far above the present levels.

"Such an increased draft on food supplies (including heavy demands of the military) in the face of a 12 to 15 percent depletion on supplies from drought could bring us face to face with the first real national hunger period we have ever known as a Nation. The resultant price rises, barring unprecedented rationing, could make present high-food-price complaints mild indeed."

There is one way to insure ourselves against hunger, rationing, and/or record high food prices. That is for Congress to persuade or force the National Production Authority to provide the steel and other materials necessary to meet the Agriculture Department's estimates of the need for increased production of machinery.

And the time for doing that is now, as Mr. Wiman told the Congress this week.

A Balance Sheet on Foreign Aid

EXTENSION OF REMARKS

OF

HON. CHRISTIAN A. HERTER

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. HERTER. Mr. Speaker, the following article by one of our leading economists, Prof. Sumner H. Slichter, of Harvard University, contains such well reasoned and constructive suggestions as to how our defense and foreign aid programs should be controlled and financed that I hope every Member will study it carefully:

[From the New York Times of September 9, 1951]

A BALANCE SHEET ON FOREIGN AID

(By Sumner H. Slichter)

The hearings on the administration's foreign military and economic aid program were recently interrupted by a surprising outburst from Senator CONNALLY, chairman of the Senate Foreign Relations Committee, and a strong supporter of the administration's foreign policies. Addressing William C. Foster, head of the Economic Cooperation Administration, the Senator declared that the United States "can't support the whole free world and remained solvent" and accused ECA of "trying to cover the earth . . . You fellows who spend all the Government's money never think where the revenues come from."

Both the House of Representatives and the Senate have voted a cut of more than a billion dollars in the foreign aid program. The National City Bank of New York, in its August survey of economic conditions, warns that "we cannot safely undertake to carry the huge defense program, plus global foreign aid, while at the same time continuing to indulge in all sorts of extravagances, public and private . . ." But Aneurin Bevan, who recently resigned from the British Cabinet, is demanding that the United States support a world mutual aid plan "on a far more ambitious scale than anything yet considered."

The administration proposes to spend \$8,500,000,000 on foreign aid during the present fiscal year—about \$6,300,000,000 for military aid and \$2,200,000,000 for economic help. Over the next 3 years the proposed outlay is about \$31,000,000,000—\$25,000,000,000 for military aid and at least \$6,000,000,000 for economic assistance. Are these

proposed expenditures more than we can afford? Would they cripple or seriously weaken the economy? What is the capacity of the country to give foreign aid, and what conditions determine that capacity? Let us take the administration's proposal of \$8,500,000,000 and consider some of its implications.

I

The capacity of the United States to give foreign aid can be measured in two ways. One way is to determine what quantity of goods can be diverted to foreign aid without reducing the level of per capita consumption in this country and without reducing capital per worker. The other way is to determine the amount of foreign aid that we can finance without imposing taxes that weaken the incentives to be efficient, or resorting to inflationary forms of borrowing.

A foreign-aid program that was so large as to reduce consumption per capita or to reduce the amount of capital per worker in the United States would not necessarily be disastrous, but it would seriously weaken our economy and should be avoided. Since the 7 percent of the world's population who live in the United States consume about 40 percent of the world's output, some people (including Mr. Bevan) think that Americans ought to reduce their standard of consumption in order to help the rest of the world.

But any drop from customary levels of consumption would set up strains and conflicts in the country and would foster dangerous disunity. By producing strikes it would cut the output of the economy. Even more serious would be a drop in capital per worker. One of the main determinants of productivity is the amount of tools and equipment that workers have to help them turn out goods. Consequently, a drop in capital per worker would probably bring about a reduction in the output of industry—though a drop in the quantity of capital might be offset to some extent by an improvement in methods of production.

There is no danger that the proposed expenditures of \$8,500,000,000 a year on foreign aid would in themselves bring about a drop in consumption per capita or in capital per worker. Since the population in the United States is increasing at the rate of about 1.7 percent per year, an increase of 1.7 percent, or \$3,400,000,000, in the output of consumer goods would prevent a drop in living standards.

The amount of capital per worker is about \$11,000, and the normal increase in the labor force is about 700,000—though the growth may be above 700,000 for several years. Hence capital needs to increase by at least \$7,700,000,000 a year in order to prevent a drop in capital per worker. Included in capital is public capital, such as roads, bridges, irrigation works, as well as private capital, such as factory buildings and machinery. Housing is included, also because workers must have places to live. The total increase in consumption goods and capital needed to prevent a drop in consumption per capita and in capital per worker is about \$10,300,000,000 a year.

During the next year the output of the economy will grow by about \$16,000,000,000—the result partly of an increase in employment (made possible by a larger labor force, longer hours of work, and a drop in unemployment) and partly of a rise in output per manhour. Furthermore, the United States is now devoting about \$37,000,000,000 a year to increasing private capital. The large output that has been going into the increase in capital would be available to prevent a drop either in consumption per capita or in capital per worker. It is evident that the foreign-aid program would have to be several times larger than the proposed \$8,500,000,000 before it would reduce the established levels of consumption or bring about a decrease in capital per worker.

II

Could a foreign-aid program of \$8,500,000,000 a year be financed without imposing taxes that undermine incentives or without resorting to inflationary borrowing? It is plain that \$8,500,000,000 a year could be raised by noninflationary borrowing if necessary. This amount is only a small fraction (3.8 percent) of all personal incomes after taxes. The Government could stimulate saving by offering securities that individuals found attractive and by building up a sales organization to do house-to-house selling. But what about the possibility of financing \$8,500,000,000 for foreign aid by taxes that do not weaken incentives? Taxes that discouraged efficiency could be very expensive—a 2 percent drop in efficiency would cause a \$6,000,000,000 drop in the national product.

There can be no doubt about the economic possibility of raising \$8,500,000,000 by taxes that would not weaken incentives, but Congress would probably not be willing to impose such taxes, at least in sufficient amounts. The present taxes on corporate incomes and on some personal incomes are dangerously high. The present standard rate of 47 percent upon corporate profits means that a rise of \$1 in expenses costs the company only 53 cents. This large shifting of increases in expenses to the Government has apparently not yet diminished the efforts of managements to hold down costs, but the corporate income tax has reached the point where it can easily weaken the resistance of management to advances in costs. Certainly further increases in this tax would be unwise.

The personal-income tax is too progressive, so that the Government takes too large a share of any additional dollars earned in the higher brackets. For example, a married man with no dependents and an income of \$34,000 a year (after deducting charitable contributions and the like) pays to the Government 50 cents out of any additional dollar he earns. If his income is \$50,000 (after deductions), the Government takes 59 cents out of every additional dollar. There is good evidence that, up to a certain point, taxes on personal income stimulate men to work harder—just as cuts in piece rates usually cause factory workers to speed up in order to preserve their former earnings—but it is obvious that if the Government takes too big a part of the earnings of additional effort, men will not try to increase their incomes.

No one knows at what point high taxes discourage rather than encourage effort, but when the Government takes half or more of additional earnings, the rates must be dangerously close to the point at which they discourage efficiency. And the persons whose efficiency is threatened are those whose superior ability has enabled them to command large incomes—the persons whose efficiency is most important to the community.

Foreign-aid expenditures of \$8,500,000,000 could be financed without injury to incentives (1) by lowering exemptions from \$300 to \$400, thus taxing large amounts of income that now pay no income tax, and (2) by raising taxes on the first \$10,000 of income, on which the rates are still low. As nearly 80 percent of all personal income goes to persons receiving \$7,500 a year or less, these two changes would apply to considerably more than half of all personal incomes—parts of many incomes would not be affected because of deductions.

Tax revenue might also be greatly increased by new excise taxes or a general sales tax, though in a sellers' market such taxes would have some inflationary effect. But Congress has always been reluctant to tax the recipients of small incomes or to impose general sales taxes. Hence, although it is economically possible to finance a \$8,500,-

000,000 foreign aid program without injury to the economy, it is doubtful whether it is politically possible.

III

It is unrealistic to discuss the ability of the country to provide \$8,500,000,000 of foreign aid a year without discussing the capacity of the country to provide the large quantity of goods required for the entire defense program, of which the foreign-aid program is only a small part.

At present, defense expenditures (including foreign aid and atomic energy) are running at the annual rate of about \$35,000,000,000. Twelve months hence, the Government plans to spend at the rate of about \$65,000,000,000 and, during the fiscal year 1952-53, defense expenditures may be above \$65,000,000,000. Far more important than the question of the capacity of the country to provide \$8,500,000,000 of foreign aid a year is the question of its capacity to turn out \$65,000,000,000 or more of defense goods a year without injury to the economy.

The tests of what the economy can stand are the same in the case of the entire defense program as in the case of foreign aid. (1) How will the diversion of output to defense affect consumption per capita and capital per worker, and (2) can the country finance a sixty-five-billion-dollar defense budget without weakening incentives or without engaging in inflationary borrowing?

The output of defense goods can undoubtedly be increased to \$65,000,000,000 a year within the next 12 months without reducing consumption per capita or capital per worker. This rise in the output of defense goods would be about \$30,000,000,000 above present levels. I have pointed out that the national production may be expected to grow by about \$16,000,000,000 during the next year and that the country has been devoting about \$37,000,000,000 a year to increasing its private capital.

This means that there is available about \$53,000,000,000 of present and prospective productive capacity to provide the \$30,000,000,000 increase in defense goods, the \$3,400,000,000 increase in consumer goods needed to prevent a drop in consumption per capita, and the \$7,700,000,000 increase in capital needed to prevent a drop in capital per worker. Evidently the country could increase its defense output considerably faster than is planned without reducing consumption per capita or capital per worker.

Paying for a \$30,000,000,000 increase in defense production is a very different matter. Total outlays in 1952-53 on defense and foreign aid of \$65,000,000,000 a year, even with economies in nondefense expenditures, would mean a cash budget of at least \$85,000,000,000, and perhaps as much as \$90,000,000,000—about \$15,000,000,000 to \$20,000,000,000 larger than the cash budget of the present fiscal year. The yield of the present rates of taxation in another year will be about \$70,000,000,000. Consequently, the Government would need to raise about \$15,000,000,000 to \$20,000,000,000 a year by new taxes or by borrowing.

Undoubtedly it would be economically possible to raise even \$15,000,000,000 or \$20,000,000,000 a year by taxes that do not reduce the efficiency of the economy by weakening incentives. This could be done by taxes substantially reducing exemptions allowed under personal income tax, raising rates on the first \$10,000 or possibly \$15,000 of income, and imposing a more or less general tax on sales.

But Congress would be likely to raise a considerable part of the needed \$15,000,000,000 or \$20,000,000,000 by taxes that would be bad for incentives. Hence consideration should be given (1) to the desirability of financing much of the increase in expenditures through noninflationary borrowing and (2) to the desirability of limiting the

peak rate of military spending in 1952-53 to considerably less than \$65,000,000,000—say to about \$55,000,000,000.

Testifying before the Senate Finance Committee on July 3, Charles E. Wilson, Director of Defense Mobilization, said that defense expenditures will reach their peak in 1953, that they will drop in 1954 by about \$10,000,000,000 and in 1955 by about \$20,000,000,000. Obviously this temporary bulge in expenditures might better be financed by noninflationary borrowing than by bad taxes. It is true that if a bad tax is definitely known to be temporary, it may do little harm, but when the drop in spending comes, one cannot be sure that it will be the bad taxes that are reduced.

If the Federal deficits of the next 2 years were financed entirely by borrowing, the Federal debt would rise by about \$20,000,000,000 to \$25,000,000,000—perhaps less. Even the larger increase would leave the debt smaller in relation to the national product than when the Korean war broke out. In June 1950 the Federal debt was about \$258,000,000,000 and the gross national product was running at the annual rate of a little more than \$275,000,000,000. Two years hence, with the rise in defense spending met by the increased yield of present taxes and by borrowing, the debt would be \$280,000,000,000 or less, and the annual gross national product more than \$360,000,000,000.

The possibility of noninflationary borrowing is good. Not only are pension funds a considerable potential source of demand for Government bonds, but so also are individuals. This is indicated by the fact that the holdings of liquid assets of individuals have increased from \$150,700,000,000 at the end of 1947 to only \$155,600,000,000 at the end of 1950, while person incomes have risen substantially. Hence attractive Government securities should meet a good response. But in order to sell savings bonds in large quantities, the Government may have to follow the example of Britain and Canada and liberalize the terms offered to buyers.

IV

Most important of all is the question of whether Government outlays on defense, including foreign aid and atomic energy, should be allowed to rise to a peak of \$65,000,000,000 or more in the fiscal year of 1952-53. This question is important not only because of fiscal reasons but because the magnitude of the defense program determines the rate at which the standard of living of the country will be permitted to rise (or whether it will be permitted to rise at all), and the number and the nature of the various controls that are imposed on the economy.

Two years ago the country went to an extreme in economizing on defense and was rudely shocked and alarmed when the outbreak of the war in Korea revealed the folly of cuts in defense spending. Today the country is reacting from the mistake of 2 years ago and is probably going to the opposite extreme. Everyone (or nearly everyone) is afraid to question the amounts that the armed services assert to be necessary for national security.

Certainly the proposal that \$65,000,000,000 or more be spent on defense and foreign aid in the fiscal year 1952-53 has never been satisfactorily explained. If goods can wait until the middle of 1952 or the beginning of 1953 to be produced, must they then be turned out at such a high rate?

As the total output of the Russian economy was recently estimated at about one-third that of the American, it is safe to say that the Russian output of defense goods is considerably less than is planned for the United States. Indeed, if the Russians were to use half of their output on their armed services (a fantastic assumption) they would

be putting one-fifth less into the armed services than we expect to devote to defense in 1952-53.

The requests of our armed services for goods know virtually no limit. Deputy Secretary of Defense Lovett recently told a subcommittee of the House Appropriations Committee that the original requests of the armed services for the current fiscal year totaled about \$104,000,000,000, but that the amount was trimmed by the Defense Department and the Budget Bureau to about \$48,000,000,000. Later it was raised to \$60,700,000,000, and the efforts of the services to get back what was trimmed from their original requests seem to be continuing.

Several months ago a force of 3 500,000 was suggested as the size needed to deter Russia from military adventures. Now the armed services are suggesting that the figure should be 4 000,000, though there is no gain in Russian strength to justify changing our figure. Among the armed services there appears to be no agreement as to what quantities are required. The Air Force, for example, believes that it should be increased from 95 groups to 150, but the Army and the Navy, which presumably know as much about our enemies and their plans as does the Air Force, are reported to oppose this increase in the Air Force.

It is not easy to get a satisfactory review of the insatiable requests of the armed services for more goods. No one knows how much is required, and it is obviously better to be too well prepared than not well enough. Much of the case in support of the requests for large military expenditures involves military secrets and cannot be publicly disclosed and, therefore, cannot be properly investigated and publicly criticized. Nevertheless, the country should not permit outlays on defense, foreign aid, and atomic energy to rise to \$65,000,000,000 or more in 1952-53 without an adequate demonstration that this peak is really necessary.

A sensible procedure would be to set a limit of \$55,000,000,000 on defense and foreign aid in 1952-53, and to require the armed services to show clear and urgent reason for exceeding this volume of spending. Since expenditures of \$55,000,000,000 on defense would be more than three times as large as the outlay of 1949-50 (including foreign military and economic aid and atomic energy), the chances are that it would be a more than adequate rate.

An increase of \$20,000,000,000 instead of \$30,000,000,000 in defense expenditures during the next year would have several important advantages. It would substantially reduce the need for new taxes or borrowing—though the need would still exist. It would not greatly exceed the probable rise in output during the next year and hence would permit the standard of consumption to be maintained without much drop in the rate at which capital is increased. It would limit the upward pressure on prices and thus help to protect the community from tighter and tighter controls. It would compel the armed services to spend their money more wisely and give them much badly needed time in which to test and improve their equipment. Hence the American taxpayer would be less likely to have to pay for many billions of equipment that would become obsolete within a few months after being put into use.

The conclusion of this examination of the effects of the proposed foreign aid and defense program is that the country can easily afford foreign aid in the amount proposed by the administration—namely, \$8,500,000,000 for the next year. This amount will not reduce established levels of consumption and it could easily be financed by noninflationary borrowing or by taxes that are not bad for incentives. But Congress is likely to increase the wrong kind of taxes. Hence the foreign-aid program will probably cause

taxes to be pushed dangerously close to the point where they impair efficiency.

The real threat to the economy comes from the proposal to raise total expenditures, including foreign aid, by \$30,000,000,000 or more in the next year. Although this could be done without cutting the general level of consumption or capital per worker, the prospect is remote that Congress will be willing to raise the needed revenue by taxes that do not endanger efficiency. To safeguard the economy, a substantial part of the rise in defense outlays should be financed by borrowing and the rise, if possible, should be kept well below \$30,000,000,000.

Acceptance of Endorsement for National Commander

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks, I am including an article from the Arkansas Legionnaire, which is the acceptance of the endorsement of Mr. Lee Ward of Paragould, Ark., for national commander of the American Legion, by the Department of Arkansas.

Mr. Ward has been active in the Legion since his discharge from the United States Navy in October 1945, and has been highly praised for his work in veterans' affairs. He is an outstanding attorney and a forceful public speaker. As department commander he has contributed much to the welfare of the veterans of his State as well as the Nation. His selection by the State convention is a wise one. Lee Ward is well qualified for the position of National Commander. The article follows:

ACCEPTANCE OF ENDORSEMENT FOR NATIONAL COMMANDER

The faith and confidence of the Legionnaires of Arkansas which prompted them to endorse me as a candidate for the office of national commander fills my heart with pride. This is a tribute which I shall deeply cherish throughout the remainder of my life.

I accept your expression of confidence with sincere humility.

The office of national commander of the American Legion makes a tremendous demand upon the individual who fills that office. No man can face the prospect of assuming the duties and responsibilities that will be thrust upon him by this high office without some feeling of his own insignificance and inadequateness for the task.

However, I have one promise to make to you. Should your efforts to make me National Commander meet with success, you may be certain that I will dedicate every ounce of energy and ability at my command to the job of carrying out the program of the American Legion on behalf of veterans and on behalf of the various communities where they live.

There is no organization, except the church, which offers to suffering and needy humanity as much service, guidance, and inspiration as does the American Legion.

We are greatly indebted to the veterans of World War I for their vision and unselfishness in setting forth the principles

and policies that make up the program of the Legion. We are further indebted to the scores of World War I veterans who have been willing to give of their time and money in establishing this program as a working reality. As a World War II veteran, I count it a vast privilege to be allowed the opportunity of stepping into the Legion as a full-grown and thoroughly established group devoted to the best interests of veterans, their families, and their communities.

One cannot, I believe, read the History of the American Legion by Richard Seelye Jones without getting a deep and abiding conviction that the Legion has reached its present position of prestige and influence because it has, over the long haul, devoted itself exclusively to the acceptance and presentation of certain fundamental policies and principles. It has steadfastly refused to be tied to any individual whether in or out of office.

This fact, in my judgment, indicates that we must follow the same undeviating course in our future activities. We must not permit ourselves to become tied up with any individual personalities who move across our national scene. We are not in the business of promoting or fighting personalities. Our job now, as it has always been, is to fight for the principles we know are tried and true.

Among the major problems of immediate concern to veterans is the continued effort by some groups to tear down and disintegrate the Veterans' Administration.

This agency of the Government was set up to administer veterans' affairs only after a long, hard fight by the Legion. It gave veterans, for the first time, one centralized agency to handle their particular problems. We must not permit it to be torn down with veterans' affairs again being scattered to the four corners of Washington.

The Veterans' Administration was established upon the promise that veterans as a group have certain problems that are peculiar to themselves alone and that they have certain rights and privileges that cannot be granted to other citizens. I believe thoroughly in the correctness and soundness of this principle.

We dare not forget, however, that rights and privileges carry with them attendant responsibilities.

To justify our privileges we must assume our responsibilities.

One of our responsibilities, which we have publicly accepted, is to keep a close watch upon the Veterans' Administration and see that it does, in fact, administer our affairs at the lowest possible cost to the taxpayers. This, I suggest, is a serious obligation on the part of the Legion. Much fine work in that regard has been done by our present and past national commanders. I commend them for keeping faith with the people of our Nation.

Nevertheless, we may never rest or go to sleep on our job of policing the Veterans' Administration. This work must be kept up and, if possible, intensified. There is ample evidence that in some instances the Veterans' Administration has not given the taxpayer a fair run for his money. Such a situation becomes the business of the Legion. We have promised the people that we will carefully ferret out such situations and do all in our power to correct them.

We know, for example, that some colleges, operating under the GI educational program, have charged the United States Government more tuition for veterans than was being paid by the same type and class of nonveteran students in the same colleges. If such an act on the part of a college is not larceny, it is at least not justice to the taxpayers who foot the bill for veterans' schooling. We have a responsibility to stop such practices and, if possible, recover for the taxpayers some of the money wrongfully extracted from them through loose practices by the Veterans' Administration.

The American Legion must be as vigilant in protecting the taxpayer as it is in protecting the veteran. These two responsibilities go hand in hand. We dare not evade either of them

LEE WARD.

The Place of the Paper Industry in the United States Economy

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, October 4, 1951

Mr. WILEY. Mr. President, in these days when we are talking about taxes and raising money it is important to become acquainted with some of the institutions of our own country which are producing the taxes. The paper and pulp industry employs a great many employees and pays out in the neighborhood of \$4,000,000,000.

I have in my hands an excellent article published in the July 14, 1951, issue of Paper Mill News. It was written by Dr. Louis T. Stevenson, economist for the American Paper and Pulp Association. The article is entitled "The Place of the Paper Industry in the United States Economy."

I am naturally particularly interested in this article because the paper industry plays a tremendous part in our economy in Wisconsin.

I ask unanimous consent at this time that the text of this article be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record, as follows.

THE PLACE OF THE PAPER INDUSTRY IN THE UNITED STATES ECONOMY

(By Dr. Louis T. Stevenson, economist, American Paper and Pulp Association)

It is but repeating a many times twice-told tale to say that the paper and board industry ranks as the sixth largest industry in the United States, when ranked by value of product. Ahead of it, according to the United States Bureau of the Census, come motor vehicles, meat packing, steel works, petroleum refining, and cotton broad-woven fabrics. This ranking was established by the Bureau of the Census in a tabulation which eliminated duplications such as would arise by including with paper and board the pulp industry and the converted paper products industries. Yes, the paper and board industry is officially and accurately ranked sixth, and yet few people outside of the industry realize its size, complexity, and importance to the United States economy because few people stop to think about paper at all. Paper is so much a part of the everyday life of an American that he simply takes it for granted. It is there in abundance when needed, and its cost is so small that it is but an incidental expense for most individuals and for most businesses.

Just where does the paper industry, and in that term I shall include all paper and board, fit into the American economic picture? The answer is, "everywhere." There is not a farm, factory, business, railroad, or other transportation system that can operate without using paper. Its use is essential to the operation of our Governments: local,

State, and National; to our banking system; to our systems of communication; to our systems of distribution; and above all, to our armed services which, during the last war, listed over 700,000 uses for paper. The use of paper had become so essential to the operation of our economy that in 1944, Donald Nelson, head of the War Production Board, stated that the paper and pulp industry was one of the most essential of all our industries.

THE FUNCTIONS OF PAPER IN THE UNITED STATES ECONOMY

The first use of paper by man was as a medium on which to transmit and record ideas or facts. Paper has thus been used by all peoples since its original development by the Chinese about the first century A. D. In the storied libraries of our country and other countries are kept the vast treasures of knowledge on which our entire civilization and educational system are built. All kinds of research depend upon facts recorded on paper, as do all the sciences: chemistry, physics, etc., etc. It is not too much to say that our western civilization was born on paper records and is disseminated through the use of the printed word.

In the United States the vast printing and publishing industry carries out the major part of this function. Local governments also keep the legal records of property transfers on paper, all kinds of other governmental agencies keep records of laws, official orders, transactions, and in most instances, these are published. It is estimated that over 10,000,000 tons of paper were required in the United States during 1950 to record and transmit ideas. This estimate, of course, includes the newsprint imported and used in this country.

In this brief presentation it is impossible to list comprehensively all the uses of paper to satisfy this function. One can hope to mention but a few which may stir the imagination to review the subject and bring to mind many other instances in individual experience.

THE PACKAGING AND PROTECTIVE FUNCTION

One of the fastest-growing fields for the use of paper and board is that of packaging. The modern package must perform satisfactorily under severe conditions of handling, climate, and storage. Paperboard has grown tremendously in volume in recent years because the product has been adapted to meet more and more exacting requirements. The advent of the paper-shipping sack, both single and multiwall, has greatly expanded the use of kraft paper in that field.

Special research into the application of sulfate wrappings, glassine, greaseproof, and vegetable parchment has widened the use of these papers.

Over 13,500,000 tons of paper and board were used during 1950 in packaging United States products.

THE SANITARY FUNCTION

It has been proved conclusively that when paper or board comes off the paper machine it is a perfect sanitary product so far as cleanliness is concerned—there are no coliform bacteria present. Paper is, because of its low cost and disposability, a natural for many sanitary purposes. Paper napkins, facial tissues, milk bottles and bottle caps, ice-cream containers, frozen-food containers and wrappers are but examples of the many applications of paper as a sanitary product. It is not easy to estimate the total tonnage of these papers, but approximately 1,500,000 tons were consumed in 1950. This is one of the most rapidly growing branches of the paper industry.

SOME ECONOMIC ASPECTS OF PAPER MAKING

Paper making is a mass-production industry, generally located in small communities, and using large volumes of process water.

Its power requirements are great because the machinery is heavy and the grinding action demands power.

The net result of these characteristics is the economic stimulation of many small communities by the steady stream of payroll and investment money brought to these small towns and cities by the pulp and paper mills located in them.

Wood-pulp mills are dependent for their raw materials upon forest resources. The mills also require huge long-term capital investments. As a consequence of these two factors the careful plant management must assure itself of adequate forest resources and consequently the pulp industry is and has been in the forefront of commercial forestry developments to assure permanent wood supplies. A pulp mill without reasonably priced wood dies on the stem, as it were. The joint use of a forest for the production of saw logs, other wood products, and wood pulp is an almost ideally economical set-up when the forest is handled so as to assure a continuous flow of wood. Waste is reduced and a greater over-all utilization of the wood results.

SOME FACTS AND FIGURES

The primary paper industry in the United States will be able to produce over \$6,000,000,000 worth of goods this year. Employment in the industry is running currently at 209,000 workers, exclusive of woods workers and salaried individuals. The present annual payroll will approximate \$765,000,000. All told, it is estimated that including woods workers, about 500,000 workers of all kinds are employed in our primary pulp and paper-making industry.

Directly dependent upon the product of the paper industry are the printing and publishing industry, and the manufacturers of converted paper products. Between these two industry groups and the pulp and paper industry over 1,000,000 people are employed, drawing about \$3,400,000,000 annual pay. Thus, over 1,000,000 people are directly engaged in the manufacture, printing, and otherwise processing paper. In addition to this, an almost immeasurable army is engaged in the distribution and use of paper.

For example, a manager of a large department store last fall asked me, when he had difficulty in getting an adequate supply of wrapping paper, "What would you do, Dr. Stevenson, if you couldn't get the material without which you could not operate?"

We may think of stores as relatively small users of paper. They think that paper is an absolutely necessary material without which they cannot operate. They can close out a line of merchandise and still do business, but they cannot operate without paper.

But if we are going to include all direct and indirect users of paper in our statement, we cannot avoid mentioning all the 153,000,000 individuals in the United States who come within that category. And the entire gross national product of over \$313,000,000,000 is affected. Certainly without paper it would be sadly deflated.

THE PAPER INDUSTRY AS AN INVESTMENT

During the past 10 years the paper industry has come to be considered by the investing public as an industry in which satisfactory investments can be made. Like all other industries, the paper industry offers investment opportunities that may vary company by company, but taking the industry as a whole, its record will bear analysis for years back as well as during the post-war periods.

The paper industry earnings record, taken as an industry, will stand up with all industry earnings in depression as in prosperity, for, in fact, the paper industry has operated more steadily in depression periods than most industries. In the low year of the great depression (1932), the paper industry

was operating at 58 percent of capacity, while steel was almost flat on its back below 20 percent and banks dependent upon the automobile industry were in distress.

The paper industry is, of course, a service industry, and it therefore is dependent upon general business activity for its own activity. But it must be remembered that whatever business is done demands the use of paper as a necessity. Business cannot be done without paper.

SUMMARY

The paper industry, sixth largest industry in the country, is dependent primarily upon adequate supplies of wood and water. Its products permeate the whole economy which is, as presently constituted, dependent upon a constant flow of products from the paper industry.

Paper production is located largely in small towns and cities in 37 of the 48 States. Consequently, the payrolls and investment money of these mills are widely distributed and stimulate the business activity of these communities.

The Development of the Alabama-Coosa River Basin

EXTENSION OF REMARKS

OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. ROBERTS. Mr. Speaker, under unanimous consent, I include in the Appendix of the Record the following address I delivered at Washington, D. C., on Monday, October 1, 1951, at the meeting of the Alabama Club:

Mr. President and members of the Alabama Club, I appreciate this opportunity to speak to my fellow Alabamians.

I am going to talk to you tonight for a few minutes about a subject which is close to my heart and which should be close to the heart of every Alabamian whether they live in Alabama or not. My subject is The Development of the Alabama-Coosa River Basin. Although I know that it has been the dream of political figures for over a hundred years, at the same time I feel that it is more vital to us now than at any time in the past. The Alabama-Coosa Basin is a principal river system of the Southeast. Its importance has been recognized throughout the country and last year it was the subject of a report by the President's Water Resources Policy Commission. It is considered one of the 10 great river systems of our country, and I feel that it is important that all of us learn as much as possible about the great potentialities of this undeveloped system. The headwaters of the Coosa are the Etowah and Oostanaula Rivers which unite to form the Coosa at Rome, Ga. These headwaters begin almost 3,000 feet above sea level in the mountains of northwest Georgia and southeast Tennessee and this body of water extends from the Blue Ridge Mountains southwesterly across the Piedmont Plateau to the lowlands of the Gulf Coastal Plain in Alabama, covering an area of 22,800 square miles. As pointed out, the Etowah and Oostanaula unite to form the Coosa; the Coosa and the Tallapoosa Rivers flow through the middle portion of the basin and descend the Fall Line before uniting and forming the Alabama River; the Alabama River flows across the gently sloping coastal plain to

join the Tombigbee River, which drains the adjoining large watershed to the west, to form the Mobile River, and then empties southward to the Gulf of Mexico. A glance at the map will show that the Coosa River touches all counties of the Fourth District except Clay, and flows by the cities of Rome, Ga., Gadsden, near the city of Talladega, by the city of Wetumpka; then the Alabama flows near Montgomery, Selma, and thence to Mobile.

The Alabama River and its main tributary, the Coosa, form the main stem of this system. The Coosa heads west and southwest from Rome, Ga., a distance of 286 miles through a hilly, upland region descending 450 feet in its course. The Tallapoosa River, which is also a part of this system, is 268 miles long, comes from the area to the south and east of the Coosa Basin and joins the Coosa about 15 miles above Montgomery to form the Alabama. The Alabama then flows west and southwesterly 316 miles through the fertile Gulf Coastal Plain to meet the Tombigbee River to form the Mobile River.

This basin is of growing importance to the economic progress of the Southeast and hence to the Nation. The entire basin has a mild, equable climate, there is an abundant and well-distributed rainfall, large areas of fertile soil, and there are rich and varied mineral resources. These are the basic ingredients of a stable and prosperous economy. Agriculture was from the beginning and still is the principal activity. Industry has now become a vital economic factor. Both depend to a large degree on water resources. Agriculture needs protection against floods and erosion of the soil, industrial growth requires power, a dependable water supply and cheap transportation of bulk commodities. The future rate of economic growth will be largely determined by the use made by the basin's water resources. At one time in the history of Alabama, when shallow-draft water transportation was the rule, cotton, grain, and timber products furnished a great deal of freight for cheap water transportation. At one time the city of Wetumpka, Ala., was one of the great cotton markets of the country, due to the fact that it had excellent river port facilities. Plans are under way at the present time to make the river navigable from Mobile to Montgomery through the building of a 9-foot channel and when the river is completely developed it will be navigable from Mobile to Rome, Ga.

Hydropower is another important element of the resources of this great basin. At the present time, there are six dams in operation owned by the Alabama Power Co., which produce more than 500,000 kilowatts of hydropower. Another dam has recently been placed in operation at the Allatoona Reservoir near Cartersville, Ga., which produces around 74,000 kilowatts.

Floods are frequent in this basin, but only moderately severe and do not constitute a great threat to the economic growth of the basin. I would like to call your attention to the fact that last Easter there was considerable flood damage in the counties of Calhoun, Talladega, and Dallas. This damage has been variously estimated at from \$1,000,000 to \$3,000,000. About one-half million acres are subject to overflow, mostly in the flat coastal plain. Agriculture bears the brunt of this flood damage and most of the urban cities are largely out of reach of floods. Water supply and stream pollution are local problems in this basin. Soil erosion is widespread, therefore, soil conservation is a vital phase of water-resource planning.

The United States Army Corps of Engineers has long been interested in the development

of this basin and there is no greater advocate of the development of this region than Maj. Gen. Lewis A. Pick, the present chief of the Corps of Engineers. I have talked to him on many occasions about this great basin and he has worked unceasingly to promote the building of locks and dams and water reservoirs. It might be interesting for you to know that General Pick married an Auburn girl and hopes to retire and live at Auburn when he leaves his Army service. He has told me on many occasions that he would not be happy in his retirement unless this great region is developed according to the plans that have been made. About 80 years ago the Corps of Engineers developed a plan for the development of this river system. The first improvement was a series of locks and dams in the Coosa River to enable shallow-draft navigation to reach Rome, Ga. As that early type of traffic disappeared from the Coosa, and power dams were built across the lower river, the need for those navigation structures ended, and they have been abandoned. The most outstanding report that has been prepared with reference to the development of this system was the 308 report which appeared in 1934. This provided for locks and dams on the Alabama River and on the Coosa River and locks in the power dams, and it was also planned to provide 9-foot depth for navigation upstream to Rome from Mobile, a distance of 659 miles and for additional power.

The increase in the number of industries in the basin has renewed the enthusiasm for the development of this system. In 1941, the Corps of Engineers submitted another report recommending a program of development of the basin's water resources and this was adopted by the Congress and the President in 1945 and is the present authority for the Corps of Engineers' program. The present program for initial construction, if funds become available, includes a navigation lock and dam and two power dams with locks on the Alabama River below Montgomery and a power dam with provision for a future lock on the Coosa River. These projects are as follows: Howell Mill Shoals Dam, Coosa River, which is now under design and is to provide 174,000 kilowatts of power, Jones Bluff Reservoir on the Alabama River to provide 51,000 kilowatts; Millers Ferry Reservoir on the Alabama River to provide 57,000 kilowatts, Clairborne lock and dam on the Alabama River and channel improvement on the Alabama River. The total cost is estimated at \$116,000,000, however, the Howell Mill Shoals Dam is to be doubled in hydropower capacity and costs on this dam alone are now estimated to reach into the neighborhood of \$90,000,000. It is interesting to note that the building of the Howell Mills Shoals Dam near Pell City would increase the power of the existing dams by almost 60 percent.

One of the most important features of the basin is its forest resources. At one time practically all of the land in this basin was covered with forest. Now, however, most of the valleys are in cultivation, and only in the swamplands and in the southern portion of the basin is there any original timber left. A great movement to reforest this region was started in 1935, and the Talladega National Forest now contains around 250,000 acres of land. This great forest and others will improve the watershed of this great basin and may be the factor that will result in Alabama becoming a great center for the production of newsprint. Most of you know that at Childersburg there is a great newsprint mill known as Coosa Pines, which produces a great portion of the tonnage of newsprint made in America. Recently, as a member of the House Interstate and Foreign Commerce Committee, I accompanied other members of this committee on a trip to Canada to investigate the critical shortage of

newsprint. Before leaving this country we held a conference on September 4 in New York City with the publishers of the leading dailies in the United States. They told us that the United States obtains about four-fifths of its newsprint from the Dominion of Canada. Further, that in the course of the next 4 or 5 years the newsprint industry would require an additional 600,000 to 700,000 tons of newsprint per year. They emphasized that in order to maintain a free press and in order to keep the newspaper as a medium of communication they felt our newsprint situation must be rapidly improved. Throughout the years Canada has supplied this country with newsprint, however, this country has a monopoly on the supply of sulfur, which is absolutely necessary in the making of newsprint. Leaving New York on the night of the 4th, we visited the cities of Montreal and Quebec, and numerous plants throughout eastern Canada. We visited vast forests and power dams and became impressed with the vast storehouse of timber reserves to be found in this great north country. Because of their timber resources and vast power developments Canada has been able to supply the world with newsprint. There are two weaknesses, however, in her situation which are not present in Alabama. First of all, Canada has a slow-growing hardwood which requires from 80 to 90 years for maturity. I refer to the spruce tree, upon which this great industry is based. Luckily we, in Alabama, have a pine tree that grows to maturity in the comparatively short span of from 10 to 15 years. We have another advantage, in that we are near the States of Louisiana and Texas, where the bulk of the supply of sulfur is to be found. This means cheaper transportation costs. With our great rivers in Alabama we have plenty of industrial water, and this very water system can also produce cheap electric power and cheap transportation. The operation at Coosa Pines has been an outstanding success. As a test case it has more than demonstrated that we can make good newsprint as cheaply as it can be made any place in the world. By following proper conservation practices, we can maintain a substantial supply of pulp wood for the newsprint mills which should be built on the banks of the Coosa and Alabama Rivers.

Recently, Mr. Arthur Treanor, Director of the National Production Authority's Printing and Publishing Division, testified before the House Interstate and Foreign Commerce Committee, and to show you how critical newsprint is at this time, he stated we have been driven to a plan to save newsprint by reducing the number of newspapers for street sale and we are also trying to work out a plan by which used papers can be salvaged through a de-inking process. I asked Mr. Treanor what he thought about the solution of this problem and he unqualifiedly stated that the only solution would be found in the building of new plants. He further stated that he believed the ideal place for these plants was in the South. It was further developed that these plants would be sufficiently impressed with national defense characteristics and so important in the national economy that, if private capital is not available for the building of these plants, Federal assistance should be forthcoming. In order to make Government capital available, I plan to introduce this week a bill which will give the RFC authority to make loans for the construction of these plants. The production of additional newsprint in this country will improve our position as a buyer in the world market and we will not then be dependent on foreign sources of supply.

To show you the growing importance of this area, I should like to point out that the number of industrial plants in this section has doubled since 1939. We now have about 130 textile mills in the area which employ

around 143,000 people. Steel and iron mills found in Gadsden, Anniston, and Rome use coal and iron ore mined nearby and employ about 10,000 men in 33 plants. There are 64 chemical plants and there are 70 concerns in the glass, clay, and stone group and the large industrial cities of Birmingham, Ala., and Atlanta, Ga., lie just outside this great basin.

This great basin contains the following mineral resources: Bauxite, Selma chalk (for cement), clays, coal, arsenic ores, flu. ing materials, fuller's earth, gold, lead, graphite, granite, marble, tin, slate, mica, ochre, lime, manganese ore, iron ore (both brown and gray), gravel, sand, silica sand, and asbestos.

As you can readily see from the list a good many of these minerals are in the critical class at the present time. During World War I a great deal of graphite was mined in Clay County and operations are in progress there at the present time. Efforts are being made to expand these operations as we are convinced from surveys made that we can produce a high quality grade of graphite which compares favorably with that being produced in foreign countries. It is important to note that in the event of an all-out war our overseas sources of these critical materials would doubtless be destroyed. One of the most interesting things to me is the fact that Coosa County boasts a considerable tin deposit and the Bureau of Mines has spent quite a bit of money in exploring this valuable deposit. So far it has not been found in large quantities and doubtless Federal aid will be necessary in order to develop the deposit to its maximum benefits. The same situation is true of manganese ore. However, iron ore is being mined at the present time by private sources and is profitable.

The immediate project which should be built in the near future, and in which all of us are greatly interested, is the Howell Mill Shoals Dam which was authorized by the Rivers and Harbors Act of March 2, 1945. This project would be located on the Coosa River about 108 miles about its mouth and about 123 miles from Montgomery, Ala. It will be a multi-water resources development for navigation, hydro-electric power, flood control, and related purposes. The most important immediate purpose is the development of power. The proposed dam will have a maximum height of 130 feet and a length of 11,000 feet. The reservoir which will be expanded by the dam will provide a total storage capacity of well over 2,000,000 acre-feet and will require some 130,000 acres of land. The project provides for the installation of 160,000 kws of power consisting of four units of 40,000 kws each. The project, as now planned, has an estimated cost of almost \$92,000,000. The power is vitally needed at this time due to the rapid expansion of defense plants in this area. Fort McClellan is being expanded, it will be the new home of the Chemical Warfare School, a WAC officers training center, and a National Guard training center. The great Anniston Ordnance Depot at Bynum, Ala., is in the process of a huge expansion program which will call for additional block of electric power. This project should be built immediately and it is estimated, when developed, it will attract industries overnight. The Coosa-Alabama Basin can be the garden spot of the Southeast as it has every element that would insure the health, welfare, and prosperity of a people who deserve the best. Due to low income, a low standard of living, lack of soil conservation practices, and neglect this section has never contributed its full share to the economic wealth of this country. We have an adequate supply of stable labor, we are blessed by the Almighty with a climate that is unexcelled in the world, we have an abundant rainfall throughout the year, and an immense supply of rapid growth timber.

The challenge is here. We must alert our people and excite them to the possibilities to be found in Alabama. We are not doing a good job of selling our section to the country. I would like at this time to show you a pamphlet which came to my desk called "Power for Defense." It shows you what the people in the Columbia River Valley are doing to advertise their section of the world. To you, as native Alabamians, I hope to make an appeal; that appeal is that everyone of you become salesmen for Alabama. The South has shown great strides in the past 10 years and instead of being the Nation's number one economic problem it must become the Nation's number one opportunity.

"Little little, can I give thee,
Alabama, Mother mine;
But that little—hand, brain, spirit
All I have and am are thine,
Take, O take the gift and giver,
Take and serve thyself with me,
Alabama, Alabama,
I will aye be true to thee,
Alabama."

—by Julia S. Tutwiler

Roads on Which Federal Funds Were Spent in the Seventh Congressional District of Alabama, June 30, 1948, to August 31, 1950

EXTENSION OF REMARKS OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 24, 1951

Mr. ELLIOTT. Mr. Speaker, under leave to extend my remarks, I include a letter and statement of Hon. Thomas H. MacDonald, Commissioner of Public Roads, Bureau of Public Roads, United States Department of Commerce, dated October 5, 1950, dealing with expenditures of Federal funds for road building in the Seventh Congressional District of Alabama, for the period June 30, 1948, to August 31, 1950:

DEPARTMENT OF COMMERCE

BUREAU OF PUBLIC ROADS

Washington, October 5, 1950.

HON. CARL ELLIOTT,

House of Representatives

DEAR MR. ELLIOTT: In response to your request of September 28 for information concerning Federal-aid highway funds which have been spent in the Seventh Congressional District of Alabama, we attach, in duplicate, a list of all projects which have been programmed, placed under contract, or completed from June 30, 1948, to August 31, 1950.

These lists show the county location of the project, project number, route number, terminal, character of work, total estimated cost, Federal funds and length separately for the three stages—programed, under contract or completed, and for the three classes of Federal-aid funds—primary, secondary and urban funds apportioned under the provisions of the Federal-aid Highway Acts of 1944 and 1948.

We trust this information will serve your purpose.

Very truly yours,

THOS. H. MACDONALD,
Commissioner of Public Roads.

APPENDIX TO THE CONGRESSIONAL RECORD

Alabama—Seventh Congressional District—Postwar Federal-aid highway projects programed, under contract, or completed since June 30, 1948, as of Aug. 31, 1950

POSTWAR PRIMARY PROJECTS

PROJECTS PROGRAMED BUT NOT UNDER CONTRACT

County	Project number	State or United States route number	Terminal	Character of work	Total estimated cost	Federal funds	Miles
Blount.....	F-42 (3)...	State 38.....	From 0.15 miles south of Blount-Jefferson County line north 7 miles toward Cleveland	Grade, drain, 2-lane bituminous surface and 3 bridges.	\$239,500.00	\$143,500.00	7.000
Do.....	F-442 (4)...	State 38.....	North end F-442 (3), north to pavement northwest of Cleveland.	Grade, drain, 2-lane bituminous surface and 4 bridges.	517,500.00	288,000.00	9.960
Cullman.....	F1-151 (3)...	State 3 and U S 31.....	From 2.45 miles north of northern city limits of Cullman, north to south end of F1-82 (2).	Grade, drain, and 2-lane hightype pavement.	41,000.00	20,000.00	-----
Total.....					848,000.00	421,500.00	16.960

PROJECTS UNDER CONTRACT BUT NOT COMPLETED

Cullman.....	F1-82 (2)...	State 3 and U S 31.....	North end F1-151 (3), 2.9 miles north of northern city limits of Cullman, north to southern end F1-83 (3) at Morgan County line.	Grade, drain, high-type pavement for 3.5 miles, 2-lane, grade, drain, high-type pavement for 2.16 miles, 2-lane, 1 bridge.	\$1,089,311.31	\$538,453.00	5.780
Walker.....	F-116 (3)...	State 4, 5, and U S 78.....	From Locust Fork to Mulberry Fork of Warrior River	Grade, drain and 2-lane bituminous pavement	660,295.35	319,544.81	6.545
Do.....	F4-116 (4)...	do.....	St. Louis & San Francisco Ry. crossing on new location of U S 78, 1 mile southwest of Sumiton	Overpass for St. Louis & San Francisco Ry.	69,643.00	69,643.00	.035
Do.....	F-318 (3)...	State 69.....	Approximately 0.5 mile southwest of Cullman County line	Reconstruct section of road where slide has occurred	46,200.00	23,100.00	.361
Do.....	F-330 (1)...	do.....	Tuscaloosa Walker County line, north to State route 18 at Marietta	Grade, drain, 2-lane bituminous surface treatment.	166,650.00	80,250.00	9.117
Do.....	F-330 (2)...	do.....	End pavement near northern city limits of Cullman, north to U S 78	do.....	322,400.00	157,900.00	7.559
Do.....	F4-330 (3)...	do.....	St. Louis & San Francisco crossing 0.5 mile south of a point on U S 78, 2 miles west of Jasper.	Steel and concrete overpass.....	30,300.00	30,300.00	.037
Total.....					2,381,799.66	1,219,180.81	29.470

PROJECTS COMPLETED

Blount.....	FAP-F1-84 (2)...	State 3 and U S 31.....	From 5.5 miles north of Jefferson Blount County line north to point 1.3 miles north of Blount Springs	3 reinforced concrete bridges, grade and drain.	\$150,093.00	\$73,973.91	1.720
Do.....	F-412 (2)...	State 38.....	Southern city limits of Arab south to point 0.2 mile within city limits of Blountville	Grade, drain, 2-lane bituminous surface treatment and 4 bridges.	459,681.64	222,835.32	13.231
Cullman.....	F-318 (1)...	State 69.....	Northern end of F-318 (2) at Bremen, northeast to point approximately 5 miles south of southern city limits of Cullman	Grade, drain, 2-lane bituminous surface treatment and 3 bridges.	512,480.00	253,810.00	9.608
Do.....	F-318 (2)...	do.....	Sussey River bridge northeast to southern end of F-318 (1) at Bremen.	Grade, drain, 2-lane bituminous surface treatment and 4 bridges.	486,980.00	242,250.00	9.864
Do.....	F-442 (2)...	State 38.....	do.....	do.....	121,399.33	59,038.69	3.512
Total.....					1,730,633.97	851,907.92	37.973
Total, primary projects.....					4,963,433.63	2,492,588.73	84.406

POSTWAR SECONDARY PROJECTS
PROGRAMED BUT NOT UNDER CONTRACT

Cullman.....	S-201 (2)...		End of pavement 0.5 mile northeast of U S 31 in Hanceville, northeast to Nector.	Grade, drain, and 2-lane bituminous surface treatment	\$150,000.00	\$75,000.00	0.700
Franklin.....	S-461 (1)...		At Little Bear Creek 5.7 miles south of State route 24 at Belgreen	Steel and concrete bridge.....	28,200.00	14,100.00	.040
Lamar.....	S-273 (3)...		From end of pavement near intersection State route 19 in Vernon west-northwest toward Mississippi State line	Grade and drain.....	56,000.00	27,500.00	4.670
Do.....	S-273 (4)...		From F 273 (3) to Mississippi State line.....	do.....	41,800.00	22,100.00	3.750
Pickens.....	S-492 (1)...		From point on U S 82, 1 mile west of Coal Fire to point on Federal-aid State 15, south of Andrew Chapel	Grade, drain, 2-lane bituminous surface treatment and bridges.	175,000.00	74,600.00	8.600
Winston.....	S-473 (1)...		At Creeks 2 miles southwest of Double Springs and 1 mile northeast of Lyun	2 steel and concrete bridges.....	120,000.00	60,000.00	.100
Total.....					674,000.00	273,300.00	23.860

UNDER CONTRACT BUT NOT COMPLETED

Blount.....	S-34 (1)...		Bridges on road from end of S-34 (2) at Hayden, northeast to Nector.	Reinforce concrete bridge and culverts.	\$34,600.00	\$17,150.00	0.032
Cullman.....	S 201 (1)...		At Brinkley and Ducks Creeks on road from U S 31 in Hanceville, northeast via Center Hill to Holly Pond	Steel and concrete bridges.....	103,900.00	51,950.00	.111
Fayette.....	S-390 (1)...		Intersection U S 43 at Bankston northeast to near Cleveland Chapel	2-lane bituminous surface treatment and bridge.	79,700.00	39,650.00	2.262
Franklin.....	S-435 (3)...		Pavement at western city limits of Hodges, northwest 5 miles	Base and 2-lane bituminous surface treatment.	42,600.00	21,400.00	5.051
Lamar.....	S-106 (4)...		Intersection State route 19 in Millport, west to western city limits and west to Mississippi State line	Grade, drain, and 2-lane bituminous surface treatment and 2 bridges.	143,220.00	70,040.00	4.271
Do.....	S-257 (2)...		At Luxapallila Creek, vicinity of northern city limits of Kennedy.	2 steel and concrete bridges.....	44,100.00	20,600.00	.046
Do.....	S-273 (2)...		Bridges on road from State route 19 in Vernon, northwest to Mississippi State line.	2 bridge culverts and 3 treated timber-reinforced bridges.	49,000.00	24,500.00	.068

Discrimination Against Armed Forces Personnel

EXTENSION OF REMARKS OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. MANSFIELD. Mr. Speaker, I am inserting in the RECORD a copy of a letter I have received from a constituent of mine who is at the present time on active duty with the Armed Forces.

I am doing this for the purpose of calling to the attention of the proper committees of the Congress the specific questions he has raised and to urge these committees to see to it that the men and women in our Armed Forces are given a square deal in fact and not in words.

The letter follows:

SEPTEMBER 25, 1951.

The Honorable MIKE MANSFIELD,
House of Representatives,

Washington, D. C.

DEAR SIR: I have always been an advocate of your program and your type of representation, however, it seems to me that as a whole, the administrative program at the present time is discriminating against personnel in the Armed Forces.

We, who are called upon to give the ultimate, at times, are now having most of our privileges and rights taken away from us. At the same time, billions are being spent, both here and abroad, to build up the prestige of the United States and its Government, and at the same time the faith and confidence of the members of the Government's protective forces are being shaken.

As a veteran of World War II and the Korean conflict, I feel personally that it is becoming more of a sucker's role to be a member of the Armed Forces.

In considering the losses of privileges in the Armed Forces, it must be remembered that the personnel are in a certain camp,

post, or station because they are under orders to be there. They have no prerogatives to leave because of unfavorable conditions, rent gouging, high prices, or many of the other circumstances which may be prevalent. We lose most of our rights as citizens when we go into the armed services. We are tried under different laws, we are on duty 24 hours per day, we can't quit, we can't change jobs, we can barely make any squawks. Who then is to protect us other than you and the other honorable Members of Congress and the President.

To bring to mind some of the most recent losses, I have taken the privilege of listing them, although I am well aware that you are probably very familiar with them.

1. Proposed loss of retirement benefits to regular members of the Army, i. e. Age limit 65 and no retirement for enlisted men (average life expectancy is still 63).

2. Mandatory post exchange and commissary prices to show a profit and equal outside (private) prices.

3. Inadequate housing and excessive rents.

4. Cost of living index has risen 175 percent, our pay has not increased, but the

nonfighting members of the Government, in civil service, have just recently been given an increase, and I understand some Members of the Congress wish to raise their pay.

5. Payments of disability allowances to veterans not injured in service, exceeds the disability benefits received by veterans injured in the service.

6. Flight personnel in the Army, Navy, and Air Force receive hazardous duty pay. The infantryman receives not one dime extra and if the casualty reports are examined, it should prove who has the most hazardous duty. Not that I believe these peoples' jobs are not hazardous, but rather that if they are, so then is the infantryman in combat.

7. Quartermaster prices have risen on our uniforms more than 100 percent since the advent of the clothing allowance system, and the Korean conflict. A pair of boots (combat) which were made and purchased in 1943-45 at a cost of \$4 now cost \$12 and we have not been given any commensurate increase in wages or allowances.

In conclusion it should be remembered that the post exchange and commissary and Quartermaster sales were for the Armed Forces with a low fixed income, and not a fluctuating wage scale. Now that prices have not been controlled and are out of all wage proportion with regard to income, I would appreciate it if you could give me some reasonable answer as to why we must suffer this injustice, and also the reasons for the proposed injustices, as retirement and those now in effect, i.e. disability benefits, inadequate housing, and pay.

Save the Tidelands

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, October 4, 1951

Mr. LANGER. Mr. President, I ask to have printed in the Appendix of the RECORD an article entitled "Save the Tidelands," by Harold L. Ickes. I further ask unanimous consent that I may eliminate from the article reference to any Senator by name.

The VICE PRESIDENT. Is there objection to the request of the Senator from North Dakota?

There being no objection, the article as corrected, was ordered to be printed in the RECORD, as follows:

[From Frontier magazine for September 1951]

SAVE THE TIDELANDS

(By Harold L. Ickes)

A moral question is involved in the attempt that is once more being made to turn over to the oil interests, via the States, the immensely rich offshore oil lands that the Supreme Court of the United States, on more than one occasion, has found never belonged to them. The States now affected, in the order of the cases that were decided against them, are California, Texas, and Louisiana. These three States, concededly in entirely good faith, for many years assumed that they had title to the so-called tidelands in which enormous oil pools have been found, and they proceeded to grant leases to explore for and capture oil, subject to a royalty to be paid to the lessor. In total, royalties that have been paid have amounted to great sums of money. Part of these profits to the States have been used for educational purposes and

the rest has been expended for other State purposes.

When I became Secretary of the Interior in March of 1933, I found that my predecessors had accepted the theory that title to these off-shore oil lands belonged to the States upon which they abutted. I accepted this policy without question, as every member of the Cabinet necessarily does with policies established by those who have preceded him, unless some reason arises which calls for a reexamination of any question. It would literally take many years for a new Secretary of the Interior to pass upon de novo, every decision made by his predecessors.

Applicants for oil leases in these off-shore areas, on the theory that title to them was in the Federal Government, had been pressing for Federal leases in the belief, as a result of opinions rendered by their lawyers, that title in fact was in the Federal Government. Usually these applicants were turned back by the General Land Office which was the agency in Interior in charge of the leasing of oil lands on the public domain, which no one disputes belongs to the Federal Government. Finally one applicant presented his case to me personally. There was no question as to my duty to consider his case, which I did, with the result that doubt arose in my mind as to whether the decision originally made, and subsequently maintained by my predecessors, was a proper finding under the law. My conclusion was that a legal question was involved which should be decided by the courts. I did not change my mind as so many critics are fond of saying, as if for an executive officer to change his mind was an act of malfeasance. Even if I had done so I would only have been acting with due regard for my oath of office, if I had come to the conclusion that the Federal Government did have title to the property in question.

SECRETARY ICKES AND FDR AGREED ON THE ISSUE

However, on the facts and arguments that were presented to me on both sides of this question, I did not feel justified in coming to a final decision. I simply took the position that, as between the United States and the several States affected, I did not know which held title and that this doubt on my part as the Federal officer having the responsibility for a final determination, should be resolved by the Federal courts. I stated the problem to President Roosevelt and he agreed with me that this was a question for the courts. He, too, was a lawyer by profession, as I am. He, too, as the Chief Executive officer of the Nation, believed that if we had not been following the law we should find out what the law was and amend our course of action accordingly. So far as I knew, he had no interest in any oil property and therefore was without the prejudice that a man interested in gaining profits from such an investment would have. I was in the same situation. It meant absolutely nothing to me whether, so far as oil land offshore the coast of California, for instance, belonged to California or to the Federal Government. But it was my concern to see to it that the United States was not carelessly, and in violation of the law which all of us had taken an oath to uphold and defend, permitting any trespass upon the property or in violation of any of the rights of the United States which was precisely what had been happening, according to the three subsequent decisions by the United States Supreme Court.

It was the Supreme Court that held that paramount rights and interests in these off-shore oil lands belong to the United States, and therefore to all of the people of the United States. I never made any such decision, although I have applauded it. I might have made such a decision, subject to a possible overruling by the courts, but it seemed to me that the orderly procedure

was, first to find out the answer from the courts and then to abide by that answer as it was my duty to do unless I cared so to conduct myself as properly to be subject to impeachment for misfeasance in office. But to listen to the uninformed, as well as misinformed, clamor that is being indulged in in the tideland States, and even from inland States that not even remotely have an interest in tidelands, one might suppose that I was a wrongdoer to be vituperated and excoriated, not for violating my oath of office, but for insisting upon living up to it.

The moral question involved in this issue, stated as simply as possible, is: Is California or Louisiana or Texas justified in holding onto property as to which they have been trespassers, even if in good faith, after the Supreme Court has said that the property is not theirs? Another question is involved which is of the highest political importance. It is: To satisfy the greed of gluttonous and obese oil interests shall we encourage, let alone permit, the Congress of the United States, in effect, to overrule a carefully considered opinion of the Supreme Court of the United States, thus doing a grave hurt not only to the Court itself but to our institutions, that it will take more than time to heal? Are we to stand before the world not as a united Nation defending our time-honored institutions, of which we so loudly boast, or are we to present an appearance of disunity and factionalism such as we did on the slavery question which required a civil war to settle? Is the law supreme in this country or, after it has been written by the Supreme Court, are we to tear it up and cast the shreds of paper to any fitful wind which may blow? Is there anything to the American political ideal, as we have vaunted, when the dollar, even though it is depreciated, tempts our greed? Just how patriotic are the oil interests or California, Louisiana, and Texas when it comes to accepting gracefully decisions of the Supreme Court that will put them on a basis of equality with other States instead of at an unfair advantage? Here are questions which we must answer now in the field of politics or with which we must trouble our conscience hereafter.

DISTORTION OF THE FACTS IS CHARGED BY ICKES

There has been going on in the Halls of Congress, in both branches, one of the dirtiest fights on this tidelands issue that I have ever witnessed, and I have been a close observer of government during an entire adult life which has already stretched into many years. I have followed the arguments indulged in by such men as ———, as well as Representatives WALTER, of Pennsylvania, and BOYKIN, of Alabama. If one did not know what the facts actually are, one would be justified in believing, from what these and others have said in and out of Congress, that the real purpose behind the Walter bill (H. R. 4484) is not to get control of the offshore oil lands from the United States "under false pretenses" in order to make them more accessible on more satisfactory terms to the oil interests—no, indeed. The patriotic and unselfish motive is to prevent the rapacious Federal Government from absconding with all of the inland waterways, especially those within the boundaries of those States that are without access to the two oceans and the Gulf of Mexico which, with Mexico and Canada, constitute our outer borders.

The incredible Association of State Attorneys Generals, generously financed, it is believed, by the oil interests, has also thrown itself into this fight for this lofty reason. Moreover, ——— and others are all excited by the thought of Federal ownership of off-shore oil lands because this would tend toward socialism. Texas and Louisiana and California may be given title to off-shore mineral oil lands to lease to private interests, but there apparently would be no danger of socialism in such cases. Socialism rears its ugly head only when the United States takes possession of property which belongs to it.

and grants leases to explore for oil or other minerals. It is interesting that, although the United States for many years has been granting oil and other mineral leases on the public domain, the argument of socialism has never been heard against such a proper exercise of sovereign power, particularly by the oil interests which have obtained many such leases and have grown rich under the generous patronage and protection of the Federal Government.

The argument for raping the tidelands for the advantage of the oil interests is based upon a tissue of lies—no other word is apt enough to describe the situation. The fact is that the Federal Government has frequently and publicly disclaimed any idea of exercising any jurisdiction over the inland waterways, to say nothing of claiming title to any of them. This is a matter of record so clear and explicit that —, a short time ago, on the floor of the Senate felt called upon to try again to set the record straight, so far as inland waterways are concerned. But the light-fingered who are out to pick the pockets of Uncle Sam of these off-shore oil lands do not wish to have the record set straight. They persist in their defamatory and untruthful statements to that degree that one is tempted to suggest the revival of the Ananias Club, made famous by the late President Theodore Roosevelt, so that all of the irresponsible gentry who keep repeating what they must know to be a lie, can become honorary members.

INLAND WATERWAYS ARE NOT IN DANGER OF SEIZURE

There is a conclusive counter to this "Gorbelsmism" to the effect that inland waterways are in danger of seizure by the Federal Government under the doctrine of the tidelands decisions. Representative MANSFIELD offered an amendment to assure this when the Walter bill was before the House of Representatives. This amendment was overwhelmingly defeated by Representatives who at the same time, bitterly complained that the waterways of their States were endangered. Moreover, the administration has caused bills to the same effect to be introduced during the last several Congresses. These have been defeated when they would have been passed overwhelmingly if supported by the Senators and Representatives who are so willing to serve the oil interests. Nor were they supported by the lobbying State attorneys general, who either do not know what the law is or are willing to misrepresent it, for purposes that will not bear the light of day.

The fact is that the oil interests and the unlawyerlike State attorneys general, whose unprofessional conduct would have been investigated long ago by the American Bar Association if it had been doing its duty, do not want any bill to pass that would be declaratory of title in the States to their inland waterways. Despite their professional deviation, they must know that such a law is unnecessary, but the dead horse "danger to the inland waterways" gives them something to fling in order to befuddle the people and distract their attention from the real issue which is a conspiratorial attempt to put over the biggest steal in the history of the world for the enrichment of people already too rich and to the unjust deprivation of the people of those States that do not have any offshore oil lands.

PROFITS SHOULD BE DIVIDED AMONG ALL THE STATES

Those who are opposed to the Walter bill and similar legislation have proposed that the profits from the federally owned oil lands be apportioned among all the States on a fair pro rata basis for the benefit of education the facilities for which, in almost every part of the United States, have been rapidly deteriorating of late years for lack of money to support them. The schools

need money to repair old and buy new equipment, we need to maintain our school buildings and add substantially to what we now have, we need higher pay to hold onto the teachers who are leaving the schools by the thousands as well as to attract new teachers. All of these things we need if we are to provide the rapidly growing army of children of school age with education, lacking which we can hardly expect them to qualify for useful citizenship. And yet a disgracefully large number of the Members of Congress would deny the children of America the educational opportunities to which they are entitled by handing over to the Standard Oil and other interests lands that are estimated to be worth literally hundreds of billions of dollars.

This new national domain constitutes the greatest source of possible new national income since the Louisiana Purchase. If wisely and prudently administered it is capable of supplying substantial financial support to the schools for many years to come. We must either allow our schools to deteriorate further, add to our already vexatious burden of taxation, or use the revenues from this oil that belongs to the Nation if we are even to attempt to educate our children for an intelligent citizenship. Yet it is apparently the intention of such men as Representative WALTER and — to turn this enormous national wealth over to greedy oil interests while adorning the education that used to be the richest heritage of our children "to go hang." When the story of this brazen betrayal by a Congress that is supposed to represent the people against the avaricious comes to be written, those who would pick the pockets of the people in order to gratify the cupidity of the oil aristocracy will richly earn their page of infamy.

Labor's Black List

EXTENSION OF REMARKS OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 19, 1951

Mr. BENDER. Mr. Speaker, in recent months it seemed likely that the American Federation of Labor might be modifying its original views on the major issues before the Nation in the light of current world events. Unfortunately, this possibility has been largely dispelled by the convention of the A F of L at San Francisco, where 19 Senators, 6 Democrats and 13 Republicans, were named as targets for 1952.

The sole criterion upon which this decision was based was the stand of these men on the Taft-Hartley Act which many people believed had been removed from public debate by its frequent use by the President himself and by the overwhelming vote received by Senator TAFT in his reelection last year to the Senate. With the world standing on the brink of possible chaos in a third world war, with the national economy pushed to the limit by the demands of military preparedness and our domestic expansion, the test of political expediency adopted by the AFL seems narrow in the extreme.

Many Senators and Representatives are still friendly to labor, even though they have voted for and will continue to support the basic principles of the Taft-Hartley Act. It is time that the AFL recognized this truth.

A Survey of United States Foreign-Aid Programs

EXTENSION OF REMARKS OF

HON. SAMUEL W. YORTY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 25, 1951

Mr. YORTY. Mr. Speaker, a democracy depends for its successful functioning upon an informed citizenry. The increasing scope of the activities of our Government makes it difficult for all of us to keep as well-informed as we need to be in order to arrive at sound judgments, and I believe this is particularly true in the field of foreign relations. In order to bring one phase of our foreign relations into clear focus, I requested our Legislative Reference Service of the Library of Congress to prepare a survey of our foreign-aid programs. I explained that I wanted the survey to be free from technical terms in order to aid our citizens in quickly grasping the fundamental aspects of the various programs.

The survey prepared by Ellen C. Collier is of such quality that I feel it should be widely disseminated, and I, therefore, include it in our Record at this point:

A SURVEY OF UNITED STATES FOREIGN AID PROGRAMS

(By Ellen C. Collier, Foreign Affairs Section,
the Library of Congress)

"Truman doctrine," "Marshall plan," "ECA," "MDAP," "point 4"—these terms appear constantly in the newspapers and magazines. They are keys to understanding the United States foreign-aid programs, which are such a large and important part of American foreign policy.

Various types of foreign aid have been carried on by the United States since the Second World War. In order to help its allies during that war, the United States provided them with defense aid through lend-lease. After the end of the conflict the United States continued its aid to the homeless and hungry victims of war by contributing to UNRRA (United Nations Relief and Rehabilitation Administration), through GARIOA (Government and Relief in Occupied Areas), post-UNRRA relief, an interim-aid program, a loan to Great Britain and the sale of surplus property at a fraction of its cost.

These programs had a triple purpose: (1) To help win the war, (2) to give help where it was needed for humanitarian reasons, and (3) to achieve a peaceful world by preventing the unrest of starvation and misery which leads to dictators and war.

More than \$30,000,000,000 had been appropriated for the wartime program, and more than \$12,000,000,000 for the immediate post-war relief projects.

The following is a summary of the principal foreign-aid programs which are now in operation. It does not include the programs mentioned above because they have been largely terminated. Similarly it excludes some minor foreign-aid programs carried on by international agencies of which the United States is a member. In some of these programs, such as the IRO (International Refugee Organization) and UNICEF (United Nations International Children's Emergency Fund) the United States is the largest contributor. This summary is limited to the principal foreign-aid programs being administered by the United States at the present time.

(a) Aid to Greece and Turkey (the Truman doctrine): A grave foreign-policy crisis

faced the United States in early 1947 when the British Government announced that it was financially unable to keep its troops in Greece. These troops had been there since the end of World War II at the request of the Greek Government. The British also planned to end their economic aid to Turkey. Both Greece and Turkey thought that the withdrawal of British support would have dangerous consequences for their security.

At that time, an armed insurrection was being carried on in Greece by Communist-led guerrillas. Since these guerrillas were being given assistance by neighboring Communist countries, they threatened the independence as well as the stability of the Greek Republic. The Athens government therefore appealed to the United States for assistance.

At the same time the U. S. S. R. was demanding a share in the control of the Turkish-owned Dardanelles, the strategic straits entering into the Black Sea. Moscow launched an intense propaganda campaign against the Turkish Government. Turkey, like Greece, requested United States aid because it did not have the arms necessary for adequate protection against the threat of Soviet aggression.

In view of these facts the President of the United States on March 12, 1947, requested the Congress to extend military and economic aid to these two strategically-located countries. He said that one of the main objectives of the United States foreign policy was to create conditions in which each nation could "work out a way of life free from coercion." But this objective, President Truman continued, could not be realized "unless we are willing to help free peoples to maintain their free institutions and their national integrity against aggressive movements that seek to impose upon them totalitarian regimes. This is no more than a frank recognition that totalitarian regimes imposed upon free peoples, by direct or indirect aggression, undermine the foundations of international peace and hence the security of the United States. * * * I believe that it must be the policy of the United States to support free peoples who are resisting attempted subjugation by armed minorities or by outside pressures."

Congress voted in favor of the requested aid, and thus was initiated the policy, popularly known as the Truman Doctrine, of helping free nations to maintain their independence when they showed a determination to do so and when the preservation of such independence was deemed vital to the security of the United States. It was an effort to contain communism to the area which it already had rather than to allow it to expand into additional countries.

Six hundred and seventy million dollars was appropriated for this program, administered by the Department of State, in its first years. After 1948 economic aid to the two countries was included in the European Recovery Program and after 1949 military assistance was included in the Mutual Defense Assistance Program.

(b) The European Recovery Program (the Marshall plan). The United States by 1947 had spent \$11,000,000,000 for European relief. This aid had been successful in preventing starvation and unrest. Nevertheless Europe had by no means recovered from the war, in large part because the European states had not yet realized the necessity of cooperative planning for their joint recovery. As a result trade barriers continued to be prohibitive and productive output lagged badly.

Secretary of State George C. Marshall in a speech at Harvard University in June 1947, suggested that the European countries form a cooperative plan for economic recovery and assured them that the United States would support such a plan. But he insisted that any assistance that this Government may render in the future should provide a cure

rather than a mere palliative. The purpose of American foreign policy, he declared, should be the revival of a working economy in the world so as to permit the emergence of political and social conditions in which free institutions can exist. The Marshall plan, as the proposal of the then Secretary of State was popularly called, was widely interpreted as being a means of preventing the spread of communism to Western Europe, and thus as a device for strengthening the security of the United States.

Sixteen nations, Austria, Belgium, Denmark, France, Greece, Iceland, Ireland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Sweden, Switzerland, Turkey, and the United Kingdom accepted the proposal of Secretary Marshall and agreed to launch a cooperative recovery program. They formed the Organization for European Economic Cooperation to coordinate their recovery efforts. The Communist satellite countries of eastern Europe were forbidden by the Kremlin from participating in this project.

The Economic Cooperation Act of 1948 was then passed by Congress in April 1948. This act authorized economic aid to the 16 European states plus their dependent areas and for Western Germany and Trieste (aid to China was also provided by the same legislation) under a 4-year program to be administered by the Economic Cooperation Administration (ECA). Eleven billion dollars have since been appropriated to carry out this recovery plan.

(c) The mutual defense assistance program (military assistance). While the European recovery program was getting under way, the fear of Soviet aggression against western Europe mounted. Western Europe remained a military vacuum, an easy target without the force to repel even an initial attack. In order to provide for collective security in the North Atlantic area and to forewarn the Soviet Union that it could not successfully attack any of the signatory countries, the United States signed the North Atlantic Treaty on April 4, 1949. The European signers were Belgium, Canada, Denmark, France, Iceland, Italy, Luxembourg, the Netherlands, Norway, Portugal, and the United Kingdom. The formation of this type of regional security arrangement was permitted by the Charter of the United Nations. Previously, in 1947, the United States had joined the Latin American countries in concluding the so-called Rio Treaty, a regional defense arrangement for the Western Hemisphere.

The Mutual Defense Assistance Act was passed in 1949, primarily to help arm those who had signed the North Atlantic Treaty. However, other strategic areas, including Greece, Turkey, Iran, Korea, and the Philippines, and the general area of China were included in the aid program. This aid was designed both to provide finished military goods and to help the other countries produce their own military equipment. Its objective was to deter possible Soviet aggression by building situations of strength in those areas most exposed to Communist armed pressure.

Under the Mutual Defense Assistance Act of 1949, \$814,000,000 was appropriated the first year for military aid. That amount was increased in 1950 to \$5,500,000,000 after the Communist attack in Korea had so forcefully demonstrated the necessity of strengthening the free countries. The program has been administered by the Department of State with the active cooperation of the Defense Department and the Economic Cooperation Administration.

(d) The international development program (the point 4 program). One-half of the world's land surface, containing 46 percent of the population, is occupied by the so-called underdeveloped areas. This means that the people of these areas are still living in poverty largely because they have not had available the knowledge or

means to apply modern methods to their work. In his inaugural address of January 1949, President Truman proposed to give to these underdeveloped areas the benefit of American scientific knowledge and experience. (This proposal was the fourth point in an over-all foreign policy program—hence the popular title is the point 4 program.) If the peoples in underdeveloped areas, the President said, did not share in the achievements of modern technical progress, they might turn to false doctrines which hold that the way of progress lies through tyranny. The role of the point 4 program as a preventive against the spread of communism in Africa, Latin America, and Asia has been constantly emphasized by its supporters.

Some technical assistance to underdeveloped countries was already being carried on when the proposal was made. Since 1948, for example, the Economic Cooperation Administration had assisted in developing the colonial dependencies of the western European countries as a part of the Marshall plan, and for 10 years the Institute of Inter-American Affairs had given technical aid to the Latin American Republics. In 1950 the Act for International Development was passed by Congress. This act allowed the United States to participate in international technical cooperation programs and to establish other programs. Thirty-five million dollars was authorized for this purpose, one-third of this amount to be given to the United Nations for the technical assistance program which it was beginning. One appropriation also included funds for continuing inter-American aid, and brought that program under the Department of State. The ECA continued its separate program.

(e) Far eastern aid. The Far East, which contains half the world's population, is of great strategic importance in the world balance of power. International communism threatens the freedom of every Oriental nation. Already the Republic of Korea has been openly attacked by Communist forces and armed Communist minorities are attempting to overthrow other far eastern governments. Because of the interest of the United States in preventing the spread of communism in this area, aid to the Far East, especially Nationalist China, Korea, and the Philippines, has been included in every general foreign aid act.

Under the Foreign Assistance Act of 1948, which authorized the European Recovery Program, \$338,000,000 was provided for aid to Nationalist China. Other Marshall Plan funds were authorized for far eastern dependencies of European countries. Later, the China Area Aid Act of 1950 authorized the Economic Cooperation Administration to extend aid to other nations which were in the general area of China. Such aid has been given to Formosa, Indochina, Burma, Thailand, and Indonesia. Indochina, Malaya, Indonesia, India, and Pakistan have already benefited from the Act for International Development (the point 4 program), in which \$3,800,000 was allocated for the Far East. Many Asiatic nations have also received mutual defense assistance funds. Finally under the Philippines Rehabilitation Act special aid has been extended to help this former United States dependency reconstruct its war damage and to furnish a firm economic foundation for the political independence it obtained in 1946.

These programs have been administered mainly by the Department of State and the Economic Cooperation Administration with the cooperation of the Department of Defense.

(f) Loan to Spain: In the fall of 1950 Congress, by a rider on an appropriations bill, authorized a loan of \$62,500,000 to Spain. The money is being used for economic development projects, including the production of hydroelectric power and strategic minerals such as copper, lead, sulfur, pyrites, and

tungsten. These minerals have been described as essential to the West.

(g) Aid to Yugoslavia: Since Yugoslavia's break from the Kremlin in 1948, it has been the policy of the United States Government to help this country maintain its independence. Although Yugoslavia is a Communist state, its independence from Moscow tends to weaken Soviet influence throughout the world. For this reason and because of Yugoslavia's strong armed forces, which could be used to fight the Red army or the other Communist armies of Eastern Europe, the United States considers the maintenance of Yugoslavia's independence important for its own defense, for the defense of Greece and Turkey as well as of the North Atlantic Treaty countries.

In 1950 Yugoslavia suffered a drought which threatened the country with famine conditions which in turn might have offered the Kremlin fertile opportunities for regaining control of Yugoslavia. Fifty million dollars was appropriated by the United States for food and other commodities to prevent the famine from materializing. The funds for this aid were drawn from Marshall-plan appropriations. The program was administered by the State Department.

(h) Emergency food aid to India: Floods, earthquake, drought, and locusts in 1950 left India threatened with a serious famine. The Indian Government, as a result, appealed to

the United States in December 1950, for 2,000,000 tons of grain to prevent the famine from developing. Funds for this grain were provided on easy credit terms under a law approved in June 1951; this grain constitutes two-thirds of all the food which India is buying abroad to meet the emergency. The loan is being administered by the ECA.

THE MUTUAL SECURITY PROGRAM

The Mutual Security Act of 1951 provides for continuing the foreign-aid programs described above.

The program has one stated purpose—preservation of the security of the United States within the security of the free world. For this "Mutual Security Program," which the new integrated foreign-aid program will be called, Congress has appropriated \$7,328,903,976 for the fiscal year 1951-52. These funds will be divided between military aid (\$5,788,502,457) and economic aid (\$1,540,401,519). The mutual defense assistance program will be continued out of the military funds, while the European recovery program and the point 4 program will be financed with the economic-aid funds. Greek-Turkish aid and far eastern aid will be continued with funds from both categories.

In proposing the program to Congress, President Truman said "The dollars spent under the mutual security program will build more strength in support of our security than

we could build at home with the same expenditure of funds . . . the amounts, the geographical areas, and the purposes of the aid have all been chosen in order to bring about the greatest possible increase in the security of the United States and the whole free world." The Soviet threat, he explained, was world-wide, total, and of indefinite duration. The mutual security program was designed to meet such a threat with the ultimate goal being that the Soviet Union would not dare to attack at the present time and eventually that the rulers of the Soviet Union would be forced by international pressures and their own people, rather than by armed conflict, to abandon their policy of aggression.

The funds will be allocated on an area basis. Europe will receive \$5,940,852,457, the Middle East \$556,250,000, Asia \$772,405,866, and the Americas \$59,395,653.

Supervision of the administration of aid programs will be vested in a new Mutual Security Agency, which will take over the functions of the Economic Cooperation Administration. Operation of the military aid program will be through the Defense Department. The point 4 program will continue under the State Department. The Director of the Mutual Security Agency, who will supervise all the programs, will be responsible directly to the President.

Table of principal foreign-aid programs of the United States

Program	Congress	Basic authorizing legislation			Congress	Appropriation act			Administering agency
		Public Law No.	Date approved	Amount authorized		Public Law No.	Date approved	Amount appropriated	
(a) Aid to Greece and Turkey.....	80th.....	75	May 22, 1947	\$400,000,000	80th.....	271	July 30, 1947	\$400,000,000	Department of State.

¹ Authorization under Public Law 472 was extended.

² Extended availability of appropriation under Public Law 793.

³ Authorized President to utilize not more than 3 percent of funds appropriated for ERP under Public Law 759.

⁴ Previously authorized.

⁵ From funds previously appropriated.

Soil and Wildlife—Part I

EXTENSION OF REMARKS
OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the Record, I include the following address by H. H. Bennett, Chief, United States Soil Conservation Service, at the fourth annual convention Southeastern Association of Game and Fish Commissioners Conference, Richmond, Va., October 18, 1950:

SOIL AND WILDLIFE

I am glad to meet with you game and fish commissioners from the Southeastern states. This is a part of the country where various land and water problems challenge the attention and best efforts of all of us who are engaged in the conservation of natural resources.

You are concerned specifically with the conservation of game and fish—natural resources that make life worth living for a great many people and benefit most of us in a number of ways. I am concerned primarily with conservation of soil and water—those basic resources without which there can be no wildlife or any other kind of life anywhere. So, we clearly have a mutual interest and a common purpose in bringing about conservation of these resources in sufficient abundance for our lasting use and enjoyment.

By and large, I am happy to say, wildlife conservationists and sportsmen in general have an unusually good understanding of the farmland conservation work which is progressing so rapidly all over the country, and a real and growing appreciation of its value in enhancing beneficial wildlife. This positive support of soil and water conservation is most encouraging.

I assume all of you are acquainted with the way in which we work—that is, in cooperation with the farmer-voted and farmer-directed soil-conservation districts established under State law in each State. Through these districts the Soil Conservation Service provides technical and certain other assistance to farmers at the district's request. I believe my understanding is correct that the fish and game commissions in all 12 of the Southeastern States likewise are working with many of the soil-conservation districts in various ways, to the mutual benefit of their erosion-control and better land-use programs and your own fish and game conservation programs. The districts, as you know, also draw on different local, State, and Federal agencies for any other help that may be available in carrying on the district programs, in addition to inviting the cooperation of private groups that similarly may be in position to help them.

WILDLIFE STRESSED BY SOIL-CONSERVATION
SERVICE AND DISTRICTS

Of particular interest to you is the fact that the Soil Conservation Service gives specific attention to training in biology for our farm planners and other technicians who work out in the fields, pastures, and wood lots with the district farmers. The farm planner considers the value of treating various types of land, not only for their primary agricultural use but also with an eye to any modification or special practice that will result in more wildlife through complete and adequate land treatment. He is expertly equipped to do this, because his understanding of the wildlife aspects of soil- and water-conservation planning and treatment is

dovetailed with similar basic knowledge and adeptness in soil science, forestry, range management, agronomy, engineering, and other phases of a complete, coordinated soil- and water-conservation program of the kind that the Soil Conservation Service helps farmers apply to their lands. In other words, the soil conservationist is also a wildlife conservationist.

So it is that appropriate wildlife work is a part of the program and work plans of every soil-conservation district and is tied in with other phases of our conservation operations. This is not left to chance; it is done consciously and with direct purpose. In this connection, let me sum up for you our Soil Conservation Service wildlife objectives in soil-conservation districts:

1. To apply to land-use problems biological knowledge useful in the prevention and control of soil erosion—that is, soil and water conservation—thereby preserving natural resources.
2. To achieve productive land use on all lands, including those not adapted to tilled crops, grazing, or wood production.
3. To assist in the solution of land-use problems which involve production of useful wild plants and animals on croplands, grazing lands, and woodlands.
4. To contribute to the prevention and control of biological damage arising out of measures established for soil and water conservation and related land-use practices.

At this point, I think it would be well to explain what we mean when we talk about the kind of conservation we are engaged in—that is, modern soil conservation.

WHAT MODERN SOIL CONSERVATION IS

Modern soil conservation consists of the kind of sound land use and protection needed to keep the land permanently productive while in use. It means contouring and terracing land that needs such treatment, and strip cropping and stubble mulching the land as needed, along with supporting practices of crop rotations, cover crops, etc., wherever needed. It means gully control, stabilizing water outlets, building farm ponds, locating farm roads and fences as nearly on the contour as practicable, planting steep, erodible land to grass or trees, development of good pastures and devoting good management to them after they have been developed.

Where land is too wet, modern soil conservation calls, moreover, for drainage—with full consideration given to wildlife needs. If it is too dry, it calls for irrigation. If subject to wind erosion, it calls for wind-stripping, tree planting, growing cover crops, and stubble-mulch farming. If plant nutrients, lime, and the humus supply of the soil have been depleted, it calls for fertilization and addition of lime and organic matter. If water-soluble salts have accumulated in toxic quantities, as in parts of the West, it calls for both drainage and leaching out of the alkali by flooding. And modern soil conservation calls also for the use of the best of the most adaptable tools and crop varieties.

Modern soil conservation likewise calls for flood control and reservoir protection (municipal, irrigation, recreational, etc.) by treatment of whole watersheds with the right combinations of practices, land use, and structures in the smaller, upper watersheds where flood waters start. Applied at the right time and place, such watershed treatment saves soil and reduces flood and sedimentation damage, stores water in the soil for plant use and, where conditions are favorable, in the underground strata for pumping.

RESEARCH AND EDUCATION ESSENTIAL

And, of course, an indispensable part of modern soil conservation is a supporting program of research, such as will provide for the welfare of the land at all times, and give farmers all the advantages that progressive science can contribute. Also, a continuing,

vigorous program of soil conservation education should be made a part of our teaching from kindergarten through college. And modern soil conservation calls for the maintenance of all effective work that has a chance for permanency. Such measures are not intended to be used for just a single year or cropping season. They are the basis of land permanency, and that is necessary if we are to have a permanent agriculture—or a permanent wildlife population.

There is only one correct formula for doing the soil- and water-conservation job. It consists of treating the different kinds of land on a farm or ranch according to their individual needs as determined by such conditions as degree of erosion, waterlogging, etc., and using each kind according to its capacity for continued safe and economical production—whether that be for field crops, pasture, timber, or wildlife.

This is the only possible way that man can provide anything like a permanent type of soil conservation. This is a physical fact having its origin in the rigid laws of nature. There can be no substitute for it, no shortcuts, no easy way out.

LAND INVENTORY USEFUL IN WILDLIFE
DEVELOPMENT

That is why we put so much emphasis on what we call land-capability surveys, which comprise a scientific inventory of the land that serves as the basis of the land's conservation planning and treatment. Through this inventory, made by our Service technicians in cooperation with the farmers, we arrive at a sound and dependable classification of all the land on a farm according to its capability for best use. Thus, capability classes I, II, and III land together comprise the kind of land which is suitable for continuous cultivation, with careful conservation treatment of class II and III lands. Class IV land is a borderline grade, which can be cultivated safely only occasionally at best. Classes V, VI, and VII represent those lands which are suited only to growing grass or trees; and class VIII land is suitable for wildlife or recreational use or for watershed-protection purposes.

This land inventory, which should be completed nation-wide at the earliest practicable date, has among its uses for other planning purposes particularly important potentialities for those who are concerned with developing wildlife resources—or the best use of land for all purposes in any way related to agriculture. For example, this capability classification shows a particular class of land which is suited better for watershed protection, recreation, and wildlife purposes than for any agricultural purpose; therefore, class VIII land may be of great importance to wildlife and may be used solely for that purpose. This class of land may be found in extensive tracts, such as some of your coastal and inland marshes obviously not suited to growing cultivated crops or even grass or trees, but which can and should be managed for wildlife, like waterfowl and fur bearers that can be produced on it. Such "wildlife land" often is found, also, in small areas on individual farms, where its development and use for wildlife production is equally important.

All together our surveys have already shown that there is a large total area of this kind of land—probably 35,000,000 acres or more. The fact that most of it is scattered through our good agricultural lands is a distinct advantage from the wildlife standpoint; because it encourages increased numbers of birds and mammals valuable to agriculture. These animals destroy insect and rodent pests and help to improve distribution of game locally. All this contributes to the farmers' income and to the Nation's food supply.

ALL LAND IS WILDLIFE LAND

I want to emphasize right here, however, that the benefits of soil and water conserva-

tion from the game and fish standpoint are in no wise limited to specialized treatments of such special kinds of land. On the contrary, all land—with the water which falls on it or flows through it—is wildlife land. Moreover, all soil and water conservation, when properly planned and carried out, is wildlife conservation. In fact, I am convinced that the unprecedented attention being devoted to soil and water conservation today is contributing as much to the welfare of game, fish, and other beneficial wildlife as anything man has ever undertaken in this country or anywhere else. And I say this without in any way discounting the unquestioned importance in this regard of our State and National forests, parks, and wildlife refuges and sanctuaries.

THE NEW SOIL- AND WATER-CONSERVATION ERA

In this present-day conservation era land, water, forest, grass, cultivated crops, and wildlife are, for the first time, being tied together and scientifically coordinated on the basis of land capability and need. This is illustrated, for example, by the very fact that I, a soil conservationist, am on your program along with such speakers in companion conservation fields as Lyle Watts, of the Forest Service, and Albert Day, of the Fish and Wildlife Service. This coordination is a basic tenet of modern soil conservation; for without such basic ground work there can be no such thing as lasting conservation of our soil or other resources which depend on the soil for their perpetuation.

Nature's laws were so contrived that land, water, plants, and animals all should—and under natural conditions do, with the exception of civilized men—exist in harmony and interdependence for perpetual productivity of these basic resources. It should be quite clear, then, that every acre of land we allow to be wasted because of soil erosion means, among other undesirable and costly results, less wildlife. That is why we soil conservationists work on the premise that all farmland is wildlife habitat—a simple fact which every farm boy or girl knows, but which their elders sometimes become too preoccupied with doing other things to remember.

Soil and Wildlife—Part II

EXTENSION OF REMARKS OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by H. H. Bennett, Chief, United States Soil Conservation Service, at the fourth annual convention, Southeastern Association of Game and Fish Commissioners, Richmond, Va., October 16, 1950:

WHEN THE LAND GOES, WILDLIFE GOES WITH IT

I have seen in too many localities how game has been driven from farms, watersheds, and larger areas by soil erosion. Fish, waterfowl, and fur-bearing game have disappeared from too many places because the streams and lakes have been polluted and filled, or partly filled, with erosion sediment. In many places the sources of water have practically dried up. In parts of this country and Latin America, perennial streams have dried up as a result of rapid runoff from eroded land resulting from careless cultivation, overgrazing, burning, and wasteful lumbering. In such localities a few birds and mammals may be seen occasionally, but

the wildlife has predominantly become very scarce with the disappearance of food, cover, and water. In parts of South Africa, large areas such as the Orange Free State and parts of the Transvaal formerly supported a great abundance and variety of wild game, but it has been virtually wiped out as the result of forest removal, the drying up of waterholes and streams. Whole watersheds in some of the mountainous areas have been denuded by fire, overgrazing, and improper land use. I have seen the same sort of thing in the Andes Mountains and in southeastern Brazil. The excessive cutting of forests in Cuba has had a severe effect on bird life in Cuba.

Such situations as some of these may seem remote and of no concern to us. But we have much to account for ourselves in the declamation of the game and fish that abounded in our forests, meadows, and streams back in the days of George Washington and Thomas Jefferson. And we can't blame the severe depopulation of our wildlife in many localities entirely to guns and traps, by any means, we must credit a very substantial share of it, also to the ax and plow which inevitably destroyed so much of the natural food and habitat for wildlife in the process of our country's settlement and development. I wonder just how far we would have to go today to find a covey of quail or to catch a mess of bass or trout if it had not been for the persistent efforts of your fish and game commissions over the country in behalf of conserving and restocking our game and fish.

Soil erosion also is an enemy of the fishing and oyster business. Back in 1880, the Chesapeake Bay, for example, produced 13,000,000 bushels of oysters, but the annual harvest today has shrunk to only about 3,000,000 bushels; and, for the Nation as a whole, oyster production has dropped 50 percent in 50 years. Dr. R. V. Truitt, founder of the Chesapeake Biological Laboratory, is quoted as having said:

"Poor management of the land around the bay and lack of conservation practices is responsible in no small degree for the declining oyster production. Unless the land is properly managed, erosion will bring about a further decline in oyster yields."

There is no need to go into further detail with respect to the bad effects of soil and water wastage on wildlife. It boils down pretty much to this: Without productive land, and the water that makes it produce, there can be very little in the way of birds, fish, fur bearers, or big game. Most of our life-giving soil is found on our farms. Most of the water that feeds our lakes and streams, and a great deal of it that empties into our coastal waters, drains from or across these same farm lands. Thus the necessity of safeguarding our remaining soil and water resources is clear. We still are losing around 500,000 acres of our productive land each year through soil erosion, with all the attendant damages to game and fish which I have mentioned.

The farm lands of America comprise our principal fish and game habitat, and the farmer is our principal game manager. It must be apparent, then, that we are going to get the most effective wildlife improvement, both in quantity and distribution, by keeping this vast farm-land habitat in its best producing condition. There is no other way to assure our over-all wildlife populations of the future, just as there is no other to assure our future production of food and other crops except by preserving our good land which produces them.

What the soil-conservation districts are doing to this end—the progress the district farmers make in putting the various wildlife-benefiting soil and water conservation meas-

ures on the land—accordingly is of special importance to you. There are now approximately 2,275 of these democratic, local units of State government. They cover 1,250,000,000 acres and include 80 percent of all the farms and three-fourths of all the land in farms in the United States.

In the 12 Southeastern States alone, there were 464 districts by July 1, this year, including 87 percent of the land (283,413,902 acres) and 87 percent (1,911,967) of the farms in this Southeastern area. But, of course, it is the conservation work that is being done—the actual conservation surveying, planning, and treatment of the land with needed control and beneficial measures—that really counts. The accelerated progress that has been made in this accomplishment likewise is noteworthy, in these States as a whole and throughout the Nation.

Our July 1 records showed more than 120,000,000 acres of detailed conservation surveys (land inventory) completed in the Southeastern States, principally on the 164,000,000 acres of farm land in these States. Meanwhile, more than a third of a million complete conservation farm plans had been worked out in the Southeastern States by July 1—63,000,000 acres, of which 35,000,000 acres had been treated.

Among the wildlife-benefiting conservation measures going to make up this land treatment in these 12 States I might mention these: 900,000 acres of strip cropping, nearly half a million acres of wildlife area improvement, including field borders, wildlife strips, and wet land improvement for wildlife, 11,000,000 acres of conservation woodland management and about 375,000 acres of tree planting, and 75,576 farm ponds built.

I won't bother you with figures and other details on the different practices, crops, etc. that are involved in this soil and water-saving work, although I do hope that all of you who have not done so already will take the opportunity to familiarize yourselves with these operations in your own States, through your State Soil Conservation Committee or our service's State office. Better still, get out into these soil conservation districts as often as you can and see what's going on in them.

As I said earlier, I understand all of the southeast States are among the 35 throughout the country whose game and fish commissions are working with the districts. Such an example as your group has set in this respect is most gratifying. The opportunities ahead for us all to work together toward the common soil and water and wildlife conservation goal are many. There is plenty of need for all that we can do together, whether it is in such undertakings as furnishing districts with such materials as sericea and bicolor lespedeza seed and plants for wildlife borders, maintaining cooperative projects for quail, or correcting unprofitable fish populations and controlling weeds in farm ponds.

Let me reemphasize this, that wildlife is considered by the Soil Conservation Service to be an important and valuable resource which merits fullest consideration in all of our conservation planning. In planning drainage works, for example, we attempt to point out those wildlife values to those with whom we work, and it is our stated policy to discourage drainage of open-water areas where important migratory waterfowl habitat is affected. Because the decision remains with the farmer, however, it is necessary that the wildlife interests themselves present to the farmers a practical program that will in some way compensate them for utilizing their land as waterfowl habitat. In matters of this nature, it will do no good and probably no little harm for the true friends of wildlife betterment to inform the specialists of the Soil Conservation Service that they are in command of the situation and therefore should be held responsible for all that

¹ As quoted by Joe Boyle, *Mystery of the Disappearing Oyster*, In Short, April 1946.

goes wrong with drainage affairs. This is not helping the interests of wildlife or those who do the charging. The facts are well known that the farmers themselves are in command and those who shout about draining land that they say should not be drained would use their time to greater advantage by consulting with and aiding those who are trying to keep drainage operations in line with sound land use, with the interests of wildlife not overlooked.

Wherever the land capability indicates that the land is best suited for wildlife, no conflict is involved, of course. Where the land capability indicates the land can be used safely and profitably for livestock, trees, or cultivated crops, however, it is only right that some incentive or compensation be made available to the landowner if that land is to be devoted to wildlife production. The from that compensation takes, and the way in which it is made available to the land owner or operator, comprise one of the most important problems facing the wildlife profession today.

In all events it is only through a coordinated land-use plan, based on a careful study of soils, location, engineering requirements, and other factors, that lands unsuitable for farm-crop production may be safeguarded as wildlife habitats. The Soil Conservation Service is committed to continue doing everything it can to obtain effective cooperation with wildlife agencies and organizations, and in encouraging them to work more closely with soil conservation districts. During the past year, in fact, in order that wildlife values be given every reasonable consideration in the assistance we give to the districts, our Service has taken additional steps to enlist the cooperation of such groups.

I have already referred to the way in which wildlife interests for their part, including sportsmen's groups, State fish and game departments, and the rest, are backing up their support of soil and water conservation with physical assistance. That is most important, for the job has only been well begun. In order to finish it, and in time, it is going to take the continued and untiring teamwork of all of us—farmers, soil conservationists, wildlife interests, and everybody else.

The farmers themselves, business, and other community interests, and local, State, and Federal Government all have found by experience that effective soil and water conservation is profitable and satisfying all along the line. It hardly could be otherwise for anything so much in the public interest. With this continued dedication of our joint best efforts to this vital undertaking of safeguarding our soil, water, wildlife, and related resources, I am more confident than I have ever been before that we are going to do the job—do it right, and do it in time.

I am becoming more and more convinced with every trip of inspection I make in the field. I am seeing an encouraging increase in the rate of soil conservation applied to the land and an advancement in wildlife habitat and wildlife numbers. Week before last a big national publication asked for a freshly made picture of a gully in eastern Pennsylvania. It was promised but when our photographers went out to get it, they couldn't get it. It seemed unbelievable, gullies had been so common in the localities. I went out with them, but still no gullies. I asked our local boys why it was we couldn't find any gullies. Their answer was the gullies had been closed up with conservation measures, principally with plantings of adaptable vegetation, including in many instances food and cover for wildlife—and I was told that wildlife was coming back on many farms.

And just last week I had a similar experience in Wisconsin. And not to overlook a

more personal experience, I enjoyed the past summer the call of bobwhites on my 6-acre tract in northern Virginia, where I am getting good results with *lespedeza bicolor*—and bobwhites, too.

Batter's Best Friend

EXTENSION OF REMARKS

OF

HON. FOSTER FURCOLO

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. FURCOLO. Mr. Speaker, I want to call the attention of the Members to an article in This Week magazine of September 30, 1951, entitled "Batter's Best Friend." It tells the story of those who work on baseballs in the A. G. Spalding Co. in Chicopee, Mass., which is located in my district.

I have been through the plant and have seen the operation described. I think all Members would enjoy reading the article.

The Republican Party

EXTENSION OF REMARKS

OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. HORAN. Mr. Speaker, under leave to extend my own remarks in the Appendix of the Record, I am pleased to include a statement from the Washington State Federation of Women's Republican Clubs.

This is a partisan insertion in the RECORD. It is however, I feel most worthy of consideration by all who believe in the two-party system. The points raised by the Washington State Federation of Women's Republican Clubs are, of course, controversial. Nevertheless, I feel that they have stated a mighty good case for the Republican Party and I am proud that this statement outlining the achievements and the principles of one of our great American political parties originated in my own State of Washington.

The statement follows:

YOU ASK ME WHAT MY PARTY IS

You ask me, neighbor, what my party is, and this I am telling you true:

My party is the one that in 1947 for the first and only time since 1932 balanced the national budget.

My party is the one in 20 years to reduce taxes.

My party is the one which has warned us of the dangers of annual deficits and a huge national debt.

My party is the one which has fought waste and extravagance in Government.

My party is the one which has stood for the preservation of the Constitution as is.

My party is the one which has upheld the liberty of the individual against the encroachments of government itself.

My party is the only one to champion the cause of free enterprise on every front.

My party is the one which has constantly fought socialism and the welfare state.

My party is the one which has tried to get Communists out of Government, carry out loyalty and security programs, institute investigations into Communist activities.

My party, in brief, is the one which from the beginning has fought communism in this country.

My party is the one which believes there is nothing iniquitous in loving one's country above all others, nor dishonorable in considering this Nation's welfare our first obligation.

My party believes that our foreign policy should be clear, forcible, in the American tradition, truly non-partisan and should be backed by a majority of the American people.

My party believes that any foreign commitments or agreements made in the name of the American people should be known to them and should be subject as required by the Constitution to confirmation or rejection by the Senate of the United States.

My party believes that the Congress of the United States and not the President should declare war.

THESE ARE THINGS MY PARTY IS AND THINGS MY PARTY IS NOT

My party is not the one which reduced the dollar to a 50-cent piece.

My party is not the one which increased the national debt from twenty-one billions in 1932 to two hundred and sixty-seven billions in 1951.

My party is not the one that increased the cost of Government from five billions in 1932 to seventy-four billions in 1952.

My party is not the one that recognized Soviet Russia.

My party is not the one that coddled Alger Hiss, let Gerhardt Eisler escape, and that blocked every effort to smoke Communists out of Government.

My party is not the one which made the disastrous agreements at Yalta.

My party is not the one whose blundering policy lost us China to the Reds.

My party is not the one that ordered the "police action" in Korea.

My party is not the one that fired General MacArthur.

My party is not the one which has brought us a spurious prosperity through war and by mortgaging the future through debt.

My party is not the one whose extravagance and fiscal policy has brought an inflation and then has cried to high heaven for greater authority to bring on more of the same to stop inflation.

My party is the one which has made it so hot for the administration they were forced to order these crime investigations, but my party is not the one whose political connections with the underworld has been revealed by these same investigations.

My party is the Republican Party. It's a first-rate party, neighbor, a Grand Old Party. Won't you join us?

National Jewish Youth Conference

EXTENSION OF REMARKS

OF

HON. HUGH J. ADDONIZIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. ADDONIZIO. Mr. Speaker, from August 31 to September 7, 1951, the annual assembly of the National Jewish

Youth Conference met at Camp Wel-Met, Narrowsburg, N. Y. Two hundred young people coming from all parts of the United States met to consider the problems of Jewish youth at mid-century.

The National Jewish Youth Conference is a permanent Nation-wide body which represents more than 300 local and regional Jewish youth and young adult councils and 10 national Jewish youth organizations. It is sponsored by the National Jewish Welfare Board.

Under leave to extend my remarks, I wish to include President Truman's greetings to the annual assembly of the National Jewish Youth Conference and an article on the assembly which appeared in the September 1951 issue of the Circle, which is published by the National Jewish Welfare Board:

THE WHITE HOUSE,
Washington, August 15, 1951.

MR. M. DAVID WEISS,
Chairman, National Jewish Youth Conference,
National Jewish Welfare Board,
New York, N. Y.

DEAR MR. WEISS: It gives me great pleasure to send hearty felicitations and warmest personal greetings to all who participate in the fourth annual assembly of the National Jewish Youth Conference.

Never before have we had such need of an effective corps of qualified leaders as we do now. Never before have we needed such intensive training in democracy. I trust that your conference will be fruitful of wise counsels and constructive action to inspire American youth with traditional courage and enthusiasm to meet the new and grave responsibilities which these perilous times thrust upon them.

Very sincerely yours,

HARRY S. TRUMAN.

[From the Circle of September 1951]

YOUTH FAIRLEY TRAINS FOR LEADERSHIP
(By Lionel Koppman)

NARROWSBURG, N. Y.—Jewish youth leaders cannot be trained in a vacuum—they must be given opportunities to express themselves, to learn about the community in which they live and the rich cultural heritage which is theirs, to share their experiences and opinions with other Jewish youth, and to acquire certain programing skills which are requisite to leadership.

More than 150 young Jewish men and women from all parts of the country were provided with such opportunities at the week-long fourth annual assembly of the National Jewish Youth Conference, which took place this month at Camp Wel-Met near here. The conference is a Nation-wide youth body which is sponsored by the National Jewish Welfare Board. Represented in the conference are 300 local and regional Jewish youth and young adult councils and 10 major national Jewish youth organizations with a combined membership of 300,000.

After spending a full week in discussing common problems and basic issues facing Jewish youth and American Jewry in general, the delegates—many of whom came to the assembly with an inadequate understanding of their Jewishness—passed a resolution calling upon leaders of Jewish community councils and national Jewish organizations to create an American Jewish Conference which would serve as "an instrument for unified action by American Jewry" and another resolution asking for full-fledged, positive programs of Jewish education in communities across the Nation.

The resolution on Jewish education asked for local committees of Jewish education to aid in promoting the effectiveness of Jewish education; called on welfare funds to provide adequate allocations to Jewish educational institutions; recognized that schools which devote maximum time and give intensive Jewish education as being most favorable to the creative development of Jewish life in America; urged the introduction of Hebrew, Yiddish, Jewish history, religion, and culture in the curricula of secondary schools and colleges; and called on all Jewish communities and organizations to seek to improve every aspect of Jewish education.

Seldon M. Kruger of Newark, N. J., 21-year-old student of international relations at Rutgers University, was unanimously elected Conference chairman, succeeding M. Davis Weiss of Munhall, Pa. Mr. Kruger, a former conference vice chairman and program committee chairman, is a member of the Travel and Exchange Commission of the World Assembly of Youth (WAY), a member of WAY Council, and was an American delegate to the WAY assembly. He was also a delegate to its technical assistance seminar last month.

The delegates' attitude toward Israel was reflected in resolutions which called for a deeper understanding of Israel and expansion of the settlement adoption project; a closer relationship between Israeli and American Jewish youth by encouraging the members of the constituent organizations to participate in the various tours and institutes; and the providing of information to those individuals seeking personal participation in and identification with the State of Israel.

The Conference also adopted a resolution thanking the JWB for its sponsorship and urging JWB's "continued sponsorship, interest, and assistance in the future."

Other resolutions urged: The United States Government, through the United Nations, to continue to explore all possible avenues to peace; the observance of U. N. Day, repeal of the McCarran Act; support of the World Assembly of Youth and the Young Adult Council of the National Social Welfare Assembly; opposition to the encouragement of Nazi revival in Germany and the commutations of sentences and extension of clemency to Nazi war criminals; strong support of the human rights declaration; greater objectivity in textbooks and promotion of intergroup understanding by the entertainment industry, freedom of emigration to Israel from those countries having policies forbidding such emigration; condemnation of any limitations on academic freedom; establishment of a world Jewish youth conference in Israel; the achievement of the goals of the Mid-century White House Conference on Children and Youth; and the observance, in 1954, of the 300th anniversary of Jewish settlement in the United States.

The American Jewish Conference was proposed by Mr. Weiss in his annual report. Mr. Weiss called upon local communities to provide funds for scholarships to enable American youth leaders to study in Israel and to enable field workers (shlichim) from Israel to work and study in America; asked the conference to seek, in cooperation with the JWB, a broader sponsorship which would include all adult youth-serving agencies; and called for a wider use of Hebrew and the strengthening of Jewish education.

S. D. Gershovitz, JWB executive director, urged the young Jewish leaders to take advantage of the unusual strengths and unusual opportunities which are theirs and to venture bravely and unhesitatingly into new fields and areas of human need and thought. He said that only during the last few years have adults come to recognize that youth must not only be considered in deter-

mining policies but they must have a share in the actual planning and the carrying out of those policies.

He called attention to the necessity for living by the ethical principles of Judaism and told the delegates that "It is one of the essential tasks of youth movements such as the National Jewish Youth Conference to provide the educational and leadership channels to make it impossible for American youth to be detoured into subversive activities."

The delegates heard Dr. Israel Knox, assistant professor of philosophy at New York University, assert that "Culture is rooted in the lives and experiences of individuals and groups. Therefore, we Jews who live in America must develop a Jewish culture which is indigenous to America."

FROM FATE TO FAITH

Professor Knox told the delegates that Jews cannot nor should they try to escape the fact that they are Jewish. He asked the delegates to take stock of themselves and to make the transition from fate to faith. Dr. Knox urged the delegates to participate more actively in Jewish life and to develop a strong, effective program of Jewish education.

Arnulf M. Pins of Paterson, N. J., board chairman of the UNESCO youth institute and a former conference chairman, told the delegates that "If we want German youth to be democratic, we have to work directly with them and help them solve their own problems." He said that the UNESCO youth institute is one step toward encouraging German youth to participate again in international activities.

In a joint report on WAY, Mr. Kruger and Mr. Pins said, "We as young people have a responsibility for making the Universal Declaration of Human Rights a living realization, for there can be no peace in the world if nations do not learn to recognize the inherent dignity of every individual."

The delegates conducted religious services and acquired leadership skills in music, dance, drama and journalism. Ned Goldberg, JWB youth services director, is the NJYO executive secretary.

The American Road

EXTENSION OF REMARKS OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

MR. RABAUT. Mr. Speaker, in the October 1, 1951, issue of the New York Times there appeared a two-page advertisement of the Ford Motor Co. As the advertising men would say, it was a real eye catcher. The left-hand page was a mammoth photograph of a portion of Connecticut's scenic Merritt Parkway, symbolizing "The American Road."

On the right-hand page, above a smaller photograph, was a message from the Ford Motor Co., which deserves the attention of this House.

To the Ford Motor Co., and indeed to every thinking American who realizes the revolutionary part which the automotive industry has played in our national development, "the American road is paved with hope." To measure the achievements of America in 1951 against the dreams of America 161 years ago is to realize, as this message points

out, that "tomorrow's works will dwarf our own."

I commend this advertisement to the reading of every Member of this House, and I salute the Ford Motor Co. for the truly American spirit it expresses.

The article follows:

ONCE IT WAS 2,151 MILES LONG—NOW IT RUNS FOR 2,322,000 MILES

In the good old days, when Henry Ford was still tinkering with his first cars, motor-ing was a risky and a random thing. But your first drive was unforgettable.

You put on your cap, goggles, gauntlets, leather driving coat and leggings; your nervous sweetheart donned her snug ankle-length duster, and wound around her head a fringed silk auto scarf, 90 inches long. The wicker picnic hamper was packed with cold chicken, sharp cheese, and hard-boiled eggs.

You set the throttle and the spark levers. You had to watch out or you would get a jolt that would knock your elbow loose. You cranked furiously and leaped over the door into the driver's seat. The car was jumping as if it would fly apart. Then you pushed the gas lever up and up, and stepped on the low pedal. With a groan and a clank, you were off into adventure, flying along at 25 miles an hour.

Where did you go on your first trip? Everybody went to the end of the road. In those days there was an end of the road. Outside the stone streets of the cities, the road soon died in choking dust or in deep ruts of thick chocolate mud. Great stretches of the Nation were unreachable—and undeveloped.

The automobile changed all that. Today the American road has no end; the road that went nowhere now goes everywhere. One of every seven Americans has a job in the field of highway transportation; a million Americans make cars and parts; a million and a half service and sell cars. Three of every four families own an automobile, Ford alone has built more than 35,000,000 cars.

The funny-looking little contraption on the delicate bicycle wheels became the source of the greatest industry in the world; it has changed all the world's ways of living and thinking.

Persons, things, and places in the Nation depend on auto wheels. The wheels roll on endlessly, always moving, always forward—and always lengthening the American road. On that road, the Nation is steadily travelling beyond the troubles of this century, constantly heading toward finer tomorrows. The American road is paved with hope. The years ahead shine with the achievements that are now only dreams—for tomorrow's works will dwarf our own.

At Ford Motor Co., we have faith in the American road. We believe that America can keep traveling on it toward an even better life for all. We intend to keep contributing to the bright promise of that future.

FORD MOTOR CO.

Public Retirement System

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. VAN ZANDT. Mr. Speaker, recently I placed in the Appendix of the

CONGRESSIONAL RECORD a report on pension plans in private industry.

Continuing my interest in the subject and with the assistance of Mr. Meyer Jacobstein, of the Legislative Reference Service, Library of Congress, and Miss Helen Livingston, of the Government Section, Library of Congress, the following interesting report has been compiled on public retirement systems.

After analyzing the reports on pension plans in private industry and public retirement systems one can readily understand the immediate need of an over-all study by Congress of the pension question.

The report on public retirement systems follows:

PUBLIC RETIREMENT SYSTEMS

Public retirement systems in the United States range from the informal pension arrangements covering a few public servants in small communities to the Federal old-age and survivors insurance system (OASI) of social security which currently covers around 40,000,000 jobs and has been called the largest insurance program in the world. They include plans for special groups of municipal employees, such as teachers, policemen, and firemen, as well as city and county systems. Some State plans are confined to regular State employees, others include teachers, and still others provide for the inclusion of county or municipal employees in the general State plan. At the Federal level, Congress has provided special retirement programs for employees of the railroads and of the Federal Government, in addition to the broad OASI program of social insurance for most of the working population.

As was the case with private retirement plans, the patterns of coverage and benefits are diffuse largely because the first public retirement systems were established by scattered employee units and were usually tailor-made to cover special conditions and requirements. The trend has been toward standardization, consolidation, more comprehensive protection, and broadened coverage. At the present time new plans are being developed rapidly at State and municipal levels especially as retirement programs are being accepted as an important incentive toward good public administration. One result of this rapid development is the fact that up-to-date data on public retirement systems at the State and local levels is not available. Over-all data assembled for 1946 is, for example, now far from being inclusive, and can, therefore, be used only to suggest trends rather than to present a comprehensive picture.

¹ For the purposes of this study, Government retirement plans separately maintained because of special conditions or hazards prevailing in the conditions of employment, have been excluded. For example, retirement programs for military and Foreign Service personnel are not considered at the Federal level, and separate systems for policemen, firemen, etc., have not been included in the discussion of State and local programs. Such programs are usually more generous, retirement age is earlier, and they cannot be considered as typical of Government retirement programs for these reasons as well as because they contain special provisions covering hazardous types of duty.

² The year 1946 is used in tables on State retirement systems assembled under the auspices of the Council of State Governments for the most recent issue of the Book of the States, 1950-51 (Chicago, 1950), pp. 210-221.

I. TOTAL CURRENT COVERAGE AND BENEFICIARIES

Major Federal systems: The Federal old-age and survivors insurance system (OASI) is expected to cover approximately 4 out of 5 (45,000,000 out of 60,000,000) jobs when the 1950 amendments become fully effective.³ But since approximately 3 out of 5 of these jobs are in industrial or commercial establishments many of the workers so covered are also protected by private pension systems. Public employees, on the other hand, have not been eligible for OASI coverage and are subject entirely to the provisions of the various public retirement systems while they are performing government jobs. In January 1951, a total of 6,487,000 persons had government jobs of which 2,204,000 were in Federal civilian employment, and 4,283,000 were under the auspices of State and local units (2,635,000 nonschool, and 1,747,000 school).

The railroad retirement system provides coverage for approximately 2,050,000 employees of the Nation's railroads. The civil-service retirement system provides for most civilian employees of the Federal Government, and coverage is practically complete for the 2,200,000 persons so employed—especially since the 1950 amendments to the Social Security Act made the small group of Federal employees hitherto lacking retirement protection eligible for OASI.

State and local systems: Estimates as to the coverage for employees of State and local governments vary widely. For example, a total taken from tables showing total State coverage as of July 1, 1946, is 632,755.⁴ A somewhat more recent compilation, which uses annual reports ranging from 1946 through 1949 for its data, yields a total of 1,304,540.⁵ The most reliable figure for current purposes, perhaps, is the total of approximately 2,600,000 employees of State and local governments who are now under some form of retirement plan. An estimated total of 1,650,000 (38.5 percent) of the employees of State and local governments now lack such established retirement systems and are, therefore, eligible for coverage under OASI through voluntary arrangements.⁶

Number of current beneficiaries in public retirement programs: Although most public systems are of comparatively recent origin and cannot, therefore, be considered as fully-protective even for some long-term employees, the effect of Government retirement programs on the income of the retired population can be measured to some degree, especially by disbursements at the Federal level. Recent figures covering the source of income of persons aged 65 years and over listed by the Social Security Act of 1935 is a third of the persons in this group (3,700,000) are covered by Federal retirement programs—

³ Voluntary coverage was provided by these amendments for employees of State and local governments lacking another retirement system, and for employees of nonprofit organizations. Reliable figures on OASI coverage will not, therefore, be available until these voluntary coverage arrangements are completed.

⁴ Book of the States, pp. 210-215.

⁵ Department of Research, Association of Casualty and Surety Companies, Government Insurance in the United States (New York 1950), pp. 86-95. Data were collected from annual reports and handbooks for each fund and, where no published information was available, it was obtained by correspondence with officials of the fund in this compilation.

⁶ These estimates were used by the Congress in estimating the scope of voluntary coverage of State and local employees lacking retirement protection under OASI.

a total exactly equal to the number of employed aged. These figures are as follows:¹

Estimated number of persons aged 65 years and over, receiving income from specified source, December 1950

(In millions)

Source of income	Number of persons		
	Total	Men	Women
Total population aged 65 and over ¹	12.3	5.7	6.6
Employment.....	3.7	2.3	1.4
Earners.....	2.8	2.3	.6
Wives of earners.....	.99
Social insurance and related programs.....	3.7	2.1	1.6
Old-age and survivors insurance.....	2.6	1.5	1.1
Railroad retirement.....	.3	.2	.1
Federal civil-service retirement.....	.1	.1	(²)
Veterans' program.....	.3	.2	.1
Other ³4	.1	.3
Old-age assistance.....	2.6	1.3	1.5

¹ Preliminary estimates for April 1950 based on sample of census returns. Some persons received income from more than 1 of the sources.

² Less than 50,000.

³ Beneficiaries of Federal retirement programs other than civil service, and of State and local government retirement programs, and the wives of male beneficiaries of programs other than old-age and survivors insurance.

No reliable figures are available covering the total number of persons now receiving benefits under State and local retirement plans. One recent compilation showed a total of 68,475 beneficiaries in this group, as compared with the total of 1,388,939 persons covered.⁴ These figures suggest that the number of beneficiaries may be slightly over

4 percent of the total number of persons covered, but it seems likely that this proportion is slightly higher today because of the rapid expansion of coverage for State and local employees during the past 2 years.

II. FEDERAL RETIREMENT SYSTEMS

The major Federal retirement systems, as indicated in the table just above, are the old-age and survivors system of social security, veterans' pensions, and the retirement systems for railroad workers and Federal civil service employees.⁵ Of these only the last two—the railroad retirement system and the civil service retirement system—can be classified as retirement programs in the generally accepted meaning of the term. The program of veterans' pensions is clearly not a retirement system in this sense either in concept or in method.

The old-age and survivors system established by the Social Security Act of 1935 is a federally administered "social insurance" program which covers approximately four-fifths of the civilian labor force. The retirement features of OASI have borrowed some principles from established retirement practices—such as the methods of relating retirement benefit to the individual's work record, of using joint employer-employee contributions, and of defining insured status. But its "insurance" features are considerably modified by "social" considerations which are designed to furnish floor of security in old age for the whole population of the country. Our system of veterans' pensions, of course, has practically no resemblance to a retirement system in the accepted sense.

The Civil Service Retirement Act of May 1920 was the first legislation in the field of retirement to be adopted by Congress. Numerous amendments to the 1920 act have

greatly extended the coverage of the civil service retirement system, which at present applies to "all officers and employees in or under the executive, judicial, and legislative branches of the United States Government and to all officers and employees of the municipal Government of the District of Columbia, except elective officers of the executive branch of the Government."⁶ Heads of executive departments were not included until 1946, and in the same year Members of Congress were made eligible to join the system at their option. The Canal Zone Retirement Act of 1931, the Alaska Railroad Retirement Act of 1936, and the Panama Canal Construction Annuity Act of 1944 are typical of legislation setting up special retirement systems for small groups of employees engaged in a particular type of Government employment. But here, too, a trend toward consolidation is suggested by the fact that two of these systems, the Canal Zone and Alaska Railroad retirement systems, were merged with the civil-service system in 1949.⁷

The Railroad Retirement Act, originally enacted in 1935 and substantially broadened in 1937 and 1946, created an insurance fund to provide pensions and annuities for aged and disabled railroad employees. The system gives coverage to employees of railroad industry of the United States as a functional economic unit, and thus includes employees of carriers by railroad, express, and sleeping-car operations, affiliated companies and joint associations directly connected with the industry, and employees of national railway labor organizations and employee representatives.

The following comparison of these three major Federal retirement programs suggests the types of protection which are offered:

	Old-age and survivors insurance	Railroad retirement system	Civil-service retirement system
Insured status	40 quarters (10 years) in covered employment, or half as many quarters (but not less than 6) since 1950 or twenty-first birthday if it was later, before the quarter in which worker dies, retires, or reaches age 65. Earnings must total \$50 in a quarter (or \$100 for self-employed).	40 quarters (10 years) in covered employment, or half as many quarters (but not less than 6) since 1936 or twenty-first birthday if it was later, before the quarter in which worker dies, retires, or reaches age 65. Earnings must total \$50 in a quarter.	After 5 years of service workers may, on withdrawing from civil service, either receive refund of contributions with interest or be entitled to annuity at age 62. After over 20 years of service, eligible for annuity at age 62 but no refunds available.
Retirement age.....	Age 65.	Age 65, or age 60 with 30 years service.....	Age 62 with 15 years of service; permissible at age 60 with 30 years of service, compulsory at age 70 with 15 years of service.
Contributions.....	1½ percent each by employer and employee (except 2½ percent for self-employed) on income or wages up to \$3,600 a year, increasing gradually to 3½ percent each in 1970.	6 percent each by employer and employee on income or wages up to \$3,600 a year, to increase to 6½ percent each after 1951.	6 percent of total wages by employees, the Government's contribution made by annual appropriation.
Worker's benefits.....	50 percent of the first \$100 of the average monthly wage plus 15 percent of the next \$200.	Years of service times the sum of 2.4 percent of the first \$50 of the average monthly wage, 1.8 percent of the next \$100, and 1.2 percent of the next \$150.	Years of service times the greater of 1 percent plus \$25 on salaries up to \$4,000 (or 1½ percent of salaries above that figure) but not to exceed 80 percent of the average for those years. "Salary" is computed as the employee's highest 5-year average basic salary.
Wife's benefit.....	At age 65, half of worker's benefit.....	None.	At age 60, half of worker's benefit if worker elects a reduced annuity for this purpose. None.
Dependent children under 18.....	Half of worker's benefit.	None.	At age 60, half of worker's annuity if caring for their child under 18.
Widow or widower.....	At age 65—or if their children under 18 are in the home—¾ of worker's benefit.	Railroad and social security earnings combined to give ¾ of basic amount at age 65, or if their children under 18 are in the home, Half of the basic amount of worker's benefit.	Least of (1) 25 percent of worker's benefit (2) \$300, or (3) amount obtained by dividing \$600 by the number of surviving children.
Surviving children under 18	¾ of worker's benefit for the first child and if 1 child. If more than 1, each child gets ½ of the worker's benefit plus ¼ of that benefit divided by the number of entitled children.		
Total and permanent disability.....	None.....	Payable at age 60 or after 20 years of service if disabled for regular railroad work or at age 60 or after 10 years if totally disabled.	Payable after 5 years of Government service.

III. STATE AND LOCAL GOVERNMENTS

During the early 1900's some States and municipalities began to establish funds to

¹ Social Security Bulletin, vol. 14 (Washington, Government Printing Office, 1951), June 1951: p. 19.

² Totals compiled from Government Insurance in the United States, pp. 86-95. But indicative of the incompleteness of these data is the fact that no totals for persons on retirement appear for the States of Indiana, Michigan, Nevada, New Hampshire, New York, North Dakota, Oregon, Rhode Island, South Carolina, Tennessee, and Wisconsin, although other features of these plans are described.

provide retirement income at a specified age for certain of their employees, especially

³ Other smaller retirement programs for special groups of Federal employees, not discussed here in detail should also be noted. Programs which operate on a contributory basis are those set up for employees in Foreign Service. The Federal Reserve Bank, the Board of Governors of the Federal Reserve Banks, Tennessee Valley Authority, Office of the Comptroller of the Currency, civilian teachers at the Naval Academy and the Panama Canal Construction Co. Non-contributory retirement systems are maintained for employees of the Army, Navy, Marine Corps, Coast and Geodetic Survey, Coast Guard,

public school teachers. During the past two decades their growth has been particularly

Army Nurse Corps, Women's Medical Specialist Corps, Navy Nurse Corps, Public Health Service, Federal Judiciary, Judiciary of Territories and Possessions, and veterans of wars and peacetime service. See Outline of Federal Retirement Systems, Federal Security Agency, Social Security Administration, Bureau of Research and Statistics, Bureau Report No. 15 (Washington, Government Printing Office, 1948), 144 pages.

⁴ Section 3 (a), Civil Service Retirement Act, as amended to February 28, 1948.

⁵ Act of July 21, 1949, Public Law 180, 81st Cong.

rapid and today every State operates at least one retirement program and most States operate more than one. The latest complete compilation of State retirement systems was made by the United States Bureau of the Census in 1941, and showed 117 State-administered retirement programs covering almost a million employees.¹² It seems safe to assume that a corresponding study anticipated as part of 1950 census statistics will show that the number of persons so covered will have more than doubled.¹³

In recent years the tendency has been toward State-wide plans for all the public employees within the State, including the employees of all its political subdivisions. By the end of 1949, 33 States had provided a State-wide system which provided for general employees of local governments.¹⁴ In some States the same system provides for all eligible classes of employees, while in others two or three systems operate on a State-wide basis. Various plans are used for the inclusion of municipalities, the prevailing pattern being voluntary participation by action of the governing body of the municipality. In Ohio, however, participation for all but specifically excepted municipalities and occupations is mandatory. Nevada and Colorado include local units unless they elect out within a certain period. Illinois places the option with the employees by requiring that a petition be signed by a specified number of the prospective beneficiaries and, if a specified number so elects, the voters of the municipality must also give their approval before coverage is completed. Wisconsin and Pennsylvania provide for participation either by action of the appropriate legislative body or by a referendum among the electorate.

State-wide plans in existence at the end of 1949 can be divided into six general groups. Listed to show the effected States, with the date of each plan's origin shown in parentheses, they are as follows:¹⁵

1. Six States had a single State system for teachers, State employees, and general local government employees as follows: Colorado (1931), Iowa (1945), Maine (1942), Oregon (1945), South Carolina (1945), and Virginia (1942).

2. Eighteen States had a single State system covering State and general local government employees as follows: Alabama (1945), Arizona (1948), California (1931), Georgia (1949), Indiana (1945), Maryland (1941), Montana (1945), Nevada (1947), New Jersey (1922), New Hampshire (1945), New Mexico (1947), New York (1920), North Dakota (1947), Ohio (1945), Tennessee (1947), Utah (1947), Washington (1947), and Wisconsin (1943).

¹² Bureau of the Census, U. S. Department of Commerce, Retirement Systems for State and Local Government Employees, 1941. Special study No. 17, Washington, D. C., 1943, pp. 11, 82.

¹³ A similar study is now in the planning stage with the prospect that questionnaires will be sent out to appropriate units in the spring of 1952, and final reports will be available sometime in 1953.

¹⁴ The 15 States without such plans were *Arkansas, Delaware, *Idaho, Kansas, *Kentucky, Louisiana, Massachusetts, Mississippi, Missouri, *Oklahoma, Rhode Island, South Dakota, *Utah, *West Virginia, and Wyoming. The 6 starred States are among the 12 which have approved plans for covering completed approved plans for coverage of uncovered employees of State and local governments under OASI since September 1950, when such coverage became available.

¹⁵ Based on a memorandum of June 20, 1950, by Weltha Van Eenam, Office of the Actuary, Social Security Administration.

3. Three States had a single system covering State employees and teachers, as follows: Delaware (1945), North Carolina (1941), and Rhode Island (1936).

4. Nine States had a separate system for general local government employees as follows: Connecticut (1945), Florida (1945), Illinois (1939), Michigan (1945), Minnesota (1929), Nebraska (1945), North Carolina (1943), Pennsylvania (1943), and Texas (1947). The Florida plan covers county employees only, and the Nebraska plan covers municipal employees only.

5. Eleven States had separate systems for State employees, as follows: Connecticut (1939), Florida (1945), Illinois (1943), Louisiana (1946), Massachusetts (1911), Michigan (1943), Minnesota (1929), Pennsylvania (1924), Texas (1947), Vermont (1943), and Wyoming (1949).

6. Thirty-nine States had separate systems for teachers. The nine States not having separate systems for teachers are listed in (1) and (3) above.

As has been noted, the employees of State and local governments, including publicly supported educational institutions, became eligible for coverage under OASI under the 1950 amendments to the Social Security Act, but only if they are in positions not included under existing retirement systems established by States or their political subdivisions.¹⁶ The sentence defining retirement systems in the act reads: "The term 'retirement system' means a pension, annuity, retirement, or similar fund or system established by a State or by a political subdivision thereof," and the amount of coverage which will become available thus depends upon the interpretation of this sentence. Present indications are that a strict construction will be placed upon the intent of this legislation, and OASI coverage will be largely limited to otherwise uncovered public employees.¹⁷

¹⁶ The House bill had provided for voluntary coverage of employees already covered by State and local systems, provided that two-thirds of the employees elected to be covered under OASI as well as under the State systems. In the Senate, however, this version was modified and coverage was limited to employees who lacked any coverage.

¹⁷ An example of the type of problem thus presented appears in the case of employees of higher institutions of learning who are insured for retirement through the Teachers Insurance and Annuity Association of America (TIAA). TIAA issues individual contracts directly to participating faculty members and has no contractual relationship with the employing institutions whose only function is to remit premium payments. State and municipal institutions have used a number of methods for enrolling faculty members in the TIAA system. Sometimes a State university has a considerable degree of autonomy, in other cases enabling legislation has been required before the institution could participate, in still others, the institution makes no contributions of its own but only has required its participating faculty members to contribute a percentage of their salary. The argument has been made that TIAA is in itself a system rather than merely a funding agency for a number of self-contained retirement plans, especially because it has provided for annuity contracts fully vested in each individual participant, so that a faculty member could transfer from one institution to another without losing his accrued benefits. The argument follows that faculty members insured under TIAA should, therefore, be eligible for OASI coverage, and that exclusive factors apply only where a government has an established system for the public administration of retirement benefits. But the prospect is that all TIAA plans in State and local units will be excluded.

Coverage of eligible employees of State and local governments (employees other than those covered by a retirement system) is provided on a voluntary basis by means of Federal-State agreements entered into between the States and the Federal Security Administrator.¹⁸ As of August 1951, 17 States had effected such agreements and 6 other States were negotiating for such coverage. States which had completed agreements were: Oklahoma (December 14, 1950), Idaho (December 28, 1950), Arkansas (February 5, 1951), West Virginia (February 26, 1951), California (March 9, 1951), Utah (April 2, 1951), Kentucky (April 27, 1951), Wisconsin (June 13, 1951), Nebraska (June 20, 1951), Arizona (June 29, 1951), Alabama (July 2, 1951), Missouri (July 11, 1951), North Carolina (July 13, 1951), Kansas (July 24, 1951), South Dakota (July 24, 1951), Washington (July 31, 1951), and Tennessee (August 13, 1951). No figures are as yet available as to the exact number of employees who have obtained coverage by this method.

Most of the State retirement programs are on a joint contributory basis, and in the majority of the programs employer contributions are equal to those of the employee. Two principal methods are used to determine the amount of the employee contributions. (1) employees, regardless of their age on entering the system, contribute a specified percentage of their salary through payroll deduction, and (2) employees contribute an amount actuarially determined to assure them of a specified amount at retirement. In the 32-State plans studied by the Association of Casualty and Surety Companies in 1950, the predominating percentage for contributions was 5 percent of salary for the 26 plans which specified a percentage. The other contribution rates were less than 5 percent. In five plans the rates varied with age, occupation, or length of service, and four had different rates for men and women. Ten named 70 as the age for compulsory retirement, seven called for compulsory retirement at 65, five place it at age 60, and another five made no provision for compulsory retirement at any age.¹⁹

The types of benefits show a degree of similarity, and a majority of the State programs provided disability and death benefits as well as retirement payments. Most disability benefits are geared to the amount of service and the salary earned and usually no limit is placed upon the length of time during which such payments can be made. The amount of the retirement benefits varies more widely, especially as it is influenced by prevailing wages within the different States. Usually the retirement benefit consists of an annuity based on the employee's contribution, plus a pension paid by the State and computed according to the employee's salary. Fifteen of the 32 plans studied by the Association of Casualty and Surety Companies contained provisions for benefits for survivors, but usually they were optional and depended upon reduced benefits for the annuitant during his or her lifetime.²⁰ In general, it may be said that State retirement plans are not as fully protective of survivors and dependents as is the OASI system, but

¹⁸ For a description of the advantages to States in completing such an agreement see "Social Security and a Kentucky Retirement Plan," Information Bulletin No. 6, Legislative Research Commission, Commonwealth of Kentucky (Frankfort, Ky., 1951). For States which already had rather complete retirement systems, however, these advantages are restricted by the provision which exclude coverage under OASI for persons already protected by retirement systems.

¹⁹ Government Insurance in the United States, pp. 86-95.

²⁰ Ibid.

that they are usually more protective than OASI in that they include nonoccupational disability—a protection not included in OASI.

Teachers systems: Retirement systems for teachers are among the oldest of public retirement systems. As early as 1869 small voluntary associations were established in some large cities and appropriation of public funds for this purpose began about 1895. In the beginning they were usually privately financed mutual benefit plans. Then for a time the trend was toward plans fully financed by public funds. Today most plans provide for contributions from both members of the system and public funds. By 1946, all elementary and secondary school teachers were covered, except for the few who chose to be excluded when a system went into effect. Seventeen of the State systems existing today were established between 1921 and 1939. But since 1940 extensive revisions have appeared with the result that 29 of the existing State and territorial retirement systems have been established in their present patterns since that date.¹

Data assembled in a recent comprehensive study of 72 major public school retirement systems gives a comprehensive picture of the status of these systems in 1950.² The study analyzes the 52 retirement laws operating in the States and Territories and in the 20 cities with the largest local retirement plans.³ The trend toward broader coverage provisions is suggested by the fact that only five of the State and three of the local systems analyzed are limited to instructional staffs which were the only beneficiaries of earlier plans. Practically all of the regular public school employees, including the maintenance and custodial staff, are members of 24 State and 11 local systems, and all of the others cover at least some other public school employees.⁴ A total fixed benefit is provided in 20 State and 13 local systems, while in 31 State and 9 local systems the allowance is of the money-purchase type, made up of an annuity (financed from employee contributions) and a pension (from public funds) separately computed, but paid as a single amount.⁵ Most systems require 30 or 35 years of service before the member is eligible to retire, or else the qualifications for retirement are based on an age which, for most members, would represent a comparable term of service. Public contributions are fixed by law in 27 State 11 local systems, while the actuary fixes the amount required from public funds in 22 State and 11 local systems.⁶

¹ Permanent disability retirement allowances are provided by all but one (Iowa) of

the 72 systems. Usually this allowance is computed in proportion to the normal retirement allowance, and the same formula is used. Only three systems (Illinois, Washington, and Milwaukee) provided benefits for temporary disability.⁷ Except for the two noncontributory plans (Delaware and New Mexico), all systems also pay a death benefit to the beneficiary of the estate of a member who dies before retirement, and only 3 States and 2 local systems fail to provide some form of benefit to the survivors of deceased retired members, usually in the form of a return of the member's accumulated contributions.⁸ Again, however, these survivors' benefits are at the member's option, and the allowance paid to the retired member during life is reduced so that the total does not exceed the actuarial value of the reserves due the member.⁹

Most systems place a maximum upon the retirement allowance for the purpose of limiting the obligations for appropriations from public funds. Thirteen State and four local plans set this maximum in terms of an amount of money, ranging from \$720 a year (Puerto Rico) to \$2,800 a year (Illinois). Four State and three local plans set this maximum in accord with the final average salary—ranging from 50 percent (Virginia and Puerto Rico and Boston) to 80 percent (Massachusetts). Other States limit maximums by using salary ceilings in the benefit formula or in the contribution rate.¹⁰ In 18 State and 8 local systems a minimum applies to the total allowance, ranging from a high of \$1,200 (New Mexico and Pennsylvania) to a low of \$1.25 for each year of services (Des Moines, Iowa).¹¹ The present average retirement allowance paid to retired teachers is close to \$1,000 a year.¹²

Retirement boards separately established for that purpose are the administrative agency in all retirement systems except those existing in six States and three local plans.¹³

IV. CONCLUSION

The major shift in public retirement programs has been away from the bounty or gift philosophy which prompted early plans, toward a career concept which sees a sound and attractive retirement plan as a means of holding trained and experienced personnel on the job. This shift has had a marked effect on public systems in all their aspects. One result in the trend toward coverage of all employees, including temporary, provisional and part-time workers, as well as people in elective and appointive jobs. At the same time, benefit provisions have been broadened to include payments for superannuation, disability, and death. Currently there is increasing emphasis upon the inclusion of more adequate provisions for dependents. The practice of relating benefits to compensation during working years by means of formal and compulsory contributions and established benefit formulas has been accepted almost universally.

⁵ Ibid., p. 143.

⁶ Ibid., p. 175.

⁷ The exceptions are Alaska and Delaware, where the Territorial State treasurer is designated, Iowa (Employment Security Commission), Nebraska (State board of educational lands and funds), South Carolina (State board of budget and control), Wyoming (State board of education), District of Columbia (District Commissioners), and Chicago and Omaha (local school boards).

The early method of informal gratuities, at the employer's expense, has also given way to funded pension systems, financed on a contributory basis with employees sharing the cost. Employee contributions, it is held, help to assure permanence for the plan, keep the employees alert to safeguard their rights and credits, and make more adequate benefits possible. The trend toward funded pension systems and increased rates of contribution in public systems has persisted in spite of the fact that emphasis upon full-funded or full-reserve methods is less essential than with private plans for the reason that governments have a perpetual life. On the other hand, government plans are usually subject to constitutional limitations which have the effect of limiting the vested rights growing out of contributions. The privilege of an employee to receive a refund of contributions upon separation from service without the right to a retirement annuity is, however, basic to the philosophy of a contributory retirement plan and now constitutes a standard provision.

The most marked development in recent years has been the expansion of State-wide plans which make it possible for small local governments to protect their employees on an equitable and financially sound basis; promote continuity of coverage for employees transferring from one unit to another within a State; make for standardization of rates of benefit, amounts of contribution and qualifying conditions; and relieve small units of the responsibility and expense of creating and maintaining a separate organization.

Perhaps the most serious problem which has arisen with the development of formal plans grows out of inflation. Proposals to increase pensions of retired employees because of increases in the cost of living clearly affect the stability of a plan's financial structure. Some systems have made voluntary increases through special allocations or appropriations for this specified purpose. Although questions have been raised about the propriety of such increases, they have been held justifiable because they do not directly affect the financial structure of the retirement system or the equities of present participants.

In broad review, current developments reflect a well-defined trend toward all-inclusive coverage for public employees, broader protection, an increase in provisions for the vesting of rights in one form or another, and greater emphasis on the concept that pensions are a deferred wage. At the same time, there is abundant evidence of a better understanding of the true meaning of public pensions, their aims, purposes, and objectives, and their long-term cost implications.

Post Mortems Cannot Raise the Dead

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article by Anne O'Hare McCormick from the New York Times of October 3, 1951:

POST MORTEM CAN NOT RAISE THE DEAD

(By Anne O'Hare McCormick)

The autopsy on our China policy being conducted by the Senate Internal Security Subcommittee is an investigation of the state of mind of yesterday in the context of today. There are times when such exercises are

¹ "Teacher Retirement Plans," in Encyclopedia of Educational Research (Walter S. Monroe, ed.), rev. ed., New York, the Macmillan Co., 1950, pp. 1440-1441.

² The Territories are Alaska, Hawaii, and Puerto Rico. The 20 cities are Atlanta, Baltimore, Boston, Chicago, Denver, Des Moines, Detroit, Kansas City, District of Columbia, Los Angeles, Milwaukee, Minneapolis, New Orleans, New York City, Omaha, Portland, St. Louis, St. Paul, San Diego, and San Francisco. A number of the local plans are larger than some of the State plans, in terms of number of members and ledger assets.

⁶ Ibid., pp. 143-144.

highly useful—on the off chance that nations may learn from experience. But just now exhumations of past mistakes of judgment on the part of present policy-makers seem to be used mainly as a stick for the political "outs" to belabor the "ins." The stick stirs up a lot of mud that spatters nearly everybody who had anything to do with China up to the year before last, but so far it has only failed at a policy that cannot be beaten any dealer than it is.

Certainly the Communist conquest of China is a great historic vicissitude that rocked this country to the depths because most Americans imagined that it was in our power to prevent it. Perhaps it was, looking back from here it is hard to justify the haze of illusion in which we operated in China. The march of advancing Communist armies, the intrigues in Chungking, the quarrels among our official advisers raised a cloud of dust that has not settled yet, that probably will not settle for generations to come. The little partisan post mortem we are holding now will throw no light on the assessment that will take place when our decisions are reviewed in the supreme court of time.

Meantime looking backward is a waste of energy, and crying over spilled milk a waste of tears. If this were a reflective period, when men and nations could ponder in peace the lessons of history, there might be some value in political inquests. In such a period, politicians might safely spend 1 year in 4 in making mud balls out of campaign issues and slinging them about with boyish abandon.

THE VEIN OF UNREALISM

Unfortunately this is a moment when the parties cannot enjoy the luxury of blaming one another for past blunders. Maybe our present troubles are a consequence of inexcusable miscalculations, but whatever the cause, it is conditions as they are that the Government and people of the United States have to face and grapple with. If one were probing our past policy in Asia in a truly objective spirit, trying to find why, or where, or even if, we failed, the first question to ask is: Who was absolutely right on China? Who among our leaders knew enough to deal with the forces at work in the amorphous world beyond the Pacific?

In the chapter on America and the Orient in his too sketchy but thought-provoking book on American Diplomacy, George Kennan remarks that the heart of the problem of the policy makers of Washington in the Far East "lies, and will always lie, in the shaping and conduct of policy for areas about which they cannot be expert or learned." This lack of knowledge, combined as it often is with a feeling that people entirely different from ourselves in mentality, environment, tradition, and circumstances, must somehow, if they are sound, think as we do, adopt our ways and yearn for our form of government, explains why our friendliest allies disappoint us and why our attitude bewilders them. It explains, too, the vein of unrealism which in Kennan's view runs through 50 years of American foreign policy and is now, because of our undisputed leadership, a danger to ourselves and the free world which has to follow us.

THE NATURE OF MISTAKES

In a passage very pertinent to the current inquiry into Asian policy he writes: "The march of events in the Far East in the decades prior to World War II was a vast and turgid process, involving immensely powerful currents of human affairs over which we Americans had little control or influence. It is easy to overrate the part we played, or the part we could have played, in the process. It is also easy to exaggerate the latitude our statesmen enjoyed . . . for none of us is fully able to put himself in

their place, and it is not important to us to pass judgment on them as individuals.

"Least of all," he goes on, "can I point to any single act of American policy and say: Here was the thing that did it—this was the thing that tipped the scales of the future. In the fabric of human events one thing leads to another. Every mistake is in a sense the product of all the mistakes that have gone before it, from which fact it derives a sort of cosmic forgiveness; and at the same time every mistake is in a sense the determinant of all the mistakes of the future, from which it derives a sort of cosmic unforgiveness."

To avoid more mistakes is now our urgent business. Correspondence that comes to this writer suggests that many thoughtful Americans are troubled by the tendency to dwell on what we did and what we left undone in China and to judge what people thought yesterday by the light of the knowledge and experience of today. These correspondents feel that this is a time for action, for going forward instead of harking back, like Lot's wife, to burned bridges that cannot be recrossed. The margin for error grows narrower as the days go by, and all our powers of thought, concentration, alertness are needed to walk the dangerous path ahead.

The Watershed Approach to Soil and Water Conservation—Part I

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by H. H. Bennett, Chief, United States Soil Conservation Service, before the Watershed development conference, Charleston, W. Va., October 19, 1950:

THE WATERSHED APPROACH TO SOIL AND WATER CONSERVATION

I am glad to take part in this watershed-development conference. To my way of thinking, the conservation of our national resources is the Nation's most important problem.

It is vitally necessary to defend ourselves from military aggression, but let's never forget that without an adequate supply of various resources, particularly productive land, we will not be able to defend ourselves. Our food comes largely from the soil, and most of our clothing, all of our wood, vegetable oils, tobacco, leather, and many other raw products of industry.

Productive land, then, is an indispensable part of our first line of national defense.

But land cannot be productive without water; so water, also, is a vital part of our first line of national defense and must be conserved and prudently used all over the country. Too much water left uncontrolled, however, is a land-impoverishing agency. So, it is of the utmost importance to control its application to the land in order to prevent excessive erosion and waterlogging.

The problem of soil and water conservation and wise use is not a problem that can wait until farmers solve it by any trial-and-error method, for that might be too late. This is an urgent problem which demands the best efforts of the Nation's scientists and of all who use the land for agricultural purposes. The understanding cooperation and active

participation in its solution by industrial and all other groups in our society will be helpful, even indispensable.

LAND AND WATER PROBLEMS EVERYBODY'S CONCERN

I realize that there doubtless are those who still think—if they think about the matter at all—that the management of farm and pasture lands and our wood lands is wholly the concern of those who own or occupy such lands, and that only these owners and occupiers have to suffer for the mismanagement of land, economically or otherwise. For too long—until very recent years, in fact—our public thinking followed such a pattern very generally. And it is quite understandable how the public has been slow in visualizing this new plan of concerted attack against such matters of public concern as soil erosion, siltation, and floods which are inseparably tied in with the impoverishment of the land and water pollution.

Damaged agricultural land and pollution of our water take heavy toll of municipal, industrial, agricultural, and other urban property. Happily, we now are tackling this problem in our flood-control work at the very beginning—at the upper ends of the small tributary streams where silt and floodwaters start on their destructive journey down to the trunk stream and the ocean. For some time we have been successfully attacking the erosion problem everywhere—from the highest lying fields on down to the lowest fields.

One of the best assurances that we are going to succeed in alleviating the flood and pollution problems is to be found in the initiative taken in that direction by such responsible interests as those represented in the watershed development conference sponsored by the West Virginia Chamber of Commerce in cooperation with the various agricultural, forestry, industrial, urban, wildlife, and recreation groups having an interest and concern in the complete resource development of our watersheds. This meeting of minds on so vital a problem as this confirms what I have said many times in talking to similar groups, like the Interstate Commission on the Potomac River Basin.

We have now entered the soil conservation era, which, for the first time finds conservation of land, water, forest, grass, cultivated crops, and wildlife intimately tied together and coordinated on the basis of land capability and need. This is a basic tenet of modern soil conservation. Profitable industries and thriving municipalities, and the health and welfare of all the people depend in very large measure on this scientific and practical conservation of our basic life-giving resources of land and water.

PUBLIC THINKING IS BACK OF SOIL CONSERVATION

We now can say that national policy and public thinking, with few exceptions, are agreed on the utter necessity of conserving our interlocking natural resources. Research, education, surveys, and the successful application of conservation measures have brought us to a new concept of the importance of land and, also, of the need for keeping the land permanently productive.

Nature's laws were so contrived that land, water, plants, and animals all should exist in harmony and interdependence for perpetual productiveness of these essential resources. To safeguard the land, it must be treated and used according to capability and need. This accords with nature's law, which man too often has overlooked. This concept is of the order of importance with the discovery of the utility of the wheel and fire.

People using land and water and those affected by their use are being confronted daily with new and complex water problems that are related to the land. The flow and

quality of water in surface streams, floods, recharge of ground water, reservoir storage, waterlogging of lands, erosion, sedimentation, and the soil moisture available for plant growth all are influenced materially by the way we use and manage our land resources. But, in most instances, individual land-owners and water users have little or no control over the sources of these problems, and hence are unable to deal with them effectively alone. As a result, local agencies and groups like your own are concerning themselves more and more in the solution of these problems.

SOIL CONSERVATION SERVICE EMPHASIS ON WATER, WATERSHEDS

The Soil Conservation Service which I represent, in fulfilling its authorized responsibilities, is committed on its part to doing everything possible within available resources to providing assistance needed and requested in dealing with this big problem, in natural watersheds or elsewhere. Thus the water conservation activities of the Service are continuously geared to the needs of the land and water users and are coordinated with the activities of other agencies concerned with land and water resources. To this end, we define water conservation—which always has been part and parcel of soil conservation in our Service planning, operations, and research—this way:

Water conservation is the physical control, protection, management, and prudent use of water resources in such a way as to maintain crop, grazing, and forest lands, vegetal cover, and wildlife for their maximum sustained benefits to people, agriculture, industry, commerce, and other segments of the national economy.

From the start of the Nation-wide program of soil and water conservation, in 1933, the Soil Conservation Service has stressed the importance of the watershed approach. The Service began its operation in that year, on a watershed basis, with the idea that soil conservation was intimately tied in with flood control and the filling of streams, lakes, reservoirs, and ditches with the clogging products of erosion. Our first projects were all on watersheds as nearly as possible—and it was found to be possible in most instances.

Some of our principal projects in the beginning were the watershed projects like those on Banister River, Va.; Brown Creek, N. C.; South Tyger River, S. C.; Okatibbee Creek, Miss.; Elm Creek, Tex.; Green Creek, Tex.; Tarkio River, Mo.-Iowa; and Coon Creek, Wis. The work in these and other watersheds had a pronounced effect on reduction of the silt content of the water carried by them, and also on damage resulting from inundation of flood waters.

For the past several years, virtually all of the Soil Conservation Service's technical and certain other assistance, including our work in authorized flood control projects, has been made available through farmer-organized and farmer-manager soil conservation districts, established under State enabling laws. Here in West Virginia, the watershed idea has carried through in the organization and operation of the districts, a number of which have been named after the watersheds in which they lie, such as the West Fork, Little Kanawha, Potomac Valley, Monongahela, and so on.

SOIL CONSERVATION DISTRICT WORK BENEFITS ALL FARMS, OTHER WATER USERS

The watershed approach is the most desirable pattern, because conservation work on one farm is planned and carried out with an eye to the needs of the next farm and to farms downstream. This viewpoint is essential, for the process of erosion has no respect for boundary lines. Gullies don't stop at fence lines, farm lines, or even county

or State lines. Neither do dust storms nor floods. And the costly process of sedimentation never concerns itself with the interests of water users dependent on unprotected reservoirs. A main objective of all this conservation work in a soil conservation district or group of districts, then, is to retard the discharge of water from upstream areas—and, moreover, over 75 percent of the Nation's total watershed flood damage occurs in these upstream watersheds.

And while we are thus retarding runoff, we are at the same time, and by the same means, reducing the effect of erosion; and we are storing in the soil for later use the water that may mean a good crop instead of a poor one or a failure. Also, we are, by the same operation, reducing the rate of sedimentation of stream channels, ditches, reservoirs, and productive bottomlands. In our normal conservation work, the objective has been to keep agricultural land permanently productive while in use. In flood-control operations, more emphasis is put on the task of slowing down runoff. So, in the complete watershed program, we give special attention to measures, including engineering, that help to hold back water and slow down its flow.

PUBLIC BENEFIT AND RESPONSIBILITY FOR SHARING COSTS

Let us suppose, for illustration, that 50 to 80 percent of the landowners of a small watershed have treated their land with a coordinate soil conservation program. They have terraced their farmlands and are tilling their fields on the contour. They have adopted soil-protecting and soil-improving rotations, and they are using all the other measures that their land needs for the maintenance of its productivity, permanently. There still, however, would be damaging runoff and sediment loss (water-transported erosion material) from the area. The sediment mostly comes from areas of unprotected land, treatment of some of which lies beyond the means of the individuals or even groups of landowners. To retard this runoff and hold back the sediment may require special measures which may offer little benefit to the farmer on whose land they are built, but which are of great value to other farmers and residents downstream.

Ordinary soil and water conservation measures are for the protection and improvement of the land on which they are applied, and consequently the principal benefit is received by the owner or operator of the farm on which such work is done. Therefore, it is only proper that the farmer should bear the principal cost. On the other hand, the special measures and structures used in aid of flood control are designed to benefit bottomlands along creeks and small streams as well as the major tributaries and to keep sediment out of stream channels and reservoirs. Because these are public benefits, the public—through community groups or county, State, and Federal Governments—should bear their proportionate part of the costs, so long as they are justified by the benefits to be expected.

HISTORY OF UPSTREAM FLOOD CONTROL

The 1935 Soil Conservation Act (Public No. 46, 74th Cong.), establishing the Soil Conservation Service in the Department of Agriculture, declares it to be the policy of Congress to provide permanently for the prevention and control of soil erosion and, among other things, "thereby to preserve natural resources, control floods, prevent impairment of reservoirs, and maintain the navigability of rivers and harbors." It also is worth noting when and how the national flood-control bill was first changed to add on the upstream phase of the work to the main-channel program of major engineering operations, which historically have been the responsibility of the Corps of Army Engineers,

That was about the middle of the 1930's, when the Secretary of Agriculture, at my suggestion, asked to make the soil and water conservation efforts of the Department of Agriculture a supplemental part of the flood-control problems. After considerable discussion the suggestion was accepted. This resulted in what seems to me to be a fitting together of the two phases of a comprehensive, coordinated program of flood control and prevention. The Soil Conservation Service and the Forest Service have been responsible for the Department's work in this program, cooperating with the Army engineers.

The Watershed Approach to Soil and Water Conservation—Part II

EXTENSION OF REMARKS OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave granted to extend my remarks in the Record, I include the following address by H. H. Bennett, Chief, United States Soil Conservation Service, before the Watershed Development Conference, Charleston, W. Va., October 19, 1950:

CONGRESSIONAL AUTHORIZATION OF FLOOD-CONTROL PROJECTS

Congress has authorized more than 600 watersheds for preliminary flood-control examination and survey, to determine whether the benefits to be derived would justify the cost. The Department of Agriculture has completed preliminary examinations on approximately 160 watersheds or portions of watersheds, and it has finished 18 survey reports. Congress has authorized programs of watershed improvement on 11 watersheds in different parts of the country under the Flood Control Act of December 22, 1944—of which the Potomac River drainage basin is one.

Congress, as you know, recently authorized a review of the Potomac survey report, as requested by local people, to determine the need for possible modification and, in light of changing conditions since the original survey, to see if its recommendations are in line, for example, with the guiding requirement that works of improvement expenditures have to be commensurate with the benefits to be gained in reducing potential flood damages. Meanwhile, of course, we are going ahead in soil conservation district farm planning and treatment in Potomac sub-watersheds with such water retardation and other conservation measures originally recommended as pasture development and improvement, contour furrowing, fencing woodlots, getting better cover on the land, etc. My understanding is that the importance of this work is pretty well understood and that the farmers are going ahead with it, but that this still doesn't take care of such needs, for example, as larger ponds with larger freeboard for floodwater detention than farmers themselves can pay for, other floodwater retarding and sediment-control structures, channel improvement, etc.

As I wrote Director Edwin R. Cotton, of the Interstate Commission on the Potomac River Basin, just last month, in comment on the United States Public Health Service's Potomac Report preliminary draft: "Over and above the land treatment requirement

(planned, completed, and remaining to be done), certain flood control and water conservation measures are needed to complete the conservation program in this area. Many of these measures are being planned and installed under the flood control operations carried out by the Soil Conservation Service and the Forest Service under the authority of the Flood Control Act of 1944. Such measures include upstream floodwater and sediment detention structures and debris basins, streambank protection works, and related measures."

INCREASED INTEREST IN STREAM POLLUTION

This matter of stream pollution, as you know, is receiving particularly active attention again at this time, and I am glad to note that silt is being recognized as a serious pollutant, originating in accelerated soil erosion. When we control soil erosion on the watershed, we thereby diminish the silt content of the streams, thus reducing the cost of filtering public water supplies, assuring dependable water supply for industrial uses, reducing the cost of navigation, reducing silting of reservoirs, and producing various other benefits. In fact, the only way in which water pollution from silt can be controlled effectively is by the adoption of soil and water conservation practices applied in accordance with the needs and capabilities of the land.

One good example I should like to mention of effective cooperation between city interests and soil-conservation districts in dealing with this particular watershed problem is that of the Washington Suburban Sanitary Commission's work with adjacent Maryland counties (through the Montgomery and Howard Soil-Conservation Districts). The commission has bought a tractor and other equipment, which is pooled and used on a rental basis in the districts, and it has established a nursery adjacent to Triadelphia Lake to furnish trees and other plants for conservation use in the districts. The Soil Conservation Service has made a complete survey of the watershed and now is in process of developing a complete plan for conservation treatment. About 35 percent of the planning in that watershed has been done during the last 5 years, and the Sanitary Commission is now allotting \$5,000 a year to assist the soil-conservation districts in speeding up the conservation land treatment.

WEST VIRGINIA EMERGENCY FLOOD-DAMAGE WORK

Another illustration of how soil-conservation districts are in position best to serve the public interest in dealing with watershed problems is the emergency flood-damage alleviation work done here in West Virginia on the south branch of the Potomac River and tributary streams after the \$6,000,000 flood in June 1949. As you remember, eight lives were lost and many others were endangered, and extensive property damage was done in both farm and urban areas in Pendleton, Hardy, Grant, and Hampshire Counties. This included damage to farms, city property, public utilities, roads, bridges, etc. An examination of the damaged area showed that unless emergency measures were taken to restore channels to their original capacity, slight rises in water stage would result in extensive future damages.

The local district supervisors worked closely with the Soil Conservation Service and other United States Department of Agriculture agencies, Army engineers, and other State and Federal agencies in surveying damage, indicating priority jobs, and otherwise facilitating the work, including channel excavation, stream-bank protection, and bank and dike repairs. As a result of the work performed by these agencies and the State road commission, I am told that most of the stream channels in the affected areas now have enough capacity to handle an ordinary flood, and protection from regularly recurring

floods has been given more than 7,200 acres of land, and many of the damaged areas can be reclaimed completely as a result of this work.

So it is that your soil-conservation districts, established under State law as local governmental units, properly have an important part in any permanent watershed program or emergency or other watershed undertaking such as those I have mentioned. Being the principal organizations through which soil- and water-conservation measures are being applied on the land by individual farmers the country over, it is only logical that they should also be called on to serve similarly in the installation and maintenance of conservation work by organized public and private interests, such as municipalities, highway departments, railroads, and other industries, and so on.

LOCAL PEOPLE HAVE BASIC RESPONSIBILITY FOR WATERSHED-DEVELOPMENT PROGRAMS

This is not discounting the place for an advisory group, committee, or association, the various members of which represent their respective districts and other interests, when a particular watershed undertaking may involve all or part of several soil-conservation districts. The need for the formation of such groups aimed at strengthening cooperation among groups of districts and other interests is, of course, a matter for local determination, when some specific objective in advancing soil- and water-conservation work can thus be achieved.

In any event, for a watershed-development program to operate successfully—in West Virginia or anywhere else—the basic responsibility for that program must be with the people residing in the watershed. That means a local responsible agency, such as the soil-conservation district, which is representative of the interests in the watershed and which can act to coordinate the activities and services of all agencies and interests to formulate the necessary broad, flexible program for watershed development.

The soil-conservation districts, through their elected supervisors, serving voluntarily and without pay from anybody, call on various sources of help in carrying out the district program, whether those sources be local, State, or Federal, governmental or private. One district supervisor summed up the district's advantageous position rather aptly, I thought, when he likened the position of his neighbors and himself to that on a wheel: Before they had a district, he explained, they were in effect running around the rim of a wheel in finding out about and obtaining the help they needed from various Government or other sources. But, through their soil-conservation district organization, they together became the hub of that wheel, and could reach out spoke-wise and draw together the different needed facilities without waste of time or money.

SOIL CONSERVATION DISTRICTS: ORGANIZATION AND WORK

I am convinced, as I have said many times before, that the soil-conservation districts, which have spread over the country with such astonishing rapidity since the first one was established in 1937, and through which conservation progress is steadily being speeded up, represent the greatest land movement of all history. It is through these democratic units of State government that the big soil and water conservation job on the farmlands and watersheds of America is being done—in West Virginia and throughout the Nation—in an effective and lasting manner never before accomplished anywhere, so far as known.

West Virginia is just short of the 100-percent mark from the standpoint of soil conservation district organization, with 99.6 percent of the State's farms and 99.4 percent of its farmland within the boundaries of its 14 districts. And, particularly in view

of the fact it has been just 10 years since your State's first three districts were organized in 1940, their record progress likewise is noteworthy. In looking over our records, I noticed, for example, that the approximately 18,700 district conservation farm plans prepared by district farmers and Soil Conservation Service technicians to July 1, 1950, covered nearly 2,500,000 acres, with upwards of a million acres having received combined conservation treatment. Also, that nearly 6,000,000 acres in West Virginia districts had been conservation surveyed by that date.

I won't ply you with further detailed figures on the State's district accomplishments, which you may get from your State Soil Conservation Committee, or from our State conservationist, Mr. L. L. Lough. But I do want to remind you of the wide range of conservation measures and practices being put on the land in the districts, such as: Contour farming, cover cropping, stubble-mulch tillage, contour strip cropping, pasture seeding and improvement, woodland management and tree planting, wildlife area improvement, farm ponds, terraces and diversions, and conservation farm drainage. There are others, of course.

ACCELERATED PROGRESS, NATION-WIDE

You will be interested in knowing that, Nation-wide, there are now approximately 2,280 soil-conservation districts, in the 48 States, Alaska, Hawaii, Puerto Rico, and the Virgin Islands. They cover 1,250,000,000 acres and include 80 percent of all the farms and three-fourths of all the land in farms in the United States. Our records show that while we admittedly are not moving fast enough and are still suffering heavy losses of soil and water waste, we are, nevertheless, moving ahead at an encouraging rate. It is my belief, based on experience, that we could, with adequate facilities, complete the job of applying the basic conservation measures to the land by about 1970, or around 20 years from now.

This is the sixteenth year in which the Soil Conservation Service will be able to report an accelerated rate of progress. I could cite you an imposing array of figures to illustrate this fact. In fiscal year 1942, for example, basic conservation measures were applied to 5,332,000 acres (in soil-conservation districts). In 1950, the same kind of treatment was applied to 26,071,342 acres. This was an increase of 388 percent—nearly five times as much work done—with operating facilities increased during the 8-year period by only about 50 percent. In addition to the conservation measures applied to the land, much farm planning work was done, and enough soil-conservation surveys were carried out for the preparation of a healthy backlog of necessary conservation farm plans. Nation-wide, detailed surveys had been made on 334,770,000 acres to July 1, 1950, 870,000 complete farm plans on 240,000,000 acres, and 121,000,000 acres treated with needed practices.

HOW NATURAL NEIGHBOR GROUPS HELP

It is of particular interest to this group, I believe, for me to point out that in helping the soil conservation districts to do this work—at their request—we in the Soil Conservation Service are finding the natural or neighbor group approach to be most helpful. There is, as I have already indicated, the need for speeding up the application of conservation on the land, farm by farm and watershed by watershed. There is, also, the necessity of doing the job at minimum cost. We have found that the most efficient way of carrying the soil and water conservation job beyond the planning stage is through coordinated group action of the landowners and operators—with technical, educational, and financial assistance from other sources. This is especially effective, and necessary, in dealing with problems of watershed extent. Soil-conservation districts them-

selves, of course, are basically group-action devices; and their efficiency and success in this direction have been proved over and over. Today, we are working with some 20,000 natural neighbor groups in districts in getting conservation planned and put on the land.

By the same token, in conservation watershed development, technical planning and services logically should be provided first to community groups and then to individual members of those groups, with the individual farm plans made within the framework of the sound technical watershed plan. That is to say, conservation treatment and land use are planned not only in the best interests of the individual landholder but also that of his neighbors up and down the watershed. In other words, a watershed for our purposes of consideration is not just an inanimate geographical area to be dealt with arbitrarily by sticking pins in a map. People are a part of the watershed we are talking about—and an essential part—along with animal and plant life, water, minerals; that is, all its component resources. Those people are the starting point in watershed development—and preferably "self-starters," through individual-group initiative and action.

If you read my article in the Saturday Evening Post some time back,¹ you may recall that I pointed out that: "The remedy (for our water sickness) includes the investment of billions of dollars of public and private money over a period of many years for the development, conservation, storage, purification, and distribution of all the available water resources we can find and utilize. Development of the Nation's water plant, from our watersheds all along the route to the points of use, has lagged behind the rest of our growth. We have a lot of catching up to do. In addition, the remedy involves a considerable change in the attitude of most Americans toward their natural resources, from prodigality and indifference to care and concern."

That includes people in the watersheds, and all of us.

TEAMWORK GETS WATERSHED JOB DONE

I could talk all evening about how soil-conservation district farmers and other people in different watersheds over the country have been working together with satisfaction and profit in this conservation approach to their common problems—in the Washita River watershed in south-central Oklahoma, in the Jones Creek watershed in western Iowa, and elsewhere. And I know all of you are acquainted with the watershed development programs in the Monongahela Valley in West Virginia and Pennsylvania and the Muskingum Valley in Ohio. The Soil Conservation Service is working with the cooperating soil-conservation districts in both of these programs—but I shall leave it to Walter Gumbel and Bryce Browning to tell you about the respective progress of the Monongahela and Muskingum undertakings.

All of these and the many other working examples like them go to show that programs of watershed improvement are good business for everybody—every segment of society involved, including agriculture, industry, and the professions. They likewise show that teamwork by a great many different people is essential to the success of such a program—hard work by rural and urban interests alike. Such a program, moreover, requires scientific knowledge, technical skill, and understanding cooperation. Based on painstaking scientific research and on wide practical use, the principal conservation measures must conform in their application with the principles of hydrology, engineering, agronomy, forestry, biology, and other

related fields. Under varying conditions of climate, topography, and drainage, the wrong thing done, or the right thing left undone, can do serious injury.

WATER CONSERVATION PRINCIPLES OF THE SOIL CONSERVATION SERVICE

The Soil Conservation Service will continue to work toward the sound development, conservation, wise use, management, and permanent protection of the Nation's water as well as its land—cooperating with local, State, and Federal agencies and with other organizations and groups like your own which are concerned with water and land. In working toward the permanent solution of our water problems, the Service will continue to give full consideration to all beneficial water uses, including those for recreation and wildlife. Also, the Service will continue to encourage conservation districts and other organizations to use, to the fullest extent practicable, available assistance from all public and private sources, including the natural leadership resources of land and water users.

Such are some of the principles of water conservation by which we are being guided in the Soil Conservation Service. Our men throughout the field are acquainted with all these principles, and I am sure you may count on their living up to them to the fullest possible extent. The confidence we have in the ability of the Nation to safeguard our remaining land and water resources is based, to a large degree, on continuing active cooperation with the soil conservation districts. This, plus the positive support of agencies and groups like those represented here this evening which are in a position to help, will expedite the conservation program throughout the country's watersheds and the length and breadth of the Nation.

We now have the knowledge of how to do the job; the conservation tools have been perfected and tested; and, what is more important, we have the organization and public support for doing the job. Not only is there no excuse for our not doing the job but we dare not shirk it, because our individual and national security, peace, and prosperity depend on it.

Alfred A. Tausk, Mr. Chips of Brooklyn

EXTENSION OF REMARKS OF

HON. LOUIS B. HELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. HELLER. Mr. Speaker, Brooklyn has lost a very valuable citizen and a leading educator in the death of Alfred A. Tausk, principal of Boys' High School. Although Boys' High School was closest to his heart and he devoted his greatest efforts to conducting this school in a most efficient manner, he nevertheless found the time to participate actively in community enterprises and organizations.

As a former student and graduate of Boys' High, I feel keenly the loss of Alfred A. Tausk. My first association with him dates back to 1919, when he was my Spanish teacher at Boys' High. I observed then that he took a personal and keen interest in every student, he would go out of his way to be helpful and to enable the student to make the grade.

His success as an educator was due to this personal interest he took in his stu-

dents. Even before he became principal of the school, he would not only help students master the specific subject but encouraged the boys to participate in such extra-curricular activities as debating, math teams, athletics, and so forth.

Himself a student at Boys' High at the beginning of the present century, he became a teacher in the same school in 1909, and was finally promoted to the top post of principal in 1932. Thus, he was associated with the school for nearly half a century. During the past two decades as principal, he always followed the careers of his boys, he was constantly in touch with them during their college years, and he tried to be helpful even after they had left college, which accounts for the fact that many of his boys have been successful in life.

It is not surprising, therefore, that he was often referred to as Mr. Boys High Himself. However, I prefer to call him Mr. Chips, of Brooklyn, because his activities can be compared to those of the well-known literary figure so ably characterized on the screen some years ago.

To me, Mr. Tausk was always an inspiring leader, one who was most helpful in my formative years, and one who was instrumental in guiding me along the path of life toward my cherished goals. He was the ideal type of a man, possessed of a noble character, profound learning, and an inspiring influence for everything that is good and constructive. He was devoted to his family, a great patriot of his country, and loyal to his many friends.

For many years he cherished a great dream which he had hoped would be realized during his lifetime. He talked, hoped, and prayed for a new school building to replace the old structure, but to be located in Brooklyn's Civic Center. He would contact the alumni of Boys High to seek their cooperation in this task, but unfortunately he did not live to see his dream fulfilled.

As a former student and great admirer of his, I should like to suggest that Boys High be renamed in his honor and memory as either the Alfred A. Tausk High School or Alfred A. Tausk Boys High School. Now we should see that his dream comes true.

To his fine family I want to extend my deepest sympathy in their hour of bereavement. His host of friends and his former students numbering in the many thousands will miss his gentle smile and his cheerful greeting, his fatherly guidance, and his numerous good deeds.

Tidelands Versus Marginal Sea

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. MANSFIELD. Mr. Speaker, I am inserting in the Record, the following letter on the subject entitled "Tidelands Versus Marginal Sea," which appeared

¹ Bennett, Hugh Hammond, Warning: The Water Problem Is National, Saturday Evening Post, May 13, 1950, p. 32.

in the Christian Science Monitor for October 2, 1951:

TIDELANDS VERSUS MARGINAL SEA

To the CHRISTIAN SCIENCE MONITOR:

Attorney General Daniels of Texas has presented the so-called Tidelands controversy, The Case for the States. The following is a brief statement, The Case for the Nation, and we believe answers the arguments set forth by Mr. Daniels.

The fundamental arguments Mr. Daniels presented for the States are:

1. The States have always owned the tidelands from the time the Nation was formed until the Supreme Court decisions; therefore, Congress should now return these tidelands to the States.

2. The three Supreme Court decisions have endangered State ownership of navigable inland waters, lakes and rivers, areas which the States have owned since the Union was formed.

3. The Supreme Court introduced a new doctrine in the cases of United States versus California-Texas-Louisiana which would give the National Government the right to take, without just compensation, any State property; and this doctrine is in direct conflict with the Constitution of the United States.

4. The Supreme Court has not yet decided that the United States owns the disputed area but only that it has paramount rights to and dominion over this property. Therefore Congress should settle the question and quitclaim the disputed area to the States.

5. The oil operators who went into the disputed area secured State leases and developed for oil, did so in good faith and have now spent millions of dollars to improve these leases, and these leases should not now be taken away from them.

We believe all the answers to Mr. Daniels' arguments are very simple and complete:

1. The most fundamental misrepresentation regarding this problem is the statement that the disputed area is tidelands. There is not one foot of tidelands involved. Never has the National Government claimed any part of State-owned tidelands or State-owned inland waters. The three Supreme Court decisions described the area in dispute as commencing where the tidelands end and extending oceanward. The complaints and decisions in all three cases specifically exclude tidelands from the controversy.

The use of the word "tidelands" has been retained by the oil lobby to becloud and misrepresent the real issues to Congress and the American people. There are 54 Supreme Court decisions which hold that tidelands actually belong to the States. The oil lobby group want to make it appear as if the Supreme Court had overruled all these prior decisions—taken the tidelands from the States and given them to the National Government under this new doctrine of necessity. Never has a Supreme Court decision been so completely misrepresented.

The only area in dispute is the offshore marginal sea, commencing where the tidelands end and extending oceanward. In regard to this area the Supreme Court said: "(a) The case of United States against California was the first time a question of ownership of this offshore belt had ever come before the Supreme Court; (b) neither the Original Thirteen States, nor any new State after being admitted into the Union, have ever owned or controlled this submerged offshore belt.

"California, like the Thirteen Original Colonies, never acquired ownership in the marginal sea. The claim to our 3-mile belt was first asserted by the National Government. Protection and control of the area are indeed functions of national external sovereignty (332 U. S. pp. 31-34). The marginal sea is a national, not a State concern. National interests, national responsibilities, national defense, relations with other powers,

war and peace focus there. National rights must therefore be paramount in that area" (339 U. S. 704).

If the statements (a) and (b) are true (and a rereading will convince anyone that that is exactly what the Supreme Court decided) then the States have never owned the disputed area—the Supreme Court did not take this disputed area from the States and give it to the National Government—there is no new theory or doctrine of law which the Supreme Court announced that the National Government can take property from the States without just compensation contrary to fundamental constitutional law.

2. The argument that the three Supreme Court decisions have endangered State ownership of navigable inland waters, lakes, and rivers, areas which the States have owned since the Union was formed, has caused many governors, states attorneys general, and state legislatures to support the quitclaim bills before Congress.

The President and all national officials having anything to do with the problem, have repeatedly stated that the National Government makes no claim to these State-owned areas. The disclaimer bills introduced into Congress would, if passed, settle the question forever, but the lobby group won't let any one of these disclaimer bills be passed.

It just seems impossible after reading the Supreme Court decisions that anyone should now question the United States ownership or its exclusive right to take the oil and other minerals from the marginal sea belt.

3. Have oil operators in the marginal sea been fairly dealt with? At the time the oil operators actually began taking any amount of oil from the offshore oil pools they had full notice that the United States was making claim to the offshore area. The States in granting State leases were very careful not to guarantee title to these offshore leases, and the operators took their chances with full knowledge that the States might not own this offshore area and that the State leases might be void.

These operators have made millions and millions of dollars on these State leases after paying their costs of operation, and have now succeeded in convincing Congress that they should not be liable for any oil wrongfully taken by them, and Congress will pass a bill that will relieve these operators of any obligation to repay for any oil wrongfully taken.

Many are of the opinion that a bill introduced in the Senate by Senators DOUGLAS, HILL, and others is the best solution of this controversy. Under their proposal control over the marginal sea areas would remain in the Federal Government but revenues from them would be devoted to grants-in-aid for schools in all States. Thus natural resources, which under three Supreme Court decisions belong to the Nation as a whole, would be dedicated to the welfare of the youth of the land at ocean level.

HAROLD MORGAN.

SALT LAKE CITY.

The Relief Racket Should Be Stopped

EXTENSION OF REMARKS
OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. MARTIN of Iowa. Mr. Speaker, pursuant to unanimous consent, I am including herewith an editorial written by Mr. Walter E. Williams, publisher of

the Fairfield (Iowa) Daily Ledger, entitled "The Relief Racket Should Be Stopped." The writer of this editorial has been the publisher of the Fairfield Daily Ledger for many, many years, and his high standing in Iowa journalism is well established and highly deserved. The editorial presented herewith has won widespread recognition and response:

THE RELIEF RACKET SHOULD BE STOPPED

The State of Indiana was recently cut off from the Federal Government's contribution to several of its security funds because that State makes available the names of persons who receive financial aid from such funds.

There is now a bill before Congress to establish the right of all States to enact a similar law without losing their share of Federal funds out of which such payments are made. The bill should be passed.

The original intent of the Federal regulation was to protect the indigent citizen from publicity. There was a time when this was perhaps wise. It was a kindly gesture toward the needy. But 20 years of progress in social welfare has been accompanied by many changes in the moral fiber of a good many persons. There are hundreds of thousands of people who are making a lifetime career of being on relief.

The problem is not so large in Iowa as in the more populous States. It has been shown that thousands of Illinois citizens, for instance, spend their winters in Florida while on the relief rolls of their home State. Once they get on the rolls there seems no way to get them off. The administrators of the funds seem to measure their success by the number of new names they can add to the list. In Illinois it is more profitable to go on the relief rolls than to work. Citizens of Iowa would be surprised, too, if they knew of some of the abuses in this State.

To legalize publicity for such lists is the only cure for a fine program which has grown into a racket in too many cases. Certainly no newspaper would publish the list of deserving recipients of those funds. But the knowledge that they might publish the names of those who are abusing the program would certainly bring about a tighter administration of the laws and save hundreds of millions of the taxpayers' dollars.

This I Believe

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. MANSFIELD. Mr. Speaker, I am inserting in the RECORD an article entitled "This I Believe" which appeared on the editorial page of the October issue of the Eagle, the official publication of the great American organization, the Fraternal Order of Eagles.

I know the Congress will be interested in this fine editorial because it once again typifies the outstanding Americanism of this great fraternity.

The article follows:

THIS I BELIEVE

I believe in America.

I believe in its democracy, as it has been developed and is being improved, with the Bill of Rights assuring all of us liberty under law.

I believe in representative government, the expressed will of an informed public being the only safe repository of final power.

I believe in honest public service, limiting the functions of government to those house-keeping services we cannot effectively provide for ourselves.

I believe in our free way of life, under which men can choose an occupation or build a business or belong to a labor union of their choice.

I believe in America.

I believe in its voluntary organizations where ordinary folks can join in serving their community and country.

I believe in its churches, respecting the faiths by which men work and live.

I believe in its schools, public and parochial, knowing education to be the bulwark of democratic living.

I believe in its clubs and lodges, believing such free associations of individuals to be a cement that holds a free society together.

I believe in Americans.

I believe in the folks from many lands, men of all creeds and races, who have built this Nation of nations, this people of peoples.

I believe in my fellow men, something of strength and weakness in each, fellow passengers with me on a troubled planet.

I believe in partnership with all free peoples, in our standing together in defense of the values we share.

I believe in fellowship on a people-to-people basis, including as allies and friends those who are enslaved by the tyrannies of our time.

I believe in national defense, for the world as it is, and international cooperation, for the world as it will some day be.

I believe that Soviet-directed world communism represents a military and economic and moral challenge to our civilization.

I believe that those who love liberty and hate tyranny can muster the military and economic and moral strength to repel that challenge.

I believe that the Soviet empire contains within itself the seeds of its own destruction and that, without war, we can hasten its collapse.

I believe that, war or no war, we must stand firm and united, recognizing that there is nothing to fear that is as bad as fear itself.

I believe in God Almighty, Creator of Heaven and earth, and pray for the strength that, with His blessing and on His side, we shall be adequate for whatever tomorrow may bring, joining in a world-wide Our Father, praying "lead us not into temptation, but deliver us from evil."

The Lieutenant Governor of California Replies to John B. Elliott on the Sub- ject of the Latter's Defense of the Sec- retary of State

EXTENSION OF REMARKS

OF

HON. JOHN PHILLIPS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. PHILLIPS. Mr. Speaker, the Appendix to the CONGRESSIONAL RECORD at page A5273 contained a statement by Mr. John B. Elliott, an attorney and Democratic Party leader of Los Angeles, addressed to the Honorable Good-

win Knight, the Lieutenant Governor of California, representing in effect a defense of the Secretary of State of the United States.

Under the circumstances it is only right that the original letter of the Lieutenant Governor, dated August 18, to which Mr. Elliott was replying, through the newspapers, together with Mr. Knight's release note to the press, dated August 20, should also be made a part of the same record. Under unanimous consent to extend my own remarks on this subject, I now include the release and the letter, as follows:

RELEASE FROM LT. GOV. GOODWIN KNIGHT,
LOS ANGELES, AUGUST 20

NOTE TO THE EDITOR: The attached is an open letter to John B. Elliott, Los Angeles oilman and prominent Democrat, in reply to voluminous correspondence in which he objected to charges I leveled against Dean Acheson in April of this year.

I have learned that Mr. Elliott has made our personal correspondence public in a printed booklet, so I am, therefore, releasing my answer to Mr. Elliott's letter of July 12, 1951.

I am amazed that Mr. Elliott does not seem to realize that Dean Acheson is an extremely unpopular public official. Mr. Acheson is also regarded by vast numbers of Democrats, Republicans and independents alike with tremendous doubts and misgivings. The huge American Legion, Veterans of Foreign Wars, and scores of other Nation-wide patriotic organizations who have demanded that the Secretary of State resign are not inspired by partisan politics, but by fear of Mr. Acheson and love of country.

Since Mr. Elliott has elected to be Dean Acheson's apologist, I am happy to let these facts be known.

G. K.

LOS ANGELES, CALIF., August 18, 1951.

Mr. JOHN B. ELLIOTT,
Los Angeles, Calif.

DEAR JOHN: This is in reply to your letter of July 12 and my acknowledgment of the enclosure which was a letter from Secretary of State Dean Acheson. In this letter Mr. Acheson sets forth what you and he call explicit answers to set the record straight to my letter to you of April 24, 1951. I am making this letter public as I have been advised that you have already forwarded to the newspapers and radio stations copies of our correspondence.

Mr. Acheson's memorandum is very extensive, being 10 pages of close-typed matter. He admitted that on December 23, 1949, he sent out instructions to the diplomatic and consular personnel in Asia to promote the view that Formosa was doomed and expendable. Mr. Acheson now says this was only a guide in a psychological war against the Communists. It was no guide, it was a surrender, and had Mr. Acheson's policy been followed to the present day, Formosa would have been gone and the dagger of aggression would now be pointed at the heart of the Philippines and Australia. Later on in the first page of his memorandum Mr. Acheson refers to this instruction as a directive. Whether you call it directive, guide, order, or instruction, it was a surrender to the Communists.

Mr. Acheson denies that he testified on June 19, 1947, that there was no danger of the Communists defeating Chiang. He is, within the narrow, hair-splitting lines of pettifoggery, correct. But he testified to exactly that on March 20, 1947, before the House Foreign Affairs Committee. In answer to a sharp, direct question by Congressman WALTER JUDS on the printed page 16 of the committee transcript he said:

"The Chinese Government is not in the position at the present time that the Greek Government is in. It is not approaching collapse. It is not threatened by defeat by the Communists. The war with the Communists is going on much as it has for the last 20 years."

Mr. Acheson positively denies in his letter that he testified before this committee. This testimony refutes him completely. I charged that on July 30, 1949, Mr. Acheson wrote a letter to the President of the United States and that he stated that no amount of aid could have saved Chiang. Mr. Acheson denies that he used those exact words but he admits that he did say, "Nothing this country did or could have done within the reasonable limits of its capabilities, could have changed that result." That is exactly the same thing that I charged Mr. Acheson said except he admits that he said it with the use of more words.

When Mr. Acheson refers to the Polish loan in 1946, he does not deny that he approved the loan and he does not deny that the loan was made against the advice of United States Ambassador Arthur Bliss Lane and he does not deny that the lawyer in this transaction was Donald Hiss, brother of Alger Hiss, nor does he deny the amount of the fee. He merely says he did not get any part of the fee. I never charged he got any part of the fee. Every fact that I charged against Mr. Acheson in this matter is true and does not prove anything for Mr. Acheson to say that the law firm functioned completely in a legal capacity. That is the only way law firms honorably can function.

Mr. Acheson claims that at the time the loan was made the Polish Government still included democratic elements. He does not explain why the man best qualified to pass on this question and all other questions, the American Ambassador to Poland, disapproved of the loan. In fact in his letter, John, Mr. Acheson never mentions Ambassador Lane. He mentions a great many other people but never explains why this loan was made against the advice of the United States Ambassador, Arthur Bliss Lane. Of course, as he admits in his letter, the loan was a bad one.

The next thing Mr. Acheson mentions in his letter can be disposed of in one sentence. I charged that he stated there were no Communists in the State Department. His answer to that is that he knew of no Communists in the State Department. He made the statement I charged and it is a play on words for him now to say that what he declared was that he knew of no Communists in the State Department. The rest of his explanation is a series of unimportant words strung together to try to explain the conditions in the State Department.

It is shocking to see the Secretary of State defend his conduct and attitude toward Alger Hiss by simply stating that the decision of the Supreme Court covered the matter. I ask Secretary Acheson now why he has not publicly repudiated the convict Hiss. Why does he still cling so tenaciously to his challenge? "I will not turn my back on Alger Hiss." Mr. Acheson's reply to my charge that he sponsored the Hiss brothers to Assistant Secretary of State Adolf Berle at a time when they had already been denounced as Soviet agents, is contained on page five of his letter to you.

His answer to that is that Adolf Berle lied. He takes a whole page to say so and does it by saying that Mr. Berle's memory is faulty and then again that his memory plays him false. The truth is that Adolf Berle had no motive to testify except to tell the truth. Secretary Acheson is trying to justify his enthusiastic recommendation of the traitor, Alger Hiss, after he had been exposed by Whittaker Chambers. A mere reading of my charge against Secretary Acheson and his reply on pages 4 and 5 of his letter

demonstrate that his only answer to that is that Adolf Berle is and was a liar. That is no answer at all and it is no proof at all.

On August 5, 1949, in a very large book of more than a thousand pages entitled "United States Relations With China" issued by the State Department under the direction of Dean Acheson, the Chinese Communists are presented to the President and the people of the United States as "democratic, liberal elements in China." The whole white paper proves that Dean Acheson and Owen Lattimore, in and out of the State Department, were soft on the Chinese Communists. John Carter Vincent and John P. Davies, top Chinese affairs planning expert, were also soft on the Communists.

The white paper calls these blood-thirsty Chinese Communists "agrarian democrats" and that the best defense against them is agrarian reform (pp. 553-556). Then a final blow is added when the white paper assures the President and the people that in China "the Communists are not practicing or preaching communism" (p. 562).

On the subject of Lauchlin Currie the Secretary misses the point. Mr. Currie has been associated with Communists for years. Why must Mr. Acheson, in private practice in 1948, rush in to defend a man who only recently before the McCarran committee was described by Elizabeth Bentley and Whitaker Chambers as "helping them in their work." In and out of official life, Mr. Acheson seems to be always helping those who help Communists.

Concerning Yalta, Dumbarton Oaks, and Alger Hiss, Mr. Acheson says his only function was to sign a travel order for Hiss to go to these conferences. The implication is strongly made that Mr. Acheson was unaware of the presence of Alger Hiss. He tries to make it appear as though Hiss was just sneaking aboard as a stowaway. He went with Acheson's approval and with his complete support. Does Mr. Acheson contend that he had no power to stop Alger Hiss? Remember he told Adolf Berle he could vouch for him absolutely. And that is what he did as Hiss assumed a position of power and prestige at President Roosevelt's elbow at Yalta.

In August and September of 1945 Mr. Acheson was seeking for confirmation as Under Secretary of State before a Senate committee. He testified that he intended to bring a more liberal government to Japan. He testified that he thought a commission form of government of the big powers should control the future of the defeated country.

On September 30, 1945, John Carter Vincent, Mr. Acheson's new assistant, issued a public rebuke to Gen. Douglas MacArthur, informing him that the Japanese policy would be made by the State Department and not by the commander. The State Department, he said, planned to use Japan to build a bridge of friendship to the Soviet Union, but General MacArthur did not cave in under Acheson pressure, and the commission form of government for Japan never materialized.

The present catastrophe in Korea stems from the blundering that began in August and September of 1945 when Dean Acheson and John Carter Vincent and men like them were trying to prevent Douglas MacArthur and men like him from saving Japan for a democratic form of government. The only bright spot in the whole foreign policy of the United States since World War II was the administration of Japan under Gen. Douglas MacArthur. No living man can or has disputed MacArthur's brilliant civil administration of that unfortunate country. Why doesn't Secretary Acheson say something about that to you and to the American people?

Instead on June 19, 1946, at a hearing of the Senate Foreign Relations Committee, Mr. Acheson was busy proposing a program

for a 10-year lend lease for China which included military training and equipment to be given to the Chinese Communist forces. When asked at that same meeting by Representative EDITH N. ROGERS of Massachusetts if there was any danger of the Chinese attacking us, Mr. Acheson replied:

"You mean the Chinese would attack us? I do not think so. I am sure that we do not need to worry."

The many thousands of Korean casualties today do not agree with Mr. Acheson's advice not to worry about the Chinese attacking Americans.

In conclusion, John, I note that you say repeatedly I am a victim of the people who are trying to destroy the public career of Dean Acheson. I feel that you are the victim of the faltering, weasel words and double talk of Dean Acheson, who now finds himself crushed under the weight of the many mistakes you admitted he has made. I have never met Dean Acheson and have no personal quarrel with him. Like yourself, I, too, am deeply devoted to the welfare of our common country. The finest thing Dean Acheson could do would be to resign today. His personal pride and vanity are not controlling factors in a story of diplomacy which is at best studded with mistakes, weakness, appeasement, and failure. I have been extremely surprised that Mr. Acheson would seek to indulge in a controversy with me except that I am persuaded to the belief that because I am 3,000 miles away from Washington that he could safely challenge me, whereas he would never dare launch such a letter against Gen. Douglas MacArthur, a well-informed Senator of the United States, or one of the members of the House Foreign Affairs Committee.

In any event, the very least Mr. Acheson could have done for this country and all of us was to have resigned the day the bars of the prison clanged on Alger Hiss. Since he stubbornly refuses to do so, he must accept the criticism of those who doubt his sincerity and his capacity. May I remind him that one whom you loved and respected in public life, President Woodrow Wilson, said during World War I:

"We do not need less criticism in time of war, but more. Honesty and competence need no shield of secrecy."

I know that you with me, therefore, welcome this opportunity to have every fact known and every truth broadcast to the end that our country may be saved and peace may be restored in the world.

Very sincerely yours,

GOODWIN KNIGHT,
Lieutenant Governor.

Persons Covered by Old Age and Survivors Insurance Program, in Alabama, on March 15, 1948

EXTENSION OF REMARKS OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. ELLIOTT. Mr. Speaker, under leave to extend my remarks, I include the following statement prepared by my office dealing with employment covered by the terms of the old-age and survivors insurance program under the Social Security Act, in Alabama, as of March 15, 1948:

On March 15, 1948, Alabama had 498,289 employed workers, covered by the old-age

and survivors insurance program of the Social Security Act.

Thus, the average of Alabama's 67 counties had 7,437 workers covered by old-age and survivors insurance.

However, only 11 counties were above average in this respect. They are:

County:	Number of covered workers
Jefferson-----	159,249
Mobile-----	58,451
Montgomery-----	24,885
Etowah-----	21,859
Calhoun-----	16,338
Tuscaloosa-----	13,353
Talladega-----	10,558
Walker-----	10,451
Chambers-----	9,780
Madison-----	8,726
Morgan-----	7,610
Total-----	341,260

NOTE 1.—These 11 (15.5 percent of all) counties had 66.48 percent of all covered workers.

NOTE 2.—Jefferson (14.1 percent of all counties) had 32 percent of all covered workers.

Thus, roughly speaking, two-thirds of the total covered workers of Alabama were in the 11 counties listed above, and one-third of the total were in Jefferson County.

In considering these figures it should be borne in mind that

1 They are for a date (March 15, 1948) prior to the greatly extended coverage of the old-age and survivors insurance program brought about by the amendments to the Social Security Act in 1950 (81st Cong., 2d sess.).

2. At that time, self employment, family employment, casual employment, agricultural employment, domestic service, Government employment, railroad employment, and employment by certain types of nonprofit organizations were excluded from coverage.

Source: "Part II State Reports, No. 1, Alabama; County Business Patterns, First Quarter, 1948; business establishments, Employment and Taxable Payrolls, by Industry Groups under Old-Age and Survivors Insurance Program." (Published by the Office of Domestic Commerce, United States Department of Commerce, 1949.)

Excessive Taxation

EXTENSION OF REMARKS OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. BOW. Mr. Speaker, I have recently received a letter from one of my constituents who under the free enterprise system has developed one of the outstanding industries in Ohio where hundreds of people are gainfully employed. His record is that of many other fine Americans. Under permission, Mr. Speaker, I insert a portion of his letter in the RECORD, as follows:

The creeping socialism and paralysis the Trumanites and New Dealers are imposing upon the economy of America not only leads to inflation but to subsequent desperate conditions and I am anxious for you to show good statesmanship in protecting the people who are primarily responsible for progress which is being made. These people are those who are the so-called higher bracket income men but who are taxed beyond all

reason for their monetary return and accomplishments.

In my case, it is the worst kind of confiscation, far exceeding Great Britain who, in 1950, averaged \$181 for every man, woman, and child in the country as against United States of America average for the same period of \$361. The average is ridiculously low compared to the penalties inflicted upon the higher-income tax men who achieve and specifically my case now is that out of 300 working days of long hours and considerable responsibility I work for the Government 279.4 days and only 20.6 for myself.

With this kind of taxation, it is impossible for me to continue to create jobs for others and you will soon find that the overall picture will give substantially diminishing returns by killing the goose that laid the golden eggs.

This tragedy has already taken effect as I am employing less than half the top number of men because I will not take the chance of being completely wiped out in my effort to continue under the so-called free-enterprise system.

You are going to find a lot more of this before you know it and before it is too late, we had better do something about it.

This Week's Thought

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. BENDER. Mr. Speaker, if you can keep your head while others are losing theirs—maybe you do not understand the situation.

National Employ the Physically Handicapped Week

EXTENSION OF REMARKS

OF

HON. FOSTER FURCOLO

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. FURCOLO. Mr. Speaker, I know that all Members of Congress want to lend their cooperation and full support to National Employ the Physically Handicapped Week. I hope all employers and everyone in the District will cooperate in every way not only during that week but throughout the entire year. It is not simply the humanitarian desire to assist in every possible way although of course all of us feel that deeply. However, the physically handicapped have established a record that proves beyond any doubt that they can do a wonderful job. In other words, resting their case solely on the proof they have established, they have shown conclusively that they can make a great contribution to America if they are given the opportunity.

Employers would do well to study the record and I am sure that they will see

that even without any regard whatsoever to humanitarian motives, but simply basing it on the desire to have a job well done, there is every reason to employ the physically handicapped.

I know all Members of Congress want to join with me in urging the people of the Nation to cooperate in every possible way.

Annual Address by Hon. Harry McMullan as President of the Association of Attorneys General

EXTENSION OF REMARKS

OF

HON. WILLIS SMITH

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 21, 1951

Mr. SMITH of North Carolina. Mr. President, on August 6, 1951, in Seattle, Wash., Hon. Harry McMullan, attorney general of the State of North Carolina, delivered the annual address of the president of the Association of Attorneys General. His address was a thoughtful and scholarly presentation of some of the questions and problems with which the Members of Congress should be and are concerned. Mr. McMullan is an honored and distinguished public servant, and one whose service has been outstanding not only in his native State but also in many matters of national importance. He has upon occasions appeared before congressional committees on matters concerning which he had been particularly well informed.

I feel that his annual address as president of the National Association of Attorneys General is such that it will be worth while to have it printed in the Appendix of the Record.

I therefore ask unanimous consent that that be done.

There being no objection, the address was ordered to be printed in the Record, as follows:

We are grateful to Gen. Smith Troy for the invitation extended to us to have the forty-fifth annual meeting of the National Association of Attorneys General in Seattle in this great State of Washington. A meeting held here is of significant interest to us all and particularly to the members of the association from the eastern part of the United States who have not had the previous opportunity to see this wonderful northwest country of which we have had just a preview.

The members of this association who are involved in politics, more or less, in their home States are happy to come to these meetings where for a day it is adjourned and where it has nothing whatever to do with the business of this association or the cordial relations between members attending this gathering. It is most refreshing to us all to get out of the sphere of politics for a while and from a completely nonpartisan standpoint view the interest of the country as a whole as well as from the standpoint of the individual States that go to make up this mighty Nation. Here it makes no difference whether or not a man is a Democrat or a Republican. The only political organization we draw the line on is that one affiliated with

Moscow and the masters of the Kremlin across the seas.

FEDERAL-STATE RELATIONS

Over the years since the creation of the National Association of Attorneys General in 1907, the attorneys general of the States, as individuals and through our association, have been concerned with the preservation and improvement of our Federal system, with the retention of the basic genius of that system as a proper balance of power between State and Federal Governments during decades of rapid and accelerating change.

We might remind ourselves that the question of relations between the States and the Central Government has been considered by the ablest students of American government—by the authors of the Federalist, by Lord Bryce, by Woodrow Wilson, and others—to be the cardinal question of the American Federal system. As Wilson observed, it is not only the leading question but one which must be continuously restudied and new solutions found for emerging problems as they present themselves for public consideration and governmental action.

These are persisting questions which we as attorneys general face, within our own States and in relations between our States and the Federal Government; and they demand our attention more today than they did 45 years ago when our association was formed. The changes which have occurred during these years—economic, political, social, and international changes—have given new form to the problems we face; they have given rise to demands from the people for new functions and new services by Government and have occasioned the most enormous mushrooming in the activities and expenditures of Government in a short span of years that history has record of. Thoughtful citizens—those who know and understand the basic purposes, methods, and objectives of the American form of Government—and our predecessors in this association have been prominent in that group—have endeavored to accomplish needed changes within the framework of our Federal system, as the best means of preserving freedom of the individual and of maintaining the people's control and direction over Government.

I should like to review briefly some of the major activities of the National Association of Attorneys General since our Miami meeting last year. Most of these developments will be treated in greater detail, of course, in reports of the various standing and special committees which will be submitted and discussed later on.

CONSTITUTIONAL AMENDMENT PROHIBITING THE EXERCISE OF ORIGINAL JURISDICTION BY THE SUPREME COURT IN SUITS BETWEEN THE UNITED STATES AND A STATE

In 1892 Chief Justice Fuller, with the concurrence of Mr. Justice Lamar, said, in dissenting opinion in *United States v. Texas* (36 L. Ed. 621), that under the Constitution the Supreme Court clearly did not have original jurisdiction to entertain a suit by the United States against an individual State. Since that time, such jurisdiction, however, has been many times exercised as was most recently done in the suits against Texas, Louisiana, and California as to territorial lands.

To any student of the history of the adoption of the Constitution, it is obvious that the framers of the Constitution did not contemplate that such jurisdiction was granted and they specifically rejected a proposal to grant such authority to the Supreme Court. I am confident the Constitution would never have been adopted with a provision in it authorizing the exercise of such jurisdiction. The alarming situation which has developed

as to State rights and encroachments by the national sovereignty was ably discussed by Gen. Abram P. Staples, now deceased, at our 1946 meeting in Los Angeles.

It is clear to all of us that with federally appointed judges serving for life, umpires are selected and paid by the United States who are permitted by their own decisions and assumptions of authority to pass upon the conflicting rights of the National and State Governments.

In the Texas tideland case less than a majority of these federally selected umpires decided the case in favor of the National Government over the vigorous dissents of three of their fellows. This was the first time in history in which less than the majority of the Supreme Court has decided a great constitutional question.

By the means of constitutional interpretation, the Federal judges, if the present tendency continues, will effectively and completely destroy the sovereignties of the several States thought to have been so carefully retained in the Constitution.

The only possible remedy for this steadily worsening situation is the adoption of an amendment to the Federal Constitution, clearly defining and limiting the authority of the Supreme Court as to controversies between the National and State Governments.

Upon the application of legislatures of two-thirds of the several States, Congress is required by article V of the Constitution to call a convention for proposing amendments which would be adopted when ratified by legislatures or conventions of three-fourths of the States. This procedure would be free from the danger of Presidential veto and, in my opinion, would be a popular move among the States of the Union who are today so justifiably concerned about the enormous encroachments on the States' rights under the aegis of the Supreme Court interpretations.

It seems to me that it would be wise at this conference to consider this subject and the desirability of appointing a special committee of this association to consider the suggested amendment and others designed to remedy this situation.

The whole problem should be explored by the States unless we are to stand by and allow our dual form of government to be only a name and a memory.

ORGANIZED CRIME

The problem of organized crime has been of increasing concern to the attorneys general since the end of World War II, and as you will recall, led us in October 1949, while we were meeting in St. Paul, to call upon State and Federal agencies to join cooperatively in stamping out the growing menace. The presence and appearance of Senator ESTES KEFAUVER on this program highlights this subject for us. We have discussed the problem at regional and national meetings since the St. Paul meeting, and we shall discuss it in all aspects while we are here. We have cooperated with various groups in developing suggestions for action. Some of these suggestions necessitate legislation at the National, State, or local levels; some involve more determined and effective enforcement and prosecution, some require cooperation among the various units and levels of government. All should be pursued diligently to the end that professional law violators and corrupters may be exposed and their operations controlled in order that the people's confidence in their Government may be sustained and strengthened.

CIVIL DEFENSE

Civil defense and the maintenance of internal security are questions which have

concerned and will continue to concern us. Our present activity in this area is, of course, the domestic or internal reflection of the cold war abroad as well as the shooting war in Korea. The States share a major portion of responsibility, with the Federal Government and with the cities and other localities, for establishing effective plans and programs to minimize loss of life and productive capacity within the Nation in the event that war comes to our borders. As attorneys general we have been called upon—and in all probability will be called upon increasingly in the future—to participate in drafting interstate pacts and agreements to permit the State and local governments to cooperate in civil defense preparations.

INTERNAL SECURITY—SUBVERSIVE ACTIVITIES

As during past wars and emergencies, we bear a general responsibility for the maintenance of security within our States. During the past year we have called upon the secretariat to undertake the preparation and distribution of a periodical, Digest of State and Local Activities Relating to Internal Security, as a means of clearing among ourselves information concerning State and local laws, court decisions, and executive actions relating to the control of subversive activities and the maintenance of internal security. The program has progressed far enough so that we are able to evaluate its contribution to our work—and it has made available a vast amount of material for the first time. This problem of maintaining internal security affects the public interest in many ways. Too lax controls over dissident elements menace the continued existence of the Nation; too restrictive controls threaten the very freedoms for the individual which the great charters of American history proclaim. As responsible officials and as citizens, we face the difficult and inescapable task of preserving the maximum freedom for individuals consistent with the survival of the Nation. It was for our way of life as well as for our lives that we fought in the last war—and for which we must prepare and be strong enough to fight again if that should prove necessary.

FEDERAL TAXATION OF STATE AND LOCAL BONDS

During the year the Secretary of the Treasury of the United States suggested to the House Ways and Means Committee the taxation of income from State and local securities, thus resurrecting the fight which had been defeated in the previous session of Congress.

As this association in its meeting in Jacksonville had gone on record as opposing this form of taxation by the Federal Government, I felt it my duty to appear as a witness before the Ways and Means Committee and state the objections of my State to this form of taxation and to advise them of the action theretofore taken by this association. Copies of my oral and written statement were furnished to members of this association.

In my opinion this is the most dangerous threat to the sovereignty of all of the States and their taxing agencies which has as yet occurred. If successful, it would, I believe, be fatal to the dual form of government under which we now live.

We are fortunate in having on the program at this meeting, representing the Conference on State Defense, the person who has led the fight to defeat this legislation in Congress. I am sure that you will be very much interested in hearing the important and interesting statement which will be made by Mr. Austin J. Tobin, executive director of the Port of New York Authority.

It is my opinion that this meeting has no business of greater importance than the consideration of this problem and the consolidation of our efforts to defeat this legislation.

TIDELANDS

This association has adopted resolutions at its former meetings supporting the efforts of the several States to secure the enactment of legislation in Congress quieting the title to their submerged lands since the startling decision of the Supreme Court in the case of United States against California. A report of the committee having this matter in charge will be presented to the meeting during the session and I am sure it will be of great interest to all. We are greatly indebted to Gen. Hall Hammond, chairman of the tidelands committee of this association, and the members of this committee, for the splendid work done by them in presenting the views of this association on this subject to the present Congress.

FEDERAL SOCIAL-SECURITY BENEFITS

Problems of social-security coverage and benefits have faced most of the States during 1951. As a result of 1950 amendments to the Federal Social Security Act, the States were enabled to extend old-age and survivors' insurance coverage to employees of their State and local governments.

The attorneys general cooperated with other State officials through the drafting committee of the Council of State Governments in developing suggested enabling legislation to meet requirements of the Federal act in extending such coverage. And in many States the attorneys general have participated in drafting the required contracts between the State and Federal Security Agency. The administration of these laws and contracts will involve continuing relationships between Federal and State agencies, in common with the administration of other Federal-State programs. The attorneys general of the central regional group, during their discussion of this question earlier this year submitted for consideration by the association the recommendation that the Council of State Governments offer its cooperation to the Federal Security Administration in working out the various Federal-State questions which will arise as a result of the extension of OASI coverage to State and local employees, with the objective of achieving (1) uniformity of administration, and (2) definition of areas in which Federal determinations and areas in which State determinations shall be accepted as controlling. This proposal has been discussed with the staff of the Council of State Governments, and in regard to specific ways and means for acting on it if the association so desires, may I suggest that the incoming executive committee be authorized to discuss the question and develop necessary procedures jointly with the council.

INTERSTATE COMPACTS

Cooperation by the attorneys general can be of assistance in a variety of ways in strengthening the operations of State compacts. During the past year, various members of the association have made proposals for cooperation by the individual attorneys general in two specific situations: (1) With respect to the administration of the interstate compact for supervision of out-of-State parolees and probationers, and (2) with respect to implementing the Uniform Reciprocal Enforcement of Support Act. The parole and probation compact was developed in the first instance, back in the 1930's, very largely through the efforts of the attorneys general and as part of the so-called interstate crime-control program. This year marks the culmination of efforts to obtain enactment of the compact by all of the States, and thus this becomes the first interstate compact in American history to be entered into by all 48 States.

This compact is not self-executing, however; it involves continuing administration

of parolees and probationers by the supervisory officials of the several States, and its administration frequently involves the local courts, prosecutors, and enforcement officials in the localities where these parolees and probationers may seek residence and employment. Misunderstanding of the operation of the compact at the local level may—and in a number of cases has—given rise to jurisdictional disputes and to unwise or unjust treatment of the persons affected. It is largely a matter of explaining to the appropriate authorities at the local level the purposes, objectives, and mechanics of the compact—and to accomplish this, some of our members suggest that we discuss the problem individually with the compact administrators of our several States, and that in cooperation with our several compact administrators we prepare suitable explanatory memoranda with annotations and make this material available to local authorities for their information and guidance. Since the ability of the States to handle this problem will be determined as much by the administration as by the enactment of the compact, this would seem to merit serious consideration as means of strengthening State government. The Council of State Governments has available and can supply us with the pertinent information which we might include in these memoranda.

UNIFORM RECIPROCAL ENFORCEMENT OF SUPPORT ACT

Implementing the Uniform Reciprocal Enforcement of Support Act presents a substantially similar situation. Here, in the short space of 2 years, over three-quarters of the States have become linked together in a program for enforcing court awards of financial support. Actual operations under these laws will affect the welfare departments, local courts, and local prosecutors, and I urge your individual cooperation with these agencies in implementing the Support Act—to demonstrate anew the capacity of the States to handle their responsibilities in an effective, affirmative manner.

JUDICIAL INTERFERENCE WITH LEGISLATIVE PROCESS

In *Tenny* against *Brandhove*, decided on May 21, 1951, the Supreme Court decided, by a divided court, a case of great importance to all of the States. It was held that a State legislative committee investigating un-American activities was not liable for damages in a suit brought in the Federal district court under the Federal civil-rights statute. A contrary decision would have imperiled the freedom of action of the committees of the legislatures of all of the States.

Many attorneys general individually joined in the *amicus curiae* brief which was filed in the case in support of the counsel representing the legislative committee.

USE AND MISUSE OF HABEAS CORPUS

At the 1946 conference in Los Angeles, Gen. James A. Emmert, of Indiana, presented an interesting and constructive discussion on the use and misuse of the habeas corpus writ by prisoners.

The resort to habeas corpus proceedings before Federal district judges by defendants who have been convicted of serious crimes and convictions sustained by the highest appellate court in the State and certiorari denied by the Supreme Court of the United States has presented a serious obstacle to the enforcement of criminal laws in all of the States. The recent decision of the Supreme Court of the United States that denial of certiorari by the Supreme Court of the United States is required, in the absence of special circumstances, to constitute exhaustion of State remedies as a prerequisite to a petition for a writ of habeas corpus, has

served only to add additional burdens and involve endless complications in securing final disposition of such cases (*Darr v. Burford* (339 U. S. 198, 94 L. ed. 781)).

In my State, we now have pending three cases in which four defendants have been convicted by courts of competent jurisdiction of capital felonies and convictions sustained by the supreme court of our State and petitions for certiorari denied by the Supreme Court of the United States. In one instance, the defendants are supported by an organization which has followed the party line in making its appeal to the public and to the courts in their behalf. The other cases are sponsored by a national organization which takes this course without regard to the enormity of the crime or the fact that the defendants have had every opportunity to present all legitimate defenses.

Under the present status of Federal decisions, the district judge is empowered, in effect, to reverse the decisions of the highest court of the State and disregard the denial of writs of certiorari by the Supreme Court of the United States. Many States have enacted laws similar to that adopted here providing for hearings upon writs of *coram nobis* as to matters which prisoners assert violate constitutional rights which were not raised at the time of their trials and convictions. This, however, is far from providing any solution to the problem. The prisoners can and do continue to seek endless hearings upon writs of habeas corpus in Federal district courts—in most cases rehearsing matters already adjudicated by trial and appellate courts.

This presents such a serious problem to all of the States, it appears to me that it would be wise at this conference to set up a committee to make a careful study with respect to it and report to our next conference as to recommended State or Federal legislation which may be thought to provide a solution.

It is suggested that the Federal statute should be amended so that if a defendant, who raises constitutional issues in a criminal trial or could have raised such issues, carries his case to the highest appellate court of the State (or could have done so) and certiorari is denied by the Supreme Court of the United States or the defendant fails to apply for such certiorari, then the Federal courts shall not have jurisdiction to entertain a petition for a writ of habeas corpus and to again pass upon the same constitutional issues which have been raised or could have been raised by such defendant in the State trial. Such amendment should specifically prohibit the Federal courts from entertaining such a petition upon the grounds of extraordinary circumstances of an urgent nature, assuming that the State courts have already reviewed the criminal trial as set forth above.

APPRECIATION

I will always be grateful to the association for the great honor bestowed upon me and my State of North Carolina by my election to the office of president of this association. I hold the office of attorney general in any State in great esteem. It is a real honor to each of us to hold this position in our respective States. To head such an outstanding group as this it seems to me is something anyone would greatly value.

During the year all of you have cooperated fully in the work of this association for which I express my sincere thanks. I believe that there is now and will continue to be much important work for this association. We hope to have the attendance at our annual meetings of every State attorney general and in this combination of forces make this organization more and more effective as the years pass.

Voice of America

EXTENSION OF REMARKS

OF

HON. WILLIAM H. AYRES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. AYRES. Mr. Speaker, I have expressed my views in the past favoring a strong Voice of America program. However, I feel it is my duty to call to the attention of the House some of the ridiculous things being carried on by the Voice of America.

Many experienced promotion and advertising men are assisting in the Crusade for Freedom messages being delivered by the media of helium inflated balloons. Mr. W. Collette, of the Oak Rubber Co., in Ravenna, Ohio, in my district is one of those helping in the cause. So again I repeat, there are constructive ways to get the right type of propaganda behind the iron curtain.

I wish to bring to the attention of the House the column by John Crosby, the well-known radio critic, in Wednesday's New York Herald Tribune. Mr. Crosby had just seen a new documentary film by the State Department titled "In Defense of Peace." This film will be shown to millions of persons overseas in our Government's attempt to win friends.

Here is Mr. Crosby's opinion of the film:

If this is the best we can do in the propaganda line, we ought to save our money—in Defense of Peace is little more than a collection of newsreel shots.

Crosby goes on to say that the narration in the film is "about as inspiring as a Latin textbook." Many of the scenes, he says, are "a demonstration of our native opulence and productive abundance sufficiently impressive to embitter a Balkan peasant against those rich Americans for decades to come."

Finally Crosby asks: "This is propaganda? For whom—the Russians or us?" All in all, this column is one additional bit of confirmation of what many experts in psychological warfare have been saying for a long time—that the Voice of America is being managed by amateurish fumbler. Let us hope that Assistant Secretary of State Edward W. Barrett and the entire crew of third-raters will resign before it is too late and make way for some real experts.

I think the Members of this House will agree with me after they have read the Crosby column printed below:

WE'RE MASTERS AT ADVERTISING, CHILDREN AT PROPAGANDA

(By John Crosby)

Last week in the Alsop column Stewart Alsop, writing from Paris, reiterated what we should all now know—but don't. The Russian propaganda line—the Russians want nothing but peace—has bitten into the minds of Europeans far more deeply than we believe possible. It's a great word, an overpowering slogan and a radiant hope the Russians have got hold of—peace. The fact that we Americans don't believe a word of it doesn't do much to countermand it in the minds of people overseas.

What are we doing to counteract it? The other night the NBC television network with a great show of pride unveiled for the first time anywhere in America a State Department official documentary film called *In Defense of Peace*, one of our own propaganda efforts, which has been shown to 40,000,000 people in 71 countries. If this is the best we can do in the propaganda line, we ought to save our money.

In Defense of Peace is little more than a collection of newsreel shots, and I'll bet there isn't a single one you haven't seen at least 15 times. The Russians fighting in the suburbs of Berlin. The great motion picture portraits at Yalta—Roosevelt, Churchill, Stalin—smiling, triumphant, and in the light of subsequent events, a little futile. On and on it went—the German surrender in the schoolhouse, the flag being raised at Iwo, MacArthur on the *Missouri* ("Let us pray that peace be now restored to the world and that God will preserve it always."), the birth of the United Nations at San Francisco—great scenes, all of them.

But also familiar ones, and ones that mean different things to different people all over the world. They were knit together by a narration which was as factual as a Latin textbook and about as inspiring. You gathered that these things had occurred—Is there anyone around who doesn't know that?—and that we had had some part in them. That's about all.

But it is in the aftermath of war, that period when the Russians and the free world ceased to be friends and became enemies, wherein our message to the rest of the world—if we have one—should lie. Well, the film showed innumerable shots of great ship-board cranes lifting those boxes into the holds of ships (the Marshall plan), of tractors happily run by French farmers, of piles of grain unloaded in Greece. We showed how our vastly wealthy country blew up its warplanes, beat its cannon into plowshares, and then beat the plowshares back into cannon again. It was a demonstration of our native opulence and productive abundance sufficiently impressive to embitter a Balkan peasant against those rich Americans for decades to come.

This is propaganda? For whom—the Russians or us? When I was in Rome, a man in the Italian Foreign Ministry told my traveling companion, Les Midgley, foreign editor of *Look*, something I've never quite forgotten: "We Italians deeply appreciate everything America has done for us since the war. We know very well that without your tremendous Marshall plan there would have been nothing here but anarchy. But sometimes we wonder why you don't come forth with something like Wilson's Fourteen Points or the Atlantic Charter, something men can have faith in. And they didn't cost one cent."

In other words, we are exporting everything except ideas, which require nothing more elaborate than a pencil and paper. (And a brain. And a conviction.) The Russians have very effectively labeled us as warmongers all over the world. We retaliate by exhibiting films showing 40,000,000 people overseas how many tanks, planes, and guns we are producing. This is reassuring to us and possibly to the heads of foreign states and foreign armies. But hardly to the people who have clutched to their breasts the word that Russia has made its own—peace.

A basket of grain is a very effective bit of propaganda when someone hands it to you—but that's the task of the Marshall plan, not of the Voice of America, which produced this film. A picture of a basket of grain won't do anything for a hungry man except make him hungrier. Propaganda is the dissemination of ideas, preferably the dissemination of a single overpowering idea. The Russians have embraced peace so effectively we'll never get it away from them (at least in the minds of

most Europeans). But we've got a word of our own, "freedom"—"something," as the Italian remarked, "men can have faith in"—and the Russians will never get that one away from us.

If we could become, in the minds of the outside world, the exponents of freedom; if we could show them how free men live; if we could, in short, take over freedom as the Russians have taken over peace, we'd be in the propaganda business. As it is, we're just sending out stale newareels.

FSA Report Reveals Increase in Jobless Persons Over 65

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. ANGELL. Mr. Speaker, pursuant to leave granted, I am including as part of these remarks a news release recently appearing in the local press which is of particular interest to all concerned with the welfare of our elderly citizens. This release entitled "FSA Report Reveals Increase in Jobless Persons Over 65," follows:

FSA REPORT REVEALS INCREASE IN JOBLESS PERSONS OVER 65

"Personnel manager wanted; must be under 40.

"Salesmen needed, 20 to 35 years old" The complex sociological problems brought about by an increasing population of old people in an economic world where the emphasis is on youth, caused President Truman last year to call a national conference on aging.

For several days at the Hotel Shoreham, 816 representatives of Government and private agencies all over the country discussed methods of bringing about a "basic social change" so elderly persons might live a happier life during their declining, supposedly nonproductive years.

The Federal Security Agency, sponsor of the conference, has just released a 311-page report on that experiment in planning. Entitled "Man and His Years," the report was published by Health Publications Institute, Inc., Raleigh, N. C.

In a foreword, Oscar R. Ewing, Federal Security Administrator, points out that "having made life longer, we must now work to make longer life worth while."

CONFERENCES IN 17 STATES

Deputy Federal Security Administrator John L. Thurston reports that during World War II, when thousands of elderly persons were called on to make effective contributions in manufacturing and service occupations, "suspicion arose that there were errors in the notion of the unemployability of older people."

The conference was admittedly an exploratory forum, and the FSA report does little beside sum up the problems of the aged, and point the way for an attack on those problems.

However, Clark Tibbetts, conference director, reports that since the conference adjourned there have been local conferences on the same subject in 17 States. Such groups as the American Medical Association, the American Public Health Association, and the American Psychological Association have included discussions of the problems of aging in their annual meetings.

OLDSTERS ON INCREASE

For purposes of the conference, the report says old age was considered to be 65 years old or over, although it points out persons should be judged on their "psychological age and abilities rather than their chronological age."

There are between 11,000,000 and 12,000,000 persons in the United States 65 or older; by 1975, it is estimated, there will be 17,000,000 to 20,000,000.

There are now four times as many old people in the country as there were 50 years ago. In 1890, 68 percent of men over 65 were still working; by 1940, that percentage had dropped to 45 percent.

Certain recommendations are made, however, for increasing the participation in national life of these persons "too old to qualify, too young to die."

The report points out no figures are kept on the productivity and absenteeism of the over-65 labor force during World War II; a recommendation is made that such pertinent data be kept as the mobilization program increases and more elderly workers are called back to work.

The report's condensation of the discussion of the conference section on health maintenance suggests broader programs to prevent premature disability and care of disabled older persons.

Throughout the report, rehabilitation programs on a community level are suggested to return disabled workers to some form of productivity.

"It is urged * * * that society free itself from the traditional prejudices against old age and launch, through various education channels, a campaign to accent the positive characteristics of the aging for continued occupation usefulness, citizenship, and family life, the report says.

Loss of Freedom by Default

EXTENSION OF REMARKS

OF

HON. SID SIMPSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. SIMPSON of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Quincy (Ill.) *Herald-Whig* of Wednesday, October 3, 1951:

LOSS OF FREEDOM BY DEFAULT

This is the freest country on earth. The basic individual freedoms are guaranteed by the Constitution. No one has suggested legal elimination of any guaranty of liberty. Yet there is danger of loss of freedom by default, while the form of legal freedom is being scrupulously maintained.

Here is how it could happen: Government has become a huge and powerful machine which reaches far into the private lives of the American people. Under the pretext of serving the people, it could become their master. This can happen only if Government can exert influence over the minds of the people through control of the sources of information.

Totalitarian countries have propaganda ministries, through which all public information is issued. The people are told only as much of the conduct of their public affairs as the masters deem expedient. This is why bad news never comes from public sources in Moscow. It is the reason for the long regime of Hitler in a literate country. The people are unable to combat the things they don't recognize.

American editors, meeting in Evanston Monday, and a convention of news executives in San Francisco last week pointed to similar dangers in our country. There has been a growing tendency toward censorship at the source of official news. Each Federal bureau has a competent public relations staff which is nothing less than a propaganda machine. Many Government executives withhold some of their records from newsmen and thus from the public.

This practice was developed in the guise of public security in two world wars. Its need then was questionable. Newspapers displayed good judgment in the handling of war news. Censorship in peace, even the censorship at source, is unnecessary and dangerous to the interests of the people.

The three-way classification of departmental news for release is conducted by persons who are in many cases not qualified to judge. It can result in skullduggery. It makes possible concealment as top secrets of the personal derelictions of officials. It enables servants of the people to hide mistakes.

Last week a Washington order was given to the Office of Price Stabilization. It advised the bureau to withhold from the public information that might be embarrassing to the bureau. Perhaps it didn't occur to those responsible for the order that price control is the vital business of the public and that anything embarrassing should be told.

The order was withdrawn after it had brought on vigorous criticism. The point is not this special order or its withdrawal. It is the alarming fact that the power to withhold information from the people exists.

Newspapers are the chief vehicles of information. The facts they print are of vital interest to the people and, in many cases, the press affords the only means for obtaining information. But only the people and their elected lawmakers can assure access to public records.

This privilege some day may mean the difference between freedom and dictatorship. It is high time for Congress to reaffirm the people's right to full information and to see that it is made available.

Six Out of Ten Favor Limiting Federal Taxes

EXTENSION OF REMARKS

OF

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. GWINN. Mr. Speaker, George Gallup, director of the American Institute of Public Opinion, has made the following findings:

Hard-pressed taxpayers in the upper income brackets, who are faced with a new boost when Congress passes the tax bill, can take comfort in this fact:

A drive to limit Federal taxes to a maximum of 25 percent of income is winning the approval of the American public.

A cross-section survey of adults in all income brackets found that nearly 6 out of every 10 favor the idea of limiting the Federal taxing power at the 25 percent figure, so that no one, whatever his income, would have to pay more than one-fourth to Uncle Sam's tax collectors.

The tax limit drive, started some years ago by a Chicago businessman, has gained considerable momentum lately.

The legislatures of 25 States have gone on record urging a constitutional amendment to set the 25 percent limit. If 32 States adopt

the resolution, Congress will be forced to act.

Persons in the upper income brackets have, for obvious reasons, long been in favor of a tax limit. At present the Government takes up to about 90 percent on very large incomes.

Whether the general public, living on modest incomes, would approve the idea of letting the wealthy off more easily through a 25 percent limit has always been a question.

To find the answer, the American Institute of Public Opinion put this issue before the country:

"It has been suggested that a law be passed so the Federal Government could not take more than 25 percent, or one-fourth of any person's income in taxes except in wartime. Would you favor or oppose this 25 percent top limit?"

Here is the vote:

	Percent
Favor limit.....	59
Oppose.....	31
No opinion.....	10

As might be expected, persons who are in the upper-income brackets voted overwhelmingly in today's survey for the tax change, but those in more modest circumstances are only slightly less in favor.

The difference is illustrated by this vote by educational levels

25 percent income tax limit?

	College	High school	Grade school
	Percent	Percent	Percent
Favor.....	63	63	53
Oppose.....	34	30	30
No opinion.....	3	7	17

The first State to approve the suggested plan was Wyoming, on February 23, 1939. The latest was Utah, in June 1951.

Others on record, listed in the order that they adopted their resolutions, are Rhode Island, Mississippi, Iowa, Maine, Massachusetts, Michigan, Arkansas, Indiana, Pennsylvania, New Hampshire, Delaware, Illinois, Texas, Wisconsin, Alabama, New Jersey, Kentucky, Nebraska, Louisiana, Montana, Kansas, Nevada, and Florida.

Succeeding legislative sessions in five of these States—Illinois, Wisconsin, Iowa, Kentucky, and Alabama—have, however, sought to rescind the actions of their predecessors.

Exorbitant Inspection Fees Charged by Federal OPS Meat Inspectors

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. LARCADE. Mr. Speaker, under authority granted to extend my remarks in the Appendix of the Record, I wish to submit an article from the September 29, 1951, issue of the Daily Signal, published at Crowley, La., the rice capital of America, as follows:

AREA MARKETS PROTEST FEE CHARGED BY FEDERAL OPS MEAT INSPECTORS

Cost of inspection of meat by Federal graders under the regulations of the Office of Price Stabilization is being protested by markets throughout the area, some of whom report the fee to be as high as 2 cents per pound.

The fee is based on the visit by the inspector, Earl Byrd, of Lafayette, they ex-

plained, whose services are billed to them at the rate of \$3.60 per hour, plus 7 cents per mile. Floyd Robichaux, of the Robichaux Market, explained.

One visit to that market when the inspector graded seven quarters of calves was billed at the sum of \$4.50, Robichaux said, and the estimated weight of the seven quarters of meat was 210 pounds. That comes to slightly more than 2 cents per pound, he figured, and with the high price of livestock, it is almost impossible to come out at present retail prices even without such exorbitant charges.

The bill was received from the Livestock Branch, 314 A, United States customs house in New Orleans, Robichaux said.

Robichaux explained that it is very difficult to obtain beef for ground meat for the six school lunchrooms they endeavor to supply at the wholesale price of 65 cents per pound. Beef type cattle are selling at prices so high that you can't possibly buy one, dress it and make ground meat to sell it at 65 cents per pound, without having to pay 2 cents for the inspection.

The butcher stated that the inspector reports that he works from 4 a. m. to 10 p. m., traveling out of Lafayette to cover this area.

Markets all over the area are protesting the charges, packing house salesmen reported to Robichaux, who is wondering if some other arrangement can be made for grading of the meat.

The Story of a Loaf of Bread

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. McDONOUGH. Mr. Speaker, here is a story in which every American consumer should be interested. It is the story of a loaf of bread, that basic staple which is a part of every meal we eat, and the cost of which must be an item figured into the budget of every housewife.

In the following article published recently in the National Grange Monthly, all the facts about the production of a loaf of bread and the factors contributing to its final cost to the consumer are clearly and simply stated. I am sure all Members of Congress will be interested in having the important information contained in this excellent report on the production of bread, the "staff of life":

THE STORY OF A LOAF OF BREAD—How THICK A SLICE OF THE DOLLAR THAT IS SPENT FOR BREAD DOES THE FARMER GET? WHO GETS THE REST OF IT? HERE ARE SOME FACTS ON "THE STAFF OF LIFE"

Practically everyone eats bread. As a Nation we consume an estimated 40,000,000 loaves a day. Wheat—its principal ingredient—represents about 70,000,000 of our cultivated acreage and accounts for 6 percent of farm income. Commercial flour milling and breadbaking, the two major manufacturing steps are among the oldest, largest, and most mechanically developed food processing industries in the world. Grain products, of which bread is the most important, provide one-third of the thiamine, one-fourth of the calories, protein, iron, and niacin and one-seventh of the calcium consumed by the American people.

Consumers and farmers are practically certain to be interested in the price of bread. How thick a slice of the bread dollar does

the farmer get? How does this compare with the gross margin of the miller, the baker, the retailer? How much of the price is represented by wages, packaging, other ingredients? How much goes for profits and salaries of executives? How big a slice is taken by taxes? To provide some answers, the Grange, working with Grocery Manufacturers of America, made bread the subject of its fourth study of price spread (earlier studies dealt with milk, oranges, and canned baby food).

COMPLETE PICTURE

As a starting point, they took United States Department of Agriculture figures for 1950, and then filled in the gaps with information gathered from congressional hearings, company financial reports, and material gathered directly from GMA member companies. The result is a virtually complete picture of what happened to the consumer's bread dollar in 1950. The picture was then brought up to date to include important 1951 developments.

Two symbolic loaves of bread highlight survey findings which apply to a standard 1-pound loaf of white bread sold in the retail grocery store, as follows:

Loaf No. 1: How the 1950 bread dollar was shared

	Percent	Cents
Farmer.....	10.6	2.9
Transport.....	21.0	.3
Ingredient.....	3.4	.5
Miller.....	4.7	.7
Baker.....	54.2	8.0
Retailer.....	16.0	2.4
Retail price.....	100.0	14.8

Loaf No. 2: How the 1950 bread dollar was divided among various costs

	Percent	Cents
Farm value (raw ingredient).....	10.6	2.9
Transport and handling.....	3.0	.4
Packaging and supplies.....	0.8	1.0
Wages and salaries.....	37.1	5.5
Executive salaries.....	1.8	2.7
Advertising.....	3.3	.5
Taxes.....	6.8	1.0
All other expenses.....	14.8	2.2
Net profit.....	6.8	1.0
Retail price.....	100.0	14.8

Loaf No. 1 shows the percentage slice going to each stage of proceedings and distribution for performing its special service. The slices don't represent profits but the total margin. Out of this the farmer, the miller, the baker, etc., had to pay their various costs of operation. The farmer's share of the bread dollar in 1950—including both the wheat and other raw ingredients—was 20 percent. The remainder—80 percent—went to pay for the costs and profits of all the intermediate steps—grain storage and transportation, flour milling, the processing of other ingredients, bread baking, and retailing. The largest share of the bread dollar—54 percent—went to the baker for his double function of baking and wrapping the bread and delivering it to retail stores.

The grocer received 16 percent for his labor to handle and sell the bread at retail. The other processing and distributing operations together accounted for the remaining 10 percent of the bread dollar.

COST BREAKDOWN

Loaf No. 2 slices the bread in a different way. Combining the costs at all stages, it breaks the price down in terms of the various types of expense involved. Again, of course, the value of the raw ingredients was 20 percent. The biggest element was wages. They took 37 percent of the bread dollar, or nearly half the 80-percent spread. Taxes took 7 percent. This was as much as packaging and

all other noningredient supplies. Transportation and advertising each took about 3 percent. Executive salaries amounted to 2 percent. All other expenses totaled 18 percent, including fuel, rent, depreciation, repair, and maintenance on buildings, machinery, delivery, and store equipment, heat, power, telephone, interest, and bad-debt losses. Net profits, after taxes, of retailers, bakers, millers, and suppliers of other ingredients claimed the final 7 percent of the dollar.

Table I completes the job by combining the information in the two loaves. It shows how much these various costs were at each processing and distributing level. They are all shown in terms of a 1-pound loaf. To make the necessary "conversions" the study used the factors shown in the box. Let's follow the process through to see what the figures mean in terms of the wheat which the farmer sells.

THE FARMER'S SHARE

To mill 100 pounds of flour, the miller needs 2.35 bushels of wheat. From this, he obtains, in addition to the flour, about 40 pounds of millfeed which he sells as a valuable byproduct. The baker who buys the 100 pounds of flour adds water and about 14 pounds or more of other ingredients such as shortening, sugar, dry milk, yeast, etc. As a result, he gets about 154 one-pound loaves. In terms of wheat, one bushel (66 pounds) produces enough flour to make 66 one-pound loaves of bread.

Now, let's see what table I means in terms of wheat. In 1950, farmers received an average price at the farm of about \$2 per bushel of wheat. This would be about 3 cents per pound of bread. The table shows only 2½ cents for the farmer's share of the 14.8-cent loaf of bread.

This is because of the value of the millfeed credited against the cost of wheat—about \$4 cents per bushel of wheat or one-half cent per loaf of bread. This leaves only about \$1.66 per bushel to be charged against bread.

TRANSPORTATION AND INTERMEDIATE HANDLING

In moving from farm to flour mill, wheat is typically handled by country elevators, commission merchants, and terminal market elevators. It is transported, stored, inspected, and weighed. Additional transportation expense is incurred on flour, from miller to baker. In 1950, these costs averaged about 3 percent (4 cent per pound) of the retail price of bread. The figure does not include the cost of delivering bread from baker to retail store. The latter is reported in the baker's cost of operation.

The costs which enter into the retail price of bread at each marketing stage

	Cents per pound loaf	Percent
Retail price.....	14.8	100.0
Retail grocer's margin.....	2.4	
Wages and salaries.....	.8	
Executive salaries.....	.2	
Packaging and other supplies.....	.2	16.0
Advertising.....	.2	
All other expenses.....	.4	
Federal, State, and local taxes.....	.3	
Net profits.....	.3	
Baker's margin.....	8.0	
Packaging and other supplies.....	.6	
Wages and salaries (except executives).....	4.4	
Executive salaries.....	.04	54.2
Advertising.....	.3	
Federal, State, and local taxes.....	.6	
All other expenses.....	1.6	
Net profits.....	.46	
Flour miller's margin.....	.7	
Out-bound transportation.....	.10	
Packaging and other supplies.....	.13	
Wages and salaries (except executives).....	.23	4.7
Executive salaries.....	.02	
Advertising.....	.02	
Federal, State, and local taxes.....	.06	
All other expenses.....	.08	
Net profits.....	.06	

The costs which enter into the retail price of bread at each marketing stage—Continued

	Cents per pound loaf	Percent
Other ingredient processor's margin.....	0.5	
Out-bound transportation.....	.04	
Packaging and other supplies.....	.08	
Wages and salaries.....	.14	3.4
Executive salaries.....	.01	
Advertising.....	.01	
Federal taxes.....	.06	
All other expenses.....	.12	
Net profits.....	.09	
In-bound transportation and intermediate handling.....	.3	2.1
Wheat and flour.....	.25	
Other ingredients.....	.05	
Farmer.....	2.9	
Net farm value of wheat.....	2.6	
Gross farm value.....	3.0	19.6
Less millfeed credit.....	.4	
Net farm value other ingredients.....	.4	

Conversion factors: 2.35 bushels of wheat produces 100 pounds of flour and 40 pounds of millfeed; 1 bushel of wheat produces 43 pounds of flour and 17 pounds of millfeed; 1 pound of bread requires 0.65 pound of flour (or .912 pound of wheat); 100 pounds of flour produces 154 pounds of bread; 1 bushel of wheat produces 66 pounds of bread.

Army Progress in Troop Education and Information Programs

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. DONOHUE. Mr. Speaker, under date of June 6, 1951, in the CONGRESSIONAL RECORD Appendix, I called attention, through remarks and insertion of an article from the America magazine to the increasingly important problem, challenging our high military officials, to provide our troops with fundamental knowledge of the reasons why they are being asked to wear a uniform.

This matter, in my considered judgment, is one vitally affecting the morale of the fighting men we are asking to leave their families and civilian occupations to defend this country against the Communist threat. The magazine editorial referred to certain writings of Mr. Benjamin Fine, education editor of the New York Times, who had published constructive criticism of the deficiencies in the troop information and education program of the military.

I have today received an excellent letter from Maj. Gen. Floyd L. Parks, Chief of Army Information, in which he explains the Army is well aware of their obligation in this sphere of military training and has made considerable advancement in their education program.

I am personally gratified at the progress achieved in the education program under the very able direction of Major General Parks and his competent staff;

I have every confidence he will continue to inspire even more substantial success in the expansion and efficiency of his information program. I know that all of you will join with me in complimenting General Parks and extending our best wishes in his devotion to duty in this most important work.

I am pleased to include his letter, at this point because I feel each and every Member of Congress will be particularly interested, especially in the statistics he reports.

The letter follows:

DEPARTMENT OF THE ARMY
OFFICE OF THE CHIEF OF INFORMATION,
Washington, D. C., September 27, 1951.
HON. HAROLD D. DONOHUE,
House of Representatives.

DEAR MR. DONOHUE: This is to thank you for your interest in the Army troop information and education programs as evidenced by your presentation to the Congress on June 6, which appeared in the CONGRESSIONAL RECORD of that date entitled "Knowledge Inspires Fighting Morale."

As you so aptly stated, the troop information program is becoming increasingly more important to the military, and the Army realizes full well that a good soldier is a well informed soldier. With this in mind, all possible steps are being taken to bring this about as a direct part of leadership and command.

As you well know, perfection is difficult to achieve. However, in the face of increased mobilization, Korea, and European troop commitments, the troop information and education programs have been considerably broadened in scope in recent months, and further improvements are constantly under study.

In his series of articles in the New York Times, Dr. Benjamin Fine presented data that was essentially factual. However, it will be noted that his conclusions were based on observations at only a few Army establishments. It is felt that had he had the opportunity to visit more establishments, his conclusions may have been a little less critical of the over-all program.

The Army commanders concerned have initiated action to overcome defects in the programs as noted by Dr. Fine and others who have investigated this field of Army training. Many of the recommendations made by Dr. Fine already are a part of Army doctrine, and several others have been authorized and are in the process of being implemented. We well realize that there is yet room for improvement.

During recent months, basic regulations have been revised and brought up to date. Special orientation programs have been prepared for those entering the Army, those going into combat or occupied zones, those returning to the United States from overseas, or those returning to civilian life. Command conferences, Army troop information discussion topics, Armed Forces talks, overseas radio networks, newspapers, films, transcriptions, posters, pocket guides, and many other informational media are used to disseminate information to the troops.

During the past year, a special 40-hour discussion leaders' course has been made available to more than 12,500 officers and enlisted men of the Army as a means of providing the units in the field with the means of presenting the information program to the troops in the best possible manner.

Only recently have the troop information and education programs had adequate funds with which to operate. It is now adjusting its activities to meet the rapid pace necessary to keep up with constantly changing demands from an expanding Army.

The other principal function of the troop information and education division of this

office, the education phase, and one that is often overlooked, is worth mentioning here as a matter of information to you.

Currently, the participation in the Army education program is greater than in any period since the demobilization following World War II, a total of 228,000.

The largest educational system in the world, this program has the objective of increasing the efficiency of the Army by raising the academic educational level of its personnel.

In order that he be fully prepared to carry out his assignments, it is felt that a reasoning man must be educated to the point where he knows and believes in the causes for which he fights. To provide this education is a constantly recurring obligation to all leaders in every stage of training and combat.

During the past year, fifth-grade certificates have been issued to 15,029 Army personnel; eighth-grade certificates have been issued to 5,365; 28,852 have passed high-school graduation requirements; and 6,709 have passed the college-level general educational development test, which is equivalent to 1 year of college.

I hope this letter serves to give you a brief outline of the mission and functions of this highly important phase of training. Realizing your keen interest in the subject, I am enclosing a folder containing material written in support of the troop information and education programs, and a number of publications prepared by this office as an example of the types of information made available to the United States soldier. If you desire, I would be glad to put you on our mailing list for informational materials which I feel would be of interest to you.

Sincerely yours,

FLOYD L. PARKS,
Major General, GSC, Chief of
Information.

Progress in Soil Conservation—Part I

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following paper prepared by H. H. Bennett, Chief, Soil Conservation Service, United States Department of Agriculture, for the fourth Inter-American Conference on Agriculture, held at Montevideo in December 1950:

PROGRESS IN SOIL CONSERVATION

It is a pleasure and a great honor to attend this important meeting. Many of you are from South and Central America, Mexico, the West Indies, and North America. I have visited a number of these countries for the purpose of studying their agriculture and the condition of their lands. And recently the organization I represent—the Soil Conservation Service—has worked with student-trainees and other representatives from most of the American Republics on matters pertaining to soil conservation. (Incidentally, I have attended all of the Inter-American Conferences on Agriculture.)

Today national policy and public thinking among the countries of the world, with few exceptions, are agreed on the utter necessity of conserving man's basic natural resources, his productive land in particular. Research,

education, surveys, and the successful application of conservation measures have brought us to a new concept of the importance of land and, also, the need for keeping the land permanently productive. No longer do we, in our thinking, planning, and action, put farmland erosion in one independent category by itself and forest depletion in another, or put floods and siltation under one heading and wildlife depletion in still another unrelated classification.

Nature's laws were so contrived that land, water, plants, and animals all should—and under natural conditions, do—exist in harmony and interdependence for perpetual productiveness. So it likewise is a mandate of nature of precisely the same order that the land and the water which makes land productive must be used and managed according to capability and need. This natural law, man too often has overlooked while busy with his daily affairs, or has been unable to understand. The practical application of this principle of capability and need is being demonstrated on a progressively wider scale from year to year in many parts of the world. Our modern, democratic approach, through the cooperative effort of landholder, Government, and the public together, is proving beneficial to both individuals and nations.

The miracle of modern soil conservation is not altogether the accomplishment of so much conservation work in so short a time, as some nations have achieved, but to my thinking, the real miracle is that perennial phenomenon whereby land, properly safeguarded and supplied with water and appropriate nutrients, goes on producing large quantities of wholesome food and other needed things indefinitely. Prudently used and properly cared for, land does not wear out or decline in productive capacity. It may even become more productive.

Hundreds of thousands of farmers in the United States have discovered this miracle of soil conservation during the last 20 years. Those who have made the discovery are now enthusiastic conservation farmers. They have become, or are fast becoming, true soil conservationists, because they have found that they can actually grow better crops, more per acre, by adopting and applying the better farming methods of modern soil conservation. This means that we are now using our knowledge of soil conservation to help nature perform the same general kind of miracle, over and over again, that she used for countless ages before men started interfering with her land plans by clearing off the forests, breaking out the prairie grasses, and tilling the soil.

THE WORLD'S LAND SITUATION

The present growing interest in soil conservation throughout the Americas and the world is doubly gratifying, because the problems of soil loss by erosion and waste of rainfall do not stop at any nation's boundaries. Conservation of the remaining areas of productive land is a world-wide task, as important as anything man has to do.

What's needed—what we must have, if it is humanly possible—is enough productive land somewhere on earth to feed the people of the world. Failure to maintain that minimum would lead the world eventually into the most serious kind of trouble. By comparison, even the potential destructive power of the atomic bomb seems but little more appalling than what could happen to entire countries, even civilizations, if enough agricultural land should be permitted to be ruined for cultivation or so impoverished as to cause a far-reaching shortage of food.

We may not all be conscious of the fact, but already we are in a race between the shrinking productiveness of our land through erosion waste, on the one hand, and the growing food demands of increasing populations, on the other. Nutritionists say that

we need at least $2\frac{1}{2}$ acres per capita of reasonably productive cultivable land to furnish each person with a minimum nutritional diet. And another half acre is needed per capita for such products as clothing, tobacco, rope, and vegetable oils. Yet some nations have not more than a half acre of productive land per capita. And in the world there is left only about 4,000,000,000 acres of immediately arable land, as nearly as can be determined with the information available. This is less than 2 acres per person for the present world population of 2,350,000,000. As population increases, the per capita acreage of productive land will decrease. Moreover, much of this limited area of land is only of fair to medium quality. Some of it is poor; and more is being made poor, or ruined, with every year of continuing erosion. The rate of decline has accelerated during recent years in many parts of the world. In some instances, population pressure on the land has caused a more intensive use of the land, and, for that reason, more rapid deterioration. This is especially true where excessively sloping grasslands and woodlands have been plowed or cleared for cultivation. Cultivation of such areas gives some temporarily increased production, but usually at the cost of subsequent erosion that too often leads to severe impoverishment of the land.

There are probably several hundred million acres of unproductive land in the world that might be brought into productive use. The precise extent is not known; surveys needed for the determination have not been made. Here and there are some virgin tropical jungle that could be used to produce more food. And there still are some areas in the temperate zones that can be brought into production by clearing, draining, irrigation, or other means. But even when we consider all these possible sources of new agricultural land, we still do not have any surplus for ready use. A great deal has been ruined irreparably by erosion; most of the remainder is in use.

This means that we must depend largely on the 4,000,000,000 acres of arable cropland now available for use. What we must keep clearly in mind is that the world population is increasing, according to the specialists, at a rate of about 20,000,000 annually—with medical science and sanitation improving and spreading rapidly. Our farmland is continually being asked to produce more food and more raw materials for industry, such as wood, clothing, oils, alcohol, and tobacco. We may even be calling on our food-producing lands sooner than expected to provide relatively more of these products. And, as already pointed out, it must not be overlooked that the estimated world supply of 4,000,000,000 acres of arable land is by no means all good land. Probably in the neighborhood of half of it is of only fair productivity at best. Some of it is poor and most of it is eroding or is subject to erosion.

LAND DAMAGE IN THE AMERICAS

In the United States, for example, we have permitted nearly a fifth of the original area of tillable land to become so damaged by erosion as to make it very largely unavailable for further practical cultivation. That means around a hundred million acres practically ruined.

In addition, about a third of the remainder has been seriously damaged, with all or much of the topsoil gone, and half or more of the rest is subject to erosion.

Canada has much land that is subject to blowing in its western prairie provinces, and water erosion is locally serious in many parts of the more humid southeastern section.

Mexico and parts of Guatemala and Costa Rica have much erosion to deal with. Some areas of considerable size have already been ruined and numerous fields have been stripped of topsoil.

For South America we have chiefly observational information, together with the re-

sults of a few general erosion surveys as a basis for estimates. Our best estimates indicate that about a fourth of the cultivated land (past and present) has either been seriously damaged or ruined for further practical cultivation, although partly still usable for grass and trees. Quite naturally conditions of erosion are worse in particular regions, especially the Andean area.

There is some evidence that around 40,000,000 to 50,000,000 acres, at least, have been ruined, nearly ruined, or seriously affected in the 10 South American countries. In the northeasterly part of the Andean area erosion conditions have been studied in considerable detail.¹ Much severely eroded land is found on the steeper slopes. Intermittent use of this land for generations without benefit of rotation, manure, or fertilizer, and without protection from erosion, has led to such severe erosion or depletion of the mineral nutrients of the soil, or both, that many of the people living under these trying conditions clearly are suffering from malnutrition. A large total acreage has been so exhausted that most of the people have left the land, some moving into the more productive lowlands and others into cities. With respect to vegetation, there are places where formerly humid areas have been so reduced in water-holding capacity by removal of absorptive topsoil and by gullying that dryland types of vegetation have noticeably invaded the affected areas.²

Progress in Soil Conservation—Part II

EXTENSION OF REMARKS OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following paper prepared by H. H. Bennett, Chief, Soil Conservation Service, United States Department of Agriculture, for the fourth Inter-American Conference on Agriculture, held at Montevideo in December 1950:

There is no need at this time to go further into detail with respect to local conditions. You may all be well enough acquainted with conditions in your own and neighboring areas.

WIDESPREAD MISUNDERSTANDING

Thus, it is easy to underestimate the urgent need for soil conservation. Many people of the past have either underestimated the importance of protecting their productive land or they have not known how. Generally, both factors have contributed to the widespread damage. Then, too, much damage has resulted from military invasion of some areas and destruction of early

¹ Land Conditions in Venezuela and Their Relation to Agriculture and Human Welfare. H. H. Bennett, D. S. Hubbell, W. K. Hull, J. E. Caudle, Soil Conservation Service, U. S. Department of Agriculture (1942).

² "In the vicinity of El Valle and on the badly eroded slopes between Caracas and La Gaurie a semidesert type of vegetation is found, consisting largely of cugi and cactus. This latter type of vegetation has invaded this originally forested section largely as the result of erosion. According to Dr. H. Pittier, cactus was not found in the hills around El Valle (where he lived) even as recently as 1913. Today it grows extensively." Ibid.

conservation works. Great areas have been terribly impoverished or ruined in this manner, and some civilizations have declined or perished. Today, even here in the Americas, despite the evidence all around us, there are still some who underestimate the importance and urgency of soil conservation. Chief among the false assumptions on the part of these uninformed critics are (1) that soil erosion has been taken care of, is of secondary importance; or (2) that we can afford to postpone the protection of our productive land while we attend to supposedly more urgent matters; that farmers will do all necessary conservation work on their land of their own accord; or (3) that there are short cuts to conservation—quicker, easier, cheaper, and just as effective ways of conserving soil—other than using each acre according to its capabilities and needs under a well-developed plan for each farm and ranch, with the best-trained technicians available helping get the job done; or (4) that soil conservation costs more than it is worth; or (5) that monetary considerations are all that are at stake; or (6) that soil erosion is an inevitable part of nature's scheme and nothing can be done about it.

Not one of these assumptions is true. Time would be wasted in discussing them here, except to reemphasize the fact that they are made by people who are diametrically unacquainted with the facts or are disappointed and jealous because they overlooked them.

Now we have learned how unrestrained erosion works, at home and away from home. We know of the almost periodic hunger that affects overcrowded areas. True, we have for many years considered hunger as merely an economic byproduct. But today we know it is an unnecessary, costly outgrowth of poor husbandry, ignorance, and lack of decision on the part of nations to take up vigorously the job of correction. Fortunately, many people are beginning to see and understand. Some months ago, for example, news commentators told us that the one subject discussed above all others among those attending the United Nations General Assembly was food.

LOOKING AHEAD

Kingsley Davis¹ is authority for figures indicating that in 1850 the world population stood at about 545,000,000; in 1880 at 806,000,000, in 1900 at 1,608,000,000, and in 1940 at 2,171,000,000. That is a fourfold increase in the world's population in 300 years. At the same rate of increase for another three centuries, the world would have 21,000,000,000 people in it, unless the food supply should give out or people destroy each other in war. (And the latter possibility I am not going to discuss beyond the point of warning that both can come, and with all the horrors our minds are capable of conceiving.)

Looking ahead only a century, we would have, at the present estimated rate of increase, 2,000,000,000 more people to feed. Can the world do this? The indications are that it cannot.

What we do know—and this is one of the more important facts of human knowledge—is that soil conservation increases yields. Fortunately we have learned about this urgent need for better use of land through soil and water conservation. In this way, according to our experience with soil conservation work in the United States, there is promise for largely increasing the production of food in most countries.

And some land—not all—presently producing little or nothing can be rejuvenated in some degree, especially for grass and legumes for livestock forage. And other

¹ Davis, Kingsley. Amer. Social Rev. vol. 10, pp. 242-249. 1945.

areas, of course, can be made to produce trees.

EROSION PROBABLY A PRIMARY CAUSE OF MALNUTRITION

It is possible that erosion may outrank all other causes of malnutrition and famine. It is my opinion that this situation, too, can be vastly remedied by modern soil conservation.

By coincidence or otherwise, it has been only in recent years that we have come to understand something of the relationship between the nutrients in the food we eat and our health and general well-being. This is the distinct relationship, if we stop to think of it, that exists between man and the soil from which he is nourished from birth until the end of his days. Admittedly, much remains to be learned on this vital subject, but it requires no profound research to confirm the fact that poor land makes poor people—people with empty pocketbooks and empty stomachs, living empty lives.

Soil erosion is the surest and quickest way of making both land and people poor and keeping them poor. Topsoil stripped from once fertile land, and fields riddled with gullies, bring on a whole ugly train of economic and social difficulties: monetary losses, declining trade, inadequate diets, lowered taxes, impoverished educational facilities, poorer schools and churches, discontent, and other troubles.

When soil is swept out of fields by erosion, the whole of it is bodily lost, layer by layer, with everything in it, whether put there by nature or man. All available plant nutrients are lost, even the organisms that help convert unprocessed soil-forming material into available nutritive material. What is left behind is usually raw, unprocessed subsoil that contains relatively little available plant nutrients. Although complete chemical analysis may show that the subsoil has about the same chemical composition as the topsoil, except for nitrogen and organic matter the plant nutrients of subsoil, nevertheless, are in a much lower form of availability. This is shown by the markedly lower productive capacity of raw subsoil—yields which sometimes are only 2, 4, 8, 10, or 20 percent of topsoil yields.

If any of the subsoil constituents are unavailable, it is quite probable all of them are unavailable. Therefore, soil erosion appears to be a direct contributor to lower nutrition, and soil conservation the remedy or a partial remedy. Exhaustion of soil by excessive cropping may dispose of a large share of the available nutritive materials in the land, but it doesn't by any means extend to the same extreme as the process of soil erosion, which removes everything bodily. Overcropping, without erosion, hurts some, but it does leave, however, most of the mass of the soil, with a considerable content of potential nutrients in the undecomposed minerals.

Effective soil conservation not only controls erosion but also maintains the productivity and ability of the land to grow healthful crops through the addition of organic matter, fertilizers, and possibly soil amendments containing available nutrients.

Dr. Jonathan Forman, editor of the Ohio State Medical Journal, recently said:

"Depleted soils will not produce healthy plants. Plants suffering from mineral deficiency will not nourish healthy animals. Deficient plants and undernourished animals will not support our people in health.

"The important problem is not how to procure medical care at public expense. First, we should get at the fundamentals of human health, which is the maintenance of soil fertility, so that proteinous materials, full of nutrients, are provided for both man and beast. Our civilization truly rests upon our soil and we must see to it that it is restored to full fertility."¹

¹Manual, Agriculture and Conservation Program, Ohio Chamber of Commerce. 1942.

Sometime ago Surg. Gen. Thomas Parran, United States Public Health Service, said in a discussion of general nutritional deficiency and national health:

"Dietary deficiency is widespread and serious, with more than 40 percent of the population—United States—on inadequate rations. The fertility of the soil influences the food value of crops grown upon it. Animals feeding on depleted soils produce depleted milk. Thus, soil conservation has a direct relationship to nutritional status."²

If we are to have a proper degree of health for our people, it is a growing belief that we must produce more of the protective foods and our crops must be grown on properly husbanded, mineral-rich soil, so that the available nutrients can be absorbed into the products fed to our bodies. But we still have much to learn along this line of study.

So it is with people. Too many of us seem to think that the food we buy in cans and sacks at the grocery store has somehow grown right there in the store. We fail to realize that even though the beans and meat we buy may appear to be exactly alike, one sack of beans and one piece of meat may be much higher in nutritional value than other sacks of beans and packages of meat, because of the soil on which they were grown.

SOIL CONSERVATION, THE MAIN HOPE OF OUR CIVILIZATION

The world—including the Americas—is approaching maturity from the standpoint of new agricultural lands that can be brought into cultivation readily. From now on, we must assume serious responsibility for the care and wise use of what is left. We can no longer afford land exploitation.

In nations where productive land is scarce, there is one best way to produce more for the hungry millions who, under a nonconservation type of agriculture, are steadily growing hungrier. That one way is to take care of the land that is left, build it up, improve it—and store rainfall in the reservoir of the soil through the use of soil- and water-conservation measures and sound land use.

Soil conservation, scientifically applied to the land according to modern standards, is the great need and the main hope of our civilization. To a large degree, people everywhere depend for their well-being on the well-being of their agriculture. Even though there has been phenomenal advancement in invention, manufacturing, mining, transportation, and other industrial activities in recent years, the people of the world are still basically dependent on agriculture.

And a prosperous and lasting agriculture utterly depends on an adequate supply of productive land, properly used and so protected that it will remain permanently productive. Without this solid foundation, there can be no real hope for a continuously successful agriculture anywhere. And, too, without this foundation there can be no assurance of economic stability and social progress, there can be no assurance of adequate nutrition, prosperity, happiness, or peace anywhere on earth.

As long as people have enough good land and an adequate supply of water to make the land productive, they have the means to overcome, if they will, such handicaps as poverty, malnutrition, inadequate education, and lack of opportunity. Without such resources, real and lasting progress is impossible.

Soil conservation, then, is mandatory everywhere over the world if our civilization is to avoid a tragic decline, economically and culturally.

PRODUCTIVE LAND A MAJOR FACTOR IN FUTURE INTERNATIONAL RELATIONS

As the population of the world continues to grow and the supply of productive land

diminishes, land becomes of increasing importance in international affairs. Apparently, food is rapidly becoming the most important article of commerce and international relations in many parts of the world.

HELPING OTHER COUNTRIES TO HELP THEMSELVES

The record of progress and accomplishment in the field of soil conservation during the last 15 to 20 years is quite sufficient to disprove any illusion that sound agricultural planning and application are not possible under our American system of government, as some unfriendly critics have inferred. Apparently, many people around the world agree with this, because during the last few years, 80 countries have sent some 500 agricultural representatives and "trainees" to the United States to study our soil and water conservation program in the field, some of them working with service technicians for as much as a year. These visitors have included agriculturists and scientists from nearly every part of the globe—from South America, Africa, Europe, India, China, Australia, Asia. A number of these countries already have national soil conservation programs under way.

Now, I want to repeat what I said at the plenary session, United Nations Scientific Conference on the Conservation and Utilization of Resources, August 19, 1949, with respect to keeping our leaders properly and promptly informed about the need for safeguarding our remaining area of productive land:

"The state of world affairs today affords evidence, as I see it, that a great many scientists hereafter must become more than scientists. They must become, also, effective advocates and teachers. I think it must be apparent to everyone here that too much of the knowledge acquired through research—knowledge of great potential benefit to mankind—is not yet being adequately used. Certainly it is not being used widely enough. Nor is the demonstrated ability of science to acquire new knowledge and to help solve current problems being employed as fully as it might be.

"The principal reason is apparent. Our leaders frequently do not understand our scientific language. Too generally we have failed, somehow, to communicate to them facts of the greatest importance. Those we have chosen to direct the affairs of our nations—our leaders—are rarely scientists. More often they are lawyers, soldiers, or leaders in public affairs—politics, labor, business. If they do not understand the facts about natural resources and how best to use them, the responsibility is more likely to lie at our own door, as scientists, than at theirs.

"One of the great jobs, then, ahead of scientists, particularly those working in the fields of natural resources, is to find ways to get their knowledge understood by our leaders and statesmen, and put to wider use."

CONSERVATION EDUCATION

Probably we shall never have maximum results from our soil and water conservation work until the full conception of the cost and destructiveness of imprudent use of the land and failure to safeguard it from the ravages of erosion are fully understood by the people. This is not likely to come about until the subject is taught in our schools, probably beginning in the lower grades and going well into the college courses. If this can be done, it will be possible to get the full and effective conception of the problem into the bloodstream of our youth and thus into the understanding of the people. And when this is done, the matter of taking the best possible care of the land will have been largely assured.

Inflation for Beginners

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. REED of New York. Mr. Speaker, until the public thoroughly understands the problem of inflation, the Truman spendthrifts can escape their responsibility for the present inflation by shouting "Give us controls." The Truman administration by confusing the public by asking for controls over the economic life of every individual, untruths referring to the real cause of inflation, which is currency expansion, is an attempt to grasp far more and more power under false propaganda.

Henry Hazlitt, a distinguished student of economics, has performed a much-needed service by publishing in *Newsweek* in issues of September 3, 10, 17, 24, and October 1, a series of articles on "Inflation for beginners." Under leave to extend heretofore granted, I am inserting the articles to which I have referred as follows:

[From *Newsweek* for September 3, 1951]

INFLATION FOR BEGINNERS—I

(By Henry Hazlitt)

No subject is so much discussed today—or so little understood—as inflation. The politicians in Washington talk of it as if it were some horrible visitation from without, over which they had no control—like a flood, a foreign invasion, or a plague. It is something they are always promising to fight—if Congress or the people will only give them the weapons or a strong law to do the job.

Yet the plain truth is that our political leaders have brought on inflation by their own money and fiscal policies. They are promising to fight with their right hand the conditions they have brought on with their left.

Inflation, always and everywhere, is primarily caused by an increase in the supply of money and credit. In fact, inflation is the increase in the supply of money and credit. If you turn to the recent *American College Dictionary*, for example, you will find the first definition of inflation given as follows: "Undue expansion or increase of the currency of a country, especially by the issuing of paper money not redeemable in specie."

In recent years, however, the term has come to be used in a radically different sense. This is recognized in the second definition given by the *American College Dictionary*: "A substantial rise of prices caused by an undue expansion in paper money or bank credit." Now obviously a rise of prices caused by an expansion of the money supply is not the same thing as the expansion of the money supply itself. A cause or condition is clearly not identical with one of its consequences. The use of the word "inflation" with these two quite different meanings leads to endless confusion.

The word "inflation" originally applied solely to the quantity of money. It meant that the volume of money was inflated, blown up, overextended. It is not mere pedantry to insist that the word should be used only in its original meaning. To use it to mean "a rise in prices" is to deflect attention away from the real cause of inflation and the real cure for it.

Let us see what happens under inflation, and why it happens. When the supply of

money is increased, people have more money to offer for goods. If the supply of goods does not increase—or does not increase as much as the supply of money—then the prices of goods will go up. Each individual dollar becomes less valuable because there are more dollars. Therefore more of them will be offered against, say, a pair of shoes or a hundred bushels of wheat than before. A price is an exchange ratio between a dollar and a unit of goods. When people have more dollars, they value each dollar less. Goods then rise in price, not because goods are scarcer than before, but because dollars are more abundant.

In the old days, governments inflated by clipping and debasing the coinage. Then they found they could inflate cheaper and faster simply by grinding out paper money on a printing press. This is what happened with the French assignats in 1789, and with our own currency during the Revolutionary War. Today the method is a little more indirect. Our Government sells its bonds or other I O U's to the banks. In payment, the banks create deposits on their books against which the Government can draw. A bank in turn may sell its Government I O U's to the Federal Reserve Bank, which pays for them either by creating a deposit credit or having more Federal reserve notes printed and paying them out. This is how money is manufactured.

The greater part of the money supply of this country is represented not by hand-to-hand currency but by bank deposits which are drawn against by checks. Hence when most economists measure our money supply they add demand deposits (and now usually, also, time deposits) to currency outside of banks to get the total. The total of money and credit so measured was \$64,099,000,000 at the end of December 1939, and \$174,200,000,000 at the end of June this year. This increase of 171 percent in the supply of money is overwhelmingly the main reason why wholesale prices rose 135 percent from 1939 to June of this year.

[From *Newsweek* for September 10, 1951]

INFLATION FOR BEGINNERS—II

(By Henry Hazlitt)

It is often argued that to attribute inflation solely to an increase in the volume of money is "oversimplification." This is true. Many qualifications have to be kept in mind.

For example, the "money supply" must be thought of as including not only the supply of hand-to-hand currency, but the supply of bank credit—especially in the United States, where most payments are made by check.

And it is an oversimplification to say that the value of an individual dollar depends simply on the present supply of dollars outstanding. It depends also on the expected future supply of dollars. If most people fear, for example, that the supply of dollars is going to be even greater a year from now than at present, then the present value of the dollar (as measured by its purchasing power) will be lower than the present quantity of dollars would otherwise warrant.

Again, the value of any monetary unit such as the dollar, depends not merely on the quantity of dollars but on their quality. When a country goes off the gold standard, for example, it means in effect that gold, or the right to get gold, has suddenly turned into mere paper. The value of the monetary unit therefore usually falls immediately, even if there has not yet been any increase in the quantity of money. This is because the people have more faith in gold than they have in the promises or judgment of the Government's monetary managers. There is hardly a case on record, in fact, in which departure from the gold standard has not soon been followed by a further increase in bank credit and in printing-press money.

In short, the value of money varies for basically the same reasons as the value of any commodity. Just as the value of a bushel of wheat depends not only on the total present supply of wheat but on the expected future supply and on the quality of the wheat so the value of a dollar depends on a similar variety of considerations. The value of money, like the value of goods, is not determined by merely mechanical or physical relationships, but primarily by psychological factors, which may often be quite complicated.

In dealing with the causes and cure of inflation, it is one thing to keep in mind real complications; it is quite another to be confused or misled by needless or non-existent complications.

For example, it is frequently said that the value of the dollar depends not merely on the quantity of dollars but on their "velocity of circulation." Increased "velocity of circulation," however, is not a cause of a further fall in the value of the dollar; it is itself one of the consequences of the fear that the value of the dollar is going to fall. (Or, to put it the other way round, of the belief that the price of goods is going to rise.) It is this belief that makes people more eager to exchange dollars for goods. The emphasis by some writers on "velocity of circulation" is just another example of the error of substituting dubious mechanical for real psychological reasons.

Another blind alley: in answer to those who point out that inflation is primarily caused by an increase in money and credit, it is contended that the increase in commodity prices often occurs before the increase in the money supply. This is true. This is what happened immediately after the outbreak of war in Korea. Strategic raw materials began to go up in price on the fear that they were going to be scarce. Speculators and manufacturers began to buy them to hold for profit or protective inventories. But to do this they had to borrow more money from the banks. The rise in prices was accompanied by an equally marked rise in bank loans and deposits. From May 31, 1950 to May 30, 1951, the loans of the country's banks increased by \$12,000,000,000. If these increased loans had not been made, and new money (some \$6,000,000,000 by the end of January 1951) had not been issued against the loans, the rise in prices could not have been sustained. The price rise was made possible, in short, only by an increased supply of money.

[From *Newsweek* for September 17, 1951]

(By Henry Hazlitt)

INFLATION FOR BEGINNERS—III

One of the most stubborn fallacies about inflation is the assumption that it is caused, not by an increase in the quantity of money, but by a shortage of goods.

It is true that a rise in prices (which, as we have seen, should not be identified with inflation) can be caused either by an increase in the quantity of money or by a shortage of goods—or partly by both. Wheat, for example, may rise in price either because there is an increase in the supply of money or a failure of the wheat crop. But we seldom find, even in conditions of total war, a general rise of prices caused by a general shortage of goods. Yet, so stubborn is the fallacy that inflation is caused by a shortage of goods, that even in the Germany of 1923, after prices had soared hundreds of billions of times, high officials and millions of Germans were blaming the whole thing on a general shortage of goods—at the very moment when foreigners were coming in and buying German goods with gold or their own currencies at prices lower than those of equivalent goods at home.

The rise of prices in the United States since 1939, or since the outbreak of war in

Korea, is constantly being attributed to a shortage of goods. Yet, official statistics show that our rate of industrial production in June of this year, for example, was two and a quarter times as much as from 1935 to 1939, and 12 percent higher than in June of 1950. Nor is it any better explanation to say that the rise in prices is caused by a shortage in civilian goods. Even to the extent that civilian goods were really short, the shortage would not cause a rise in prices if taxes took away as large a percentage of civilian income as rearmament took of civilian goods.

This brings us to another source of confusion. People frequently talk as if a budget deficit were in itself both a necessary and a sufficient cause of inflation. A budget deficit, however, is fully financed by the sale of Government bonds paid for out of real savings, need not cause inflation. And even a budget surplus, on the other hand, is not an assurance against inflation. This was shown in the fiscal year ended June 30, when there was substantial inflation in spite of a budget surplus of \$3,500,000,000. A budget deficit, in short, is inflationary only to the extent that it causes an increase in the money supply. And inflation can occur even with a budget surplus if there is an increase in the money supply notwithstanding.

The same chain of causation applies to all the so-called inflationary pressures—particularly the so-called wage-price spiral. If it were not preceded, accompanied, or quickly followed by an increase in the supply of money, an increase in wages above the equilibrium level would not cause inflation, it would merely cause unemployment. And an increase in prices without an increase of cash in people's pockets would merely cause a falling off in sales. Wage and price rises, in brief, are usually a consequence of inflation. They can cause it only to the extent that they force an increase in the money supply.

The accompanying chart compares the percentage increase in the money supply (currency plus bank deposits) since 1939 with the rise in wholesale prices and in the cost of living during the same period. The correlation is obvious—though the factors involved are too complex to expect it to be exact. The chief reason why prices have not increased as much as the money supply is that the production rate of goods has also greatly increased since 1939.

A warning must also be given concerning the accuracy of the two price indexes themselves. They show apparent stability from the end of 1942 to the middle of 1946, and a sharp rise then when price control was taken off. But this is chiefly because official price and cost-of-living indexes tend to become fictional under price control. They do not measure the realities of black-market prices, shortages, rationing, queues, favoritism, deterioration of quality and nonexistent goods. When price control is taken off, the Government's increase of the money supply has its full effect on the official price indexes.

[From Newsweek for September 24, 1951]

INFLATION FOR BEGINNERS—IV

(By Henry Hazlitt)

As long as we are plagued by false theories of what causes inflation, we will be plagued by false remedies. Those who ascribe inflation primarily to a "shortage of goods," for example, are fond of saying that "the answer to inflation is production." But this is at best a half-truth. It is impossible to bring prices down by increasing production if the money supply is being increased even faster.

The worst of all false remedies for inflation is price fixing and wage fixing. For if more money is put into circulation, while prices are held down, most people will be left with unused cash balances seeking goods.

The final result, barring a like increase in production, must be higher prices.

There are broadly two kinds of price fixing—"selective" and "over-all." With selective price fixing the Government tries to hold the prices merely of a few strategic war materials or a few necessities of life. But then the profit margin in producing these things becomes lower than the profit margin in producing other things, including luxuries. So selective price fixing quickly brings about a shortage of the very things whose production the Government is most eager to encourage. Then bureaucrats turn to the specious idea of an over-all freeze. They talk of holding or returning to the prices and wages that existed on the day before war broke out in Korea. But the price level and infinitely complex price and wage interrelationships of that day were the result of the state of supply and demand on that day. And supply and demand seldom remain the same, even for the same commodity, for 2 days running, even without major changes in the money supply.

It has been moderately estimated that there are some 9,000,000 different prices in the United States. On this basis we begin with more than 40,000,000,000,000 interrelationships of these prices. And a change in one price always has repercussions on a whole network of other prices. The prices and price relationships of June 24, 1950, were presumably those roughly calculated to encourage a maximum balanced production of peacetime goods. They are obviously the wrong prices and price relationships to encourage the maximum production of war goods. Moreover, the price pattern of a given day always embodies many misjudgments and "inequities." No single mind, and no bureaucracy, has wisdom and knowledge enough to correct these. Every time a bureaucrat tries to correct one price or wage miscalculation or inequity he creates a score of new ones. And there is no precise standard for measuring the economic "inequities" of a particular case that any two people seem able to agree on.

Coercive price fixing would be an insoluble problem, in short, even if those in charge of it were the best-informed economists, statisticians, and businessmen in the country, and even if they acted with the most conscientious impartiality. But they are subjected in fact to tremendous pressure by the organized pressure groups. Those in power soon find that price and wage control is a tremendous weapon with which to curry political favor or to punish opposition. That is why parity formulas are applied to farm prices and escalator clauses to wage rates, while industrial prices and rents are penalized.

Another evil of price control is that, though it is always put into effect in the name of an alleged "emergency," it creates powerful vested interests and habits of mind which prolong it or tend to make it permanent. Outstanding examples of this are rent control and exchange control. Price control is the major step toward a fully regimented or planned economy. It causes people to regard it as a matter of course that the Government should intervene in every economic transaction.

But finally, and worst of all from the standpoint of inflation, price control diverts attention away from the only real cause of inflation—the increase in the quantity of money and credit. Hence it prolongs and intensifies the very inflation it was ostensibly designed to cure.

[From Newsweek for October 1, 1951]

INFLATION FOR BEGINNERS—V

(By Henry Hazlitt)

The cure for inflation, like most cures, consists chiefly in the removal of the cause. The cause of inflation is the increase of money

and credit. The cure is to stop increasing money and credit. The cure for inflation, in brief, is to stop inflating. It is as simple as that.

But while simple in principle, this cure often involves complex and disagreeable decisions on detail. Let us begin with the Federal budget. It is next to impossible to avoid inflation with a continuing heavy deficit. That deficit is almost certain to be financed by inflationary means—that is, by directly or indirectly printing more money. Huge Government expenditures are not in themselves inflationary, provided they are made wholly out of tax receipts or out of borrowing paid for wholly out of real savings. But the difficulties in either of these methods of payment, once expenditures have passed a certain point, are so great that there is almost inevitably a resort to the printing press.

Moreover, though huge expenditures wholly met out of huge taxes are not necessarily inflationary, they inevitably reduce and disrupt production, and undermine any free enterprise system. The remedy for huge governmental expenditures is therefore not equally huge taxes, but a halt to reckless spending.

On the monetary side, the Treasury and the Federal Reserve System must stop creating artificially cheap money. That is, they must stop arbitrarily holding down interest rates. And they must stop buying at par the Government's own bonds. When interest rates are held artificially low, they encourage an increase in borrowing. This leads to an increase in the money and credit supply. The process works both ways, for it is necessary to increase the money and credit supply in order to keep interest rates artificially low. That is why the cheap-money policy and the Government-bond-support policy are simply two ways of describing the same thing. As long as Federal Reserve banks buy the Government's 2½-percent bonds, say, at par, they hold down the basic long-term interest rate to 2½ percent. And they pay for these bonds, in effect, by printing more money. This is what is known as monetizing the public debt. Inflation will go on as long as this goes on.

The Federal Reserve System, if it were determined to halt inflation and to live up to its responsibilities, would not only halt this process of holding down interest rates and monetizing the public debt, but it would take the leadership in raising interest rates. It should never have departed, in fact, from the tradition that the discount rate of the central bank should normally (and above all in an inflationary period) be a penalty rate; that is, a rate higher than the member banks themselves get on their loans.

Congress should immediately restore the required legal reserve ratio of the Federal Reserve banks to the previous level of 35 and 40 percent, instead of the present emergency level of 25 percent put into effect as a war-inflation measure in June 1945.

Congress should in addition authorize the Federal Reserve Board to increase this reserve ratio even further. Legal minimum reserve ratios are admittedly an awkward method of limiting the potential supply of money and credit. But they are an added safeguard when other methods are not properly used. As long as the Federal Reserve authorities, moreover, insist on the power to control the reserve ratios of member banks, they should also be obliged to control their own. An increase in reserve bank credit can cause far more inflation than an equal increase in member bank credit.

As a last resort the monetary authorities could actually freeze the credit supply, allowing no net increase in loans at all. But this will never be necessary if other measures have been wisely taken.

It can be said, finally, that the world will never work itself out of the present inflationary era until it returns to the gold

standard. The gold standard provided a practically automatic check on internal credit expansion. That is why the bureaucrats abandoned it. In addition to its being a safeguard against inflation, it is the only system that has ever provided the world with the equivalent of an international currency.

The first question to be asked today is not how we can stop inflation, but do we really want to? For one of the effects of inflation is to bring about a redistribution of wealth and income. In its early stages (until it reaches the point where it grossly distorts and undermines production itself) it benefits some groups at the expense of others. The first groups acquire a vested interest in maintaining inflation. Too many of us continue under the delusion that we can beat the game—that we can increase our own incomes faster than our living costs. So there is a great deal of hypocrisy in the outcry against inflation. Many of us are shouting in effect: "Hold down everybody's price and income except my own."

Governments are the worst offenders in this hypocrisy. At the same time as they profess to be fighting inflation they are following a full employment policy. And as one writer recently admitted, frankly in the *London Economist*: "Inflation is nine-tenths of any full employment policy."

What he forgot to add is that inflation must always end in a crisis and a slump, and that worse than the slump itself may be the public delusion that the slump has been caused, not by the previous inflation, but by the inherent defects of capitalism.

Inflation, to sum up, is the increase in the volume of money and bank credit in relation to the volume of goods. It is harmful because it depreciates the value of the monetary unit, raises everybody's cost of living, imposes what is in effect a tax on the poorest at as high a rate as the tax on the richest, wipes out the value of past savings, discourages future savings, redistributes wealth and income wantonly, encourages and rewards speculation and gambling at the expense of thrift and work, undermines confidence in the justice of a free enterprise system and corrupts public and private morals.

But it is never inevitable. We can always stop it overnight if we have the sincere will to do so.

Mutuals and Cooperatives

EXTENSION OF REMARKS OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 2, 1951

MR. SIEMINSKI. Mr. Speaker, while I have received numerous and divergent views relatives to H. R. 4473, the Revenue Act of 1951, which will soon be reported to the House by the committee of conferees, I should like to list below extracts of some correspondence on the issue:

HUDSON CITY SAVINGS BANK,
Jersey City, N. J., September 28, 1951.
Congressman ALFRED SIEMINSKI,
The House Office Building,
Washington, D. C.

DEAR AL: You are familiar, no doubt, with the steps that are being taken to bring about taxation of the income of mutual-savings banks and cooperatives, which have heretofore been exempt.

While there has been bitter opposition to this taxation from certain savings banks, it

appears that the Senate Finance Committee is going to insist upon such taxation in spite of the fact that the House of Representatives has voted against such taxation.

To me, there is one important point that should be considered and in which we would like to enlist your cooperation. The mutual-savings banks should be permitted to build up a reserve out of earnings each year on a tax-free basis, and whether that reserve is set at 10 percent or 15 percent of deposit liabilities, there should be a provision in the tax bill which would exempt the income of savings banks so long as the surplus of the savings bank is not up to the required 10 percent or 15 percent.

This is particularly important because the hundreds of thousands of depositors throughout the country are entitled to the protection that an adequate surplus account in the individual banks would give them.

I trust that we can count on your cooperation in seeing to it that this provision is incorporated in the tax bill.

With kind regards, I am,

Very truly yours,

JOHN J. ROE,
President.

NEW JERSEY SAVINGS AND LOAN LEAGUE,
Newark, N. J., September 28, 1951.

HON. ALFRED D. SIEMINSKI,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN SIEMINSKI: It is our earnest hope that the House version of the bill will be adopted by the conference rather than the Senate version. We would appreciate it very much if you could recommend to the conferees that they urge the adoption of that version.

The status of the savings and loan associations was carefully considered by the House Ways and Means Committee both in 1950 and in 1951. All of the arguments were presented in detail and the committee on both occasions came to the conclusions that the present treatment of such institutions was proper. It was recognized that the available earnings of savings and loan associations are in the tax stream now, since the participants—the members—are fully taxable upon their dividends received from the associations and that all that is left above the payment of dividends is needed as a prudent reserve against future losses. Therefore no provision was included to tax the associations.

The original Senate version of the bill gave no recognition to the necessity for reserves at all, but after long debate on the floor, it was amended to provide that associations should be taxed upon any accumulations to reserves at any time that their reserves are in excess of 10 percent of the savings of the members in the association.

Even the proponents of the tax in the Senate finally admitted the necessity for reserves. The amendment which was adopted by the Senate while a partial recognition of the fact, is not an adequate recognition. For example, the State of New Jersey requires that associations shall set aside to reserves, a portion of their earnings until those reserves equal 15 percent of their assets.

We would therefore have the situation, if the Senate version of the bill is adopted, that the State of New Jersey would be saying that the reasonable minimum to which an association must build up its reserves is 15 percent while the United States Government would be saying that anything over 10 percent was excessive and should be taxed.

It was argued in the Senate by the proponents of the Senate version that it was their purpose to force into the tax stream, earnings retained in these institutions, but not needed as reserves. There are no such earnings in savings and loan associations. Everything in the way of earnings that can

safely be distributed, is distributed and is in the tax stream. The limited field in which these associations operate, does not permit of large profits. The associations must pay a reasonable dividend in order to attract and hold savings. All that is left is absolutely required as a measure of prudence and safety.

The House bill recognizes this, while the Senate bill sets up a system which will hamper the establishment of necessary reserves and may well result in the weakening of these institutions and make it impossible for them to meet a future economic set-back.

Much of the clamor for taxation of mutual institutions has come from the commercial banking interests. It seems inconceivable that Congress should pass a law which in its effects in New Jersey, would injure the present small earning power of 1,500,000 people who save their money in mutual institutions of one kind or another, or that would weaken the financial soundness of these institutions, simply to improve the competitive position of the commercial banks owned by no more than 30,000 stockholders.

We shall appreciate very much, anything that you may be able to do that will further the adoption of the House version as to this particular matter.

Sincerely yours,

EMIL A. GALLMAN,
Executive Vice President.

D. KALTMAN & Co., INC.,
Jersey City, N. J., August 23, 1951.

HON. ALFRED D. SIEMINSKI,
Gifford Avenue, Jersey City, N. J.

MY DEAR CONGRESSMAN: Please don't think me presumptuous in sending you the attached editorial.

I do hope you will read it, as busy as you are

Since we, like other wholesalers, work on a fixed mark-up established by the manufacturers, approximately 15 percent gross, we're finding it more and more difficult to compete with cooperatives and mutuals in our field. I know that wholesalers in other industries are in the same position.

May I appeal to you, to use your efforts in righting a wrong, that was created years ago, but was never intended to continue to grow, to the "Frankenstein" it is today, at the expense of a large segment of American business.

Equal taxation for all enterprises—mutuals, cooperatives, or independently owned, will right this gross injustice and in addition, will help our Government raise the additional tax money required.

May I hear from you, for which please accept my thanks in advance.

Very sincerely yours,

DAVID L. KALTMAN,
President.

[From the Jersey Journal of August 11, 1951]

AS IT SEEMS AT JOURNAL SQUARE

There's a movement on to collect income taxes from cooperatives and mutuals doing business in competition with banks, stores, and other concerns which already pay taxes. The amount of subsidy given to tax-exempt businesses like savings banks, credit unions, life insurance companies, consumers or farmers' cooperatives, etc., is said to be more than \$2,000,000,000.

The existence of such a big boom to certain types of business organizations is proof of how easily the country can be led down the path of socialism. If depositors in mutual savings banks, members of credit unions, and of other cooperative or mutual business enterprises thought about it, there is some doubt how anxious they would be to get this tax exemption. Spread over all the co-ops and mutuals today, would it be a serious blow to pay the same taxes that all other business has to pay? The basis of the ex-

emption is not the kind of business done, but the organizational set-up. If the customers own the store, that's a co-op; and it's exempt from income tax. If stockholders own the store, that's not exempt, but is taxed.

One other way to make things fair, and not favor one way of doing business over the other ways of private enterprise, would be to drop the income tax on corporations and collect income tax only from individuals. This way is never going to be adopted, because the Government likes to tax the corporations—the tax is easier to collect.

Still another way to square things off would be to tax all income (gross income) and never mind about net. This would put an end to sitting up all night trying to figure out deductions from your taxable income.

The plan to tax mutuals and co-ops is perfectly sound, but it will take a lot of public support before a Congressman will vote for it. He will figure every member of a co-op or a credit union is a voter, and every mutual savings bank depositor a voter, and he will want to know that they are in favor of taxing their own business the same as other business is taxed.

Truman Nails Down the Curtain

EXTENSION OF REMARKS OF

HON. GLENN R. DAVIS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 25, 1951

Mr. DAVIS of Wisconsin. Mr. Speaker, much has already been said, and very properly so, about the iron curtain of news of governmental agencies decreed by President Truman. Truly, much more than an issue between newspapermen and Presidential appointees is involved. We have witnessed all too many efforts by Federal officials to influence and control public opinion. There ought to be less of this, and not more.

I insert herewith, Mr. Speaker, a pertinent editorial from the Wisconsin State Journal, the leading newspaper of Wisconsin's capital city:

TRUMAN NAILS DOWN THE CURTAIN

Stubborn as usual, Harry Truman insists on standing by his order which gives Federal bureau chiefs power to pick and choose between news stories the public should or should not have.

"There is nothing wrong with the order" allowing department heads to suppress selected Government news because it is "security information," the President insists.

In addition to proving once again his bad-tempered stubbornness, Mr. Truman's decision displays a state of mind dangerous for America. The President's decision also reveals his own lack of knowledge of the way Government agencies and their bosses operate.

President Truman's order itself concedes that improper application of the classification powers can be dangerous. What the order does not say and what the President apparently does not know is that improper application of the classification power is inevitable.

In the first place, department heads will be inclined to play it safe and stamp almost everything secret.

Second, a few power-hungry and overofficial bureau bosses will use the classification

system at every opportunity merely to satisfy their own ego and prove their own importance.

Third, practically all department heads will use their new powers to cover up their own and the administration's mistakes.

Once a Federal bureau has a good share of its papers and records marked "Secret," the newspapers and the public will have the devil's own time digging out the information that never should have been suppressed in the first place.

The Congress now is sniffing into some odoriferous RFC loans, for example. Many of these loans went to firms connected in one way or another with the national defense effort. Couldn't most of these deals now be classified and the details hidden from the public?

On the same day Mr. Truman stamped his foot and said his secrecy order would stay, Dr. Alberto Gainza Paz, former publisher and editor of La Prensa, warned that the Americas are in danger of losing free access to the news and must fight for freedom of the press. Dr. Paz should know whereof he speaks. His newspaper was suppressed and finally seized by the Peron government of Argentina.

The Germans, Italians, and Spaniards all lost free access to the news at the same time they lost their freedom, he pointed out. And the techniques of totalitarian government have changed from one of suppressing editorial opinion to control of the news itself, he said.

This becomes then more than a fight between a few United States newspapers and a bunch of politicians. The President's secrecy order is an issue between the American people and a government that has shown an insatiable appetite for power, power, and more power.

True Profit Control

EXTENSION OF REMARKS OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 27, 1951

Mr. GOODWIN. Mr. Speaker, we can depend upon our people to cooperate patriotically in any effort made by administration to assume reasonable control over our living in a period when it is essential that our economy be geared to the situation where the national defense becomes a prime consideration of government. Notwithstanding all this, we have to realize the inherent difficulty in attempting to administer controls which drastically affect the lives of all of us by substituting rules and regulations for free and open competition in connection with the basic economic law of supply and demand. Under leave to extend my remarks, I include an editorial from the Everett (Mass.) News-Gazette of September 19, 1951:

TRUE PROFIT CONTROL

There has been a lot of talk about how much profit retailers should be allowed to make and just what formulas should be applied by OPS to take care of increases in wholesale prices, overhead expense, and other costs. OPS has, on several occasions, made changes in orders which proved to be unworkable, and which would have squeezed profits so thin that retailers would have had to sharply cut their purchasing of stocks.

Entirely aside from these rather technical matters, the fact is that the best form

of profit control ever devised by man does not lie in rules and orders and laws. It lies, instead, in free, open competition—along with the public's idea of what this item or that is worth. As an example, many commodities are now selling at prices below the legal OPS-established level. The reason for that is that people just wouldn't buy at the higher price—and when that happens, competitive business seeks a price that the customers will pay.

Many people seem to think that retailers customarily keep, as profit, 20 cents and perhaps more out of each dollar that goes through the cash register. This is a highly fallacious assumption. Depending on the kind of goods sold, and the rate of turn-over, typical stores actually earn a profit of 1 to 5 cents out of that dollar. All the rest of the money goes to buy stock; to pay wages, taxes, and rents; and to meet other unavoidable expenses.

Whether prices go up or down in the future, competition will be the big restraining factor on profits. Consumers are abnormally price-conscious today, and retailers, of sheer necessity, are doing everything they can think of to hold prices down.

Executive Order Affecting News Releases by Government Agencies

EXTENSION OF REMARKS OF

HON. WILLIAM H. HARRISON

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. HARRISON of Wyoming. Mr. Speaker, the timing of the President's Executive order directing civilian agencies of the Federal Government to withhold information those agencies considered dangerous to security assumes a note of irony when it is realized that the Executive order preceded by only a few days the observance of National Newspaper Week—a week dedicated to a great industry which has served this country well, in good times and bad, for generations.

Many Members of Congress and not a few newspapermen have blasted the order, terming it everything from an "insult to Congress" to a "totalitarian device." Official expressions from newspaper editors' groups have demanded the order withdrawn. Resolutions have been introduced in both Houses of Congress to repeal the order. So far, the President has turned a deaf ear to all criticism.

I do not believe, Mr. Speaker, that this Nation has a more patriotic group than is represented by our newsmen. They have a deep devotion to duty in the American tradition—and they have an equally profound sense of obligation to do the best job of which they are capable.

Theirs is a monumental task, particularly in this fast-moving age in which we live, and they measure up to that task.

That the newspaper profession accepts certain limitations is expressed quite aptly in the time-worn slogan of one of the great newspapers of this country. That slogan: "All the news that's fit to print."

For anyone, cognizant of the remarkable job done by America's newspapers during World War II, to believe that the Nation's newsmen would wittingly violate any confidence or deliberately endanger this country's security is simply beyond my comprehension.

It is in recognition of a job well done and of the vital place of the newspaper in the American scene that this special week has been set aside for the observance of National Newspaper Week.

But, as many others have pointed out, the President's executive order transcends even the threat it poses to the Nation's free press. It would, in effect enable any Federal agency to suppress facts, not related to national security, which would throw an unfavorable light upon that agency. It would, in short, absolutely halt any effort to restore and/or retain honesty in Government, because meanderings from that ideal could go unnoticed.

Military agencies of the Government already classify material as "secret" and withhold information which such agencies believe involve national security. But those same agencies, already, withhold other information which probably have no bearing on national security.

As a case in point, I insert here as part of my remarks, the following news item published in the Washington Times-Herald of October 3, 1951:

EUROPEANS GET FACTS BARRED TO AMERICANS

Government censorship at the source is keeping from the American people essential facts about the defense program which already are known by foreigners, it was learned at the Pentagon yesterday.

The rubber-stamp censorship was disclosed when a reporter asked the Munitions Board for a list of military contracts with foreign companies. Similar lists of contracts with American companies are published weekly.

How much are the Army, Navy, and Air Force buying from Britain, France, Italy, and other foreign countries? A Munitions Board spokesman was asked. (The Board is a central clearinghouse for military buying).

WAS STAMPED SECRET

The spokesman, after consulting several Munitions Board offices, replied that such a study had just been compiled of foreign purchases but that it had been stamped secret.

Asked why such information would be considered secret if foreigners knew about it, he said the Board's office of international programs had decided on the secret stamp.

From other Pentagon sources, it was learned the Munitions Board felt that information about defense orders in foreign countries would prove embarrassing—provoking complaints from American competitors and from foreign nations which had not fared as well in the allotment of orders.

Such government information has been withheld not only from newspapermen but from businessmen and business groups.

CHAMBER OF COMMERCE DENIED DATA

The Chamber of Commerce of the United States was denied access to the list of foreign contracts on grounds they were secret, a Munitions Board official said.

Military buying agents are required by the buy America act to make their purchases in the United States, with certain limited exemptions. Foreign governments, especially those in the Atlantic Pact, have been pressing the Pentagon for American defense orders to bolster their economies. The Defense Department has made special arrangements with Canada for large pur-

chases of munitions from Canadian manufacturers to offset Canadian defense orders in this country.

The Pentagon's secrecy on foreign deals has extended also to the bases being built in Europe on which 26,000 foreigners will be employed, to foreign arms shipments, to the share of Atlantic Pact costs being paid by the United States and to scores of other defense matters involving arrangements with foreign countries.

Mr. Speaker, it is an old adage that we profit by our mistakes. I hope that the President will recognize the wisdom of this adage, realize the mistake of his order and rescind it.

Report of Board of Directors of the Property Owners' Federation of Puerto Rico

EXTENSION OF REMARKS

OF

HON. THOMAS G. ABERNETHY

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. ABERNETHY. Mr. Speaker, I include in the Appendix of the CONGRESSIONAL RECORD, as an extension of my remarks, a resolution adopted by the board of directors of the Property Owners' Federation of Puerto Rico, at its special meeting held in San Juan on September 19, 1951, as a result of its deliberation growing out of the publicity given in the Miami Herald, of Miami, Fla., to the report rendered by Mr. Chester W. Wright to TIES, a private organization of that city. This report contains certain attacks upon the Honorable Luis Muñoz-Marín, Governor of Puerto Rico, as well as upon the Puerto Rican government.

The resolution expresses the points of view of the Property Owners' Federation of Puerto Rico, a nonpolitical organization, with regard to the report rendered by Mr. Wright to the TIES association. I believe the resolution speaks for itself:

RESOLUTION ADOPTED BY THE BOARD OF DIRECTORS OF THE PROPERTY OWNER'S FEDERATION OF PUERTO RICO AT ITS SPECIAL MEETING HELD IN SAN JUAN ON SEPTEMBER 19, 1951

Whereas the board of directors of the Property Owner's Federation of Puerto Rico, at its special meeting held in San Juan on September 19, 1951, had before its attention charges made by a private citizen of Miami, Fla., as published in the Miami Herald, against the Hon. Luis Muñoz-Marín, Governor of Puerto Rico, and the legally organized government of this island; and

Whereas this federation, which is a nonpolitical organization composed of businessmen, owner of dwellings, urban developments and other real state property, has always been in the alert in order that the good name, credit, and prestige of our country, shall not suffer damage due to adverse publicity originated by reasons not based on the general welfare and progress of this country, or publicity that tends to affect the good relations that prevail between the people of Puerto Rico, and the people and Government of the United States, or foreign countries; and

Whereas it is the opinion of this federation that there exists a legally organized government in Puerto Rico, where all citizens enjoy the right to present their claims and complaints, utilizing democratic and adequate procedures, to make their views prevail on any subject matter, and that Puerto Ricans can only decide whether to elect, keep in power, or change that government, when the electorate thus believes it convenient. Furthermore, it is our opinion that no person from outside Puerto Rico has the right to intervene in our local affairs, as well as we believe that Puerto Ricans should also keep away from the internal affairs of other countries, cities, or people; and

Whereas in Puerto Rico ample opportunities and guaranties are offered both to capital and labor, and the right of all citizens are respected because such rights are specifically included in the Organic Act of Puerto Rico, approved by the United States Congress, and that all business matters are conducted and developed within the democratic policy of the officials in power.

Now, therefore, the board of directors of the Property Owners' Federation of Puerto Rico do hereby resolve—

(a) That this federation deplores the unfortunate and unpleasant publicity that resulted from the statements made by a private citizen, as published in the Miami Herald, and of the report rendered by such citizen to a private institution of that city against the Governor and the legally constituted government of Puerto Rico

(b) This federation respects the right of the electorate of Puerto Rico to elect, reelect, maintain in power, or change the government of its own election, and rejects the intervention of any person or foreign government in the internal affairs of our country.

(c) This federation appeals to businessmen, industrialists, merchants, proprietors, and investors, both within Puerto Rico and in foreign countries, to continue their good business relations with this island, in the assurance that they will enjoy complete guaranties of law.

(d) Copy of this resolution be sent to the honorable Governor of Puerto Rico, to both Houses of Congress, to the Miami Herald, and to the Puerto Rican press.

VICENTE L. GIMENEZ,
President.

Neckyoke Jones Says

EXTENSION OF REMARKS

OF

HON. WILLIAM H. HARRISON

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. HARRISON of Wyoming. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Neckyoke Jones Says column published in the Sheridan (Wyo.) Press on September 26, 1951:

NECKYOKE JONES SAYS

"Did you seen where the Eyettallan wagon-boss had come over here?" I requires of Greeseewood last nite. "Yep," he rewarbles, "An' Presyden Harry greeted him with hugs an' kisses. Like as not he thort to hisself 'Here is another feller we kin give away somethin' to. It's gittin' awtill hard to find somebuddy we kin give somethin' to any more—we about run every one of them Europeans through the chute an' we have plumb emptied the corral. It looks like Clem Attlee an' Morryson over in Brittain is got the skids

greased for 'em—an' while ol' Whinney Churchill ain't above takin' a few nickels from his American cousins he's got a sort of ol' fashioned idea that it's got to be paid back some time. It's sure fine we still have somebody who we kin give a helpin' hand to—so we kin raise taxes some. Of course I kin allus depend on Jo O My Money to help out there—but we got to have somebody to give the money to after we git it. Like as not that's why Harry opened his arms to the Eytalian." Greasewood kin still remember when these heer Eytalians was yellin' "Viva Moosoleeney!" Hopin' you are the same, I am,

Yure Fren,

NECKYOKE JONES.

UMW Welfare Fund

EXTENSION OF REMARKS OF

HON. CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. BAILEY. Mr. Speaker, in the month just ahead, the Nation's vital coal industry will once more face the hazards of negotiating a contract by the coal operators and the United Mine Workers of America. One of the major factors to be determined will be the welfare and retirement fund covered in the present contract.

I would like my colleagues to know the great good that has resulted from the setting up of this fund, and in this connection I desire to include data covering the cost of the program and the many excellent services that are being rendered through its efficient administration:

UMW WELFARE FUND

The United Mine Workers welfare fund, source of 4 years of bitter strife, has amassed a surplus of nearly \$100,000,000, a financial report revealed yesterday.

Up to last June 30, the report showed, soft coal operators paid into the fund \$360,361,771.02 from royalties on coal mined. Out of this sum, the fund paid \$261,022,128.18 in benefits to miners and their families and administrative costs, leaving a balance of \$99,339,042.84.

Fund Director Josephine Roche said the unexpended balance has continued at about the same rate since June 30. She emphasized that during the full 4 years of the fund's life only \$7,003,862.23, or 2.7 percent of the total collected, was spent for administration. She said the administrative cost during the last fiscal year was 3.1 percent, due to increases in services as well as direct benefit payments.

Since May 26, 1946, when a welfare fund agreement was reached during Government operation of the mines, the fund has been supported by increasing royalties paid by the operators. Originally fixed at 5 cents a ton, these were increased in 1947 to 10 cents and in 1948 to 20 cents, and in 1949 to 30 cents a ton, where they now stand.

Miss Roche said that since payments from the fund were resumed after a long interruption a year ago, they have averaged \$9,000,000 a month. Before the fund ceased operations temporarily in September, 1949, she said, payments were averaging about \$12,000,000 a month. She credited the decrease to tightened operating rules and closer audits of hospital and medical bills.

The report showed the fund began fiscal 1951 with \$51,063,525 remaining from the previous year, collected \$129,873,885 in royalties, and during the year paid out \$79,329,132 in pensions, benefits to widows, and survivors and hospital and medical service. A total of 186,510 persons received benefits; 42,514 miners have received pensions; 23,949 death benefits have been paid to widows or other dependents of deceased miners; 16,188 aged widows are receiving cash assistance and hospital and medical care; 6,805 widows and orphans are receiving cash aid and medical and hospital service; 3,344 miners who have become ill or crippled because of mine work are being restored to physical and vocational usefulness again, and in addition to medical, hospital, and vocational care they are given cash assistance; 14,324 ill and aged miners receive cash aid; 899 miners paralyzed from the waist down or otherwise severely handicapped have been or are being rehabilitated at special treatment centers; 610,803 medical care services have been provided, and these include comprehensive hospital, medical, and surgical care, 4,500 miners or their dependents are being hospitalized each week; 1,296,000 hospital days have already been provided for miners and their dependents, for widows and orphans, and for the old and disabled.

Together with all the dependents, a total of 1,116,742 benefits have been provided.

Our Forgotten Boys

EXTENSION OF REMARKS

OF

HON. GEORGE M. GRANT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. GRANT. Mr. Speaker, permit me to say a few words about our forgotten boys. In yesterday's paper, an obscure item on an inside sheet announced American battle casualties in the Korean war this week had reached 87,650, an increase of 2,181 since last week.

Baseball, football, and special committee investigations and reports have crowded war news to back pages. Such news has come to be commonplace. What kind of a shock will it take to bring this Nation to a realization of the terrible tragedy of Korea? Only yesterday it was noted that a suggestion had been made that a special committee be appointed to ascertain why more supplies were not being sent to General Eisenhower in Europe. In the name of our Korean dead, if any investigation is to be made, let us forget about Europe for a moment and investigate the supply situation in Korea.

Yes; I am familiar with the situation in Europe, but our boys are not dying by the thousands there. There is no war in Europe—certainly no shooting war.

Every day or so I note in the press where additional air forces are being sent to England and continental Europe. What about Korea? At the same time I read that the Reds are greatly increasing their air power in Korea.

It seems that all we can do is hope, pray, and trust our military leaders, but, if there is to be yet another investiga-

tion—let us investigate why so much is being sent to Europe at the present time, so much more than what is needed to keep our forces there in condition.

Frankly, I do not see how General Eisenhower has time these days to appraise the situation, there being only 24 hours in the day, even in Europe, what with the visits of numerous Members of Congress intent on securing inside information as to his political intentions. The general is certainly doing a fine job, and I imagine he would be better satisfied if his political well-wishers would let him alone, at least for a few more months. That, perhaps, would leave more shipping space for needed supplies and less for unneeded passengers.

I have always thought wars were fought with one purpose in mind—to win them. It is no consolation to anyone for some person to come up with the statement, "We are killing so many more Reds than they are killing of our boys." Place it on that basis and this war would go on for ages.

It is no good answer to merely say, "Congress didn't declare war"—we did not get the country into this thing. There is no use to go into that. We are in war. Hear me, war—the worst kind of war—call it the Korean incident or police action if you will, but do not call it by any such trite name should you happen to meet one of the nearly 100,000 casualties.

I have talked with privates, commissioned officers, and others who have been in the thick of it, some of them in World War II and a few in World War I, they say it is war in its most horrible form.

Let me get this Korean tragedy in proper focus. Let us clear up our perspective. Korea cries out for our attention—for relief for those brave boys fighting such a horribly futile fight thousands of miles from home. If we must have more investigations let us investigate where it will do Americans some good. Investigate this Korean tragedy from end to end. Thousands of hurting American hearts will applaud.

Industrialization Program in Puerto Rico

EXTENSION OF REMARKS

OF

HON. AUGUSTINE B. KELLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. KELLEY of Pennsylvania. Mr. Speaker, I am sure that most of those present in this Chamber have heard or have read of the good work being done in Puerto Rico by Gov. Luis Muñoz-Marin and his administration. Since taking office in January 1948, he has instilled in his people a new hope and has inspired them into a vigorously active program to help themselves. This program has been aptly termed "Operation Bootstrap." Governor Muñoz has taught his people that the only way that they can advance their living standards is to help themselves. He has molded of his

people a mighty team for this laudable purpose.

Naturally, as is the case with every great man, Governor Muñoz gathered some enemies along the road toward success.

The insular government, endeavoring to grease the wheels of progress, adopted a tax-exemption law to aid and facilitate the establishment of new businesses in Puerto Rico in an industrialization program designed to relieve unemployment, Puerto Rico's great sickness. In order to qualify for tax-exemption, certain established standards were set up by law to be met by the new industries going to the island. One of these requirements is that the industry must, in fact, be a new industry and not merely a business moving to the island from the mainland.

The industrialization program has not been in operation long enough to have taken care of all the unemployment in Puerto Rico, but it has made significant progress.

Recently, there have been some indications that certain interests, anxious for private gain or nursing private grudges, have attempted to smear Governor Muñoz personally, his administration, and his program. Having visited the island on official business for the Congress, twice within the past 2 years, and having observed the industrious and ambitious efforts of the Puerto Rican people to help themselves, I say that they should be given every bit of help and encouragement. They should not be handicapped by adverse publicity, by smear tactics, or by any other means.

In the September 13 issue of the CONGRESSIONAL RECORD I noted in the Appendix an insertion of a so-called report on conditions in Puerto Rico rendered to the TIES Association and the TIES Research Foundation, both of Miami, Fla., by one Chester Wright, who, I understand, is the recently elected president of that association. The TIES association is identified as a group of technicians, industrialists, economists, and scientists. This report constituted an attack on the administration of Governor Muñoz-Marín as being that of an absolute dictatorship. In my opinion, nothing could be further from the truth.

It is not necessary to take up the assertions in this report one by one, paragraph by paragraph, but it did strike me that the name of the head of a continental firm doing business in Puerto Rico, occupied a very considerable portion of this report by Chester Wright.

I was pleased to find in the Appendix of the October 1 CONGRESSIONAL RECORD another insertion taking the Wright report to task, and suggesting some of the reasons which possibly inspired that report. The Chester Wright report has been refuted by a number of persons and many organizations which have real knowledge of the island of Puerto Rico.

The Puerto Rican Chamber of Commerce at a special meeting held September 17, 1951, unanimously approved the following resolution:

The Chamber of Commerce of Puerto Rico, always watchful that the good credit of this island be not at any moment or under any circumstances affected by motives impairing our own welfare, declares that at the pres-

ent time Puerto Rico offers full guarantees and opportunities to both capital and labor to develop their activities under the democratic government which rules in this island. Therefore our institution once more invites investors abroad to continue pursuing our island with greater intensity, and, for their benefit as well as ours, their commercial, industrial, banking, and agricultural activities, in conformity with the advantages of a legal order which are offered by the government of Puerto Rico.

In a letter dated September 18, 1951, Mr. B. Hiram Blakey, the president of the Miami Chamber of Commerce, wrote to Fernando Rodríguez, president of the Puerto Rico Chamber of Commerce, as follows:

The Miami Chamber of Commerce this morning is in receipt of your telegram reemphasizing the guarantees and opportunities to both capital and labor to develop their activities under the democratic government which rules Puerto Rico. You can be assured that the officers and staff of the Miami Chamber of Commerce will continue to work with you, your general manager, Mr. Lugovina, and your chamber of commerce and government officials, in the trade and business programs with which we have been connected during the past 5 years.

I think you will also be happy to read the resolution adopted yesterday afternoon by the board of directors of the Miami Chamber of Commerce. We deplore the unfortunate publicity resulting from a report made by one individual that apparently completely lacks factual basis and are glad to repledge to you and the people of Puerto Rico our continued friendship.

The resolution of the Miami Chamber of Commerce is as follows:

"Whereas it has recently come to the attention of the Miami Chamber of Commerce that a citizen of the Miami area has assumed the responsibility for criticizing the Governor and the Government of the island of Puerto Rico and its government operations; and

"Whereas the Miami Chamber of Commerce recognizes and applauds the close and cordial relationship existing between the people of Puerto Rico and the citizens of Miami, the State of Florida, and, in fact, of the entire United States, and in appreciation of that cordial relationship resolves,

"(a) That the Miami Chamber of Commerce deplores the recent and unfortunate publicity resulting from statements made by a private individual in Miami pertaining to the Governor and the Government of Puerto Rico and further

"(b) This chamber of commerce hereby expresses its full support of the rights of the Puerto Rican voters to elect and maintain in office a government of their own choice and pledges its continued friendship with the people of Puerto Rico."

Adopted September 17, 1951.

Mr. Speaker, I believe that these resolutions speak for themselves.

Our Greatest Danger

EXTENSION OF REMARKS

OF

HON. ANGLIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 27, 1951

Mr. GOODWIN. Mr. Speaker, it is refreshing to note that there is a widespread awakening to the fact that we

have been gradually drifting into a situation where moral values and a sense of decency, not only in everyday living but also in Government, are being either forgotten or neglected. Under leave to extend my remarks, I include an editorial from the *Melrose* (Mass.) Free Press of September 20, 1951:

OUR GREATEST DANGER

Herbert Hoover's most recent major address dealt with the subject of honor in public life. In the course of it, the ex-President said this: "Dishonor in public life has a double poison. When people are dishonorable in private business, they injure only those with whom they deal or their own chances in the next world. But when there is a lack of honor in Government, the morals of the whole people are poisoned"

"Our strength is not in politics, prices, or production, or price controls. Our strength lies in spiritual concepts. It lies in public sensitiveness to evil"

"The issue is decency in public life against indecency."

"Our greatest danger is not from invasion by foreign armies. Our dangers are that we may commit suicide from within by complacency with evil. Or by public tolerance of scandalous behavior. Or by cynical acceptance of dishonor. These evils have defeated nations many times in human history."

"The redemption of mankind by America will depend upon our ability to cope with these evils right here at home."

Remember that next time you read of 5 percenters, milk coat and deep freeze gifts to Government officials and employees, sordid tie-ups between politicians and gamblers, and morally indefensible activities within the RFC and other Government agencies. These things are terrible symbols of moral decay. As Mr. Hoover has eloquently warned, that decay could destroy us more surely than any foreign enemy.

Withholding Cotton

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the *Jonesboro* (Ark.) Evening Sun of September 26, 1951:

WITHHOLDING COTTON

A farm labor organization official Monday accused 100 Congressmen of promoting a scandalous wildcat strike by signing a statement urging farmers to withhold their 1951 cotton from the market until they can get a higher price.

This same H. L. Mitchell charged that the action is an unprecedented plot to wreck our national economy in the hour of our greatest effort to combat communism.

Mr. Mitchell apparently has forgotten all too soon that last fall the Government sounded an urgent plea to the cotton farmers to convert as much land to cotton as possible in order to produce at least 16,500,000 bales. This huge crop was needed to help the free nations of the world in their fight against armed Communist aggression, the Government pointed out. The Government also hinted to the farmer that he would get,

about 40 cents a pound for his cotton if he met the goal.

So the farmers went all out to meet the Government's emergency plea, and have passed the goal by several hundred thousand bales, according to estimates.

But the price on cotton has slipped well below the 40-cent level that the farmers expected. Their only recourse is to withhold enough cotton to force the price upward.

A Jonesboro farmer recently, pointing to a bale he had just gotten ginned, explained that he had paid \$6 a day to cotton choppers, had dusted five times, and still lost much of his crop to boll weevils, and had paid big money to get it picked. He added, "It's 40-cent cotton, all right, but I can't sell it for more than 30 cents a pound today."

That's why the farmer is withholding his cotton. The small farmer and the tenant in the South can't stand a loss of any kind. They operate largely on borrowed money, and a short crop leaves them penniless throughout the winter. That disrupts the entire economy of the South.

It seems to be much sounder economy, in this section at least, for the farmer to hold part of his cotton until he can come out on it than it does for him to sell it at the prevailing prices.

"F-51 Mustangs Are Taking Off Laden With Rockets and Napalm Bombs on Strafing Missions in Korea: Along With Our Jets and Bombers They Succeeded in One 24-Hour Period This Week End in Destroying or Damaging a Record-Breaking 1,121 Communist Trucks Ferrying Supplies and Reinforcements to the Front"—Battle Report, Washington

**EXTENSION OF REMARKS
OF**

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. BOYKIN. Mr. Speaker, today we come to the fifty-seventh teledocumentary of Battle Report, Washington, projected by Dr. John R. Steelman, the assistant to the President, and the National Broadcasting Co. over its television network and coaxials.

Dr. Steelman, out of a workweek wherein his associates count his rest and recreation almost by the minute rather than by the hour, has once more brought to the television screen important personages to make direct report to the American people upon the current state of the Union.

Once again on Sunday afternoon, when most men in important positions are enjoying a pleasant interlude with their friends and families, finding several hours of relaxation on the golf course, or else perchance rolling across the highways in the zest, the tang, of autumn breezes, and the beauty of autumn leaves, we find Dr. Steelman under the klieg lights in the sweltering television studio, rapt with interest, always kindly, ever thoughtful. He is simply carrying on in his own inimitable way

the duties to which he has dedicated his every waking moment.

The engineers and the technicians of the National Broadcasting Co. love him because of his great consideration for all in the studio—from the lowest messenger to the highest public dignitary that he brings to the television screen on this weekly broadcast.

How truly appreciative of John Steelman's devotion to duty was a colleague of this House only last week when he said:

Frank, America has no finer citizen, a more capable or harder working public official at any level of Government, or does anyone in public office in these United States merit greater respect from persons in high office throughout the world than Dr. John Steelman.

Mr. Speaker, on this week's teledocumentary Dr. Steelman had as his guests Maj. Pak Byung Soon, of the Army of the Republic of Korea; Hon. W. Averell Harriman, special assistant to the President; Mr. Homer M. Byington, Jr., Director of Western European Affairs for our State Department; and Hon. Delos W. Rentzel, Under Secretary of Commerce.

Always conscious of the humanities, in his introduction of Maj. Pak Byung Soon Dr. Steelman spoke of the countless numbers of homes in Korea which are in ashes, of the shops and factories that are piles of rubble, and of the millions of innocent men, women, and children who are homeless, and pointed out to his vast television audience that no man could tell the tragic story better than could one of the heroes of the South Korean Army.

Mr. Harriman spoke with great feeling on the tense situation existing with respect to the oil controversy raging between Britain and Iran and which now comes to a head in the councils of the United Nations. He discussed the optimum use of the resources of all countries signatory to the North Atlantic Pact organization and of how these resources could best be utilized under General Eisenhower's command both to deter aggression and to attain national security.

In concluding his splendid analysis of conditions in Europe and Asia, Mr. Harriman declared.

Our task is to make recommendations as to how the available economic resources of the member countries can best be utilized to develop military forces under General Eisenhower's command needed to deter aggression and attain our mutual security.

Just home from Europe, the Director of Western European Affairs for the State Department, Mr. Homer M. Byington, addressed himself as to the benefits that will accrue to Italian agriculture, industry, and finance in creating internal stability as well as to a discussion with respect to the recent visit of Italy's Prime Minister, Alcide De Gasperi, to the United States.

The Under Secretary of Commerce, Delos W. Rentzel, made a most interesting report with respect to the transportation facilities of these United States: railroads, pipelines, ships, trains, busses, automobiles, trucks, and airplanes. Briefly and concisely, he presented a word picture of the accomplishments

made and the objectives yet to be achieved in perfecting all systems of transportation as well as of the merchant marine of these United States.

Mr. Speaker, again I say that there is so much contained in this fifty-seventh copy of the Battle Report, Washington, of an estimable value to my colleagues in this House that I am asking unanimous consent to insert same in the Record of this day's proceedings.

The producer-director of this program is Ted Ayers; the assistant producer, Jean Montgomery; technical director, Sherman Hildreth; commentaries, David Brinkley and Bill Wood; the script is written by Lou Hazam; film editor, Bill Brooks, floor manager, John Johnson; art director, Joseph Ferrier; and sound by Jim Martensen.

Mr. BRINKLEY On goes the fight for Heartbreak Ridge in Korea, whose commanding peak still defies our troops. As the Second Division's Twenty-third Regiment and their French allies continue their assault, NBC Television News continues its weekly report on the battle against Soviet communism.

Washington, from which Gen. Omar Bradley, Chairman of the Joint Chiefs of Staff, left secretly this week to confer with Gen. Matthew Ridgway on important military decisions that face us in Korea, and the world, which wonders, as the Reds launch a new series of attacks along a 60-mile front, how sincere the Communists are about resuming the truce conferences they broke off 1 month and 5 days ago.

On Battle Report, this last and far-from-peaceful Sunday in September, Maj. Pak Byung Soon, with a Korean's-eye view of the struggle that occupies his homeland; W. Averell Harriman, special assistant to President Truman, reporting on his new mission concerned with our European defense plans; Homer M. Byington, the State Department's Director of Western European Affairs, bringing us up to date on the status of Italy in the family of free nations, and finally, the Nation's transportation czar, Delos W. Rentzel.

But first the assistant to the President, Dr. John R. Steelman.

Dr. STEELMAN. Good afternoon, ladies and gentleman.

In these troubled days it behooves all of us to remember that the first aim of our foreign policy is to prevent war. We not only are trying to prevent a world-wide war, but also any war, anywhere. That does not mean, of course, that we can stand by idly and watch aggressive powers destroy their weaker neighbors. We believe that force should be used only to serve the cause of justice and only when all peaceful efforts have failed.

In the words of the Secretary of State, "Our purpose is peace with freedom and justice. Our method is to build these situations of strength which are essential to the achievement of our purpose. This is based on our conviction that the desire for peace is not enough; the free world must also have the strength to enforce peace."

The North Atlantic Treaty Organization is an outstanding example of a great peace movement. All Western Europe was threatened. As long as our friends in Europe remained weak they were logical prey for the aggressors. So the free nations have united in a gigantic effort to build impregnable defenses behind which a peaceful world of plenty can be built.

Our efforts to have the Iranian oil dispute settled by peaceful negotiations is another part of the struggle to prevent wars. Everyone knows the danger there. Not only are the economic needs of both Britain and Iran

imperiled, but also their national pride. There is still hope. Our representatives are working tirelessly to prevent any act which might cause bloodshed. Let us pray a just agreement can be reached around the conference table.

In Korea the well-known Communist tactics to cause delay and confusion are proceeding according to the Moscow pattern. We can only watch and wait until they realize they have nothing to gain by such actions. Meanwhile, the bitter fighting continues. Conspicuous in the news have been the activities of the Communist jet planes which are challenging our superiority in the air. Returning airmen report the enemy is using a new high wing super MIG which has not been seen heretofore. Currently, we do not know whether these air attacks are the prelude to an all-out war or if they are a bargaining point for the long delayed cease-fire negotiations. Men in the field continue to suffer and to die. Countless numbers of homes are in ashes; shops and factories are piles of rubble. Millions of innocent men, women, and children are homeless. No one knows the tragic story better than the heroes of the South Korean Army. One of them is with us today. He is Maj. Pak Byung Soon, who reached here only last Monday.

At 9 a. m. last Monday 263 Republic of Korea officers arrived in San Francisco aboard the United States Army transport *General John Pope*. These Korean officers have come to this country as part of the mutual defense aid program, a world-wide interchange of officers and technicians designed to improve the understanding and cooperation between all of the allied free nations. One of these Korean officers is Maj. Pak Byung Soon, commander of the First Engineer Battalion in the First Division in the Republic of Korea Army. Major Pak has come to Fort Belvoir, Va., home of the United States Army Corps of Engineers, to study and absorb the latest methods employed by our soldiers and technicians. Major Pak, just how large is the Corps of Engineers in the Korean Army?

Maj. PAK. Before the war he had very few engineers; now we have about six times the number we originally had.

Dr. STEELMAN. With all the fighting the Republic of Korea Army has done, I imagine your battalion has suffered heavy casualties.

Major PAK. Yes; it has. Of the original 730 men in my command, only about 150 have survived; that is, about one-fifth of the original troops. However, we have replacements, and the situation is much better now than it has been in the past. We have much better equipment to work with and the men are more carefully trained.

Dr. STEELMAN. Would you say that the primary need of the engineers is for more equipment rather than more men?

Major PAK. Yes; the Korean engineers have enough men to fight effectively, what they now need are the tools to fight with. We are constantly getting more equipment and training more technicians. We are much better now than we were a year ago. We are better than we were 6 months ago and we are improving all the time as new equipment arrives.

Dr. STEELMAN. Can you tell us something about what the Korean engineers are doing now?

Major PAK. We have one large project under way that is rather interesting. An engineer battalion is building four double-lane, all-weather roads. When the project has been completed, we will have constructed many miles of new highway.

Dr. STEELMAN. Major Pak, most of us are very curious to know just what life in Korea has been like in the past few months. Can you give us a sort of general picture of what your people are going through?

Major PAK. Americans have no idea what it is like to live in a country where Communist agents are constantly at work. In

every city, town, and even in small villages, informers spy on an assigned area. They make lists of all anti-Communists in their neighborhood: city officials, such as the chief of police; soldiers of the Republican army; and all those who have aided the forces of the United Nations. These names are taken down and kept so that when the Communists capture a town or village all of the people can be punished. Many important officials may be killed, many people imprisoned, and many may simply disappear. One of the lightest punishments is that given to families of soldiers fighting in the South Korean Army: everything they own—clothes, furniture, valuables—is taken away from them and distributed to Communist sympathizers.

Dr. STEELMAN. Do the Communists offer any reason for doing this?

Major PAK. In North Korea the Communists say they do this to make everyone equal, but their equality is based on the level of the poor class of people so that everyone must take on the appearance of being poor. If you own a bit of jewelry—a ring, a necktie, stickpin, a fine wrist watch—you cannot wear it in public or the Government might take it away from you or add so many taxes to you that you would lose it. Anyone seen wearing a good suit of clothes on the street might be suspected of prosperity and investigated. This Communist equality is something the people do not like for it pulls everyone down instead of building them up.

Dr. STEELMAN. Major Pak, can you tell us something about what the Communists do when one of our bombing squadrons blasts one of their airstrips?

Major PAK. Civilians are forced to repair it. The Communists go through a village or town and take out everyone who can walk—old men, women, children—and make them repair the airfield, and they stay there until the job is finished. Those refusing to go are punished—more often killed.

Dr. STEELMAN. With life so difficult for civilians under the Communists, do many of them try to escape to the South?

Major PAK. Yes; the roads are often crowded with refugees; some of them are young men bitter over the treatment they and their families have suffered. They come south to join the Army fighting the Communists. In my own battalion we have about 150 North Koreans.

Dr. STEELMAN. North Koreans who have joined with you to destroy the Red armies in Korea?

Major PAK. This is correct. Refugees have created other problems too. Because of the destruction war has brought to the buildings in the towns of the country and because there are so many refugees in the South, the housing situation is critical. We no longer think in terms of having a house to live in. If we have one room in a house we consider ourselves lucky. For example, my wife and year-old son, my mother, and sister are all living in a single room located near Pusan.

Dr. STEELMAN. Major can you sum up for us the feeling of the people of Korea today?

Major PAK. Before the war there were many people in Korea with many different political ideas. They often quarreled among themselves. Since the coming of the Communists, two distinct sides have been drawn—the Reds and those loyal to democracy. Sometimes families have been broken up because of conflicting loyalties, brother fighting brother, father against son. In the south the people have united against a common enemy. The Koreans believe it is essential for them and for all the United Nations to combine their efforts to stop the spread of communism. If we do not work together, the Communists will pick us off one by one and Korea, as well as the rest of the world, will not be a good place in which to live.

Mr. BRINKLEY. These are British jets on the Mediterranean island of Cyprus—pointed

toward Iran, only a few flying hours away. The eyes of a worried world are upon them this week end as the oil controversy hits a new climax when Iran locks British technicians out of the huge refinery at Abadan.

One word from London, and these RAF Meteor and Vampire jets can, by entering Iran, give Russia a treaty-based excuse to enter Iran herself. Meanwhile, off the coast of Cyprus, the British battleship *Liverpool* goes through training maneuvers, just in case it should be called upon to steam into Abadan's harbor. Only recently returned from Iran, where he strove vainly to mediate this conflict, comes our next guest. No stranger to tough assignments, he takes on a new mission now as United States representative of the special North Atlantic Council committee designed to make a realistic study of the defense capabilities of all NATO members. Now, Special Assistant to the President W. Averell Harriman.

Mr. HARRIMAN. The oil controversy between Britain and Iran has now come to a head in the councils of the United Nations. During the past months, there has been speculation in the international press as to whether the difficulties would lead to the use of force.

Now that the British Government has taken the case to the Security Council, we can feel this danger is set aside. One of the principal difficulties is that the emotions of the people of Iran have been aroused during the past several years while the controversy has developed, and, in fact, the emotions of the British people as well.

The controversy looks quite different to the people of each country.

On the one hand, the Iranians desire to control their great natural resources and are determined to carry out the nationalization of the industry; whereas to the British it looks more like a breach of contract and confiscation of a very large investment which is important to the economic life of Britain.

Dr. Mossadegh, the Prime Minister of Iran, is himself coming to New York to represent this country.

Let us hope that in the atmosphere of the United Nations—that great organization dedicated to peaceful settlements—a new approach may be found which will lead to a satisfactory conclusion.

From my experience with the controversy when I was in Iran last summer, I do not feel that the differences are irreconcilable, but with good will on all sides an equitable solution can be found.

I am leaving next week for Paris to represent our Government on a special committee of the North Atlantic Treaty Organization.

Our task is to make recommendations as to how the available economic resources of the member countries can best be utilized to develop military forces under General Eisenhower's command, needed to deter aggression and attain our mutual security.

In considering the principle of mutual assistance to which we are all pledged, we Americans should understand certain factors that exist in Western Europe.

Although Europe is next to ourselves the greatest workshop in the world, the total production, even if Germany is included, is less than half of ours, and, on a per capita basis, is only about one-third. To put it another way, the European countries, with their larger population, have the manpower but not the available industrial capacity to produce rapidly all of the modern equipment which is now so essential for effective military forces.

With only a third of the per capita income that we have, it is far more difficult for the people of Europe to divert the efforts needed to build the required military forces.

Under the mutual-security bill, which will be voted on by Congress in the next few days, we are planning to contribute to Europe an amount equal to about 10 percent of the

money that has been voted for our own Military Establishment.

In other words, with this much smaller expenditure, we can assist in the development of forces as large as ours, in numbers of men.

The primary objective of all of us is that our combined military strength will be a deterrent to aggression and another world war can be prevented. It is my personal conviction that when we are strong enough the Soviet leaders will be forced to change their aggressive policies.

The total production of the Soviet Union and its European satellites is probably only about a quarter of the output of the North Atlantic community.

In my opinion, the Kremlin will not be able to continue to force its people to bear the enormous burden of maintaining its large military forces indefinitely.

No one can foresee the long future, but it is clear that, for the next few years, we must continue vigorously in our mutual plans for building defensive forces.

When this is accomplished, we can look forward with hope to living in peace and security.

Mr. BRINKLEY. Scene now—France, where joint Allied maneuvers, the largest since General Eisenhower took command of the forces of the North Atlantic Pact nations, got under way last week. Over a thousand Allied planes, including 700 jet fighters, swept over Europe from the North Sea to the Alps. Object: to test new concepts of air defense. On the ground, in separate maneuvers taking place at the same time, more than 150,000 United States, British, and French troops armed with 30,000 tanks, armored cars, and other vehicles moved against the French zone of Germany to fight an imaginary enemy presumed to have crossed the Rhine. Part of our new strength in Europe, and an increasingly important part, is our erstwhile enemy, Italy. Only last week her premier visited here in Washington and addressed our Congress. For an informed report on how Italy today is backing the free world, here is the Director of Western European Affairs for our State Department, Homer Byington.

Mr. BYINGTON. Four years ago Italy's Prime Minister, Alcide de Gasperi, visited the United States to ask for American aid to help rebuild his country. The United States responded to his appeal and the prime minister returned to Italy with assurances of our support.

During these past 4 years our aid has helped Italy make good progress in agriculture, in industry, in finance, and in creating internal stability. The heavy damage caused by the war has been repaired with energy and hard work. The Italian people are now devoting that same energy and hard work to the tasks ahead.

Prime Minister de Gasperi in 1947 ousted Italian Communists from his cabinet. Thus, Italy's Government no longer includes ministers who brazenly masquerade communism under the picture of that symbol of liberty, Giuseppe Garibaldi. The Italy which Prime Minister de Gasperi leads today rightly claims its position in the forefront of the democratic nations working for peace.

There still remains, however, the shadow of the peace treaty which is the result of a disastrous war. In that regard, a historic step marked Prime Minister de Gasperi's visit to Washington this past week. The United States, United Kingdom, and France have started action concerning the treaty which will give Italy the full status among the free nations to which it is now entitled. The spirit of the treaty and its stigma of inequality are most unjust to the new democratic Italy. The treaty also cripples Italian efforts for the common defense of the North Atlantic community. It denies Italian workmen the opportunity to use

their energy and skill in defense production for the free world. Our action opens the way to more employment for Italian manpower. It also opens the way to increased activity in Italian shipyards and factories. Italia's production will take a larger part in the joint efforts to create an adequate defense against aggression, and thereby to insure security against the danger of war.

The step taken by the three Governments in their declaration with regard to the treaty of peace marks the beginning of the end of those permanent restrictions and discriminations against Italy which have been overtaken by events and have no justification under present circumstances. Together with all the other signatories who agree with us we shall remove them so far as our relations with Italy are concerned.

When the Italian Prime Minister returns to Italy he takes with him an encouraging report of our Government's recognition of what Italy has accomplished. The President of the United States has declared that if the Soviet Union keeps on vetoing Italian membership in the United Nations other ways must be found to enable Italy to play a full and equal part in upholding the principles of the United Nations. De facto revision of the Italian Peace Treaty is now a matter of weeks and we do not intend to let Soviet obstacles be put in our way. The Prime Minister will also be able to tell his people that the United States will continue economic aid within the limits of funds appropriated by the Congress. This aid will help Italy gain greater economic strength and social stability, and increase its capacity for the defense of its freedom and independence.

In his speech before Congress, Prime Minister de Gasperi stated in no uncertain terms that, if attacked despite all efforts at conciliation, Italy would fight and contribute to the common defense. While in Washington, the Italian Prime Minister also discussed with our Government various other problems of Europe, including Germany and European integration. These discussions revealed that American views were similar to Italy's. His visit has contributed greatly to full understanding between our two countries.

Together with Italy and the other free democracies we shall create the strength and unity essential to confront the threat of aggression which now menaces all corners of the world. Only by this means will we prevent a third world war and establish enduring peace.

Mr. BRINKLEY. F-51 Mustangs, taking off laden with rockets and napalm bombs on strafing missions in Korea. Along with our jets and bombers, they succeeded, in one 24-hour period this week end, in destroying or damaging a record-breaking 1,121 Communist trucks ferrying supplies and reinforcements to the front.

Charged with the responsibility of seeing that essential materials for these and other fighting arms of our services move with dispatch across the country is the man our cameras pick out next. He is the Nation's "transportation czar," Under Secretary of Commerce Delos W. Rentzel.

Mr. RENTZEL. In a country as big as ours we need good transportation and plenty of it. We have it now. And we will have more of it in the not too distant future. Today, our transportation facilities dwarf those of any other nation. We have 226,000 miles of main-line railroads, more than 30 percent of all the railroads in the world. We have 358,000 miles of improved inland waterways and 165,000 miles of pipeline. We have the ships, the trains, busses, automobiles, trucks, and the airplanes to amply use these facilities, every one of which benefits from Federal cooperation and assistance, either past or present. Since early post roads and canal days, the Federal Government never has lost sight of the vital importance of transportation to

the national economic development and well-being. There are 13 Federal agencies directly concerned with transportation problems. Six are in the Department of Commerce. They are the Civil Aeronautics Administration, Maritime Administration, Bureau of Public Roads, Inland Waterways, Coast and Geodetic Survey, and the Weather Bureau.

At this time of mounting international tension, our country is rapidly mobilizing its vast resources and productive capacity to help maintain world peace. The heavy drain upon our various forms of transportation, to keep abreast of increasing demands, poses a serious challenge to both the private transportation industry and the Federal Government. Through continued cooperation much is being done at present to solve these problems.

Recently Battle Report reviewed merchant marine operations across the Pacific. So today we will look at what makes up all segments of our vast transportation system and how it works.

Mr. WOOD. To a nation confronted with global war, transportation lines become truly lifelines. It is along these lifelines that we move to the defense of our freedoms amid the challenges of 1951.

The truck that lumbers cross country along route 1 is not just a truck; it is a breastplate in the armor that buttresses American liberty.

The steel rails that set our every which way across the continent marking the path for our trains also mark, like the human bloodstream's diagram, the way by which we feed our strength.

And finally the planes that birdlike are borne along unseen routes are just as surely flying a tried and tested road in behalf of the Nation.

Transportation, the arteries of our defense. No part of our Nation is unknown to our railroads as they keep on the move the essential food, fuel, and goods that keep us sound and strong.

In critical today as in World War II, when they carried more than 90 percent of all military freight, they are backing our forces in Korea and wherever else freedom is challenged throughout the world with the stuff of which victory is made, men as well as material. To move just one division of our armed forces from training camp to embarkation point, you, America, demand of your railroads, and receive, 570 pullman cars, 1,422 flatcars, 201 gondola cars, 82 kitchen cars, 40 boxcars, 82 baggage cars.

What is our rail situation now as compared with World War II? Listen. A third of a million new freight cars placed in service, 4,300 new passenger trains, a billion and a half dollars worth of new locomotives. Yes; should Stalin challenge, our railroads are ready.

How about our civil airlines? It has been written, and it is true, that the greatest airlift reserve in the world today is to be found in the fleet of the scheduled airlines of the United States.

Each month, from Key West coast air bases, hundreds such planes have been flying critically needed freight and military personnel to the far-eastern war front.

The trucking industry of America, boasting more than eight million trucks, serving not only the military but business, farms, and homes, is today answering the Nation's needs on a scale that wasn't even dreamed of 20 years ago.

Quickly responding to this present emergency, America's truckers gave the Army expedited service, something the Nation didn't have before—war goods trucked east coast to west coast in a record-breaking 5 days.

Not content with this alone, other special trucking services were devised, such as this automobile transport unit. Today it

carries up to 14 jeep trailers from plants in Chicago to troop centers the country over.

Today everything we eat, wear, or use is carried part of the way to its final destination by this comparatively young arm of the Nation's transport.

In such spinning wheels as these, then, see in your mind's eye America's modern workhorses providing the Nation in these crucial times with a transportation pattern that has no equal.

Mr. RENTZEL You have had but a glimpse of the complex activities of our great transportation system, the finest and most efficient in the world. Yet today we are faced with many problems arising from the expanding mobilization effort. So far our transportation facilities have proved adequate for handling the mounting volumes of traffic, but new problems continue to arise. Their solution depends upon material supply and the manpower available for new equipment construction and operation.

The railroads are faced with growing shortages. To meet their immediate needs during the third quarter of this year, construction plans included 900 Diesel locomotives, 25,000 tank cars, and 30,000 freight cars. To offset to some extent production lags, all segments of the railroad industry must work together for better utilization and improved scheduling.

Highway freight traffic, double that of 10 years ago continues to rise. There is no current truck shortage, but further expansion of trucking operations may be impaired by highway deterioration. The United States Bureau of Public Roads is currently channeling critical material mainly to highways of first importance to mobilization activities. There are 15,056 miles of Federal-aid highways now under construction—and plans have been approved for 5,897 miles.

Great Lakes shipping, particularly of ore, has substantially increased. Despite inadequate capacity, operators have met their schedules. Expanded overseas shipping requires new merchant vessels of high speed and mobility. Present construction includes some 35 dry-cargo type and 26 tankers.

To increase the flow of crude oil and avoid bottlenecks, over 16,500 miles of additional pipelines are planned for construction.

Air traffic also has climbed over 30 percent. Increased civil and military use of the airways and terminals has brought about a common system of air navigation and traffic control that assures more rapid movement of aircraft regardless of weather.

From this round-up of our national transportation system and its potential, it is evident that this system provides the arteries of our economy and security. We want no hardening of these arteries. We do want an increasing flow of the vital blood of commerce at home and abroad.

Mr. BRINKLEY Thanks to Bill Wood for his special narration on this program, and, until we again turn our cameras upon the Nation's Capital next Sunday to report on the battle of democracy against world communism, this is David Brinkley putting a period on your fifty-seventh Battle Report, Washington.

The Late Maj. Gen. Robert McKune Vail

EXTENSION OF REMARKS

OF

HON. HARRY P. O'NEILL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. O'NEILL. Mr. Speaker, under leave to extend my remarks, it is my solemn obligation to memorialize with-

in this RECORD the sad occasion of the death of a neighbor, a great Pennsylvanian, Wednesday, October 3, 1951, Maj. Gen. Robert McKune Vail. I had the honor to know General Vail for my 20 years in the legislature for the Commonwealth of Pennsylvania, at Harrisburg, Pa., and was fortunate enough to have his close friendship during that period and since my entry into this congressional body and until his death. The following can somewhat summarize his career:

ILLNESS IS FATAL TO GEN. R. M. VAIL—HIS MILITARY CAREER COVERED 45 YEARS

Maj. Gen. Robert McKune Vail, 76, a native of Scranton and one of Pennsylvania's most distinguished citizen-soldiers, has been claimed by death.

General Vail succumbed yesterday at his home at Camp Hill, Dauphin County, after a long illness.

A former commander of the One Hundred and Ninth Infantry Regiment and possessor of a distinguished war record, General Vail was also a former State adjutant general, one-time superintendent of the Wilkes-Barre division, Scranton-Spring Brook Water Service Co., and also served for a time as United States marshal for the middle district of Pennsylvania.

General Vail, who was adjutant general during the administration of Gov. Edward Martin, resided at Indiantown Gap prior to taking up residence at Camp Hill last June. He lived for many years at Kingston.

His military career, which covered a span of 45 years, began March 16, 1894, when he enlisted as a private in Company D of the old Thirtieth Regiment.

General Vail fought in the Spanish-American War, the Philippine Insurrection, and the Mexican Expedition before his World War I service.

Commissioned as a captain and made regimental adjutant of the Thirtieth Regiment on October 4, 1904, he was advanced to the rank of lieutenant colonel in 1918.

During World War I he served with the One Hundred and Eighth Machine Gun Battalion of the Twenty-eighth Division. His courage in combat won high military honors.

On September 5, 1918, he was awarded the Distinguished Service Cross for extraordinary heroism in action near Villetle, France.

WOUNDED IN ACTION

One month later he was wounded in action during the Meuse Argonne offensive and thus earned the Purple Heart. He also was honored by the French Government which conferred upon him the French d'Honneur and the French Croix de Guerre. After the war he was advanced to the rank of full colonel and placed in command of the One Hundred and Ninth Regiment.

Later he became a brigadier general in command of the Fifty-third Field Artillery Brigade. On his sixty-fourth birthday anniversary, April 24, 1939, General Vail was promoted to major general and was retired on that date.

General Vail was associated with the public utility firm for 40 years and retired as superintendent.

He also served a term as State department commander of the American Legion and was a former president of the Wilkes-Barre Kiwanis Club.

His term as United States marshal ran from 1929 to 1932. His selection for the Federal post came upon the recommendation of the late United States Senator David A. Reed.

General Vail, who served in the Mexican War with Senator MARTIN, served as adjutant general in Governor MARTIN's cabinet from 1943 to 1947.

Prior to that he served as deputy adjutant general under former Gov. Arthur H.

James, being appointed October 1, 1940, and as acting adjutant general from February 20, 1941, until January 19, 1943, when he assumed full command.

During those years he became known as one of the best-liked officials on Capitol Hill. On at least two occasions his name was mentioned prominently for appointment as commander of the Pennsylvania State Police and, on one occasion, he declined that appointment.

General Vail, who was born in Scranton, received his early education in this city and was graduated from the Binghamton high school. He also was graduated from business college.

He is survived by his wife, the former Helene G. Hull, and a son, John, a member of the Kingston High School faculty, a sister Mrs. Stanley B. Michael, this city; and a brother, Rossman I. Vail, Maplewood, N. J.

Loans to Veterans

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. MULTER. Mr. Speaker, I desire to call the attention of the House to the following press release from the Brooklyn council, Veterans of Foreign Wars, issued by its county commander, Vincent J. DiMattina. It points up a very serious problem. Unless the mortgage strike by some of our lending institutions is called off they will find that the Government will make the loans directly to veterans as presently provided by law.

The release is as follows:

County Commander Vincent J. DiMattina, of Brooklyn Council, Veterans of Foreign Wars today demanded that the Federal Government begin granting 4-percent mortgage loans to World War II veterans in the metropolitan area unless local banks immediately cease charging veterans higher interest rates on what should be properly classified as 4-percent GI mortgages.

Reporting that a series of complaints on the subject had come to his attention, DiMattina pointed out that the Veterans' Administration already had congressional authority to grant direct 4-percent loans to qualified veterans in areas where it was deemed that a shortage of 4-percent mortgage money exists.

The VFW leader said that he intends to apprise Brooklyn's nine-man congressional delegation of the shortage here.

He termed the apparent need for Federal intervention in this community a disgrace which could only be wiped out by a forthright reversal of policy on the part of our great lending institutions.

DiMattina explained that his organization had been receiving an increasing number of reports that banks have been turning down qualified veterans' applications for 4-percent GI mortgages but have been offering the same veterans home loans at 4½ percent and higher interest rates.

Such action on the part of lending institutions, DiMattina asserted, is a betrayal of the veterans' trust in the financial leaders of this great city.

The turn-down on 4-percent loans, in many instances, have been based on the flimsiest of excuses including a statement that veterans were not eligible for GI loans unless they were already depositors in the particular bank from which a mortgage loan was being sought, DiMattina said.

We Jump Into Fire

EXTENSION OF REMARKS

OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. JENKINS. Mr. Speaker, a few days ago the House considered and passed a bill providing for an appropriation to improve the Forest Fire Station at Missoula, Mont. I spoke in favor of the legislation and in the course of my discussion I referred to an article which appeared in the Saturday Evening Post of April 28, 1951, and which was written by my nephew, Starr Jenkins, who was for some time a fire jumper working out of the fire station at Missoula.

In this article he graphically describes one of the fire fighting battles in which he took part. His story must have had some merit else the Saturday Evening Post would not have accepted it. In the remarks that I made I referred to one very tragic incident which he describes. Several Members of the House suggested that I have his story printed in the CONGRESSIONAL RECORD. I am doing so believing that since he was at that time employed by the Government at the Missoula station it will be interesting and pertinent. The incidents that he describes are the every day work of these heroic young men.

The story is as follows:

WE JUMP INTO FIRE

(By Starr Jenkins)

I'm up in the hot sun cutting a tin valley drain for the new loft roof we're putting on when the call comes in "Eight men on Yellowstone Park. One plane load. Cole, Jenkins, Samsel, Hall, Hellman, Bennett, Piper, Thol. Get your gear and let's go. Fire jump."

It is 1.40 on a summer afternoon. The Forest Service parachute loft, at Missoula, Mont., is having a busy week. Fires are popping all over the region, and planes are shuttling men out to jump and back home to rest as long as daylight will let them. We're running out of jump rations and have to order truckloads of C rations from War Surplus, and the riggers are working overtime to get the chutes packed as those big white bundles of loose nylon come in. One fabulous Thursday within the last few weeks 64 men jumped on fires scattered over the wild 25,000,000 acres that is the Forest Service's region 1, and a week later 34 men were dropped in twos and fours and sometimes dozens from the Gallatin Forest, down near Wyoming, to the Kaniksu, up in Washington State.

"All right, you guys, Shank will be spotting you, and you'll land at West Yellowstone to pick up the park man. He'll show you where the fires are. Four small ones they're supposed to be—little lightning strikes. He'll have maps for you and give you your best routes out. Now get that gear into the plane."

We've been loading a pick-up with half a ton of equipment: Back-pack chutes in white canvas covers; chest-pack reserves, compact and olive drab with red rip rings; big bulky sacks that contain our canvas jump suits, helmets, let-down ropes and harnesses. Fire packs with rations, canteens, flashlights, fire tools—a shovel and a pulaski, and a file for sharpening them— all wrapped tightly in new tarps and mounted on click-board carriers for the hike out. Sleeping bags—big

kapok ones this time instead of the tin, efficient goose-down rolls we sometimes have along on fires. Five-gallon water cans—silver square oblongs of steel that we know from experience smash as often as not on landing—tied in pairs to cargo chutes. Then lots of odds and ends, like a spotter's kit, map cases with compasses, climbing irons for retrieving chutes, extra signal streamers, and a crosscut saw bolted between two boards, so that its sharp-set teeth won't be ruined on landing.

Outside, the plane is a sight to frighten the wits out of a modern air passenger. It is an ancient trimotor job, its engines uncowed, external control cables that slap its corrugated aluminum sides in the wind, truck tires on huge solid wheels, large square windows like a streetcar and the over-all streamlining of a model T. The wing is massive and fat, and the fuselage seems cut off square at the bottom to clear the turf of the airport. The wing-mounted engines have three dials each on the inboard side of one strut, so that the pilot, to check the engine's performance, must look through rain, darkness, or fog and find those dials. This museum piece of an aircraft has been known variously as the Heap, the Tin Goose, the Flying Quonset Hut, and Old Ironsides.

Yet we who are about to fly in her feel good inside, knowing that she is light for her size and can get in and out of canyons and postage-stamp airstrips. We know that the pudgy 8-foot-thick wing gives her tremendous lift—she can glide and glide if the engines fail. We know that the high wing and big square windows give us visibility, and visibility is important in this business of jumping on fires. We know also that she, like her sister ships, has been kept up by her owner—Johnson Flying Service, contractor to the Forest Service in Region 1—to the best of man's ability.

Now the pick-up roars out to where the plane is thundering in warm-up, and we transfer the load into her belly and climb in ourselves. Take-off time, 2 o'clock. We are scrambling around in the great jumble of equipment as the airport and the fairgrounds and Missoula drop away below. We swing past the big white M of Montana State University on the side of Sentinel Mountain and then settle on a southeast course bound for Yellowstone country.

Two hundred miles from Missoula to West Yellowstone. A 2-hour flight in the slow-moving plane. We climb to clear the ridges that bristle up before us, and there always seem to be higher ones beyond. Getting cool as we climb. The door of the plane is off and back in Missoula, and a safety bar stretches across the middle of the doorway to keep guys from falling out.

Smitty, the chief rigger, is along for the ride and is telling us not to hit the ground in high country like Yellowstone or we'll break our ankles like he did on his last jump up there in '47.

"Hang up, whatever you do, because that ground at 8,000 to 10,000 feet is just too hard to land on."

We think about it, the fact that air that high is a little thin for safe parachute jumping, and it sounds like good advice.

"Small reproduction, young trees—that's what you want to look for. Small reproduction for a soft landing. But hang up, whatever you do." Then Smitty goes up forward to gab with the pilot and fly the old Goose a while, horsing it sloppily over the next pass till the pilot takes the controls away from him and adds a little throttle for good measure.

"Hey, that must be Georgetown Lake.

"Yeah, there's Anaconda over there. See the big smelters?"

Eleven thousand feet to clear the highest range. It's cold up here in the air-conditioned plane. Seems funny; an hour ago I

was sweating, out on that roof in Missoula's heat. Now I'm shaking with cold and pawing through the big white sacks to find mine and break out my high-collared canvas jump jacket.

Big stone mountains with jagged tops go by. I'd hate to jump into stuff like that. Don't worry, you won't have to. The Forest Service isn't out of its head.

The ranges are getting drier, less timbered, more and more just big humpy ridges of bareness separating the twisting river valleys with their bright-green irrigated fields. We're slanting down over Hebgen Reservoir, and my ears are popping in a gidge. Must be close to West Yellowstone. We start suiting up—too early, but everybody starts, so I do, too. Dumping our sacks out on the crowded floor of the plane, fighting our way into our girdles and jackets and jump pants with the big webbing crotch protection, and our quick-release harnesses.

"You can put on the chutes later, guys, after we pick up the park man."

So we don't fasten our legstraps, but sit comfortably half dressed for a jump, and I'm taking pictures with the 36-millimeter camera that I take on all fires these days.

"Hey, there's West Yellowstone!"

We give the town a good buzz with two steeply banked circles to lose altitude, and West Yellowstone, with its railroad station and lodge and airstrip and stores, and two highways slicing away through the endless plateau of timber, is wheeling below us like a big, slow pinwheel. Then the pilot is down where he wants to be, and we skitter in over the clawing lodgepole to a landing on the dirt strip.

We taxi over for gas and to find the park man, and all pile out for a stretch. Hot again down here. Why did we suit up so soon? Smitty and Hank Shank are out hunting for the park man while we sprawl in the shade of the plane's protective wing. Soon they are back in a black park service car, and they pile out with two National Park rangers. These are dressed in snappy green-and-gray uniforms that we in the forest service think make them look just a little too much like tourist ushers. But forget the rivalry. We're working together this time. Besides, the park service pays for maintaining 101 of our 150 jumpers at Missoula, so that the park people can call on the outfit for fire protection whenever Glacier or Yellowstone needs it.

"One of the fires has a ground crew on it already," Shank is saying. So Hellman and Bennett unsuit to stay here at West Yellowstone. Hellman fits his harness and reserve onto the ranger that's going to guide the remaining six of us to our three remote spot fires. Shank is reshuffling the jump list, and I want to jump last, so I can take pictures of the guys going out of the door. But I don't say anything, and he puts me in the first pair—Kermit Cole, of Missoula, a good boy.

Cole and I didn't find out till Saturday afternoon that the last four men of our eight man load—Hellman, Bennett, Thol and Piper—all made dry runs on Yellowstone and went back to Missoula to jump on Friday and die in Helena National Forest. And I wanted to go last to take pictures!

We suit up again, this time chutes and all, and check one another out. Harnesses secure all around, safety catches of our quick-release on, three little strings under the loop of each static line to secure the apex of the chute to its cover till our weight tears it loose. A dozen little details that have to be right. Our right legs look fat with a 100-foot coil of rope stuffed in the leg pocket. And my left leg is also bulging with a small strapped-on canvas sack of personal gear—soap, toothbrush, clean socks, underwear and dungarees. We'll be almost unrecognizable when we get our football helmets on with the wire-gill face masks buckled down. Six

hundred dollars' worth of equipment. Seventy pounds of fabric and rope and metal per man, not counting the stuff that goes in by cargo chute.

The engines are thundering again, and the park man yells to the pilot, "Got plenty of gas? We've gotta fly 50 miles one direction, then 70 miles another, then 40 miles back." "Yeah, we've got plenty."

All aboard again except Hellman and Bennett—the last I ever see of them alive—and we're roaring down the runway in take-off. The park man has an armful of map scrolls, and he's having a tough time climbing forward over the jumble of men and equipment in the seatless tunnel-like plane. He's brought a feeble little water bag along to drop to one of his ground crews. A 2-gallon job with about half a gallon in it—and that leaking out through the loose cap as the bag lies on its side by the door, giggling with the plane vibration. Hate to be out on a mountain and have to depend on that. Our smashable square water cans don't look half bad alongside this park brand of water supply.

The ranger is a nice guy, and he's done this before. As soon as he knows that Cole and I are on the first stick, he gives me a little piece of a Yellowstone topographic map with some lakes and a couple of rivers on it and an inked-in X and some arrows running east and north from the X. The X is the fire, of course—as close as they can tell from the Mount Sheridan lookout, and incidentally about a half mile off, as we find out later—and the little river nearby is the headwaters of the Snake. The thick green line right below the X is the southern border of the park—less than 3 miles from the fire. So that'll put us 250 miles straight southeast of Missoula. The ranger is explaining that the arrows point the way out.

"Don't go back this way on the trail," he shouts above the roaring engines, "even though it looks closer, because that trail hasn't been maintained. Go north, the way it's marked, to the ranger station on Heart Lake."

"Roger," I say, and put the map away and start taking pictures again. It's great being a second-year jumper and having a little experience to give you confidence. It's more fun knowing the little tricks that take your mind off yourself—enough to keep from sweating like Samsel, or Piper, there. Short Hall seems kinda quiet, too. Oh, well, last year you sweated just as they're doing.

We're over the valley of the Snake, and the C and Teton ranges rear their heads in jagged black majesty 40 miles to the south. Hank Shank, our handsome spotter, is motioning me back to where Cole is sitting by the door, waiting. The ranger is up with Smitty and the pilot, looking for the smoke, and I take a last snapshot of Cole before tucking my camera inside my jacket and under my arm, where it hasn't smashed yet on a landing.

"There it is," I say, poking Hank Shank and pointing to a smoke off the port quarter. The smoke isn't much, and Cole and I figure we really are going on a one-man fire, but two of us along for safety. Word is passed to the pilot, and we get down to business. Cole and I put on our gloves and helmets and snap our collars all the way up and get our static lines over our arms and into our right hands.

There's a wilderness of snags below us—miles and miles of dead-white tree skeletons marching over the hills as far as we can see. Individual trees. The old Heart Lake burn, the ranger said, in 1931, and still looking ugly after all those years.

Snags. One of the four dangerous horse-men facing the smoke jumper; the others being deep water, sheer rocks, and insecure tree hang-ups. Cole and Hank Shank and Smitty and I are all looking for a decent place to land in that tossing ocean of brittle dead bones; and we all simultaneously de-

cide on the only spot available—a stand of thick young reproduction about a mile along the ridge from the smoke. I've got the map out again, getting oriented with the terrain, and 100 percent of my attention is on the problem of getting to the ground safely. Ground altitude almost 8,000 feet here. "Remember, hang up, whatever you do!" A little drift chute gives us the wind—something like 12 miles an hour, blowing east—and then comes the order to hook up.

Cole and I snap our static lines into the cable over the door and give ourselves a last fast check-out. Cole is going out first, so he kneels in the oval door and puts one foot out on the little step hanging there in space. I'm going out second, so I crouch behind him ready to follow him out as soon as the door is clear. Shank checks us over carefully again and briefs us once more on the spot we're to aim for and repeats what the ranger said about hiking out. Then we swing into the final pass. Shank jockeying the plane into position with hand signals to the pilot. The noisy engines die at last and after 1 second of eerie silence, Cole gets the slap to go. He steps out easy and straight, wrapping his arms across the reserve on his chest, and the static line begins reeling the white silk off his back. I'm out with him a half second later, feeling the weird minutes-long moment of falling before the opening shock jolts me in the chest, and then that wonderful nylon flower is open above me with the sunlight streaming through.

No lines over—canopy functioning perfectly. Cole is far enough away. Okay, where is that spot? There it is, the lightest green of that patch of timber. Turn away from it and hold into the wind. I grab a guideline to spin myself west—for this is a steerable, slotted Forest Service chute I'm wearing—and haul down the front risers to gain forward speed.

I'm chinning myself on the risers to give myself 8 or maybe 10 miles an hour into the wind. The plane is circling around watching us closely and is completely out of my consciousness. Damned arms are getting tired, and I'm watching the ground through the V of my feet. I'm not going to make it; the wind's pushing me too far. And yet for some reason I'm not worried at all that I'm sailing beyond the thick safe stand of young trees toward the open, tree-dotted ridge.

Gettin' pretty close. Better stop planing and turn around. The slots start me around so I'll come in frontward, and I'm not quite around, and dumping both slots to kill forward speed, when the grassy ground with all the trees just out of reach rushes up into me with a thump. My feet are together from habit, and I flop into a loose sideways roll and come up tangled, unhurt and happy.

A soft landing, considering the 8,000 feet. No harder than plenty of jumps I've made at 2,000 or 3,000. Well, that just shows what queer ducks parachutes are. The air must be perfect today.

Cole has also hit the ground 100 yards away from me and behind a couple of trees. We are both waving our signal streamers at the plane to show them we're all right, and then we're climbing out of our gear and sacking it up. The plane goes away to drop Samsel and Short on a smoke we can't see, beyond the Snake, and comes back 10 minutes later to drop our cargo. We have piled our sacked-up gear in an orange-streamered cache on the ridge and watch our cargo come out of the plane a mile away through the forest of snags. The water-can chute hangs up in the top of a big snag right near the vague haze of smoke, and the silvery tin twirls and twinkles in the sun, making a perfect landmark for us to hike for.

O K, Jenkins, the fun is over. Now begins the work you're getting paid for. The

noise of the plane tapers away to nothing, and all of a sudden it's quiet on this mountain. Cole and I are two guys alone in the wilderness. Alone, many miles from the nearest road, in a sunny, dead forest.

"Damn Smitty for forgetting to drop the sleeping bags."

"Oh, well," says Cole, full of good sense, as always, "that just means we'll work most of the night. And those kapoks are plenty big to park out."

He's right, and I know it, and I don't mind working most of the night anyway to rake in a little overtime.

The fire is up on a knoll the way most lightning strikes and isn't going anywhere since the wind died down. It's really a tiny fire—at the size the Forest Service likes to catch them—not covering 100 square feet—in five or six little spots, where the lightning split off chunks of a snag and scattered them, burning, out on the grass. The stump of the snag is 20 feet high and burning all the way up and down inside, and dropping it will be our biggest angle job in putting out this fire.

We're a little short on water because when we telled the snag that held our water can way up in the air, the can smashed to tin-foil and the water wetted up the ground good. Besides that, one of the canteens on the fire packs had a leak and is dry, so we have half a gallon from the other canteen to last us till we hike down to the Snake tomorrow sometime. Not that we'll need any more than that half gallon. But knowing that's all we've got is making us thirsty already.

It's been a big job falling a snag 3 feet through at the butt with a Pulaski just to get down the cargo chute—a Pulaski being a heavy-headed ax with an adz blade on the back. Cole and I have taken turns and are really warmed up by the time she sways and cracks and comes crashing down among the jumble of deadfalls around us.

We collect the gear and eat supper, hitting the liquid canned stuff first to save our water, and then settle down for a night of work. The tall butt of the burning snag comes down first and doubles the spread of the fire by taking an unexpected roll. We cool the burning logs by turning them warm side up and scraping the fire out of them with the adz blades of the Pulaskis. We break the big embers up into little ones and spread out the hot spots to cool and burn out. Then we trail each little spot of burn, scraping a shallow shovel-width trench around it down to fireproof mineral earth.

"Separate the fuel from the fire"—the old simplicity-itself fire-fighting method of the Forest Service. It doesn't take water or chemicals or bombs or pumps or hoses, though all those things may help if available. All it takes in essence is men, enough men with tools, and lots of sweat and back-bending and shiny places on the insides of thumbs. And half-decent luck in regard to wind. But like any fire-fighting method, it works best at night, when everything cools down.

It's midnight and cold, and the stars are so bright you can almost see by 'em, and the northern lights are a faint gray glow in the sky that looks like dawn coming up in the wrong place. Cole and I are sitting around patrolling our little line and taking turns going up to a muddy sump of a spring we found to fill two water bags with the stagnant stuff and pour it on what spots are still glowing red in the darkness. There's not much smoke drifting up through the cones of light from our headlamp flashlights any more. The night is still and without wind. And the fire is just about dead.

So we decide to stretch out for a couple of hours, wrapping up in the tarps from the fire packs and the cargo chutes to keep warm. Not as cold as I'd expected it to be, and 2 hours of good shut-eye really pick me

up. Don't forget to put that on the time report, that we slept for 2 hours.

Up again at two for a long cold morning of mop-up. We douse every square foot of the burn with undrinkable water and go over the charred ground with our gloves off, feeling for warm spots. It seems I'm spending half the night slogging back and forth to the shallow sump, filling the water bags tediously with a skillet, and climbing endlessly over the tangled maze of fallen snags back to the fire.

It's dawn and beautiful, and there's Mount Sheridan to the north and the valley of the Snake below us, and we're filthy and tired and unshaven, and the fire is dead. We eat breakfast, gripping again because there's too much chocolate and ham in these jump rations, and the last of our canned fruit and juice goes, and all but a couple of swallows of water. Oh, well, there's a whole river of it right down there. We'll make out all right.

We know we'll have to watch the burn through at least 2 o'clock this afternoon to make sure that somewhere in that black wet mess of charcoal we haven't missed one spark, because the heat of the afternoon will show smoke if there's going to be any. So we figure we'll use this half day to start packing out. Chutes, suits, fire packs, and tools will make a good mule load for each of us. And as we have time to burn, we might as well make two trips.

It's a mile back along the ridge to our jump gear, and then 3 miles down to the river trail—all through the maddening tangle of downed snags that blankets this country. About 80 percent of the deadfalls lie with their tops to the east, telling us mutely that the winds roar through this saddle from the west most of the time. We pack down our jump gear—two big, heavy white sacks apiece lashed to a clackboard—and it's treacherous footing downhill over the never-ending snags. Five or six elk are moving down ahead of us, keeping a good half mile away and wondering what men are doing prowling around their domain. It's marshy grassland in the bottoms, with fresh elk wallows and lots of flies, and a flock of black-headed Canada geese takes off ahonking from the Snake as we trudge into sight.

A soft little rain starts to fall, and we know the fire is out for good, even though we'll check it again to make sure when we go back after the rations and fire tools. We get squared away with our map, discovering the half-mile error in the original fire location from the lay-out of the trail with the river; and it's good to have a full canteen again.

Six o'clock, Thursday evening. The sunlight is bright and warm, and I've just taken a bath in a creek because the mighty Snake here is too shallow to get under water in. Cole is busy eating supper—something I shall later regret not doing—and we've found, from horse tracks and shouting up and down the valley, what the dope is on the packer who is to lug this load the rest of the way out on packsaddles. The packer has been up here looking for us and has gone beyond where we have come out on the trail. So we quit looking for him, pile everything beside the trail, barber-pole a tree with streamers so he can't miss, and start hiking for the ranger station up on Heart Lake.

Our map shows it to be 6 miles away. With all the twists and turns of the trail it turns out to be 12. My boots are stretched and too big, and there's a place on my heel that makes a little squeaking sound with every step as it rubs on the inside of the boot.

Pretty soon it's dark and we wonder if we are on the right trail, and the moon comes up in time to help out Cole's waning flashlight. On a needlessly empty stomach and with one bad foot, I am a poor partner for a strong hiker like Cole, and he is constantly

having to stop and wait for me. Another herd of elk is moving ahead of us in the darkness, crashing away intermittently when the tortured bawling of their scouts warns them of our persistent approach. The black peak of Mount Sheridan seems an eternity in creeping down to our left, and then at midnight we are finally marching along the shore of Heart Lake, feeling triumphantly near to rest. Suddenly we get a jolt, for there, a few hundred yards away, is a tall plume of smoke climbing into the moon-lit sky. Another fire. But the fear quickly evaporates as a stink of sulfur drifts over us. A hot spring. That isn't smoke, that's steam. You're still in Yellowstone, remember?

The ranger station is nothing more than what the Forest Service calls a guard station—just a cabin that may or may not be manned during the summer—the fire season. This one is manned by the packer who is out looking for us, and is well stocked with provisions. It looks beautiful there in the moonlight on the sandy north shore of the lake, and we find the break-in window in the back with no strain. The lake is so clean and remote from people that a bucket dipped out of it is drinking water—a weird contrast to the highway cluttered with people and monoxide fumes just across the mountains.

A quick chow to stifle my gnawing, and the blankets close over us in sleep.

"Hey, Kern, did you shave back there in the cabin?" Cole is hiking ahead of me on the trail out from Heart Lake to the roadhead, and I can't see his face from where I'm walking.

"Hell, no. I wouldn't shave in cold water for all of Yellowstone National Park."

As if smarting under the insult, Yellowstone National Park produces, 100 yards farther up the trail, plenty of hot running water for all our needs. We squat on a steaming line flat among countless bubbling hot springs for our first shave in 3 days. The water is too hot to be used for anything except dipping a washrag, but we make out. And we find the creek nearby has all degrees of mixtures from boiling to cold, as the surface water mixes with that from underground.

I get a scare a little later on when I slip shin-deep into some warm volcanic muck while crossing another open flat. It's not pleasant thinking of the people who have died of accidental scalding in Yellowstone's strange, naturally hot waters. But the mud goes to my boot tops and no farther, and I churn loose like a shying horse. The mud on my boots dries to white crust as we hike on out.

A truck meets us at the road 5 miles farther on, and after we make our fire report at the South Gate, the Park Service sends us on a personally conducted tour of the park, the first leg of our long ground trip home. We're stuck in Mammoth Village, on the north edge of the park, that evening because we can't get a train out of Livingston, Mont., till morning, and we kill time at a dance and a touristy wild-life lecture. Cole and I sit in the back row and grin when the ranger tells how nine forest fires are going in the park right now, and how they've called in extra crews and planes and even smoke jumpers.

At next day we ride the train back to Missoula and grip because it's Saturday and we're traveling on our own time. But then, in the station at Missoula, we pick up a red-headlined paper that tells us 12 of our buddies were burned to death yesterday afternoon down in the Helena. It's hard to believe that Dave Navon, my best friend in this outfit, won't ever be back to get that laughing post card I sent him from Old Faithful. And Cole and I are shocked and hollow and hungry to know why, and we feel powerful lucky to have gone on our Yellowstone jump.

Who Is My Neighbor?

EXTENSION OF REMARKS

OF

HON. CLAUDE I. BAKEWELL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. BAKEWELL. Mr. Speaker, in these days of world crisis, civilization hangs by a thread. If the holocaust breaks out, no man can estimate what will be left. One thing is certain. There will be no victors. There will be only survivors.

There are many who are so discouraged by this prospective future for the world that they can see no hope. I believe, however, that there is hope for the future. It lies in love—love of God and love of our fellow men. Only when man realizes that we are all God's creatures, and therefore, one another's brothers, can we realize the goal of true peace.

The practice of anti-Semitism is inconsistent with the practice of Christianity. To be a Christian one must love his brothers—black, white, yellow, and red; Jew, Christian, Mohammedan, and Buddhist.

This thought was forcefully and beautifully expressed recently in a book called *Head Over Heels*, by Msgr. Maurice S. Sheehy, head of the department of religious education at the Catholic University of America.

Monsignor Sheehy has not spent his years dwelling in an ivory tower. He is a captain in the Naval Reserve and served on active duty during all of World War II. He was in most of the forward areas of the Pacific, concluding his active duty service as senior chaplain of the Pacific Fleet.

Under unanimous consent, I include under extension of my remarks one chapter titled "Who Is My Neighbor?" from Monsignor Sheehy's book, *Head Over Heels*:

[From the Washington Post of October 2, 1951]

HEAD OVER HEELS

(By Msgr. Maurice S. Sheehy)

WHO IS MY NEIGHBOR?

(The following article is an excerpt from the book, *Head Over Heels*, A Guide for the Better Self, by Msgr. Maurice S. Sheehy, head of the department of religious education at Catholic University. The title, says Monsignor Sheehy, comes from his belief that God intended that the head should be over the heels, looking upward toward Him and outward toward our neighbor. It is reprinted here, as the second of a series, with the permission of the publishers, Farrar, Straus & Young, Inc.)

There is a great deal of nonsense in talk about tolerance.

The fact is that men vary in complexion, height, mind. That is God's business, not mine.

But because I claim to be a Catholic, I am a liar and an impostor the moment I refuse to see anyone as other than a child of our Father.

Our Father. Not mine, not yours—ours. That Christ is our brother makes me by adoption His Father's son.

Of sin, the better self must be tolerant; but in the sinner there still gleams the flashing splendor of the divine.

Twice I spoke on national networks against anti-Semitism when Hitler's sadism appeared in the bloodstream of humanity, indicating an infection which was partly cured by the lifeblood of 10,000,000 men. Hitler is gone, but the virus of hate appears from time to time.

Pope Pius XI in one encyclical spoke as follows: "We spurred all the children of the church, and indeed all men of good will, to a holy rivalry in love and succor."

At the close of World War II, 70 chaplains received their orders directly from me, as district chaplain in Pearl Harbor. Of these only 20 were Catholics. The chaplains were men of practically every faith, united in the purpose to serve, in a religious way, our Navy.

As a consequence of World War II, many of those within my innermost circle of friends are ministers of other faiths. I do not tolerate them. I really and truly like them.

One cannot meet and come to know personally all the 2,000,000,000 people in the world. In the story of the Good Samaritan, Jesus answered the question, "Who is our neighbor?" "That man closest to me, that man in need of a helping hand, that man is my neighbor."

Of certain things I am most intolerant. First, and above all, anti-Semitism.

Once a man wrote me with these words on his letterhead: "A potestate Judaecum, libera nos Domine" ("From the power of the Jews, deliver us, O Lord"). I threw the letter into a wastebasket. Then my conscience compelled me to write:

"DEAR SIR: In response to your letter, I am constrained by the obligation of fraternal correction to inform you that your heart is a crater of hate. Some day you must face as your Judge one who received all His human nature from a Jewish maid."

Thus ended our correspondence.

A few years ago, an old pastor was disturbed at the gossip he heard about members of his parish, particularly the ladies, who, following a popular orator, expressed anti-Jewish feelings. One evening at the ladies' sodality, he gave, instead of his usual 20-minute discourse, the following:

"MY DEAR SODALISTS: In your devotions I have observed that you, while praying, seem to spot a new member of the parish, or to know when Mrs. Smith has a new hat or Mrs. Murphy a new dress.

"From some reports I receive, I fear that if the Mother of Jesus, whom we honor here this evening, were to come attired in modern clothes, some of you would say in surprise, 'Why, she looks Jewish'."

"In the name of the Father, and of the Son, and of the Holy Ghost. Amen."

As I grow older I know I am growing more intolerant of people who insult my presence by careless use of the name of Jesus or an off-color story. It may be prudent to keep silent, but such people I no longer want in my company.

One cannot be an inmate (if I may borrow Mencken's term) of Washington for 24 years without being requested to write countless letters of recommendation. I do not tolerate people using my priesthood as a political springboard.

I do not tolerate kind-hearted people who invite me to dinner because a dab of purple gives a bit of color to the scenery.

My stomach, however, is a Catholic stomach, respecting all good foods. It happens that on the occasions I dine out, I dine frequently with non-Catholics, not because they are superior at culinary arts but because they invite me most frequently.

As a priest I have a grave obligation to all my non-Catholic students. The Catholic University of America admits all, regardless of race or creed, to its campus. Over 500 non-Catholics now study at the university.

One student told me at the end of the year that he had been delegated to organize the Communist Party on our campus. He received his degree.

He is still an organizer—but against his former comrades. Why should those who believe in God fear contact with Communists who oppose His purpose?

Some years ago the editor of the Daily Worker wrote an abusive letter to Msgr. Fulton Sheen. The editor was invited to lunch. His name is Louis Budenz. Monsignor Sheen refused to talk to him at lunch about communism. He talked about the Mother of Jesus.

Communists have souls, too. They are our brothers. We must treat them as such. The alternative?

Increased Compensation for Veterans

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Erle Cocke, Jr., national commander, the American Legion:

THE AMERICAN LEGION,

1. dianapolis, Ind., September 25, 1951.

EDITH NOURSE ROGERS,

House Office Building,

Washington, D. C.

DEAR CONGRESSWOMAN ROGERS: This is a letter of congratulations and of thanks.

It is intended to convey to you some sense of the appreciation on the part of 3,000,000 legionnaires of the important role you played in the enactment over the President's veto of H. R. 3193, now Public Law 149.

We believe that you acted not only in the veterans' interest but in the national interest. We are convinced that a very great majority of the American people join us in applauding this action.

For some time now, we have noted in the press a strangely belligerent and resentful reaction to anything having to do with maintenance and improvement of veterans' benefits. The attitude is one of impatience bordering on disdain. It is reflected in editorials and articles which all too often emphasize astronomical cost projections rather than basic facts.

Because passage of H. R. 3193 was greeted in this fashion in many areas I want to place on your record a brief review of the matter.

The American Legion advocated a reasonable pension for helpless and bedridden war veterans long before the introduction into Congress of the measure which last week became law. Three successive national conventions in 1948, 1949, and 1950 reiterated the plea. We studied the question, we debated it, and we concluded that it was morally right and economically necessary.

The most severe objective scrutiny will disclose the new law to be just that.

The \$120 monthly benefit is reserved exclusively for those veterans who are in fact unemployable—who are blind, helpless, or otherwise so disabled as to require the full-time attendance of another person. In addition, the beneficiary cannot have more than \$1,000 income if single, or \$2,500 if with dependents.

This law will add not a single penny to the tax burden of the American people. I cite this fact merely to refute the outlandish implications of cost that have been used against it. Every veteran who qualifies for

the benefit will have already exhausted the last possibility of self-support. The only question, then, is how needed public assistance shall be provided: Whether through county or State taxes or through Federal taxes. It is obviously fair in the case of those who have served all of the people to distribute responsibility for their care among all of the people.

The burden, therefore, rests squarely upon the Federal Government. Public Law 149 recognizes this obligation.

Pension based upon identical principles has been awarded by the Congress to veterans of the War Between the States, the Spanish-American War, the Philippine Insurrection, and the Boxer Rebellion. A policy precedent thus has been four times affirmed by different sessions of the Congress in different periods of our history. Fifty-five years elapsed between the end of the War Between the States and provision of this type of benefit for veterans of that conflict. The Eighty-second Congress, by acting now, has assured that the intended beneficiaries of the World Wars and of Korea will have full opportunity to claim their right.

The President, in his veto message, complained that the measure would grant a special award to veterans whose disabilities are in no way connected with military service. The complaint is as ill-founded as it is misdirected. Advisers to the President are in a position to know better.

The veterans who will receive the new payment are in large part those who have been and are drawing part III pensions for permanent and total disability. The latest Veterans' Administration hospital census conducted by the VA showed that of 19,632 patients in the general, medical, and surgery (nonservice connected) category, 5,532 were receiving part III pensions, and 6,554 had disabilities connected with their war service. Who can say that the service disability did not play a big part in bringing about the conditions that made these men permanently and totally disabled on a non-service-connected rating? To assume the contrary is crass speculation.

According to the same VA census, 1,808 patients among the 19,632 rated as nonservice-connected were then awaiting the outcome of claims filed for the purpose of establishing service connection. As you can well realize, the margin of human error in the process of adjudicating such claims is great. How much greater the error to imply a prejudgment against the claimant.

As of July 31 there were 312,000 veterans drawing pensions for permanent and total disabilities rated as nonservice-connected. This included 30,408 World War II veterans. Less than 8 percent—or only 8 out of 100—of the total group are expected to qualify for benefits under the new law.

Were they all bedridden and, therefore, eligible for this new pension, the obligation upon the Government would be just as binding.

The American Legion is concerned about the high cost of Government. But the American Legion is equally concerned about the high responsibility of Government, and we condemn and deplore the double-standard viewpoint of those who would make cost the all-important index of the merit of veterans' legislation while assigning it only moderate importance in other sectors.

Of all the legislative proposals which come before you, those affecting veterans are the only ones which are consistently presented to the reading public on the basis of cost in the year 2000. Most Americans knew the projected cost of the pension bill by the end of the century before they knew the nature of the bill itself. And the basis of the projection in this instance as in many others remains a highly mysterious question.

The Congress within the week has approved a salary increase for Government workers. We are in sympathy with your ac-

tion. But so far as we can determine, no voice has been raised to point out that the consequent cost to the taxpayers will be some \$25,000,000,000 by the end of the century.

Certain elements of the population long have regarded veterans' benefits as the soft underbelly of Government spending. Organizations have been formed under varied and attractive aliases for the sole purpose of dulling the public sense of responsibility as regards veterans' rehabilitation. We sometimes wonder if individuals who lead such groups consult either their conscience or the realities of human suffering.

Public Law 149 is a good law. It is a law to be proud of. And it is to the lasting credit of Members of the United States Congress—a mark of your moral and political courage—that you resisted the pressures put upon you to forget these needy veterans.

Sincerely,

ERLE COCKE, Jr.,
National Commander.

The Greatest Waste

EXTENSION OF REMARKS

OF

HON. EDWARD H. JENISON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. JENISON. Mr. Speaker, the increasing toll of Korean fighting in the form of Americans killed or wounded should jolt us into final realization that we are at war and not just engaged in what President Truman chooses to call a police action.

Unfortunately, the total losses sometimes fail to convey the full impact of the tragic cost of war. But when individual cases come close to home it is a different story.

Such a case has been brought to my attention in my home community, where the following letter was addressed to the editor of the Paris (Ill.) Daily Beacon-News after receipt of word that a Paris soldier had been killed in the fighting in Korea. Under permission granted me by the House, I am including the letter in the CONGRESSIONAL RECORD. It follows:

THE GREATEST WASTE

About a year ago a young man from Paris, Ill., was recalled to active duty and sent to the slaughter grounds in Korea. A great many of us here in Paris realized he was over there but most gave it very little thought until today when in every part of Paris one would hear, "Did you hear about Chuck?" or "Have you heard about Tuffy?" Yes; Chuck, or Tuffy, however you knew him, has given his life for his country—but, was it for his country? Is our way of life being threatened from Korea? Have our shores been approached by the Korean enemy? Did this man die to make our country a better place to live for his wife and daughter? (Just a few of the things a soldier usually fights for.) No; I don't think he died because of any of these, although he would have gladly have done so, for he was that kind of man. Or has this man, like so many others, in the Korean police action given his life to satisfy the aims and desires of a certain handful who are not thinking as much of their country as they are of their own political future or who are not thinking as much of the fine American lives being lost as they are of lining their pockets with American currency?

Yes, Charles (Chuck) Twigg, with many, many others, has given his life in Korea but for what? Ask a Korean veteran, who was lucky enough to be returned to his home, why he fought and I believe he'll tell you he doesn't know. How many of us do know? Is there a goal to be reached, and, if so, is this sacrifice of American lives bringing that goal any nearer? Ask yourself.

When we lose a friend or a buddy or a loved one over there it makes us stop to think just a little more. It is past time we all thought a great deal more and let our thoughts be known to those we have elected to run our country for the people.

We here at home are enjoying many privileges in this, our country, by far the finest in the world, but let's not forget those who have already lost their lives in this conflict and those yet in Korea who are fine Americans and deserve to live and enjoy our freedoms with us. Remember, don't forget.

Government Economy? What Does That Mean?

EXTENSION OF REMARKS

OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 2, 1951

Mr. DAVIS of Georgia. Mr. Speaker, there are some newspaper editorials which are worthy of being preserved and of having wide distribution.

On September 29, 1951, the Atlanta Journal had such an editorial, entitled "Government Economy? What Does That Mean?"

The editorial deals with an item of spending just recently voted, under which Members of Congress are authorized to purchase \$1,500 worth of electrical office equipment, such as automatic typewriters, and so forth.

It is just common sense that at this particular time when we are having to pass an appropriation bill of approximately \$57,000,000,000 for military purposes, no new spending project should be taken up unless it is absolutely necessary. This electrical-office-equipment project is not absolutely necessary. I think the great majority of congressional offices have no need whatever for this equipment. There are some probably who do need it. For such, the need should be met by buying a few sets of such equipment, setting up a pool, and letting this equipment be used as needed by Members who actually do need it.

I am in accord with the editorial writer in his opposition to this item. For that reason I voted against it. I feel that it is another item added to the tax burden, which could very well have been dispensed with.

Under unanimous consent, previously granted, I insert herewith the editorial above referred to:

GOVERNMENT ECONOMY? WHAT DOES THAT MEAN?

An economy-minded House of Representatives, recuperating from the arduous labors of shaping a bill that will add to the burden of all American taxpayers, has voted itself an appropriation of more than \$1,000,000 for the purchase of new electric typewriters and other office gadgets.

The taxpayers, of course, will foot this bill.

House Members could hear well enough the resonant tones of those urging the need for increased taxes to help pay for the preparedness program and combat the rising tide of inflation.

But when voices all over the land cried out for a reduction of nonessential Government expenses, wax clogged their ears.

Representatives urging passage of the measure authorizing House Members to spend up to \$1,500 each for electrical and mechanical equipment and, if desired, to draw another \$1,000 from the fund for clerical hire, argued they needed more efficient equipment because their work had increased.

Would they also argue that because of the rising cost of living, taxes should be reduced?

Should the people economize now that their cost of living is soaring, their tax burden rising, their dollar cheapened by inflation? By all means.

Economy in Government? Whoever heard of such?

Always Burned, Always Shy

EXTENSION OF REMARKS

OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. BOW. Mr. Speaker, on Thursday, September 27, 1951, an editorial appeared in the Canton (Ohio) Repository relative to the recent ruling of the President which, in the opinion of many, strikes at the foundation of freedom of speech and freedom of the press.

It seems that perhaps this order violates one of the planks in the platform adopted by the President's party at the Democratic National Convention, July 14, 1948, in Philadelphia, Pa., which reads:

We deplore the repeated attempts of Republicans in the Eightieth Congress to impose thought control upon the American people and to encroach on the freedom of speech and press.

Under leave, Mr. Speaker, I include in my remarks the editorial referred to.

ALWAYS BURNED, ALWAYS SHY

President Truman says his new Executive order for classifying and protecting security information in all departments will not be used to gag the press.

Spokesmen for the press say it will be used that way. Their reason for saying so is that such orders always have been used that way. Whether they come from the Chief Executive of the United States, or some local functionary trying to button up loose lips, orders to clamp down on certain kinds of information invariably are broadened to cover other kinds of information.

Some of the broadening is done in malice. Most of it is done by underlings made jittery by the hint from on high that newspapermen, peddlers, and dogs are unwelcome. The underlings do not want to jeopardize their security by consorting with these creatures beyond the pale, so they play everything doubly safe.

That is the way it works, Mr. President. There is nothing harder to get along with than a public functionary who has been given an excuse to throw his weight around, especially if there's secret stuff involved. Every newspaperman who ever bird-dogged his daily bread has snubbed his nose for news

on this sort of thing. That is why there is so much excitement over the Presidential order to follow State and Defense Department plans for controlling security information.

From the Presidential point of view, the order no doubt is necessary. From the point of view of people who try to keep the public informed about what their Government is doing, it opens the door to all the incredible nonsense and fat-headedness built into the Federal bureaucracy.

Gold, Communism, and Money

EXTENSION OF REMARKS

OF

HON. THOMAS H. WERDEL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 4, 1951

Mr. WERDEL. Mr. Speaker, under leave to extend my remarks in the Record, I submit the following editorial from the California Mining Journal of August 1950 entitled "Gold, Communism, and Money," which was delivered at the Interstate Conference of Western Mining Council, Inc., at Reno, Nev., June 16, 1950, by Harry Sears, president, Calaveras Central Gold Mining Co., Ltd.:

GOLD, COMMUNISM, AND MONEY

(By Harry Sears, president, Calaveras Central Gold Mining Co., Ltd.; director, California Gold Committee Angels Camp, Calif.)

An outstanding business leader, W. C. Mullendore, president of Southern California Edison Co., recently stated in a public address:

"The country is in the most dangerous and unsound boom in its history—a 'phony prosperity' that becomes more dangerous as it continues.

"It is financed by unsound expansion of Government debt, Government guaranty of unsound private loans, by legal counterfeiting and by confiscation of the savings of thrifty people through inflation.

"All businessmen should cease making peaceful concessions and tell the truth about this phony prosperity."

We respond to his suggestion and also note that during the past few months shocking conditions in Government departments and deplorable lack of integrity and sound Americanism on behalf of some public officials has been revealed.

The searchlight is now principally on foreign affairs, tied in with communism and other subversive traitors in our land.

But there is another revelation of subversive influence yet to be made. It concerns both foreign and domestic affairs and its effects govern the daily lives of every man, woman and child in our country. It affects everything that they own and will control their future for years to come.

The lid has been clamped tight on this subject. It is supposed to be something only for experts. The normal reaction has been that money and currency and the value of the dollar are complicated subjects not to be understood by people generally.

But it is a simple fact to know that to be safe, the value of our money must be grounded on truth and honesty.

Because of this aura of mystery, those responsible for the manipulations which have destroyed much of our present and future money values have been able to oper-

ate almost unchallenged, but this condition must be changed.

We are told that it is "un-American" to urge "guilt by association." That because swarms of our public servants mingled freely with traitors and made excuses for them, and chose to follow the Communist line, there is no implied proof that they are equally guilty with them.

Let us therefore be more direct. In this matter of money let us view their "guilty association" and judge the degree of their guilt on the record of their acts.

Now a great many people, particularly here in the West, are very directly interested in gold, but all of our citizens are indirectly interested, although they do not realize it.

THE POWER OF GOLD

Because of its importance and value in world affairs few people here who know and respect gold can understand the motives and objectives of our Government in stifling gold mining and trying to exterminate gold miners. It is natural to believe that if the attention of Government is drawn to their plight, that gold producers will get favorable attention.

But it isn't that simple.

They forget that the control of gold represents power. That is the power that the Government has seized and they will hold it so long as the people permit.

If the control and possession of gold is regained by the people, they will have likewise regained their freedom and the control of their lives.

To the rank and file citizens, bankers are viewed as experts on money. If we trust the bankers with our money, they surely know best and will look after our interests. At least that is the general supposition, but it is no more true than the other general supposition that banks control money. They have very little money. Just a few bags of small change, that's all, and it's very doubtful that if, on the average, all the people of the land now have on hand as much as \$25 each in real money.

What the banks have and deal with are just pieces of printed paper, accepted as currency, and that is about all we ever see or handle. We get this in small or large bundles according to our degree of luck or prosperity and then we promptly hand it back to the banks because we believe they will look after our interest and make sure that the currency is safely kept.

For some years past the Government has been working toward the total demonetization of gold and silver and they have come dangerously close to achieving their purpose.

We are assured by the Government and by many bankers, that our money is protected by the national gold reserve and that bank deposits are guaranteed by the Government.

We have also been educated for many years on the evils of high prices but we seldom hear our money is steadily losing its value. It is not the prices that are high, but the dollars that are low.

We face the simple question—If the gold reserve is really a protection and if the guaranty of the Government is worth anything, why do these things happen? There is no safety to us, if we get dollars that continue to lose their value.

This question was put very directly and courageously by Senator CAIN, of Washington, in an address in Chicago, early this year, and I quote several passages from that address:

"If the Government has operated in the red for 17 of the last 19 years, if it has disregarded the solemn duty to preserve the integrity of our money, the blame for this must be shared by the public."

RESPONSIBILITY OF BANKERS

"In particular it must be shared by those institutions which solicit the confidence of

the citizen and assume obligations toward that citizen payable in the future. I refer particularly to our banks and great insurance companies.

"There are more than 14,000 banks in this country. They have more than 104,000,000 individual deposit accounts. These banks are the debtors and the depositors are the creditors. The depositors give the bank money today which must be paid back at some time in the future.

"If the buying power, or the real value of the dollar is cut in half, the depositor in the end of the period finds himself the loser. This is not fraud in any premeditated sense but the effect is unfortunately precisely the same. Too many of our Nation's banks have had an eye almost solely for the legal discharge of their obligations. They have been completely indifferent to the real substance of their obligations."

ABA SILENT ON CURRENCY ISSUE

"Probably the primary responsibility for urging honest money rests upon the American Bankers Association. This body has consistently remained silent on the great issue of currency. I have never seen the association become indignant or express any articulate opposition to what is happening to our American dollar.

"All banks have a moral duty to insure the value content of the dollars they repay. This they have strikingly failed to recognize and in their failure they reveal a disappointing lack of stature.

"Actually the American Bankers Association at its last annual meeting at San Francisco extended the courtesy of its platform and the great prestige of the occasion to a noted guest who lectured them on the virtues of a managed currency—a planner who would leave the currency to the loose limitations of the printing press and the discretion of so-called competent and responsible men.

"What I have said sincerely and considerately about the bankers goes with equal force and conviction for the great life-insurance companies of America. They carry 191,000,000 insurance policies aggregating more than \$213,000,000,000. They collect money today in the form of premiums at the annual rate of \$6,800,000,000. Again, as in the case of the bankers, there is a narrow concern over the details of dollar obligations and a disquieting complacency regarding the substance of the ultimate payments to their policyholders.

"Rightly or wrongly, the public presumption is that the leadership of our banking and insurance fields understand the subject. Their failure to speak up implies approval of a paper currency completely unhinged from gold. I can understand their reluctance to stand up and be counted, but I can't condone it. They are doing only what their counterparts did in Italy and Germany in the decades of the 1930's.

"As their reluctance—brought gigantic ruin to Germany and Italy, the present day disposition of the banking and insurance fraternities of our Nation to let the administration have its own way in money matters will bring the same sort of tragedy and ruin to all of us in due time."

Those are forceful statements from a member of the Senate Banking and Currency Committee and a man who was a banker for 10 years before he became a Senator.

It is unfortunate that gold, as money, is far from the lives and experience of the present generation. Gold coin and gold certificates have been out of circulation for 17 years, therefore to those under 35 years of age gold is just a substance for jewelry, dental work, and something to bury in the ground at Fort Knox.

The use of gold by our citizens, as a protection from exploitation, by a dictatorial and

spendthrift government is only a dim subject for them to contemplate. Although it affects their lives and future it is something beyond their experience.

PROPER USE OF GOLD IMPORTANT

The proper use of gold and the right and ability of citizens to get it, and hold it, is the most important issue in our economic future.

We were a proud people 5 years ago when we thought we had victoriously concluded a terrible war. Today we find ourselves in another war. They call it cold and our enemy is communism.

MENACE OF COMMUNISM

Communism is not a mere organization, it is an unholy philosophy, founded upon deceit, lies, and greed; administered by brute force, treachery and lust for power, by its leaders, and requiring absolute and abject slavery of the masses of people, to sustain and support it.

Freedom, decency, property rights, kindness, religion, and morals, are signs of weakness to Communists and these are the things which must be ruthlessly stamped out, according to their code.

They have stolen our words and phrases, using them to confuse and cover up their acts. These words in their hands have an entirely different meaning and interpretation from our use of them. Thus they claim that theirs is a real democratic action, that theirs is the peoples government, that their elections, with only one candidate, and mandatory voting, are free. This is all double-talk to confuse.

Communist dogma kills the originality of its followers and robs them of normal human powers of defense. When cornered they slavishly repeat certain pet phrases and rail against pet hates. They follow a routine just as they follow the party line. They have thus recently exposed a dangerous weakness. The Communists' denials of guilt have assumed a recognizable pattern. By their form of denials they prove their guilt.

IS SOCIALISM DIFFERENT?

If we consider socialism as entirely different from communism, we make a mistake, for socialism and government controls are as inseparable as homogenized milk.

They always have been and always must be inseparable, because socialism is contrary to normal human instincts. It must be enforced if it is to prevail. The only way a Socialist government can get the people to behave like robots is to drive them to it with a multitude of regulations and ever-increasing penalties on disobedience. Thus, compulsion is at the very root of the philosophy of socialism, just as it is of communism.

WHAT HAS THIS TO DO WITH GOLD?

You may now ask, what has all this to do with gold? We will show that connection, but first let us quote a few communistic doctrines put forward by Marx, Engels, and Lenin, and also widely used in the New Deal and Fair Deal philosophy of the administration as popular slogans.

"The right to work" is a phrase constantly popularized by Roosevelt and Truman and the starting point for countless labor demands, yet this was put forward by Engels in 1893.

NEW AND FAIR DEAL SLOGANS

"We owe it to ourselves" is another phrase use constantly in excusing our vast public debt and to popularize deficit financing. This was advanced as "the modern doctrine that a nation becomes richer the more deeply it is in debt," by Karl Marx, in 1897. At the same time he also said that "over-taxation is not an incident but rather a principle."

"Race, color, or creed" is one of the most widely used slogans to stir up unrest. It comes directly from the manifesto of the First Communist International, dated 1894.

"A quart of milk a day" was one of the great slogans of Roosevelt and Henry Wallace, but it was also the formula proposed by Lenin in 1917.

DEBAUCH THE CURRENCY

Let us remember that Karl Marx also said, "The surest way to overturn the social order is to debauch the currency," and with that in mind can we close our eyes to the fact that the ends sought by the Communists are being deliberately delivered by those who persist in subjecting us to managed paper currency instead of sound and honest dollars?

J Edgar Hoover, the head of our FBI, gave some sensational secret testimony early in April, parts of which have just been revealed. He stated that there are more than 54,000 known Communists in this country and that for every party member there are 10 others who follow the party line, ready, able, and willing to do the party's work.

In plain words, there are 540,000 people dedicated to this work and this slimy philosophy. This fifth column is a feverish arm of a ruthless conspiracy against our freedom. The effects coming from the acts of these Communist sympathizers can be just as deadly as from party members.

To what extent are they meddling with our money?

We hear a lot about ending the cold war, but which one of them; for there are two.

The first is being waged against us by the Communists who hope to pick up power by dividing our people, disrupting our Nation, and ruining us.

The second is being waged against our people by the left wing cliques and the Truman administration because it increases their power and gives them lots of money.

THE SECOND "COLD WAR"

We can end the first cold war when we end the hopes of Communists and their sympathizers that we can be divided and ruined, but we can only avoid being ruined by the second cold war when we end the hopes of the politicians in power who still subscribe to the formula of "spend and spend" and "elect and elect."

As part of this second cold war there has been a constant stream of Government propaganda during the past 17 years telling us that all gold is rightfully in the hands of the Treasury, that it is the backing for paper currency and that it is dangerous to allow it to be in the hands of citizens.

Their efforts have been so successful that economists, businessmen, bankers, teachers, and even many gold miners themselves, accepted this propaganda as fact and talked and thought only of gold in the monetary relation.

GOLD IS A COMMODITY

The facts are that gold is basically a commodity metal, just as copper, lead, zinc, and iron are commodities, or wheat, or corn, or wool.

The industrial use of gold in manufacturing and the arts in this country is constantly expanding and has far outstripped the gold production of the United States.

DICTATORIAL GOLD PRICE SINCE 1934

The Government has only asserted the power to dictate to gold producers since 1934 when the Treasury regulations set up the arbitrary price of \$35 per ounce for gold, but long before this the commercial use of gold in this country was growing and in the 11 years from 1919 to 1930 it was 131 percent of the total United States gold production.

During the years 1941 to 1949 the industrial use of gold here was 139 percent of the total United States production.

SOME LEADING QUESTIONS

Why then in the face of those facts is gold mining a sick and depressed industry

today? Why are about 90 percent of all gold mines in the United States closed down?

Why are hundreds of communities and thousands of property owners throughout 11 Western States deprived of their lawful and constitutional rights to produce and sell their gold?

Why is labor denied the opportunity to seek and secure employment for thousands of men, in hundreds of proven gold mines and in the development of other hundreds of prospective mines?

Why is industry denied the opportunity to furnish machinery, equipment and supplies, and railroads denied profitable freight, and why are agriculture and food processors denied an increased market throughout the West in communities which are today stagnant and depressed?

ANSWER—A DELIBERATE CONSPIRACY

The answer to these questions seems to point to a deliberate conspiracy in the Government to discourage and stifle gold mining in this country, to appropriate and destroy the property rights of gold producers by unlawful regulations, but support and encouragement of gold production elsewhere in the world.

By sustaining a stagnant and inadequate price for gold here and enforcing regulations which do not allow producers to sell their product to industry or in other markets where they may secure a higher price, the Treasury has assumed to be a dictator, blocking gold producers from the free conduct of their business.

The Government thus supports a favored class among the manufacturers who use and fabricate gold, with no limits on their profits, giving them access to the privately owned property of those gold producers who are still operating, at completely unrealistic prices.

OUR DOLLARS LOSE THEIR VALUE

All of this is done by the Treasury under the plea that it must hold gold at the \$35 per ounce price in order that the value of the dollar is maintained.

This brings to mind a story concerning a high school lad who asked for more spending money.

"You don't know the value of a dollar, son," sighed the father.

"Yes I do," replied the lad, "as of last week it was about 58 cents as compared with 1939 standards."

Is this the sound and honest money we expect our Government to provide? Why should the Government wreck the gold-mining industry?

MUST REVIEW GOVERNMENT TREND

To answer, we must consider politics and power. We must review the trend of government and its purposes during the past 17 years.

Previous to that time we proudly felt that we lived and were governed under constitutional checks and balances; that the first loyalty of the Government lay in protecting the rights of our citizens.

Then came the deluge and a horde of soothsayers were gathered into the family fold in Washington. They began to brew a variety of poisons which flowed through the streams of business and social life causing constant turmoil, mounting waste and debt, and piling crisis upon emergency. This mess was known as the New Deal, now it is called the Fair Deal.

CHUMMY WITH COMMUNISTS

During these years some of our leaders in government got very chummy with the Communists. They were invited in and told to help themselves to whatever they wanted. They did. They also sprinkled a liberal layer of spies and agents throughout the Government, putting them on our payrolls. They bundled up the information, experience, information and secrets of our people and

shipped it out to their masters in Moscow just as fast as planes and ships could be lined up and loaded.

And goods, too, anything they wanted, in any quantity. During the last war those gifts went to Russia with higher priorities than we could get for our most vital defense measures.

OUR COMMUNIST MONEY POLICY

Now early in this game our Government began to hint that gold might not have any future and before we became directly involved in the war active steps were taken to reduce postwar gold production. These were later extended to the actual closing of gold mining in this country under pretense of war emergency.

We were told that the real way to have a healthy currency was to manage it. That's what they did in Russia and in Germany.

THEN CAME LORD KEYNES

Then England sent us Lord John Maynard Keynes, Lord help us. He taught our leaders that it was just foolish to bother with gold, all we needed were debts and plenty of them, then we would be prosperous.

The great master minds of the financial side of our Government liked this idea of debt; they just wallowed in it. Roosevelt, Hopkins, Wallace, Morgenthau, White, and Eccles of the Federal Reserve, all bowed to this financial wizard from Britain who arrogantly reported back to Parliament on May 23, 1944, saying:

"I hope your lordships will trust me not to have turned my back on all I fought for. Was it not I, when many of today's iconoclasts were still worshippers of the calf, who wrote that 'gold is a barbarous relic' and 'as a permanent institution, the plan accords to every member government the explicit right to control all capital movements.'"

A PAPER EMPIRE ON A GLOBAL SCALE

Here Lord Keynes was outlining a paper empire on a global scale to be administered by the very debtors and defaulters, on loans from this country, who had created it. Then he came back here to push it through.

Roosevelt called the delegates together at Bretton Woods. They were headed by Henry Morgenthau and Lord Keynes. Here was the meeting to glorify debt. It was all dignified by our Federal Reserve. One of their special advisers, Alvin H. Hanson, said:

"We shall come out of the war debt-free. We shall have no external debt, only an internal one—a public debt (internally held) is an instrument of public policy. It is an instrument of the national income and, in conjunction with the tax structure, to regulate the distribution of income. An internal debt is in fact so different from what we commonly think of as debt—that it should scarcely be called a debt at all. Public expenditures financed by continually rising public debt is essentially a conservative proposal."

A BOLD PLAN TO LIQUIDATE OUR ASSETS

Here was a bold plan to liquidate the assets of every man, woman, and child in this country in a grand slam of national socialism and it was called essentially a conservative proposal.

The 85-page bill in Congress to authorize this was introduced by Senator Wagner, he of the notorious Labor Act that has caused untold losses to labor and business and has divided labor from employers in true Communist confusion.

When this Bretton Woods plan was introduced on February 15, 1945, an immediate loud clamor arose clear across the country for its immediate acceptance. There were appeals, threats, and cajolery from the same groups and organizations who backed Henry Wallace, most of whom have since been listed as Communist fronts.

BRETTON WOODS, COMMUNISTIC

Among the leaders for the Bretton Woods agreements were Alger Hiss, whose Communist ties are now widely known and Harry Dexter White, high policy maker in the Treasury, who sought death rather than face the Communist charges brought against him.

They put it over, and out of Bretton Woods came the International Monetary Fund which is supposed to maintain the price of gold throughout the world at \$35, also to maintain monetary exchange for the various currencies of all members.

MONETARY FUND A FAILURE

The fund has now been in operation for some 5 years and it has signally failed to achieve either of the two objectives. Charging the fund with bad faith and failure to keep its initial promises to members that the \$35 price of gold was only temporary and to be later adjusted upward when it became necessary, South Africa last year sought freedom to sell half of its gold on a world free market.

The fund delayed its decision on this request until the beginning of last month when it refused to agree. Within 3 days N. C. Havenga, finance minister, delivered a blistering indictment of the fund and its dominating power, the United States, in the South African Parliament, charging that the United States "is the most outstanding example of countries that have conformed to fund policies when it suited their convenience," that the fund's gold policy had been "ineffective and largely discredited."

Mr. Havenga cited figures which he charged the fund should have published in 1948 and 1949 showing that half of the world gold production, excluding Russia, "failed to reach central reserves" of governments, that \$367,500,000 went into industry, arts, or private hoards, that of \$300,000,000 that went into private hoards, five-sixths was released from official holdings.

Mr. Havenga made the significant statement that "the United States Treasury conformed outwardly to the International Monetary Fund policy by laying down that no United States subject should deal in such gold at a premium."

SOUTH AFRICA REPUDIATES FUND

Then South Africa refused to be further bound by the fund and reserved the right to sell her gold at the highest price she can get in the world's free markets.

The demand for a free gold market in this country is steadily gaining strength. Business and financial leaders in mounting numbers are seeing this is the only sound means of determining a proper price level for gold, established by public demand and acceptance of its value as a refuge from the shrinking purchasing power of dollars.

This market must be free in all respects. If the Treasury carries out its threats to depress such a market by selling enough of our national gold stocks so as to maintain its present politically pegged price of \$35 gold it can prolong the present unsafe condition of national finances, but in adopting such a course our present financial dictators would reap a whirlwind of public condemnation.

FREE MARKET A PRACTICAL NECESSITY

A truly free gold market is a practical necessity to establish the proper dollar value of gold and a safe level at which it could be made convertible for the present paper currency. The determination of such a price, or value, is far beyond the powers of any person or group of persons to whom such a task could be safely entrusted.

CONDITIONS WARRANT HIGHER PRICE

Never before in history have our citizens been faced with the combination of past and present conditions which would influence such a gold price. It must take into ac-

count the great devaluation of our present dollars, the demand on national gold reserves which our citizens would normally make to provide for themselves reasonable safety and security and it must also reflect the necessity of our Government to retain enough gold as the legal backing for a safe and honest national currency.

There is a striking similarity between the attitude of our Government toward gold and that of the Communist governments toward freedom. Under the pretext that its citizens misuse freedom the Communists confiscate it and make their citizens slaves. Under the pretext that individuals misuse gold our Government confiscates it, to its own advantage, and is making us slaves.

CONFISCATION DOES NOT BRING SECURITY

It is a strange paradox that governments confiscate the best instrument of economic security at the very time when they claim to insure the economic security of citizens, through all sorts of laws and social institutions, pensions, etc. It just doesn't make sense, for good Americans.

It's just part of the game, however, for economic dictators. Remember that Karl Marx said, "The surest way to overturn the social order is to debase the currency."

To this add the words of one of our great statesmen, Daniel Webster, who said, "Of all the contrivances for cheating the laboring classes of mankind, none has been more effective than that which deludes them with paper money."

LIFT THE LID ON THE FEDERAL RESERVE

We have spoken of the Federal Reserve and its approval of deficit financing and public debt as a virtue. Perhaps this appears strange to you. It may have been in your thoughts that although privately owned, this institution was the leader of our banking system and the pillar of integrity. Let us lift the lid just trifle and look how it works, then see if you hold the same idea?

On September 30, 1951, Marriner Eccles, then Chairman of the Federal Reserve, was testifying in Washington before the House Banking and Currency Committee.

"Congressman PATMAN. Mr. Eccles, how did you get the money to buy those two billions of Government securities?"

"Mr. ECCLES. We created it.

"Congressman PATMAN. Out of what?"

"Mr. ECCLES. Out of the right to issue credit money."

Now look at the paper currency in your pockets. Do you think it is money, backed by gold? You will find the bulk to be only Federal Reserve notes, backed with debt.

During the hearings on the Banking Act in 1935 the Governor of the Federal Reserve told how it was done. When the bank buys a billion dollars worth of bonds, it debits its Government bond account a billion dollars or it actually creates by a bookkeeping entry a billion dollars.

A BEAUTIFUL EXAMPLE OF FISCAL FRAUD

Isn't this a beautiful example of fiscal fraud? The banks of issue just create the money without cost to themselves, except the paper and the ink required for the printing. The money never even existed before the bank made the loan by bookkeeping entry.

The bank takes a piece of printed paper called a bond. This is a liability, or a minus quantity. It then takes another piece of printed paper called currency, also a minus quantity. It puts these two together and calls the result money, which is a plus. Two minuses therefore make a plus. Two liabilities make an asset.

But even these people face the loss of purchasing power of the dollar. There was a Washington news item last month which said:

"The paper on which currency is printed has gone up in price. Crane and Co. of Dalton, Mass., which supplies the paper, has

raised the price from 48.2 cents to 53 4 cents a pound."

BONDS BOUGHT WITH IMAGINARY MONEY BEAR INTEREST

There is another item, however, in this fiscal hocus-pocus and it is hidden in this paper transaction. Both of the liabilities bear interest and all banks, particularly the Federal Reserve, are vitally concerned with interest. Those bookkeeping entries draw interest. The bonds which were bought with imaginary money are interest bearing.

Who gets the interest? The banks. Who pays the interest? The people.

They pay it through their taxes even though they never saw or possessed one of the bonds.

INTEREST IS THE ONLY REAL MONEY

What they pay in interest is the only real and tangible money, or value, in the whole deal. That's cash on the barrelhead out of their sweat and toil and not a bookkeeping transaction.

But, you may say, we the public also buy bonds. We are told every day over the radio that they are the safest investment in the world, that for every \$3 we pay in now we will receive \$4 in 10 years, when the bonds mature. That's interest isn't it? No, it is just a slice of yours and other peoples' taxes.

As to the payment at maturity. You will receive it provided that at that time someone else buys enough newly printed bonds. But what will you receive at that time? Even the high school lad knew that there has been a loss of 42 percent of what was paid in and then if you lost 42 percent of the 25 percent you were supposed to receive in interest your net loss would be more than 25 percent or what you originally put up and you would have waited 10 years to find it out.

FREEDOM THROUGH GOLD

Now all of these things are possible because your Government has seized control of gold and they refuse to let you get your hands on it.

They will not give you any in exchange for your paper currency, or for your bond, which they claim to be the safest investment in the world.

The reason they give for declining to part with the gold is that you might hoard it. This terrible sounding word only means saving, but somehow they create the impression that you would be a malefactor if you saved gold.

WE FACE LOSS OF FISCAL FREEDOM

The simple truth is that if you got enough gold out of their clutches they would have to tone down their fiscal shenanigans, and another truth is that unless you get the gold out of their clutches you are facing the eventual and early loss of such slight economic freedom as you still have.

At the beginning of this talk we mentioned recent exposures of Communists and their influence in our Government. We find that either from motive, plan, or effect, the monetary and currency policies of the Treasury, the Federal Reserve, the International Monetary Fund, and Karl Marx, are all of a pattern and that if they are not checked we will pay the ultimate price through complete loss of our freedom.

Strangely enough, we have been a long time in finding this out, though our Congress had warning when Mr. Morgenthau testified before the House Banking and Currency Committee, when he said:

"The Bretton Woods agreements are good for every American citizen—they involve jobs and profits—they govern the amount of food on the family table, the money for a new radio school books for the children."

These were sweet words, but note the phrase, "they govern." They meant it just that way but we do not have to tolerate it and the same is true of the policies and

practices of the other Government agencies we have named.

DESTRUCTIVE GOVERNMENT

When our Declaration of Independence was written there was a clause which said: "Whenever any form of government becomes destructive—it is the right of the people to alter or abolish it, and to institute new government, laying its foundations on such principles, and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness."

Since it is our right to change even our form of government, we surely have an equal right to seek changes in the policies of the privately owned Federal Reserve System. That we need changes should be apparent when we listen to the words of the "planner" mentioned by Senator CAIN.

A MONEY MANAGER SPEAKS

Allen Sproul, president of the Federal Reserve Bank of New York, addressed the recent convention of the American Banking Association in San Francisco. He spoke of gold money as something inferior to the present paper currency. He stated that the people were not to be trusted with gold lest they might want to withdraw some and hoard it just when the managers of the paper currency desired their greatest freedom. His statements are typical of those coming from various speakers who join with his views. Sproul says

"We have decided that this policy requires that gold should not be available for private use in this country.

We have decided that the place for gold is in the monetary reserves as a backing for our money supply, not in the pockets or the hoards of the people.

"I perceive no moral problem involved in this question of gold convertibility."

Mr. Henry Hazlitt, a keen financial writer, makes this comment in Newsweek:

A REAL GOLD STANDARD

"Let's help him to perceive one. Prior to the year 1933 our Government pledged itself to pay interest and principal on its bonds in gold. It also pledged the holder of every currency note that it would redeem that note on demand in gold. It violated its most solemn pledge. It deprived the rightful owners of their gold. And it made the possession of gold by anybody but the thief illegal.

"The principal argument for restoring the circulation of gold coin," declares Sproul, "seems to be distrust of the money managers and of the fiscal policies of the Government."

"Mr. Sproul could not have stated the issue more clearly but he seems blind to the fact that this mistrust has been richly earned."

As a matter of practical fact we are just as effectually robbed if we lose our property through Federal Reserve policies or through direct acts of the Communists. We know that the Communists seek our extinction but we had expected some integrity from the Federal Reserve.

DOES OUR GOLD NOW PROTECT US?

We hear of our vast stores of gold and are told it guarantees the integrity of the dollar. Our dollars are issued in ever mounting billions by the very money managers we are supposed to trust. Sproul describes them as "competent and responsible men" but Henry Hazlitt pointedly comments, "Sproul's currency theory may be summed up thus—put your faith in the monetary managers, who have always fooled you in the past."

Since various Government departments issue statistics on the value of the dollar we can adopt their figures and conclude that the present value is only slightly more than 50 cents. Its integrity is at a very low ebb.

SOME FIGURES ON OUR FINANCIAL FIX

On May 4, 1949, William McMartin, Jr., Acting Secretary of the Treasury, wrote a letter to the chairman of the Senate Bank-

ing and Currency Committee for the purpose of showing the impossibility of attempting gold convertibility for our present outstanding currency obligations. He said:

"Even our \$24,000,000,000 of gold holdings would be completely inadequate to meet a serious run on gold from the \$27,000,000,000 of United States currency in circulation, over \$140,000,000,000 of bank deposits and scores of billions of dollars of Government securities.

"Conversion of 5 percent or 6 percent of these Government and bank obligations would be enough to bring the Federal Reserve banks below their legal minimum bank reserve."

In the face of this isn't it childish for so-called economists to talk of converting to gold at the present \$35 gold price?

GOLD PRICE A FICTION AND A FRAUD

The price of gold in dollars is so fatally out of line that it menaces our economic future every day it is maintained by helping to perpetuate a fiction and a fraud on our citizens.

The admission by the Treasury of the dangerously thin margin we have in our present ratio of gold to dollars provides the strongest possible argument for the necessity of a higher gold price.

It is an astonishing experience to hear business and financial men discuss these matters, deplore the dangers inherent in our present money policy, express their distrust of our money managers and then hesitate to press for a higher gold price because "that would mean devaluing the dollar."

THE DOLLAR HAS ALREADY BEEN DEVALUED

Its value is only gaged by what it will buy. It is now worth only 50 cents and headed downward.

AN HONEST ADMISSION NEEDED

An honest admission of this fact by our Government and by bankers and businessmen would be a first step toward returning integrity and dignity to the dollar.

Gold should now be \$70 an ounce merely to be of the equivalent dollar value that it is supposed to hold, but this would not be a safe price at which conversion of currency into gold could be undertaken.

It is obvious that whatever the future price of gold may be, it cannot safely be left to the choice or judgment of the same managers of paper currency who have betrayed us.

FREE MARKET A COMPELLING NEED

It is because of this compelling need for an honest determination of the realistic value of gold that a free market must be established. That there gold may be freely bought and sold by citizens with no fear of prosecution for violation of Treasury Regulations, or of loss through seizure of their gold holdings.

In such a market the Treasury could buy, but it must be prohibited from selling lest we still be the victims of the present political fiction which constitutes our monetary policy.

Such a market could develop the reasonably safe value of gold so that the next step could be a conversion of paper currency to gold without wrecking the economy. The proportion of gold which would be withdrawn by the citizens, and others who possess our currency and dollar obligations, must be carefully estimated so that the remaining gold reserves may legally and adequately support the currency outstanding.

RESERVE INCREASE IMPOSSIBLE

The present world reserves of gold (exclusive of Russia) are tabulated and known. It is physically impossible to rapidly increase these reserves. The mining of new gold is a slow and laborious process, no matter what the price, or the incentive, it is a matter of years to open new mines, or increase the productivity of existing mines.

Taking into account the world consumption of gold as a commodity which is constantly increasing and bearing in mind that much of this gold is destroyed and therefore not returnable for re-use in the future, the actual fresh and new gold production would scarcely keep pace with the expansions of sound credit.

The world gold stocks can therefore only be expanded in the proportions needed through a new dollar price, or value, or relationship.

Such a price now might be \$105 an ounce, but if we continue to be guided by the stubborn stupidity which has chartered our course down the present path to increased inflation and eventually financial disaster, the eventual price of gold may soar to far greater heights.

WE MUST ACT NOW

What can we do to help?

We can make the subject of phony money a daily peeve and talk to our families, neighbors, merchants, bankers. Write to our friends at a distance and suggest their activity along the same lines. Write to our insurance companies and to our Senators and Congressmen and request that they answer our letters. If the answers are evasive or unsatisfactory write again.

These are your rights and privileges as American citizens and this is the most important subject in your future if you wish to retain and enjoy them. A mass movement from citizens now will augment the work of outstanding banking and business leaders who have become increasingly active in publicly proclaiming the necessity and benefits of a free gold market and ultimate convertibility to gold of present paper currency.

HONEST BANKS BACK FREE MARKET

The Empire Trust Co., of New York, in the East and the powerful Bank of America, on the Pacific coast are two leaders of this movement, backed in principle by forceful and independent bankers clear across the continent.

The Washington Mutual Savings Bank, in Seattle, has adopted a very practical plan to help its customers.

When entering the bank to buy a United States savings bond a staff member greets the customer and opens a discussion to show how Government deficit spending is destroying the dollar purchasing power and therefore the security of the bond purchase.

The banker then offers to aid the customer in voicing concern to the State's Congressmen as to the value of the bond in 10 years from now. The bank offers to prepare and send a letter for the customer, which states, in part—

"I have bought this bond because I believe the statements of our Treasury Department and of our Government that this is the soundest type of investment I can make to protect my savings.

"I am nevertheless disturbed by the continuing reduction in the purchasing power of the United States dollar.

"I am of the opinion that Congress must act to balance our budget and should do everything in its power to make certain that the proceeds of my bond when it matures 10 years from now will have purchasing power comparable to those dollars which I have invested in our Government bonds of this date."

These are direct-action methods in the best tradition of every loyal American citizen. They give impetus to a mass movement which will compel the politicians now ruling us to modify their acts and realize that they do not own this country and its people.

IMPORTANCE OF HEALTHY GOLD PRODUCTION

Few people realize the economic importance to the country of a sound and healthy gold-production industry. Gold producers are not seeking any favors, but they are

entitled to justice and the protection of laws and their constitutional rights.

When these suggested actions take place on a mass scale it would seem that the Government should return to financial sanity, and when this happens all the present problems facing gold mining will be wiped away.

World-Wide Influence of American Soil Conservation Program—Part I

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include part I of the address by H. H. Bennett, Chief, United States Soil Conservation Service, fifth annual meeting, Soil Conservation Society of America, Detroit, Mich., October 27, 1950:

WORLD-WIDE INFLUENCE OF AMERICAN SOIL CONSERVATION PROGRAM

Among the benefits our American soil conservation program has given the world are: The rates and behavior of accelerated soil erosion, the extent of erosion in the United States (survey of 1934), and most of the basic principles and measures involved with the control and prevention of erosion.

We have learned through bitter experience here in America that a part-way job is not effective soil conservation in the sense of establishing anything like permanent productivity for the land. For example, the old single-practice type of soil conservation—terracing—used by many cotton farmers of the Southeast for more than a hundred years did much more harm in the long run than good. The failure was due, more than anything else, to the fact that no one knew how or where to build terraces, or how to provide supporting practices needed for their efficient operation. The practice had its beginning (as "hillside ditches") early in the nineteenth century and was never subjected to the scrutiny of research until nearly a third of the twentieth century had passed: a delay of nearly a century and a third in finding out how to build and where to use the principal erosion control practice of the time! Ramser wrote a very important bulletin about terracing as practiced in this country in 1917,¹ but in the absence of research that publication was based on field observation.

Now we know how and where to build terraces. We know what grades and cross-sectional dimensions to provide for terraces to be built on different slopes with different soils and soil conditions. And, what is just as important, we have learned what combinations of conservation practices to use with terraces in order to give them needed support for permanency, as well as what kind of terracing is required to provide needed support for other conservation practices.

These requirements, we have learned through the research and experience of the Soil Conservation Service. That agency has produced most of the fundamental conservation information and has developed the principal conservation measures for the United States and the world. The Service and its immediate forerunner (the soil conservation erosion experiment stations) developed such effective conservation tools as strip cropping,

contour crop rotations, the broad-channel terrace, stubble mulching, the land capability survey, and the principle of treating land according to kind and need for lasting soil conservation.

Our first work in cooperation with practical farmers began in September 1933. Some of the principal projects were those covering the watersheds of South Tyger River, S. C.; Banister River, Va.; Elm Creek, Tex.; South Palouse River, Wash.-Idaho; Salt Creek, Ohio; Big Creek and Tarkio River, Mo.-Iowa; Jones Creek, Iowa; Coon Creek, Wis.; Okatibbee Creek, Miss.; Brown Creek, Ark.; Limestone Valley Creek, Kans.; Arroyo Grande, Calif.; Middle Pecan Creek, Okla.; Green Creek, Tex.; Cadron Creek, Ark.; Dauchite Bayou, La.; Upper Fountain Creek, Colo.; Plum Creek, Nebr.; Shue Creek (Huron project), S. Dak.; Park River, N. Dak.; Presque Isle Creek, Maine; Big Muddy Creek, Mont.; Conchocon River, N. Y.; and Kickapoo Creek, Ill.

PUBLIC RESPONSIBILITY

From every conceivable angle of consideration—economic, social, cultural, public health, national defense—conservation of natural resources is an objective on which all should agree. It is also a need which all should recognize and do something about. The public—our society as a whole—has a vital stake and, therefore, an enduring responsibility in the land. Exercise of the public responsibility in the sustenance of agricultural land is of such obvious importance to the general welfare of all people it would seem that an adequate program of soil conservation and prudent use of water would always be the first order of business in all nations.

With the understanding that can be developed through education there should be little or no opposition to sound conservation action persistently carried out. There are, however, likely to be, spottedly, misconceptions, unwise proposals for alleged short cuts and panaceas, and occasional bickering and quibbling arising out of time-wasting argument as to who should do the work, as well as out of ignorance and the common error of taking things for granted. These deterrents represent a type of human behavior that probably can be dealt with most effectively through the educational process.

Public thinking in making the wisest possible use of all of a nation's natural resources is, in a sense, of greater importance than the individual's interest, but both are tied together in such a completely complementary way there is no point in pursuing the subject beyond the point of indicating that no man or group should have the right, legally or otherwise, to recklessly destroy or unnecessarily waste any resource on which public welfare is dependent. Willful destruction of those resources essential to life amounts, in the end, to a form of inflicting privation on one's fellow man.

Productive land occupies a position of such basic importance to everybody that some individuals have come to favor public control in the use and management of land. They contend that because of man's utter dependence on the world's limited supply of land, the question of how land is to be used should not be left entirely to individual discretion.

Our American experience, however, has developed a majority feeling, seemingly, to the effect that our soil-conservation efforts should proceed along lines of cooperative action, without the use of compulsion at any point, at least not until there has been time for adequate education and action. The present national program of soil conservation, under which the Government supplies, on request, technical assistance and certain materials to soil-conservation districts, has become highly effective and very popular. Excellent progress has been made in the districts without public use of anything stronger than persuasion and cooperation.

¹ Ramser, C. E. Prevention of the erosion of farm lands by terracing. U. S. Dept. Agr., Bull. 512. April 5, 1917.

There have been, however, many instances where farmers have not brought themselves immediately into active cooperation in this conservation program. Delays have resulted from such postponement of action on the part of farmers, and in turn these have caused difficulties and hardships for their neighbors; but such situations have usually cleared up with time and education.

SOIL CONSERVATION DISTRICTS

It is my conviction that the democratically farmer-voted and farmer-managed soil-conservation districts, through which the Soil Conservation Service makes available virtually all of its technical assistance to landowners and operators, represent not only the greatest land movement of all time but the most promising vehicle for taking advantage of the powerful force of landowners and operators working together as they do in the districts. It is through these democratic units of State government that the soil and water conservation job on the farm-lands of the Nation is being done in an effective and lasting manner—as never before achieved anywhere.

The districts are in an ideal position for the landowners and operators to work together and take advantage of counsel and assistance of one another, as well as of various local, State, Federal, and private sources.

Back at the time when the districts were getting under way, I never would have believed that in the short space of a dozen years—starting in 1937—every one of the 48 States, as well as our Territories of Alaska and Hawaii and insular possessions of Puerto Rico and the Virgin Islands, would have enacted these district laws, so promptly taken advantage of by the landholders. More than three-fourths of the Nation's farms are now within the boundaries of the nearly 2,280 soil-conservation districts already established, by what usually has been the overwhelmingly favorable vote of the landowners themselves. The districts now cover approximately a billion and a quarter acres, including more than three-fourths of the Nation's farmland. Nine States and our two insular possessions of Puerto Rico and the Virgin Islands are completely covered by districts. Many of the other States are nearly covered. Up to July 1, 1950 (the beginning of the present fiscal year), farmers and technicians of the Soil Conservation Service, working together out on the agricultural lands of the country, in soil conservation districts alone, had prepared co-operatively some 870,000 complete soil conservation farm plans. These plans covered by that date over 240,000,000 acres, of which more than 120,000,000 acres had been treated with conservation measures in whatever combinations were required to give adequate protection to the land.

GROUP ACTION

Not only are farmers in soil-conservation districts becoming more neighborly and helpful to one another in conservation work, but natural groups of farmers within districts, bound together by the ties of neighborliness and common interests, are contributing encouragingly toward speeding up conservation work by planning together and working together, loaning one another machinery and seed, and cooperating in conservation work in many other ways. The groups usually range from 4 or 5 to 15 or 20 families.

The Soil Conservation Service is now working with some 20,000 of these natural groups. An increasing number of soil-conservation districts are finding that it is comparatively easy to organize and determine the membership of these groups, seek out their leaders, and interest them in conservation. In a great many instances these groups, under their leaders, are coming together in planning and application meetings. They are helping the district supervisors and their

own neighbors in routing equipment, distributing seed, and meeting seasonal farm needs. It has long been known that people like to work together. Many people work in groups far more effectively than as individuals. There is a certain stimulus to morale in the act of working with friends and neighbors for a common beneficial purpose. It leads to better feeling and cooperation here in America and in other countries I have visited.

Recently the leader of a typical neighbor group in Texas said: "We like this group way of doing things. One helps another and is helped in return. One learns what another is doing and wants to do likewise * * *; we save in transporting seed for the whole group * * * and in hauling fertilizer. Naturally it speeds up application * * *; working together, we become more interested * * *; it makes for better group spirit."

UNITED STATES LEADING THE WORLD

And so, in the ways I have indicated, this country is leading the world in soil conservation. And we are not hiding our methods for the conservation of soil and water from any person or nation—when they earnestly request assistance. We are helping as well as we can. Eighty countries have sent representatives to the United States to acquaint themselves with our methods, and we have carefully shown them everything we do and how we do it.

PRODUCTIVE LAND UNLIKE OTHER RESOURCES

Productive land is unlike any other natural resource. It is characterized by the element of life—fruitfulness—placed by nature in the thin mantle of soil occurring over a limited portion of the earth's surface. Productive land is further differentiated from other natural resources in that it must be maintained and used simultaneously. All other natural resources, with very few exceptions, must be taken from the earth—separated from it—in order to be used by man. The principal utility of some of our very important resources calls for their complete transformation, as the consumption of petroleum for heat and the smelting of iron ore to make steel. Productive land, however, can be used over and over indefinitely, if prudently used, in accordance with the principles of sound soil conservation.

LAND SUPPLY

Productive land is much more limited than commonly has been supposed. It occurs only on the surface of the earth, and only on part of this surface. It is not permanent. It cannot be stockpiled—shipped in from other countries—like natural rubber, tin, copper, titanium. Once the fertile topsoil is washed or blown away, it cannot be restored or replaced in any practical way for generations. And what is left—subsoil—usually is far less productive, less stable, and less absorptive of rainfall. There are no undiscovered reserves of productive land of any substantial extent.

We cannot dig deeper into the earth and find new productive soil. We cannot pump it from wells, plant it with seeds, or dig it from mines. We must keep the productive soil we have or do without.

Productive land is the only natural resource without which we cannot live. We are completely dependent on it for the food we eat, except fish. We also depend on it for a very large share of our clothing and all of our wood supplies. With our present knowledge, we cannot get enough to feed ourselves from the ocean—certainly not 3,000,000,000 bushels of corn, a billion bushels of wheat, etc. On any large scale, hydroponics would be utterly impractical. We might conceivably turn sometime to some form of synthetic food, as pills, plus a roughage, but this appears to be a fantastic extreme, still far away, and likely, if it ever comes, it will be decidedly unpopular.

There is no doubt about the need for protecting productive land. Year after year, for generations, man has been steadily engaged in ruining or severely impoverishing millions of acres of this basic resource. Every hard rain falling on unprotected, cultivated, or overgrazed sloping land washes additional tons of soil downslope, downstream, into the rivers, reservoirs, and oceans. There is no practical way of bringing this back. And wind, blowing across bare, dry soil, whether sloping or level, adds to the damage by lifting the fine soil particles into the air and wastefully scattering the substance of the land. What is left behind, frequently, is infertile, shifting sand that smothers out vegetation on neighboring good land.

When the world was younger and our population much smaller, we could, perhaps, stand such waste; but that time is past. It is not defeatism to say that the world is fast maturing and must assume now a mature responsibility for its resources. It is not limiting the horizons of the future to say that land exploitation must stop. It is simply a matter of common sense and self-preservation. Besides saving soil and water—the two go together—soil conservation results in increased yields per acre, and that's the basis of profitable farming, whether prices are up or down. It is also easier and cheaper to farm on the contour than up and down hill, and it's much more sensible to use crop residues as a source of surface mulch and organic matter for the soil than to lose it all by burning.

ONLY ABOUT 4,000,000,000 ACRES LEFT

Today, throughout the world, there are left only about 4,000,000,000 acres of immediately arable land, the productivity of a great deal of which is only fair to medium. Much of it is poor land. Yet this land must feed a population believed to be in excess of 2,250,000,000, and still increasing.

The United States is somewhat better off, from the standpoint of productive land, than most nations. Even though we have ruined more good land in less time than any other nation in recorded history, we had the advantage of an unprecedented supply to begin with.

It is generally considered that 2½ acres per capita of reasonably productive land are necessary for a minimum adequate nutritional diet. And we need an extra half acre for such crops as tobacco, flax for the production of oil for paints, and other raw products of industry.

With our 480,000,000 acres, approximately, of good land, we have enough for our present needs. Moreover, soil conservation increases yields—probably by more than 50 percent—so that we are not likely to go hungry any time soon.

But some countries have much less than 3 acres per capita. Some have less than half an acre and some have not more than a quarter of an acre.

TECHNICAL ASSISTANCE NECESSARY

Practically all farmers need experienced, scientific assistance on the ground to help them solve their land and water problems. Without such assistance, they are not likely to bring their agriculture to full fruition or adequately safeguard their land.

Effective and lasting soil conservation work demands the utmost in technical excellence. A trained, experienced soil conservationist prescribes for the land much as an experienced physician prescribes for his patients. In a sense, Soil Conservation Service technicians are land doctors. These men have learned that half-way measures are improperly placed practices will not get the job done in a lasting way, and that such measures often do more harm than good over a period of years.

Each conservation measure is specifically designed to fit the land on which it is used.

Furthermore, each measure is designed to support or complement another one, or several other measures, wherever support is needed whether in the same field or an adjoining field, above or below. Also, conservation work on one farm is planned and carried out with an eye to the needs of the next farm and to farms downstream. This viewpoint is essential, for the process of erosion has no respect for boundary lines. Neither do dust storms, nor floods. And the costly process of sedimentation never concerns itself with the interests of water users dependent on unprotected reservoirs.

World-wide Influence of American Soil Conservation Program—Part II

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr WICKERSHAM Mr Speaker, under leave to extend my remarks in the RECORD, I include part II of the address by H. H. Bennett, Chief, United States Soil Conservation Service, at the fifth annual meeting, Soil Conservation Society of America, Detroit, Mich., October 27, 1950:

To hope that anything less than a scientifically planned and properly executed conservation program for each field, each farm, and each watershed will give the needed permanent protection to the land is to hope for the impossible, and, what is very important, any acceptance of the idea that there can be a shorter and easier way of doing the job is dangerous, because there is no short-cut or easier way than doing it right except by lowering standards, which would amount to pure folly.

SOME MISCONCEPTIONS TO AVOID

We need to be on guard against certain misconceptions or loose assertions about soil conservation, that still seem to confuse the thinking of some otherwise well-informed people. Briefly stated, some of these are:

1. That soil conservation is of secondary importance, has already been taken care of, or can be postponed.
2. That there are short-cuts to conservation, that farmers can do all the necessary conservation work without technical assistance, or that district farm plans are too technical for farmers.
3. That soil conservation costs more than it's worth.
4. That we have all the good land we need.
5. That soil erosion is an inevitable part of nature's scheme.
6. That the job will never get done at the rate we are going.

These utterances, for the most part, are either misconceptions or something on the order of quibbling on the part of academic minds run out of factual material. They are so far from correct that it seems unnecessary to discuss them here in any detail. However, some of them could, perhaps, be the cause of wasting time on the part of those who are not adequately acquainted with the facts. Take, for example, the question sometimes asked: "Aren't the alluvial lands along the lower Mississippi good for farming, and aren't they composed of the products of soil erosion?"

Well, of course, they are highly productive lands—among the richest in the world—and certainly they were formed by the deposition of the products of erosion en route to the sea. Anyone who knows anything about the process of erosion understands that all alluvial lands throughout the world are the products of erosion, which have accumulated along stream courses by deposition from overflow.

But this is the answer to only part of the question. It's not a full answer, however, because alluvial land is formed by deposition from two kinds of erosion: (1) slow geological erosion, which does very little harm under normal conditions, and (2) accelerated erosion following man's disturbance of natural conditions by removing the protective cover of grass or trees and then plowing the land for farming purposes. This latter kind of erosion—the accelerated type—does great damage to bare, sloping land through the process of rapid erosion.

Soil-conservation science has shown the world clearly just how and to what degree accelerated erosion damages our productive land more than all other imprudent activities of man. It has been thoroughly explained in almost countless publications that it is the speeded-up action of erosion, which results from man's use and abuse of the land, that soil-conservation science is concerned with, not the tediously slower erosion of normal geological process. We have found that the soil losses from individual rains falling on well-kept woodland or grassland often can't even be measured because of the slowness of erosion within such an environment—geological or natural erosion. The kind of erosion we are concerned with—accelerated erosion—goes on so rapidly it sometimes is exceedingly difficult to get all the mud washed off the clean-tilled fields under study measured up before the next rain.

Before anyone goes too far off the deep end on this subject, they should study the recently published United States Department of Agriculture Technical Papers Nos. 837, 859, 873, 883, 888, 916, 959, and 973, dealing with measurements of rates of accelerated and unaccelerated erosion on different types of land. This would provide them with the facts obtained through research carried on by the United States Department of Agriculture cooperating with the agricultural experiment stations.

The Mississippi Delta illustration provides misinformation rather than helpful information when used without explanation.

Also, we occasionally hear about the good that soil erosion does. In this instance there is some truth but not much. I won't go into detail, but will say merely that by eroding off unfavorable topsoil and its sublayers down to high-lime or high-phosphorous material richer layers are sometimes reached.

What is left out of the illustration is the very important fact that erosion seldom planes off the land evenly down to these richer depths, to leave the surface smooth enough for cultivation. Generally after the removal of the topsoil by sheet and rill erosion, deep grooving of the land by gullying sets in, so that while erosion may get down to limy material, and so forth, the land is likely to be—almost always is—cut into such a rough gullied condition it can't be cultivated at all.

These things really are not very important, however, beyond the point of providing the public with meaningful information.

COST OF NOT CONTROLLING EROSION

It seems to me, we have overlooked a number of important aspects of the land use problem by a process of over-emphasizing certain points of view. One place where the problem is sometimes viewed from the wrong direction, I think, is that in appraising the importance of soil conservation, the cost of

controlling erosion is always stressed, with seldom a word about the cost of not controlling erosion. Accordingly, soil conservation is too often looked on as a good thing provided it doesn't cost too much. And that's a good point, of course, but it just isn't the whole story. In the first place, soil conservation pays its way and more.¹ Then, in a great many instances we can reduce the cost of erosion by stopping gullying before the gullies get too deep. And the same with sheet erosion. Prevention is the word—doing something to prevent or circumvent the damage "before the act."

Here's an example of the cost of not controlling erosion. Out in the Palouse Wheat Belt in 1948, it cost the farmers, where erosion had not been controlled, 25 bushels of good, productive wheat, pea, and grass soil to produce 1 bushel of wheat. The eroded soil largely ran off by way of the floodwaters of the Columbia River into the permanent wastes of the Pacific.

And it's more or less that way with flood control. Reduce flood flows up along the little headwater streams and less water will be getting into the big trunk streams down below—where the cost of control is often very great. By thus holding back the waters of little streams, less water is immediately discharged into the big streams, so that it would be easier and less expensive to control the smaller quantities of water that get down into the big river channels.

Similarly, if a safe place for the discharge of water from a terrace or diversion ditch is prepared before water is turned into the terrace or ditch, much costly gullying will be prevented at the discharge ends.

REPORT TO THE NATION

This is the sixteenth year in which the Soil Conservation Service will be able to report an accelerated rate of progress. While we admittedly are not moving fast enough with the soil-conservation job, and are still suffering heavy losses of soil, we are, nevertheless, moving ahead at a rate which is not at all discouraging. I don't mean that any of us is at all satisfied with present progress, we are not satisfied, and are constantly seeking improvements for continued acceleration of the work. We have greatly increased progress, particularly in recent years, and propose doing everything in our power to maintain this progressive advancement. It is my belief, based on experience, that we could, with adequate facilities, get the job of applying the basic conservation measures to the land completed by about 1970.

This estimate is based on what has been done thus far, together with the encouraging continued upward trend. At the end of the first 7 years of work, in 1941, the Soil Conservation Service had directed the conservation treatment of 26,600,000 acres, an average of 3,800,000 acres each fiscal year for this first period. The first year, 1935, the conservation job was completed on less than 1,000,000 acres.

In 1942, the basic conservation measures were applied to 5,338,000 acres (in soil conservation districts). In 1950 the same kind of treatment was applied to something over 26,071,342 acres. This was an increase of 388 percent—nearly 5 times as much work done—with operating facilities increased during this 8-year period by only 50 percent.

In addition to the conservation measures applied to the land, much farm planning work was done and enough soil conservation surveys were carried out for the preparation of a healthy backlog of necessary conservation farm plans.

But there is still a long way to go, and we are still losing great quantities of soil. How-

¹ Bennett, H. H. New Landmarks in Soil Conservation. Berkshire County Mass. August 16, 1949. p. 9.

ever, we have learned how to control erosion on practically all kinds of land, and we are controlling it at a much faster rate than the public realizes. The job is being done at a rate so much faster than I ever expected to see, even as recently as 15 years ago, that I feel almost jubilant over the progress that's being made. Even so, we are continually finding new ways to accelerate progress.

The figures used in this report are from the records of the Soil Conservation Service. Other agencies, Federal, State, and private, have made contributions, to be sure, but we do not have accurate figures about their accomplishments. The progress I am reporting relates to the use of needed soil conservation measures on farms for which complete conservation plans have been made by our technicians on an acre-by-acre basis. These farm plans have been guided by the physical land facts revealed in our soil conservation surveys (which no other agency makes).

In considering the rate of progress on so prodigious a job as conserving the productive lands of the United States while using them, a major point to be considered is whether or not progress is speeding up from year to year. This has much to do with an appropriate appraisal of the rate at which any long-time job is being accomplished.

As to finishing the job, actually there is no end to it; because when the basic conservation measures have been applied to the land there still remains the continuing task of maintenance. This is true of all the works of man; if not maintained, they eventually disappear through the depredations of neglect.

Our Soil Conservation Service method of conserving soil is markedly different from anything that has ever been done in the recorded history of man insofar as revealed by the literature we have examined. It is based on nature's highly successful method of keeping the productive land she builds permanently productive. Nature accomplishes this through the operation of an almost perfectly balanced program of soil building and soil conservation. The basic principle of her ideal method is perfect coordination between land, water, vegetation, and animals (except civilized man), and climate.

The closer we can follow this pattern, the better will be the job. For example, our measurements show that under a good cover of grass or forest, only a trace of soil is lost by erosion, and most of the rainfall is stored in the reservoir of the soil for plant growth. Under these conditions the negligible loss of soil from the surface of the ground is doubtless compensated for by soil building from the materials beneath and by accumulations of organic matter on the surface.

So, it is a mandate of nature that the land and the water which makes land productive be treated and used according to need and capability if the land is to be preserved. I am repeating this concept because it needs all the emphasis that can be given it. Too many people still do not understand that this is one of the physical facts that man cannot change or amend.

For the cultivated crops, our program of modern soil conservation calls, along with other things, for coverage of the land throughout the year with some form of dense vegetation or mulch for as much time as such coverage can be fitted into practical farm practice. Results obtained from our principal conservation practices, when used in mutual support of one another (if the character of the land and the climate call for such support), show something like 85 to more than 95 percent of complete effectiveness. The degree of effectiveness will be increased as crop rotations and other measures add organic material to the soil and

otherwise improve soil structure and fertility.

In the beginning (September 1933), our work moved ahead slowly, probably more because of newness than anything else. In the beginning I proposed the type of program we are still using, because I felt then, as I know now, it was the only possible way to lasting soil conservation. This I had learned through continuing study of soils, soil erosion, and land use over a period of 30 years. I had mapped soils in the old Bureau of Soils and later had set up and directed the work of the erosion experiment stations in the former Bureau of Chemistry and Soils. Most of the basic data we have relating to rates of soil and water losses from different kinds of land, used for different purposes, as well as the principal erosion control measures, were developed on these stations. These experiment stations, and their successors, cooperating with State stations have also developed the great majority of the control measures being used at the present time.

I was sure in the beginning that my proposal for completely coordinated treatment of the land was scientifically sound—that for enduring soil conservation, treatment of the land on the basis of kind and need was just as much a physical fact as the fact that water will not run uphill on its own power. In other words, our conservation method was based on the closest possible adjustment with reality, as relating to soil, slope, water, and proper land use.

I understood, also, back in 1933 (as the result of 30 years' study of the land), that there was no short-cut—no other way—to get the soil conservation job done with any assurance of permanency. But farmers, generally, and others had to be convinced.

So, in the beginning our program did not move out very fast. It was, quite naturally, necessary to explain every detail of the work to the landowners and operators who were considering taking up conservation farming. Now that great numbers understand the program, not so much time is required, generally, for detailed explanation.

During the first 7 years of the life of the Soil Conservation Service—by the end of the fiscal year 1941—the part of the total conservation job completed on the farm land of the Nation (excluding national forests, parks, public domain, and certain other public-owned areas) amounted to only 3.2 percent. This was an average annual rate of less than one-half of 1 percent. But in the fiscal year 1942, eight-tenths of 1 percent of the job was completed. During the 3-year period of 1943 to 1945, inclusive, the rate of progress averaged 1.1 percent of the total job each fiscal year, while for the 3-year period of 1946 to 1948, inclusive, the average rate had increased to 2.1 percent of the total job—almost doubled. By 1950 the annual rate of treatment had increased to 2.7 percent of the total job.

Our figures up to June 30, 1950, show that 18.6 percent of the conservation job had been completed. In addition, there had been a considerable spread of practices to thousands of farms both inside and outside of soil conservation districts, for which we have no records. We have completed, in other words, around one-fifth of the total job; but in considering the results I must again emphasize the fact that the rate of progress is speeding up and we are striving continuously to move faster.

If we can raise the year-by-year rate of application of effective conservation measures a little more—and it is felt that this can be done with adequate facilities—it will not be long until we can begin to see the goal which for so long has seemed so far off.

Accordingly I am optimistic about progress with our national program of soil conservation, as well as with the possibilities of the work being extended to other countries.

Removal of District Veterans' Administration Hospital From Boston

EXTENSION OF REMARKS OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolution from the Veterans of Foreign Wars of the United States, Massachusetts district:

VETERANS OF FOREIGN WARS
OF THE UNITED STATES,
Boston, Mass., September 27, 1951.
Congresswoman EDITH NOURSE ROGERS,
House of Representatives,
Washington, D. C.

DEAR CONGRESSWOMAN ROGERS: Enclosed you will find a resolution drawn up and proposed by the membership from district 16, Department of Massachusetts, Veterans of Foreign Wars, stating our position in relation to the removal of the death claims and insurance divisions of the Veterans' Administration from Boston to Philadelphia.

We earnestly solicit your support in this vital matter and your assistance in the prevention of the continuation of the recommendations of the Hoover committee, as they adversely affect veteran problems.

Yours in comradeship,

FRANCIS J. MULDOON,
Commander, District 16.

Whereas war veterans, their dependents, and the public generally in the recent past experienced great pleasure in the victory in their long struggle to have death claims and insurance matters decentralized to various local offices of the Veterans' Administration where personal and sympathetic discussion might be had with regard to their problems incidental to rights granted them under various laws of the United States; and

Whereas prompt, humane, and efficient service in the solution of those problems has been enjoyed since that decentralization in a detrimental comparison to the former delayed and utterly cold-blooded approach to those problems by an entrenched bureaucracy in faraway places; and

Whereas the brief enjoyment of prompt, humane, and efficient service as to death claims and insurance services rendered by district office No. 1 of the Veterans' Administration is about to be lost by the abolition of said district office No. 1 whereby an entrenched bureaucracy is again enfolding unto itself the authority, the power, and the positions to assume complete control of this very important work incidental to death claims and insurance matters incidental to rights granted by laws passed by Congress acting for a grateful nation toward its heroic defenders in times of emergency; and

Whereas we note that the general trend of thinking by the Chief Executive and the Federal agencies generally is emphatically toward decentralization; and

Whereas approximately 600 VA employees of District Office No. 1 after a practical survey have learned that they cannot procure proper living quarters for themselves and their families in the city of Philadelphia; and

Whereas these trained and efficient employees with many years of conscientious service will thus be lost by the Veterans' Administration; and

Whereas there is an excess of qualified trained workers in Boston, Mass.; and

Whereas there is an established lack of qualified workers in Philadelphia based on Government statistics as to the labor markets; and

Whereas we have been reliably informed that arrangements have been made for the training of about 1,000 prospective employees to replace trained and proven efficient employees who cannot make the proposed move to Philadelphia; and

Whereas the proposed move to Philadelphia of the Death Claims and Insurance Division will leave this area without a duly trained representative as to death claims or insurance matters highly technical in their nature; and

Whereas the 610,000 war veterans entitled to service in the area served by the Boston regional office of the Veterans' Administration and the 1,200,000 war veterans residing within the New England area will be deprived of urgently needed service and information it is our considered opinion that this drastic, unbusinesslike and arbitrary order and its utter disregard toward the rendition of prompt and efficient service to which war veterans and their dependents are rightfully entitled has and will continue to receive the severe condemnation of level-headed and right-thinking citizens as manifested by the roar of public disapproval which met the announcement of this very unpopular and hasty decision; and

Whereas the practice of economy under proper circumstances may have many commendatory aspects, statistics now available make clear that in the over-all aspects this proposed move to Philadelphia is not to the advantage of this Nation and is not economical; and

Whereas we have viewed with equanimity the forwarding of billions of dollars to various foreign countries, which may have served many commendable purposes, even though a great deal of the products flowing from that reservoir have reached and aided the enemies our men are now fighting in Korea and while the millions parcelled out to the farm population for not raising certain farm products may have helped the farmers, a regiment of our population, nevertheless we do deeply resent and protest to the limit of our ability against the practice of economy, again practised in the first instance directly against war veterans, particularly disabled war veterans and the members of the families of deceased war veterans who have been in most instances named as beneficiaries of the policies of insurance upon the lives of those who have made the supreme sacrifice in the defense of this great country and whose money paid the premiums which purchases that insurance, and in our opinion they are not only entitled to a fair deal but also to a square deal. It is therefore

Resolved, That we, the members of District No. 16 Department of Massachusetts, Veterans of Foreign Wars comprised of 18 posts in Boston, Mass., protests vehemently and to the limits of our capacity the abolition of District Office No. 1 of the Veterans' Administration and the transfer of the Death Claims and Insurance Division, its current constituent parts from Boston, Mass., the cradle of liberty, to Philadelphia, Pa.; and it is hereby further

Resolved, That the Administrator of the Veterans' Administration be and hereby is requested to rescind that order of abolition and transfer to the end that the best interest of war veterans and their dependents may be served by prompt, humane and efficient service in their own area by personal contact and not by remote control with added erroneous and voluminous correspondence and by persons who only see a number and a folder; and be it further

Resolved, that this resolution be forwarded to the President of the United States, Senators Lodge and Saltonstall; United States

Representatives Edith Nourse Rogers, John F. Kennedy, Harold D. Donohue, Philip J. Philbin, Thomas J. Lane, Foster Furcolo, John W. Heselton, William H. Bates, Angler Goodwin, Donald W. Nicholson, Christian A. Horter, Richard B. Wigglesworth; and Administrator Carl Gray of the Veterans' Administration.

Conservation, Development, Self-Government Through Districts—Part I

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by H. H. Bennett, Chief, United States Soil Conservation Service, at the fifth annual meeting of the National Association of Soil Conservation Districts, Oklahoma City, Okla., February 22, 1951:

CONSERVATION, DEVELOPMENT, SELF-GOVERNMENT THROUGH DISTRICTS

Your president left a note in my office the other day, inviting me to come out here to Oklahoma City and tell you to do your job better. Those aren't exactly the polite words Waters Davis used, but they seem to represent the general idea, as I understood it.

Now, as most of you already know, I spend a good part of my time telling everybody that we ought to get the soil and water conservation job done faster and more economically. That is, faster insofar as it can be done without sacrificing any fraction of the lasting quality of the conservation work we do. But I am not so sure I am up to the job of undertaking to tell you and the hundreds of thousands of farmers and ranchers you represent that you must do a better job in your soil conservation districts, although I'll risk a few observations in this general direction. And in doing so, I can see no reason why the districts, in turn, should not tell me to do a better job of helping them. That, I am sure, would be all right too; for ours is a service agency, and nothing could be wrong with your telling me to get on with the job.

It is true, however, that all of us—district officers and our service people as well—constantly need to examine the situation, not alone from the standpoint of past accomplishment, but with respect to current district progress. Really much remarkable progress has been made in the 13 years since the districts began to operate. One danger could be the temptation to look back on accomplishment through district organization with a degree of satisfaction that might lure us into the error of complacency. District organization is, of course, not an end within itself. Neither is a farm plan for soil conservation, where its provisions are not applied to the land. I am happy to say that I know of few satisfied districts. I do know, however, that here and there some of the carefully developed farm plans have not been applied to the land. But you know better than anyone what the situation is in this respect in your own States.

Personally, I am more than happy over the great progress that's been made in soil and water conservation. It gives me great satisfaction, for example, to be able to point to the excellent rate of progress that's been made in the districts for 16 consecutive

years. This point was emphasized in my annual report to the Secretary of Agriculture for the fiscal year ending June 30, 1950. It's been even more encouraging that progress has been accelerated from year to year, with the exception of the 1 year when SCS took a severe cut in funds.

In 1935—before there were any soil conservation districts—we were able to report the farm conservation job completed on less than a million acres. Seven years later, in 1942, 5 years after the first district was established, basic conservation measures were applied in that 1 year to 5,338,000 acres. Then, in the fiscal year of 1950, the same kind of treatment was applied to 26,071,342 acres in that 1 year. This was an increase of 388 percent—nearly five times as much work done—with operating facilities increased during the 8-year period by only 54 percent. In addition to the conservation measures applied to the land, much farm planning work was done, as you know, and enough soil conservation surveys were carried out for use in the preparation of a healthy backlog of necessary conservation farm plans, in most of the districts.

Final figures for the latest 6-month reporting period (July–December 1950) were not all in when I left Washington, but enough had been received and tabulated to show how the good rate of progress has continued right on through to this minute. Work completed between July and January this fiscal year, amounted to about 19,000,000 acres of farm-planning surveys; more than 71,000 farm plans, covering 20,000,000 acres, and approximately 17,000,000 acres treated.

This brings the estimated cumulative figures on accomplishments in soil-conservation districts to around 350,000,000 acres of detailed surveys; 850,000 farm plans comprising 237,800,000 acres; and 138,000,000 acres treated. It also means that 20 percent of the total job has been done. That isn't counting, of course, the considerable spread of practices to thousands of farms, within and outside soil-conservation districts, of which we have no records.

We can all be proud of such figures and tell the world about them. I for one am certainly going to tell the world—if it will listen.

And very encouraging, too, is the steadily increasing extent to which district farmers are taking over the many important responsibilities of leadership and direction in the conservation program. This must continue to be the key to lasting progress. Not all of the districts have done so well, those that have not, we must help in every way we can.

Now, having pointed to the brighter aspects of the job, let's get down to brass tacks and get on with the things I've been asked to say, the things that very acutely need to be said at this time. I have already urged that we avoid all aspects of complacency. Time has come to step up the rate of progress and to do many other important things. In too many places not as much is being done as can be done. We have learned about some of the reasons, and there may be others. The degree to which you district supervisors, directors, or commissioners exercise your responsibilities of leadership and direction of this highly successful and going conservation program is of utmost concern to all the country, especially in this hour of world peril, so threatening with catastrophe we refuse even to let our minds dwell on the subject. And, how you perform your duties is of the utmost concern to the Soil Conservation Service as an assisting technical agency. Our ability to help you get the conservation job done depends directly on efficient district management; but we have no authority in any district, and we have no desire to run the affairs of districts. We couldn't do it if we had the desire—that's out.

The Soil Conservation Service wants to be a junior partner with the district. We have always visioned that kind of copartnership as a most advantageous one. The very facts in the case prevent our occupying any other relationship with districts. You see, we occupy a very peculiar position with respect to districts. It may be more interesting than important, however, but I will explain what I mean. The districts represent, actually, a creation of the Soil Conservation Service. We were there when they were conceived, we nurtured unceasingly the processes involved with their birth, and we helped with their establishment and growth before and after their physical existence.

The point I want to make in connection with this reference is that, by reason of the part we took before and after—at every turn—our efforts were of a nature that forbid the existence of anything but a feeling of copartnership with districts. We did everything we could think of to keep a completely objective attitude toward the districts from the very beginning. Above all, we did what we could to keep them democratic, independent, and in every sense free. If we had entertained any possessive or acquisitive feelings toward them, they couldn't have gone ahead and proved themselves to be, as they have, the best examples of democracy in action that man has yet formulated.

I am not so sure that all of your district supervisors have yet come fully to understand precisely what it is that you are supervising. Let that point rest for a moment, other than to say you are in a position of trust of the highest order, having been chosen by your neighbors to look after your neighbors' affairs along with your own—and this without promise of reward beyond that of truth, faith, and hope. When man bestows such honors and trust in his fellowman, good men cannot betray the confidence or in any way shirk the sacred duties that go therewith. This is the way you are being looked to—and with very scrutinizing eyes—by farmers, industrialists, bankers, professional people, teachers, citizens of other countries, ministers of the gospel. Don't get frightened—just carry out your duties and responsibilities.

All of you are no doubt acquainted with the memoranda of understanding between your districts and the United States Department of Agriculture and also the supplemental memoranda with the Soil Conservation Service, setting forth our mutual obligations and responsibilities in carrying out soil conservation district work. As you know, each district under these voluntary agreements has important responsibilities. They range from determining priorities for work in the district to planning the use and maintenance of field equipment. The effectiveness of the Service's technical assistance is contingent on the extent to which the district, through its supervisors, lives up to or goes beyond its part of the agreement.

Right at this time, probably as much as at any other time since the first soil-conservation district was established, there is much that we need to be thinking about, talking about—and doing something about—both as district officials and as assisting technicians. Again, and for the third time within the brief space of 33 years, we find ourselves in a state of emergency and national mobilization of our manpower and economic resources for defense of our country and of those democracies elsewhere we would have go with us and not against us. Again we find ourselves called on to "defend" soil and water conservation work against questions raised by the short-sighted, the misinformed, the meddlers. It seems to me the rational people would never raise a question as to the perfectly obvious fact that in order to maintain national

strength, we must safeguard and maintain the very source of our individual and national strength—our productive land. Some have argued that now since we seem to be on the way into a long and destructive war, we can postpone soil conservation. Would any man—I mean any understanding, competent man—want to postpone the closing of his jugular vein if it were laid open to the outgushing of the life substance of his body?

Such a foolhardy act would be, to my way of thinking, the precise equivalent to any postponement of the task of safeguarding our productive land from the destructive and impoverishing forces of erosion.

What some people still don't seem to realize, however, is the fact that men with guns and bullets can't fight without food, and that there can be pitifully little food from poor land. No one knows how long the present emergency may last—1 year or 25 years. But the longer it does last, with the continuing need for maximum production of food, fiber, oil crops, timber, the more indispensable becomes our productive land from which all these necessities are derived. The more important becomes the conservation and efficient use of this land, and the water which makes it produce.

Among other things, in the light of conditions as they are, this would seem to indicate pretty definitely that Government and local interests will need to assume an even larger share of responsibility than ever for carrying on the vital conservation program. Your soil conservation districts—every supervisor, every cooperator, and every potential cooperator—must redouble their efforts in safeguarding our productive land. Every dollar of Government money available for soil and water conservation—whether from Federal, State, or other sources—should be budgeted and spent so as to make sure of its utmost contribution to real conservation.

The Soil Conservation Service, for its part, will continue to use every dollar of its appropriations to the maximum extent possible in providing technical help to farmers in soil-conservation districts as in the past. In fact, 88 percent of our entire personnel is thus engaged in soil conservation work on the land now. The Service likewise stands ready to give full cooperation and every encouragement to whatever program or agency is contributing to our common conservation objective, financially, educationally, or otherwise. We are not too greatly concerned, for instance, over "reorganizations," which seem to lead some people off onto tangents of speculation and unwarranted forebodings.

It is you and your neighbors in the soil-conservation districts, farm organizations, agricultural committees, and elsewhere who I am confident will continue to give the necessary direction and push to our overall conservation undertakings. It is an important responsibility which you have in this matter, but one which I urge you not to avoid or slight in any way. Your help is always needed, now it is indispensable.

I cannot stress too strongly the importance of positive and vigorous leadership within the districts in bringing conservation treatment at the earliest practicable date to every acre of land still needing it. This, of course, is simply the fulfillment of the original district concept. You now have developed the machinery for most effective exercise of this leadership, through your individual district governing bodies, your State associations, and your national association.

Your State and national associations have an important place and a big job to perform. Soil and water conservation has advanced so far in our system of agriculture and has taken such a definitely recognized place in our general economy that the constantly and rapidly growing numbers of bona fide conservation farmers and ranchers no longer

can remain silent and retiring. They have a proper voice in the direction of our resources development, from the back forty to an entire watershed. Your State and national associations are the natural means through which they can express themselves intelligently and effectively.

I have had the pleasure of taking part in some of the State association meetings. I have found them made up of hard-working sessions of hard-hitting men with definite plans and purpose. But the worth of no association or other organization can be measured on the basis of its occasional meetings alone. It must be active and vocal 12 months in the year—get out and get things done. Your associations have a golden opportunity in this respect. They are young and vigorous, with uncounted educational, planning, and other tasks awaiting their attention and action. I hope that very soon every State and Territory will have a strong association leading out in the affairs of all districts in its area.

The initiative being taken by your national association in many worth-while directions is attracting wide attention and respect. People who should know about them are beginning to hear about your more than 2,300 farmer-organized and farmer-directed soil conservation districts, embracing three-fourths of the Nation's farmland and over 80 percent of its farms and ranches. They are becoming aware of the 12,000 district supervisors who are giving unselfishly of their time, energies, and sometimes personal funds in the furtherance of soil and water conservation work throughout the country. It is dawning on some people at least that you are on nobody's payroll, and are obligated to no Federal or other outside authority. That, incidentally, is a mighty healthy and enviable position to be in.

Conservation, Development, Self-Government Through Districts—Part II

EXTENSION OF REMARKS OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by H. H. Bennett, Chief, United States Soil Conservation Service, at the fifth annual meeting of the National Association of Soil Conservation Districts, Oklahoma City, Okla., February 22, 1951:

Please don't misinterpret my appraisal of this matter as indicating any of us are so foolish as to believe your educational and relations job is done. Far from it; there are, as you well know, thousands of people—including farmers as well as businessmen, public officials, and others—who have yet to learn about your sound, thorough-going, permanently effective districts brand of conservation. These are the people—put the figure at 1,000,000 or some other number that suits you—who need, for example, to get hold of and read your Association's brand new booklet on the why, what, and how of soil conservation districts.

It is an excellent presentation of the subject, by the way, and should go far in setting people straight on the purpose and operations of soil conservation districts. From my own point of interest, this publication will

have rendered a most worth-while service if it clears up for some people—from farmers to newspaper editors—the distinction between and relationships of soil conservation districts and the Soil Conservation Service. I get just as annoyed as you do at forever seeing and hearing references to "SCS Districts," and still hope that the day will come when there won't be anybody who doesn't know that soil conservation districts are entirely independent farmer organizations with which the Soil Conservation Service, as a governmental service agency, is proud to be a junior partner, as I have already pointed out.

Along this same line, of your letting people know about the districts and their work, I also hope the time won't be long now until every farm or ranch with a good conservation plan in operation on it will be displaying conspicuously one of those district "Signs of the Times" your association has arranged to make available for purchase through the districts. We in the service began promoting the idea of signs along the road on conservation farms way back in the demonstration project and CCC days. They were successful and effective in many places, too, but this is the first plan I know about for putting inexpensive signs conveniently within the reach of all conservation farmers.

Every genuine conservation farmer I've ever talked with was proud of what he was doing, and there certainly is no good reason why he shouldn't advertise the fact. I want to repeat right here what I have said over and over. That the soil conservation district movement, in my opinion, is the greatest movement relating to the welfare of the land in all history. No other agricultural movement in history has approached it in magnitude. And there never has been anything to equal the soil conservation districts to induce farmers to work helpfully together. I am strongly of the opinion that this matter of farmers working together is going to be the most potent factor we have discovered for the maintenance of soil conservation work.

Also—and I repeat—we can be eternally grateful that we enjoy in this country an economy that depends on individual freedom and initiative, and the exercise of such individual responsibility as that which has been demonstrated by the scores of thousands of soil conservation district landholders you represent. I sometimes wonder if we appreciate just how fortunate we are in having such an effective local, democratically operated organization through which to carry on vital undertakings like soil and water conservation, especially in these days.

The self-government plan of your new slogan is much more than just a well-rounded catch word. It has to do with what in my opinion is a most significant quality possessed by the soil conservation districts—as already pointed out—that they are living, working forces of practical democracy in action. The district organization, as it has stood the test of 13 years of peacetime and wartime experience under just about all possible economic, weather, and other conditions, definitely has proved itself to be superior to anything else we know about in coping with our basic land problems in a democratic fashion. How different this is from the situation I have observed in too many other countries, where what the Government says is law, with little or no opportunity for individual freedom of action, assurance of stability, or hope of security—and where I saw very little in the way of cooperation between farmers and essentially none between Government officials and farmers, beyond regulatory activities.

When the farmer has a sound plan for conservation operations for a period of years

ahead, as he does have as a soil conservation district cooperator, not only is he likely to do a better job of farming, but he has the satisfaction of knowing that his efforts will increase his security, in the face of whatever international or other unfortunate incidents the Nation may have to pass through. It gives the farmer pride and satisfaction to be able to look forward to the future security of his family.

One of the most fortunate decisions ever made in the history of this country's agricultural planning and development, I think, was back in 1935, when we agreed that two main things were necessary to insure adequate progress in farm conservation: (1) that the technical services of trained conservationists should be made available to all farmers desiring help; and (2) that some type of local government unit should be established to assist in bringing about necessary cooperative action and to place responsibility for getting the job done and maintained on the local farm people who are so intimately associated with the land problem.

There still is room for improvement in many places. From the standpoint of the leadership and responsibility in the districts, supervisors have a considerable distance to go by way of exercising maximum effectiveness. I do not mean to imply that the supervisors and cooperators should do all the thinking and all the work, while our technicians stand around and look wise. But you can't hope to get the assistance out of these technical men that the districts have every right to expect if they are kept on the jump looking after minor details and trivial questions while somebody else's farm planning and application of conservation practices wait.

During the last year, an average of about 10 new soil-conservation districts were organized each month, along with substantial additions of new territory made to established districts. I hardly need to remind you what that means in terms of additional demands for technical assistance. Meanwhile, we had fewer technicians available, country-wide, to give service to the districts. What that condition adds up to is obvious: we have had to tighten up all along the line, and increase the efficiency of operations, individual by individual, and district by district. We don't know what the situation will be next fiscal year precisely, but there is every logical reason to expect the manpower situation to get tighter rather than otherwise. That means again, of course, that all of us—district officials and service personnel alike—have to take advantage of every good means of further increasing efficiency in operations.

That is, of course, if we expect not only to maintain our progressive accomplishments but to speed them up, as we hope to do.

Certainly, it seems to me, the national association has moved in the right direction toward speeding up and moving ahead for greater achievement by adoption of your program for greater service. In order to succeed, this has to be an all-out conservation effort, with nobody pulling back. This is an action program, designed, apparently, to give every district officer an important job to do, as well as enlisting the active support of everyone who may contribute in any way to progress of soil and water conservation through districts. The keynote of the future success of your whole districts organization is set out, it seems to me, in general suggestion No. 13:

"Their [soil conservation districts] success depends on the active initiative exerted by the members of their governing bodies with the assistance of all local leaders."

Without that initiative and local assistance, you surely could not hope to achieve your further stated goal: "Improving the quality

and speed of soil conservation district work in the United States while reducing its per-acre cost."

I am expecting much improvement all over the country through your program for greater service. Taken seriously, as everybody is expecting you to take it, there can be no doubt of its success. As I see it, success is dependent on you, but our people will help everywhere they can. I hope when you leave this convention, you will carry home the full realization that you really have found out you have a job to do—one that you should do, must do, will move heaven and earth to do.

One of the best ways, also, we have found for speeding up the conservation job is for every farmer to learn as quickly as possible how to carry out as much of his conservation work himself as he possibly can, and how to keep up his structures and maintain his other conservation developments with a minimum of technical assistance. In that way—particularly now when the time of our limited number of experienced personnel is so fully occupied in furnishing technical assistance to the still increasing number of soil conservation districts—each technician can be freed for that much more new planning and assistance in new land treatment.

Your reports indicate that the backlog of applications for district farm conservation planning assistance continues to be about 200,000. We are all glad, I know, to have a healthy workload ahead, instead of having to go about drumming up business. But you district supervisors and our technical people alike are anxious to get to every one of those farms with the least possible delay, as well as to the other farms and ranches constantly being added to that backlog of requests. That is why we are emphasizing the facilitating device of neighbor group action, maximum farmer application and maintenance work, and relieving the technicians just as much as possible from doing such "housekeeping chores," as routing, servicing, and other handling of machinery, materials, labor, etc.

And still more people—within your districts and the public generally—need to know the job there is still to do and what it takes in manpower and other facilities for getting that job done. They need to know, for one thing, that the continuing need for some years yet is for more technical and other manpower, machinery, materials, and so on, in order to pick up the lag and keep pace with farmers' demands. Fortunately, many interests, Government and private, are giving increased attention, financial and other support to soil and water conservation, especially support to the district programs.

I hardly need to remind you, for instance, that State appropriations and allocations such as are now being made by all but three States, I believe, for assisting district programs are of substantial benefit in furthering soil conservation. There seems to be rather general agreement now as to the Government's obligation to help farmers with their erosion and land-use problems. How much help soil and water conservation receives from Government, and for how long, depends on the performance of those entrusted with this vital work—on individual landholders, district boards, technical personnel, and so on.

By the same token, it clearly is part of your legitimate responsibility as district supervisors or directors to keep all who are concerned informed on that performance—interested local, State, and Federal officials, banks and other lending institutions; handlers and processors of agricultural products; farm machinery people, and many others. In many places, business and other urban interests already have caught up with us in their conservation thinking. You know them—professional people; schools and

churches; newspapers, radio, and television stations, women's and sportsmen's groups, and so on. Right now, for instance, the national farm equipment manufacturing and retailing people are launching an active program of direct cooperation with districts, through cooperation of your national association, looking to mutual benefits of improved farm machinery market on the one hand and better equipment for doing the conservation job on the other.

It stands to reason that if it is good business for these business and allied interests to devote their efforts and money to soil and water conservation, it behooves those of us who own or live on the land to put our best energies into this vital undertaking. Among the other opportunities for leadership by your soil conservation districts as responsible local agencies we need to place high on the list those in water conservation and watershed type of development. Water conservation is part and parcel of soil conservation. Land treatment—watershed treatment—is basic and must be done first for conserving our life-giving water supplies, reducing flood damage, and for reducing costly siltation of our reservoirs and harbors.

Among other points that must not be overlooked as important, unfinished business, we should all do what we can to (1) complete the national land inventory at the earliest date facilities will permit; (2) complete the organization of the Nation's agricultural lands into soil conservation districts and strengthen district responsibility and work with a scientifically developed soil conservation plan for every farm in the country; (3) urge active participation of all interested rural and urban groups—business, professional, and patriotic—in achieving Nation-wide conservation; (4) make a real conservationist out of every farmer in the country.

We have a long way to go yet, you see, but with the task in such good hands as yours, we will get the job done on time.

Wisdom in Brief

EXTENSION OF REMARKS OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. SHAFER. Mr. Speaker, discussions of the pros and cons of inflation, and what to do about it, have long since reached voluminous proportions. Under permission to extend my remarks, I include an editorial from the October 4, 1951, Grand Ledge (Mich.) Independent, a weekly newspaper published in my district, which compacts a great deal of wisdom in a single paragraph:

THINGS ONE REMEMBERS

Every day the Washington propaganda machines boom price control as the medicine for inflation control. For some unknown reason the same official agencies never mention tax control or waste control in Government as the one indispensable requisite for inflation control. Nor do they explain how tax confiscation of the earnings of the individuals for Washington bureaus to spend high, wide, and handsome is any less inflationary than if the individual spent his own money. After all, the Government earns nothing, it just spends and it can only spend what it first takes away from the individual who earns it. Only the people can stop the tax spenders who create inflation. They will never stop of their own accord.

The Proposed Aluminum Industry for Montana—III

EXTENSION OF REMARKS OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. MANSFIELD. Mr. Speaker, on Monday and Tuesday of this week I had personal conferences with Mr. Manly Fleischmann, Defense Production Administrator; Mr. David Irwin, assistant to the Administrator of Defense Mobilization; and Mr. Charles Wilson, Defense Mobilization Administrator, urging them to make sure that the power developed at Hungry Horse Dam and allocated to Montana be kept in our State and that they make every effort to see to it that a permanent year-round industry is established in the Flathead Valley of Montana.

All three gentlemen were very courteous and considerate and all heard my plea in behalf of Montana with sympathy and understanding. I have done my best to see to it that Montana is not left holding the bag and that the power developed in Montana will be retained there for the development of a permanent year-round industry.

Mr. Speaker, under leave to extend my remarks, I am inserting at this point in my statement a letter I have written to the Honorable Jess Larson, Administrator, General Services Administration; a letter to Hon. EMANUEL CELLER, chairman, Committee on the Judiciary, asking for a hearing on my bill to establish a clearing house in the Department of Justice to pass on companies seeking to do business with the Government; and a reply to my letter to Hon. Manly Fleischmann signed by James F. King, special assistant to the Administrator:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., October 5, 1951.

Hon. JESS LARSON,
Administrator, General Services Administration.

DEAR JESS: A rumor has come to my attention that there may be an attempt to divert practically all the power from Hungry Horse Dam in northwest Montana to the State of Washington, and especially to the Spokane area. May I call to your attention that, in the bill authorizing the construction of the Hungry Horse Dam, it states specifically "that for the purpose of providing additional storage for water which shall be used for (1) the generation of electric energy urgently needed for the war effort, and (2) the irrigation and reclamation of arid lands, and other beneficial uses, primarily in the State of Montana but also in downstream areas."

You will see from this, that Montana has a prior right to the benefits to be derived from the construction of this project. Dr. Paul Raver, Administrator of the Bonneville Power Administration, has made specific allocations of something like 300,000 kilowatts of power from Hungry Horse for the use in the State of Montana. Because of Hungry Horse being made a part of the integrated system of the Bonneville Power Administration, it will be able to furnish in addition to the power for Montana, somewhere between 400,000 and 500,000 kilowatts

of firm and interruptible power downstream in the Columbia Basin for Grand Coulee and Bonneville Dams. I am sending you this information because of my great and paramount interest in the development of my State and to request of you that you give every consideration to my plea that this power allocated to Montana for Montana's development will not be diverted to other States for their development.

Montana has been mined and milked of its great resources for the past 50 years and we have contributed greatly to the welfare and security of people and industries outside of our borders. It is high time that Montana is developed for the benefit of Montana and its people, realizing at the same time, that insofar as Hungry Horse is concerned, this development will contribute greatly to our downstream neighbors in Washington and Oregon.

While this rumor about the possible diverting power from the Hungry Horse may be only just that, I feel that I should call it to your attention and urge upon you with all the sincerity I possess that this vitally needed power from Hungry Horse will not be taken away from our State, and that you will make every effort to see to it that a permanent year-around industry is installed in the Flathead Valley of Montana to use that power. I am depending on your sense of fairness and honesty to see to it that the people of Montana, whom I have the honor and privilege to represent, are not sold down the river, but instead the power from Hungry Horse allocated to Montana will be kept in my State, that a permanent year around industry will be installed in the Flathead Valley, and that we will be given fair and decent consideration.

With best personal wishes, I am

Sincerely yours,

MIKE MANSFIELD.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., October 4, 1951.

Hon. EMANUEL CELLER,
Chairman, Judiciary Committee,
House of Representatives.

DEAR MR. CHAIRMAN: My bill, H. R. 5410, has been referred to your committee and I would like to ask that if you have not referred this to a subcommittee, that you do so. I am most anxious to have a hearing on this measure at the earliest date possible.

Thanking you and with best personal wishes, I am

Sincerely yours,

MIKE MANSFIELD.

DEFENSE PRODUCTION ADMINISTRATION,
Washington, October 3, 1951.

Hon. MIKE MANSFIELD,
House of Representatives,
Washington, D. C.

DEAR MR. MANSFIELD: This will acknowledge receipt of your letter to Mr. Fleischmann, dated September 20, 1951, with which you forwarded copies of your letters addressed to the Secretary of the Interior, the Administrator of the Reconstruction Finance Corporation, and the Attorney General, concerning a section 302 loan to the Harvey Machine Co.

The Secretary of the Interior, who recommended approval of the loan to the Defense Production Administration, has undertaken to review the matter. We hope to have his findings within a short time since it is imperative that either this expansion or a substitute be undertaken at the earliest possible date if we are to meet the aluminum requirements of the defense program.

We shall be glad to inform you of the results of the investigation at the earliest possible date.

Sincerely yours,

JAMES F. KING,
Special Assistant to the Administrator.

Fraud and Waste in Public-Welfare Programs

EXTENSION OF REMARKS OF

HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES
Friday, October 5, 1951

Mr. HARRISON of Virginia. Mr. Speaker, those of us who have been striving for elimination of the improper and fraud-breeding restrictions placed upon the States in the matter of details of their welfare programs have been heartened by recent developments which point up sharply the extent of public demand for an end to this unwarranted Federal restraint.

In acting on the revenue bill, the Senate voted to remove the present secrecy requirement which is a condition precedent to State eligibility for Federal grants-in-aid for welfare programs. This is the third time the Senate has so voted.

Last week, at their annual conference, held in Gatlinburg, Tenn., the Governors of the States, without dissenting vote, adopted a resolution calling for restoration to the States of their rightful discretion in the matter of making public welfare roll data.

In a letter to the conferees on the revenue bill, Mr. Allan B. Kline, president of the American Farm Bureau Federation, gave strong support to the mounting demand for an end to secrecy, in the interest of the taxpayers and the deserving needy—who have been robbed of countless millions by chiselers operating under the protection of Federal law.

Mr. Kline said to the conferees:

We strongly favor the enactment of Senate section 617, which is designed to prevent Federal officials from denying Federal aid to States which allow public inspection of public-assistance program rolls.

I also wish to include an excerpt from a letter directed to the conferees by Mr. M. A. Hubbard, executive secretary of the Virginia Farm Bureau Federation, as follows:

It is also our understanding that you will also be considering the Senate amendment providing public access to welfare program rolls.

This matter is one that our rural people have been much concerned about for a number of years and with good reason.

A strong resolution on this subject has been a part of our Farm Bureau platform for a number of years and it is readopted at each of our annual sessions with much enthusiasm.

There is certainly no good reason why the States and their political subdivisions should be prohibited by Federal law from making their welfare rolls public if they choose to do so. In our opinion this should be entirely a matter of local option. Even though this option might not be exercised in all cases, the very fact that it readily could be done on short notice, would discourage many chiselers from seeking and receiving unnecessary and undeserved public assistance.

Unless something is done toward correcting this situation some of these days the backs of those who carry the load will be

broken by those who are willing to pile on for a free ride.

Mr. Speaker, when the conferees finish their labor, we in this Congress will proceed to impose the heaviest tax burden in the history of the Nation upon the backs of the people. How can we defend ourselves if we do not plug a drain through which many hundreds of millions are being wasted and stolen?

Let Church Bells Ring at Noon

EXTENSION OF REMARKS OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES
Friday, October 5, 1951

Mr. BEALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial from the Afro-American, Baltimore, Md., of September 1, 1951. This is a splendid editorial, and I urge everyone to read it:

LET CHURCH BELLS RING AT NOON

Prayer changes things.

In this earnest belief, the Afro suggests that the church bells in the city should be rung at 12 noon daily as a signal to stop a moment and pray for peace.

Because of the present world crisis, such unified prayer services are spreading throughout the country. They meet the need for renewed hope and courage.

Let us pray that the President of the United States and the members of his Cabinet shall have the help and direction of Almighty God in the Government of this country and in their relations with other nations.

Let us pray that Almighty God will direct the minds and the hearts of our governors, our mayors, of our county and State officials so that they will understand that every human being must be treated with respect and dignity.

Let us pray that Americans everywhere shall believe that it is God's will that segregation, hatred, and discrimination are evils which should disappear from our broad land.

Let us pray that with the help of Almighty God peace and serenity shall come to each of us in our personal lives.

Let us pray for the safety of our boys in foreign service.

Let us pray for a real commonwealth of nations, a real United Nations and lasting peace in our time.

Each of us should be greatly concerned about the possibility of lasting peace. We also should be disturbed about the fate of mankind if peace cannot come to us.

HAVE PERSONAL CONTRIBUTION

No matter how hopeless the present world tension may seem, each of us has a personal contribution to make peace real.

World peace in our time is not so wild a dream as some might think. Within each man and woman there is the power to reach this ideal. Within all of us, there is the power of prayer.

Peace can be reached through a simple plan of action.

Peace can be achieved through personal prayer.

If we take time each noon hour to stop for a minute and pray to Almighty God asking that He grant understanding among nations, between all races of men, a chain reaction

can be set off greater than any exploding atom pile.

NO FORCE MORE POWERFUL

If the spark of our daily prayers extended beyond our home, our city, our Nation, around the world, peace can be realized.

No force is more powerful than the will of God—than mankind's belief in God. Since all else has failed, let us appeal to Him.

We suggest therefore that all churches leave their doors open during the noon hour, so that the passer-by can step in for a moment of silent meditation.

Those of us not near a church can be equally as sincere in our silent prayers at home, at work, or at lunch.

No prayers are so necessary, no prayers are so vital, no prayers are so challenging to the world as our prayers for peace.

Our Foreign-Aid Program

EXTENSION OF REMARKS OF

HON. HARRIS ELLSWORTH

OF OREGON

IN THE HOUSE OF REPRESENTATIVES
Friday, October 5, 1951

Mr. ELLSWORTH. Mr. Speaker, a few months ago a member of the United States Foreign Service was seated in front of his radio in the foreign city where he is serving and heard some speaker criticize the United States. It seemed that the speaker on the radio, or wireless, as they call it there, was endeavoring to make the point that the United States had some ulterior motive in its program of aid to other countries. Our Foreign Service officer became so indignant at the misrepresentation of the truth being made that he went to his typewriter and wrote his thoughts on the subject. Being a modest man, this gentleman does not wish to have his name appear in the RECORD, but his patriotic words are worth our reading and our consideration:

Let us say now, categorically and with all the force at our command, that which the world knows to be true. The United States is the most altruistic nation the world has ever known. No other nation in the world's history which had power even approaching that of our country has been able to forbear, under some pretext or other, the urge for conquest by war or threat, with all the accumulation of riches and power it brought. In two World Wars when, at tremendous cost of life and treasure, victory was forged, we can search in vain for any benefit to our country that came to us other than peace, or the semblance of it.

All Europe knows how, in the hands of the imperialistic conqueror, those wars would have ended—and Asia, too, must know. Were it not for the fact that our country was founded and has grown in the spirit of a Republic with malice toward none, a great part of the civilized world could have been absorbed as satellites without a shot being fired.

Instead, we have poured out treasure, America's treasure, in an effort to secure peace in the world by building up those weak and powerless countries.

The United States has thus gained nothing from the wars in which she has been compelled to engage—she has nothing to gain from any war. War can only threaten

the American way of life, more than favorably comparable with any other in the world, which, because of its industry and devotion to the liberty of the individual, is the envy of many and the scourge of totalitarian dictatorships.

For this way of life, and its respect for the individual in the true concept of the first of the real republics, many sacrifices have been made. Its majestic achievements in the short period of some one hundred and seventy-four years can be seen from east coast to west and from north to south, over thousands of miles. It will be protected by all the strength and with every powerful aid at our command.

Farm Support for St. Lawrence Project

EXTENSION OF REMARKS

OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. BLATNIK. Mr. Speaker, under leave to extend my remarks in the RECORD I include the texts of two resolutions. One is a resolution adopted by the National Rural Electric Cooperative Association of region IV at its annual meeting, September 24-25, at Dayton, Ohio; and the second was adopted by the National Rural Electric Cooperative Association at its annual meeting September 27-28, at Chicago. Both resolutions endorse the St. Lawrence seaway and power project, and indicate the widespread support for this project by farmers from the States of Ohio, Indiana, Michigan, West Virginia, Illinois, Iowa, and Wisconsin.

RESOLUTION ADOPTED AT NATIONAL RURAL ELECTRIC COOPERATIVE ASSOCIATION REGION IV ANNUAL MEETING, SEPTEMBER 24 AND 25, 1951, DAYTON, OHIO

Whereas the necessity for full farm and industrial production is essential to national defense; and

Whereas, 2,000,000 horsepower of electric energy is available to the United States and Canada by development of the St. Lawrence seaway. Now, therefore, be it

Resolved, That the Congress approve the program for the St. Lawrence seaway.

RESOLUTION ADOPTED AT NATIONAL RURAL ELECTRIC COOPERATIVE ASSOCIATION REGION V ANNUAL MEETING, SEPTEMBER 27 AND 28, 1951, CHICAGO, ILL.

Whereas in World War II it was only because of the power capacity of public power, particularly TVA and the Bonneville Power Administration, that there was the margin of power available so that our country was able to produce aluminum in sufficient quantities for total defense; and

Whereas, in our now critical defense situation, production of aluminum and other defense materials is being greatly curtailed because of a serious shortage of power; and

Whereas, had it not been for the selfish and short-sighted influence of the commercial power interests through their propaganda campaigns and lobbying against all public power, our defense program today, as related to power, would not be in as precarious a situation as exists; and

Whereas this shortage of power will materially and adversely affect the growing needs of rural electric cooperatives in their

service to farms with their labor shortages in their production of food and fiber, essential also to the defense effort; and

Whereas in spite of the dire need for the development of all sources of power, the same interests are ignoring the common good and are still working against the proper development of the water resources of the Nation for power purposes; and

Whereas it is our conviction that the natural resources of the Nation, as contained in its hydro power potential, belong inherently to the people first, for the general welfare in peace and for defense. Now, therefore, be it

Resolved by this convention representing 111 cooperatives in Iowa, Wisconsin, and Illinois, That we support the report of the President's Water Power Commission, and strongly urge its further implementation by legislation where necessary, and be it further

Resolved, That we condemn the efforts of the commercial power interests to discredit said report, their apparent object being that they may destroy the established Federal policy of priority rights of municipalities and cooperatives to said power, and be it further

Resolved, That we reaffirm our support of all public power projects which are economically feasible, including TVA and the Bonneville Power Administration, the St. Lawrence waterway, and those proposed by the Reclamation Bureau and the Army, and be it further

Resolved, That we urge the modification or elimination of the Keating amendment that preferential customers may again have their rightful access to Federal power by the most practical and economical means possible.

The Late Hon. Frank Fellows

EXTENSION OF REMARKS

OF

HON. T. MILLET HAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. HAND. Mr. Speaker, I am including in the CONGRESSIONAL RECORD a statement by our former colleague, Hon. Harry L. Towe, referring to the late beloved Representative Frank Fellows.

I am certain that this beautiful expression will meet with the unanimous approval of the House:

FRANK FELLOWS

The House of Representatives learned of my resignation from Congress on September 12, the same day that his sorrowing colleagues learned of the death of Representative Frank Fellows, of Bangor, Maine.

And so it was that I took leave of Congress with a heavy heart, regretting the necessity of leaving those with whom I had worked and served for 9 years, and mourning the loss of a friend whom I would never see again.

Frank Fellows, who had represented his State's third district since 1941, was an admired and respected colleague; but far more important than that, he was a beloved and understanding friend.

He loved life, and lived it bravely. I don't think Frank Fellows was ever afraid of anything. Certainly he was never afraid to stand up and be counted against the pettiness and selfishness in Government which he loathed. And certainly he was never afraid to pour all of his boundless energy into causes in which he believed. Whatever the outcome of any issue, Frank Fellows always

voted and talked as he felt. No colleague ever wondered what Frank Fellows' position was, on any issue.

I shall remember him for his wisdom, for his great gift of oratory, and for the lavish manner in which he gave all of his talents to his constituency and to his people.

I shall remember him too, for his love of song, and for the delightful wit which made so many of us love him.

No man or woman ever came to know Frank Fellows without becoming a better person as a result of the experience.

No person who ever knew him can think of his passing without experiencing the sense of loss which has come to all of us.

Maine has lost a great Congressman. America has lost a patriot. I have lost a good friend.

The United States Merchant Marine: Heroes Generally Unsung

EXTENSION OF REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. MARTIN of Iowa. Mr. Speaker, pursuant to unanimous consent, I am including herewith an editorial written by Mr. Clarence Moody, editor, Burlington (Iowa) Hawk-Eye Gazette, which has won outstanding recognition because of its high quality and because of the deserved recognition extended by Mr. Moody to the merchant marine.

The Burlington Hawk-Eye Gazette enjoys a large circulation over all of southeastern Iowa and a large area of western Illinois and Mr. Moody's outstanding service as editor has been recognized by the patrons of that paper throughout the entire period of his editorship.

HEROES GENERALLY UNSUNG

While its exploits which would fill pages of history have never been touted as have the records of other branches of our Government forces, nevertheless every war discloses anew how highly essential it is for Uncle Sam to have a strong merchant marine organization.

It is generally the tendency to let this urgent factor go to pot during periods of peace and then strive frantically, when war breaks, to build it up again. This was more true after the First World War than the second. In 1939 we only had 1,300 merchant craft while we now sail about 3,500. Gross tonnage, too, has trebled.

Little known to the general public, especially here in the Middle West, the merchant marine is sometimes confused with the United States Marine Corps, but it is something entirely different. The merchant marine is that vast fleet of cargo vessels necessary to maintain our trade relations with the world and, in event of war, to supplement naval and military craft in transporting munitions and supplies of all kinds. It operates on the inland waterways such as the Mississippi and also on the Great Lakes, as well as the high seas.

Uncle Sam owns outright a lot of cargo-carrying vessels that are not a part of the Regular Navy. Many of them are leased to private operators of shipping lines. Furthermore, Uncle Sam maintains an academy at Kings Point, on Long Island, near the city of New York, where young men may be

trained for officerships in the merchant marine. Candidates are received between the ages of 16 and 21. Upon graduation at the end of 4 years, a candidate then has a bachelor of science degree to his credit and is eligible for a commission either in the United States Naval Reserve or the United States Maritime Service.

There are several men around Burlington who have seen service in the merchant marine or are so engaged now. They don't have the opportunity to enjoy the fanfare of publicity that rival branches of service come in for as a matter of course, nor do they frequently parade behind timbrels and clanging brass.

Instead, they're the seasoned salts who brave the seas on fairly slow-going merchantmen—tankers, freighters, and the like. There is a job as hazardous as if they were in the active military. We know a young merchant marine officer whose craft broke in two during a storm in the Indian Ocean but they brought him off it safely into port.

In time of war merchant vessels are always ready targets for enemy submarines. Hundreds of brave men have gone to their deaths in such encounters, but their memories have been allowed to dim. They haven't been given the hero worship attending death on a battlefield or in an air fight or aboard a destroyer.

It's about time the general public was understanding more about the merchant marine. If we are to maintain our position as mistress of the seas, we must always have a strong fleet of such vessels ready for anything and everything to be found on the world's oceans and in ports from Cape Horn to Cape Hope, Singapore to Frisco, or New Orleans to Rio.

Incidentally, if you're a youngster with a yen for the sea where you've got to be a man's man, you could do well by investigating the merchant marine as a career.

The Lafayette Steel Case

EXTENSION OF REMARKS OF

HON. THADDEUS M. MACHROWICZ

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. MACHROWICZ. Mr. Speaker, I am inserting in the Record a statement issued this day by the Honorable BLAIR MOODY, Senator from Michigan, supplementing one made by him on the floor of the Senate on October 4, 1951. The statement follows:

I am reluctant to identify pending tax cases, but it might be well to have the Commissioner of Internal Revenue take a personal interest in the long-pending prosecution of the Lafayette Steel Co., of Detroit. This case now is believed to be in the hands of the Bureau's penal division in Chicago.

Agent Weyn was in charge of the investigation of this case, and he recommended to his superiors that officers of Lafayette Steel be prosecuted. Investigators for the Senate subcommittee found no irregularities in Weyn's handling of this case.

Albert C. Grunewald, agent in charge of the Detroit Intelligence unit until his retirement last July 1, assured committee investigators that the case would stand on its merits and that any charges against Agent Weyn would not materially affect its prosecution.

This alleged tax-fraud case was under investigation for nearly a year, starting late in 1949. It has been in the hands of the penal division in Chicago for nearly a year.

The St. Lawrence Project

EXTENSION OF REMARKS

OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. BLATNIK. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I include an article entitled "Last Call on Seaway" by Peter Edson, which appeared in the October 2 edition of the Washington Daily News. This article relates to the issue of the St. Lawrence seaway and power project, which has been brought to a head by the September 28 announcement that Canada is prepared to construct this project by herself.

LAST CALL ON SEAWAY

(By Peter Edson)

Canadian Prime Minister Louis St. Laurent's proposal that his Government alone build the St. Lawrence River seaway has done more to stimulate American interest in this project than anything yet. The feeling is that if this is a good thing for Canada, the United States should be in on it.

Congress is too anxious to go home for anything to happen in a hurry. But the bill introduced by Representative JOHN BLATNIK (Democrat, Minnesota) will be high priority unfinished business when the lawmakers return in January. The Blatnik bill would authorize joint Canadian-American construction of the \$818,000,000 project. About \$300,000,000 would be for locks and ship channel around the St. Lawrence rapids, the rest for power.

There is no question about Canada's ability to finance this undertaking alone. The Canadian Government has a \$500,000,000 surplus which could be utilized on the ship channel. Ontario's Hydro-Electric Commission could easily finance the power development.

Congress thus has one more chance to bring the American Government in on the act. The St. Lawrence project has been kicking around since 1921. The Canadian-American treaty on the project, negotiated in President Herbert Hoover's term, was signed in 1932. It has been awaiting ratification ever since.

In tracing the record of defeats, opposition to the St. Lawrence project is seen to come from three principal sources. First and most powerful of the opponents are the three big eastern railroads—New York Central, Pennsylvania, and Baltimore & Ohio. Through their connecting lines, this influence has been traced to opposition which comes from southern and western railroads.

The Association of American Railroads has taken a lead in opposing the seaway. And an organization known as the National St. Lawrence Project Conference has been the "front" for railroad opposition to the seaway.

Railroad opposition has not been applied so much through lobbying here as through indirect pressure on local chambers of commerce, conferences of shippers, and industries which depend on railroad support. In tracing various congressional committee votes on St. Lawrence legislation, it has been found that most of the votes against the seaway come from districts where there are major railroad interests.

Chicago Association of Commerce stood on the sidelines of the dispute for many years, though many Chicago banking, industrial, and shipping leaders have been for it. But a committee on transportation made up of railroad men has consistently been able to

impose the railroad point of view in the association's policy statements.

Similarly, in Toledo's chamber of commerce, an industrial committee has gone on record in support of the seaway while a transportation committee opposed it. Both reports were tabled until a railroad man became head of the organization, when the transportation committee's recommendation was brought out and approved.

Railroad opposition has also been reflected in policy statements of the railway labor brotherhoods and John L. Lewis' United Mine Workers. Finally, Boston, New York, and other eastern seaboard port authorities, dependent on railroads for most of their freight traffic, have taken a stand against possible competition from the seaway.

Until all this potent opposition can be overcome, the St. Lawrence project doesn't stand much chance of getting anywhere, as far as Congress is concerned.

William N. Oatis

EXTENSION OF REMARKS OF

HON. JAMES G. POLK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. POLK. Mr. Speaker, under leave to extend my remarks in the Record, I wish to include a resolution of William N. Oatis, which was adopted by Pleasant Aerie, No. 2293, of Georgetown, Ohio, of the Fraternal Order of Eagles on September 4, 1951:

RESOLUTION ON WILLIAM N. OATIS

Whereas William N. Oatis, Associated Press bureau chief in Prague, Czechoslovakia, a free newspaperman who was performing his duties according to the standards and criteria of the free press of the world, was brutally snatched and imprisoned by the Communist government of Czechoslovakia without explanation; and

Whereas Mr. Oatis was arrested and held in detention without access to friend, Embassy representative, or trusted legal counsel; and

Whereas he was brought to trial and accused of "insisting on obtaining accurate, correct, and verified information," which is the definition of the work of a free press; and

Whereas he was forced into admission of espionage because of his reporter's instinct for presenting the factual rather than the fictional; and

Whereas he was convicted and sentenced to 10 years of imprisonment by a trial which was universally condemned by all free nations as an outrageous "kangaroo court," completely bereft of the principles of justice and the dignity of the human being; and

Whereas by its action, the Communist-dominated Czech Government showed its scorn for the principle of freedom of information and its hatred of our free world; and

Whereas representatives of the Soviet news agency Tass have the free run of the United States of America, and are permitted to attend press conferences at our national seat of government, at which often much "off-the-record" information is discussed: Now, therefore, be it

Resolved, That Pleasant Aerie, No. 2293, of the Fraternal Order of Eagles urges the Federal Government and its agencies to be unceasing in its efforts to secure the freedom of Mr. Oatis by honorable means, and we also offer our support and the vitality of our membership to the executives of the Associated Press in their campaign to secure the

release of Mr. Oatis by the communication of the true facts of the case to the free peoples of the world, and be it further

Resolved, That Aerie No. 2293 of the Fraternal Order of Eagles, urges the Federal Government to bar the correspondents from the Soviet news agency Tass as well as all satellite nation correspondents from official Government press conferences where vital information may be revealed until the release of Mr. Oatis has been secured.

Adopted this 4th day of September 1951. Aerie No. 2293, city of Georgetown, State of Ohio

Attest

WILBUR L. MARTIN,
Worthy President
C. R. ROBINSON,
Secretary.

A Letter of Timely Interest to Every Member of Our Armed Forces

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. VAN ZANDT. Mr. Speaker, the following letter written by Mr. Edgar P. Paulsen, service officer, Post No. 256, Veterans of Foreign Wars of the United States, Lehighton, Pa., is of timely interest to every serviceman because it contains advice that, if heeded, will prove of untold value. The letter appeared in the December 1950 issue of *Foreign Service*, a monthly magazine issued by the Veterans of Foreign Wars of the United States:

DEAR JOHNNY. You are in the Army now—and God keep you safe and bring you back home in good shape. Barring wounds that may come to you in the conflict, or accident or illness, the Army life can make you or break you. You can come out a bum or you can come out as a man. If you watch your step, keep your nose clean, your ears open, and your mouth shut, you will be O. K. I know. I have been through it.

I want you to read the rest of this letter carefully. Then read it over a few times more. After that, pass it along to your buddies. It may mean a lot to you later and may keep you from learning the hard way.

First off, in the Army you will have all sorts of chances to make decisions. You can decide to drink or you can decide to stay sober, and I mean to let it alone altogether. The Army today has no room for a drunk or a bum. It is too highly specialized to have room for the man whose wits and judgment are clouded with liquor. Promotion today goes to the man whose mind is clear in an emergency and whose judgment is not fouled up with alcohol. In a combat area, you never know what instant you may be called on for a quick decision and your life, and the lives of your buddies, may depend on you. If you are not sober, you may regret it all your life. If one buddy's life is lost, or his body maimed, because you bent your elbow too long, you will never forget it.

It is not sissy to say "No." No one in the Army will ever force you to drink and no one will laugh at you if you say "No, thanks" and stick to it. Those days have gone by. The smart soldier today is the soldier who is always sober.

Discipline will not bother you. It is taken for granted that order are given to be obeyed. You will have 90-day wonders who will burn you up—but there is only one

thing to do. If a dumb order is given, carry it out and gripe afterward. No officer can make you do a thing if you do not want to, but he can make you wish you had.

DON'T BE A HANDSHAKER

Leave the handshaking and brown-nosing to the other fellow. You will have one in your squad, your platoon, and probably one in your file. Let him do it. He will get the promotion and the soft detail, but sooner or later it will catch up with him and he will be transferred. It may get you places with your sergeant or your officer, but not with your buddies. Some officers like it. You will notice that the guy with the long nose always gets it rubbed off sooner or later. You never did it at home, so don't start now. If asked about anything, just don't know how it happened.

WOMEN

As far as women are concerned, use your head. Just remember you are coming back to America where there is a nice girl waiting for you. One misstep can cause you a lot of grief and remorse for the rest of your life.

GET A HOBBY

You will have a lot of spare time. Use it so that it will be of use when you get back. Get a hobby for this spare time—an orchestra, stamps, books, travel, and visiting the points of interest in the country you are in. Make a study of the history of the country you are in, then use the museums and libraries to increase this knowledge. There will be a teacher or an official in every town you are stationed in, and they are always glad to see a foreigner take an interest in their better things. You will then have some happy memories to bring home, or send home with your letters. You know every country has a great many things that we do not know about.

ATTEND CHURCH

Go to church. No matter where you are, or what religion the church may represent, attend it. There is nothing that will take the place of prayer if you get into a tight place. You will find, if you get into action, that there is no religious difference in the fox hole, and there are no atheists in the front lines. It's just "God" to every man.

Get acquainted with your chaplain. He will help you get into school, or with the hobby you may be interested in. If you get into a jam see him. He knows the score and is there to see that you get a fair shake. Of course he will see that the officers get their parties and cigars, but he will see that you get yours too.

Your chaplain is your contact between you and God, between you and your officers, and between you and yourself.

WRITE HOME

Write home. Remember that your dad and mother are always worrying and watching every mail. I know that if and when our Phil goes, that we will be haunting the post office. It will be seldom that you cannot write home every week at least. Send cards from every where you are. They will be interesting as long as you live. A letter may seem like a small thing to you, but it is all that your parents have to look forward to while you are away. To them, war is always combat, even if you are far behind the lines.

Save your money. If you save \$20 per month, one bond, in three years you will have nearly \$800 with the paymaster, and that's not hay. When you get that discharge, if you have \$800 in cash money, plus your last month's pay and mustering-out pay, you will have nearly \$1,000 in your pocket. An honorable discharge, \$1,000 in cash, together with some trade that you will learn in the service, you will be on easy street when you get home. There are few boys at home who will have a thousand

iron men in their hands after 3 years. The best way is to have your commanding officer take it out of your pay every month and put it to your account or have a bond paid for every month.

KEEP RECORDS

And now, get this. If you are injured, no matter how slightly, if you are ill, or operated on, or for any reason sent to sick call or to the hospital, even for a report, or for a day, or for a CC pill, or a swab of iodine, make a note of it. Write down the day, the date, the place, and the reason. Get the names and addresses of your buddies who know of the injury or the disability, and write them down.

A sprain, bruise, illness, wound, operation, a cold, or anything that you are treated for in the service may show up as serious after 20 years, and if it is not on your record, you will have a hard time proving the service connection when claiming for compensation or pension. You see, there is a statute of limitations, which states that after certain periods of time, some as short as 3 months, unless you can prove continuous treatment after discharge, the disability has to be proved to have happened in the service. If it is on your record, it is already service-connected for the rest of your life. In every case, if any disability is not in your records, you will be the one who has to prove it happened in the service. That is rough after a few years. I know.

You know of my work as service officer for the VFW. Last March there were 653 veterans or their dependents in my home for various claims, and the majority were here because their disabilities were not on their records. One lad is not able to walk. He is totally disabled, had fallen off a tank while on maneuvers, hurt his leg, and after his discharge it affected his spine. It took 117 letters and 2 years of work before we could service-connect it by finding men from his outfit who knew of the original injury and made affidavits to that effect. He is now drawing \$228 a month compensation, and just received a car from the VA. A veteran from Palmerton fell in a hole while on reconnaissance patrol on one of the islands in the Pacific. He hurt his back, went to the dispensary, and had it taped up. It was, for some reason, not put on his medical record. Get this. He came to me in October 1945 to get out-patient treatment from the VA, and filed a claim for compensation, as he was unable to do his old job.

We worked on that claim until November 1950 before we could get the necessary proof by affidavits from his buddies, etc., that it was service-connected. In those 5 years he had paid his own doctor bills, lost his rights under Public Law 16 for education, lost money by having to take a lower-paying job, and lost compensation. Had the injury been on his record there would have been no delay at all. Another is drawing total disability, \$150 a month, but it took over 2 years to get it. Not on his record. I can show you hundreds of similar cases.

Another veteran, R. S., living here in Lehighton, was on a bulldozer in Honolulu when a tank hit it and turned it over and pinned him underneath, hurting his leg. It was only a minor injury at the time, and after reporting to the medics he went back to duty, and in time was discharged. He came home, and after a long time his leg began to bother him. For 5 months he had to lie on a floor, and was unable to walk except on his haunches. He was totally disabled, as it had injured him in such a way that his spine became affected. Not on his record, so no service connection. But I had written him as I am writing this to you, and he had the name of the driver of the tank that hit him, and his address, the name of the driver of the bulldozer behind him that saw it happen, the name of the doctor that strapped his leg, and the name of the

first sergeant that had confined him to quarters. He had the place, day, and date. With this information it took only a few weeks to get him \$800 back compensation and \$150 a month. If he had not had those names and addresses, he would have been out of luck.

A service connection for a total disability means the difference between \$150 a month, plus an allowance for the family or parents, instead of \$60 a month for a non-service-connected disability. A service-connected disability means that any time during your lifetime that you need hospitalization you can get immediate hospitalization or outpatient treatment at the VA expense. You can get crutches, braces, etc., as you need them, and there is no delay or question. Also, if it is service-connected, in most cases you will get \$150 a month after the first 21 days that you are hospitalized.

If your disability is not service-connected, you get nothing, and you may have to wait a long time before you can even get into a VA hospital. If there is a repetition of the Economy Act of 1932, you will not even get into a VA hospital for a non-service-connected disability.

In the event that you die from a service-connected disability, your widow will get from \$75 a month up, and \$25 up for the child or children. Your wife will have priority for a civil-service job. She will also have certain rights that you would have under the GI bill, as the GI loan privilege, etc. Your children will also be eligible for certain State benefits. Your dependent parents will also be eligible for certain benefits.

If your death comes from a non-service-connected cause, your widow may get \$42 a month, and \$10 a month for each child. I have not been able to get one of these through yet though, except for widows of World War I veterans. You will be under Public Law 346 if you select education, and you will wait your turn for hospitalization, and you will pay for your own crutches, braces, etc., and that goes for a service-connected disability that cannot be proved because there is no record of it as having happened in the service; and even if the disability is service-connected, but is not on your record, and cannot be proved to have happened in the service, you will pay your own doctor bills.

It is almost impossible to prove service connection without the necessary dates, places, names of witnesses, etc., which are naturally required for proof.

MORE BENEFITS

Hospitalization, compensation, pensions for your dependents or survivors, is worth taking care of. You are the only one that can do it. A good many medical corpsmen and officers will neglect to put your injuries, treatments, or disabilities on your record, and you will not realize it until you are laid up months or years after discharge with a bad back, a mental condition, nerves, varicose, a bad knee, arthritis, etc., and you claim compensation or hospitalization.

A year, or 5 years after discharge may be too late to service connect the disability that is not on your record unless you can get proof by affidavits from buddies that know of the conditions under which the disability originally occurred. I can show you hundreds of veterans, unable to work, and paying their own doctor bills for conditions that happened in the service, but for which there is no record, and for which we cannot get proof.

Write everything down, with the names and addresses, and send two copies home so that if one copy does not reach them, the other will. It is easy to lose these records if they are in your pocket or bag.

The same goes for dental work. If the service dentist fixes your teeth and later the filling comes loose or falls out, the VA will

fix them for life. The same goes for the plate that will not fit after several years. Also, if a tooth is extracted, except the wisdom teeth, it will be replaced by the VA. A dental disability is service connected in the same way as a physical disability, but it must be on your record.

The Veterans' Administration will not come to you or write you to ask if you are O. K., but if your disability is service-connected they will keep in touch with you and give you the best of care and treatment and compensation as you may deserve. Remember, it is in every case up to you to prove that the disability happened in the service.

CHECK YOUR RECORD

You have a right to ask to see your record before you are discharged. Do so, and if there is anything missing in your medical or dental record that is missing, see that it is put in the record before you sign the discharge. It is your right and the service wants you to have it. That goes for any illness or disability no matter how trivial it may have appeared at the time. Day, date, name, place, number, and location of the hospital or dispensary, name of the doctors or nurses or buddies, and the nature of the disability. Get them, and keep them.

GO TO SCHOOL

Go to a service school if you can. The man without a trade is in a tough spot today as a civilian. The service wants you to learn, and your captain or chaplain will help you get into the trade you think you are fitted for. We are out of the day of the bow and arrow.

AT THE SEPARATION CENTER

One thing more, and this is important. When you come back and are at the separation center waiting for the discharge you will receive a thorough examination. It is your last chance to tell the service of any accident, illness, or injury you may have suffered while in uniform. This includes surgical, medical, dental, mental, or anything else that may affect you in later years, and to get it on your record. Check with the records you have sent home.

At the separation center, the officers will suggest that you get your teeth fixed up, or that you get that disability looked after before you are discharged. It may delay you for a few days or weeks, but stay there until you are fixed up. You will be anxious to get home, and you will perhaps be as dumb as thousands of us were and say to the officer, "Give me my discharge and let me get home, I'll get myself fixed up." But if you do that, you are just fouling yourself up.

Stay at the separation center, or go where they tell you to go, and get fixed up. In this way, you will have that disability service-connected and you will avoid the long delay with the VA and the possible refusal of service connection.

That's about all this time. I am telling you what thousands of us have learned through bitter experience. For 6 years I have had veterans come to my home every day, and many nights; all in trouble, and three-fourths of them in trouble because they kept no records of injuries or illnesses that happened while they were in uniform.

Wherever there is a United States Army, there is a VFW post. Wherever there is a VFW post, there is a VFW service officer to help you. Go to him if you have a problem on your hands that needs the help of a trained man.

I will be glad to hear from you at any time, Johnny, and will answer your letter—but write home first, and often.

Again—may God keep you safe and well, and bring you back to us straight and strong in mind and body, with nothing on your record except "Service honest and faithful." Such a hitch in the service will bring you

out as a man, and if you decide to stay in for retirement, you will not be making a mistake. It's a good career if you like it. That's all this time.

So long

Sincerely,

EDGAR P. PAULSEN,
Service Officer, VFW Post, No. 256,
Lehigh, Pa.

Gratitude

EXTENSION OF REMARKS

OF

HON. JOSEPH P. O'HARA

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. O'HARA. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Faribault County Register, Blue Earth, Minn., on September 18, 1951:

Jim Markham, at the helm of the Hopkins Review, expounds on some of the fundamentals of public service for new members of the Hopkins City Council. He explains:

"The first of these is that every man and woman who chooses to serve his fellow countrymen, on any level of American government, at once becomes the fair target of his peers who elected him to office. Gratitude is not an outstanding characteristic of the average American voter. Witness the abuse always heaped upon the Chief Executive of the land, whether he be of Democratic or Republican persuasion.

"As people are ungrateful, so newspapers can be embarrassing some time, especially when they call attention to those acts of elected officials which do not meet the approval of a majority. But newspapers are a part of the American scene. They do have a habit of reporting the news, and their editors do reserve the right to differ, now and again, with the voting judgments of public servants.

"Most men in public office adjust their emotional apparatus to these facts early in their careers. They do not consider it as a personal insult every time another citizen, or a newspaper editor, disagrees with their official judgments. We feel certain that in good time they will learn these first lessons too, and certainly when they do they will find it less difficult to pursue their duties as elected officials."

William N. Oatis

EXTENSION OF REMARKS

OF

HON. JAMES G. POLK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. POLK. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a resolution on William N. Oatis, which was adopted by River City Aerie, No. 567, of Portsmouth, Ohio, of the Fraternal Order of Eagles on September 13, 1951:

RESOLUTION ON WILLIAM N. OATIS

Whereas William N. Oatis, Associated Press bureau chief in Prague, Czechoslovakia, a free newspaperman who was per-

forming his duties according to the standards and criteria of the free press of the world, was brutally snatched and imprisoned by the Communist government of Czechoslovakia without explanation; and

Whereas Mr. Oatis was arrested and held in detention without access to friend, Embassy representative or trusted legal counsel; and

Whereas he was brought to trial and accused of "insisting on obtaining accurate, correct and verified information," which is the definition of the work of a free press; and

Whereas he was forced into admission of espionage because of his reporter's instinct for presenting the factual rather than the fictional, and

Whereas he was convicted and sentenced to 10 years of imprisonment by a trial which was universally condemned by all free nations as an outrageous "kangaroo court," completely bereft of the principles of justice and the dignity of the human being, and

Whereas, by its action, the Communist-dominated Czech government showed its scorn for the principle of freedom of information and its hatred for our free world, and

Whereas representatives of the Soviet News Agency Tass have the free run of the United States of America, and are permitted to attend press conferences at our national seat of government, at which often much off-the-record information is discussed. Now, therefore, be it

Resolved, That River City Aerie, No. 567, of the Fraternal Order of Eagles urges the Federal Government and its agencies to be uncensuring in its efforts to secure the freedom of Mr. Oatis by honorable means, and we also offer our support and the vitality of our membership to the executives of the Associated Press in their campaign to secure the release of Mr. Oatis by the communication of the true facts of the case to the free peoples of the world; and be it further

Resolved, That Aerie No. 567 of the Fraternal Order of Eagles urges the Federal Government to bar the correspondents from the Soviet news agency Tass as well as all satellite nation correspondents from official government press conferences where vital information may be revealed until the release of Mr. Oatis has been secured.

Adopted this 13th day of September 1951 Aerie No. 567, city of Portsmouth, State of Ohio

Attest:

KENNETH G. WELLS,
Worthy President
PAUL M. BEILMAN,
Secretary

Jewish Hospital of Brooklyn

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr. MULTER. Mr. Speaker, Brooklyn is proud of many things and institutions. One of those of which it is proudest is the Jewish Hospital. Despite its name and although organized and supported in the main by persons of the Jewish faith, it has never been a sectarian institution, nor has it ever practiced segregation. It has always been operated on the principle that all people suffer the same ills and injuries and that the cures and the remedies are the same for all people and

can be administered by persons learned and trained to do so, no matter where they may come from, no matter what the color of their skin, and regardless of their religious beliefs.

I am pleased to direct the attention of my colleagues to the following commendation sent to Max Abelman at the hospital, immediately following a visit by the Honorable Ralph J. Bunche, as follows:

UNITED NATIONS,

New York, September 25, 1951

Mr. MAX ABELMAN,
Director of Public Relations, Jewish
Hospital of Brooklyn, Brooklyn, N. Y.

DEAR MR. ABELMAN: My recent visit to the Jewish Hospital of Brooklyn was an inspiring experience. I thank you for arranging it.

This institution is something a good deal more than patients, doctors, nurses, and hospital facilities. I realized almost immediately that what makes it a great hospital is the sense of dedicated service to humanity which characterizes its personnel and the spirit of true democracy which prevails throughout. In its rooms and corridors, people are people and are cared for and treasured as such, irrespective of race, religion, color, or origin.

The Jewish Hospital of Brooklyn is at once a monument to the fine public spirit of Brooklyn and a noble example of democratic medical service for the Nation.

Sincerely yours,

RALPH J. BUNCHE,

Director, Department of Trusteeship

The Attempted Tidelands Grab

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, due to recent expressions contained on the subject of tidelands, and particularly in connection with late statements by a former official of the Government, I am constrained to call to the attention of the Congress and the country, a statement made by the same Government official on the same subject on December 22, 1933.

In order to include the statement to which I refer, I wish to quote part of the statement which I recently made on the floor of the House in regard to the bill under consideration on the subject in the House on July 27, 1951, when the House voted almost unanimously to approve the bill H. R. 4484, which rebukes the Government, and provides for the vacating of the Government's claim to these tidelands which rightfully belong to the sovereign States.

Following is an excerpt from my statement above referred to, to wit:

What a far cry is that decree of the highest Court of our land of the free, from that of the highest Court of the same land of regimented nationalization, which now solemnly holds that where that sovereign right of ownership in the people of a State, which it now refers to as the "bare legal title" to the lands under the marginal sea is questioned

by this Federal Government, the right of power and dominion of the United States transcends those of a mere property owner.

Thus for the first time the United States Supreme Court has adopted and put into effect the totalitarian doctrine of the supremacy of the state over the people, or that the people have no property or right whenever the Federal Government wishes to appropriate, because of its power and dominion.

The Supreme Court ignored all its prior jurisprudence on the subject of tidal ownership by the individual State for its sovereign people, and its repeated decisions since 1842 that the Original Thirteen States absolutely owned all their navigable waters and the soils under them for the common use of the sovereign people of each State, subject only to the rights surrendered by the Constitution to the Federal Government—navigation, interstate and foreign commerce, the national defense—and that all States since admitted into the Union succeeded to the same ownership and rights of sovereignty.

However, the Supreme Court did, with seeming compunction, admit the right and power of Congress to legislate on the matter of recognizing the century-old fact of tidal ownership in the States for their sovereign people, or ratify and confirm their totalitarian decree, either by positive action or inaction.

Further, to cap the climax, Mr. Ickes, former Secretary of the Interior, who agitated this Federal land grab, declared officially that he recognized the settled law that title to the soil within the 3-mile limit is in the State and cannot be appropriated except by the authority of the State. In his letter dated December 22, 1933, to Mr. Proctor, of Long Beach, Calif., rejecting his application for a lease under the Federal Leasing Act of 1920, Mr. Ickes stated:

"It has been distinctly settled that . . . the title to the shore and lands under water in front of lands so granted inures to the State within which they are situated. . . . Such title to the shore and lands under water is regarded as incident to the sovereignty of the State . . ."

"The foregoing is a statement of the settled law, and therefore no right can be granted to you either under the Leasing Act of February 25, 1920 (41 Stat. 437), or under any other public-land law to the bed of the Pacific Ocean either within or without the 3-mile limit. Title to the soil under the ocean within the 3-mile limit is in the State of California and the land may not be appropriated except by authority of the State."

The RECORD shows that on Wednesday, October 5, 1949, the Solicitor General appeared and testified for and on behalf of the Department of Justice and the Secretary of the Interior appeared and testified in person on this subject.

Whereas the Secretary of the Interior based his entire testimony and claim for Government control of the tidelands and resources of all the coastal States of the Union on the ground that it was necessary for national defense, he did not elaborate to show in what manner Federal control could produce the petroleum necessary for national defense in times of emergency any better than has been done in the past under State ownership and development through private enterprise.

On the other hand, the same Secretary of the Interior, Mr. Krug, testified on the same subject on March 3, 1948, at the joint hearings before the Committees on the Judiciary—see page 741 of the report—that the States and the oil industries "had done a miraculous job" and he thought "they would continue to do a miraculous job." Therefore, the Secretary of the Interior has no substance to his claim for national control of the oil resources in the submerged coastal lands adjoining the coastal States of the Union.

There Is an Imperative Need for Sound Amendments to the Railroad Retirement Act

**EXTENSION OF REMARKS
OF**

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. VAN ZANDT. Mr. Speaker, thousands of retired railroad employees and surviving widows and children were keenly disappointed last week when the House leadership failed to schedule final action last Friday on pending legislation designed to amend the Railroad Retirement Act.

Every day that we delay we are adding to the misery of beneficiaries of the Railroad Retirement Act who find it impossible to meet the high cost of living on the present scale of retirement benefits.

During the debate last week the following remarks were made by me on the subject of amending the Railroad Retirement Act:

Mr. VAN ZANDT. Mr. Chairman, like all of you, I have been the recipient of personal calls and printed material setting forth the arguments for and against pending amendments to the Railroad Retirement Act.

I can truthfully say that those who contacted me did so in a cooperative manner, thus convincing me of their sincerity of purpose. Without doubt, the information furnished me has been very helpful in my study of this subject.

As many of you know, I am a railroad man on furlough while a Member of Congress. I come from a railroad family and represent a congressional district that has, without doubt, on a percentage basis, the greatest number of active and retired railroad employees in the United States. I mention this to assure you that my interest in the Railroad Retirement Act is not seasonal, because the subject is one that has been with me since the law was enacted in 1935.

I have introduced over a score of bills during my congressional career designed to liberalize the provisions of the Railroad Retirement Act. These bills were introduced because of the need for increased benefits to those retired and to surviving widows and children. They also provided for structural changes in the act regarding the age of retirement, the years of service required, and would have amended other provisions of the law.

To get action on these bills I was constantly in touch with the House Committee on Interstate and Foreign Commerce to such an extent that I know at times my tenacity must have exhausted the patience of the chairman and the professional staff. This resoluteness on my part was not confined to the House of Representatives, because I was equally active in Senate circles.

Ever since the Eightieth Congress increased benefits under the Railroad Retirement Act by 20 percent to annuitants and pensioners, the only replies I received to my repeated requests for action on my bills were that no consideration could be given any railroad retirement amendments until actuarial studies could be completed, revealing the financial condition of the railroad retirement fund and the impact such amendments would have on it.

Speaking frankly, the repeated statements that nothing could be done until the ac-

tuarial reports were available, were accepted by me as an exhibition of sound judgment, because the future of the Railroad Retirement Act depends upon maintaining the solvency of the railroad retirement fund. In short, those who have retired and those who will retire must be able to look forward to receiving their monthly retirement checks with absolute certainty and without any interruption.

Therefore, any vote I cast on railroad retirement amendments will depend upon their relationship in maintaining the solvency of the retirement fund. In other words, can the fund stand the additional cost of proposed amendments, or will such amendments so impair the fund that their approval will threaten the future of the Railroad Retirement Act by making it financially impossible to fulfill its obligations to its beneficiaries?

Another basic factor that I intend to keep in mind during our consideration of this legislation is that it is generally agreed that retired employees and survivors of deceased employees must have immediate relief. I know it will not surprise many of you to learn that I have retired railroad employees and survivors of deceased employees in my congressional district who are actually hungry and living under conditions that you and I would find repugnant to the American way of life. These people are the victims of a frozen income over which they have no control and Congress, as custodian of the railroad retirement fund, is obligated to provide relief to these people through sound amendments to the Railroad Retirement Act.

According to the Railroad Retirement Board the average age of the disabled and retired annuitant is 70.3 years and the pensioner 83.2 years; while the average age of the widow is 73.1 years. The average monthly benefit received by the annuitant is \$82.75 monthly, the pensioner \$79.79 monthly; and the widow \$29.62 monthly.

Keeping in mind the present scale of benefits, it may be well to look at the cost of living figures as furnished by the Bureau of Labor Statistics of the United States Department of Labor. As of July 15, 1951, or about 3 months ago, the cost of living had increased 82.7 percent over the cost of living in 1937, the year the Railroad Retirement Act became effective.

For an illustration, food had increased 114.8 percent; wearing apparel, 98.3 percent; rent, 34.9 percent; fuel, electricity, etc., 45.3 percent; house furnishings, 108.6 percent; and miscellaneous, 83.5 percent. As I stated, prices of everyday commodities have increased during that period.

While these increases in the cost of living were mounting during the period from 1937 to 1951 the recipients of railroad retirement benefits received but one increase—the 20 percent granted by the Eightieth Congress. The widows, however, received no increase.

It may be well for me to remind you at this point that the 1937 or 1939 dollar is not the same dollar in value that these retired railroaders or their survivors receive today. It can truthfully be said that they are the victims of not only the high cost of living, but of the inflated dollar. For that reason, they need assistance and they need it immediately.

It is to the credit of the advocates and opponents of the proposed legislation that they are in agreement on the fact that those already retired and the survivors of deceased employees must have immediate relief.

Another factor that I cannot ignore is one which concerns the railroad man of today who will be the retired man of tomorrow. He definitely is in favor of structural changes in the Railroad Retirement Act, that involve the reduction of the retirement age from 65 to age 60 and he desires the option

of retiring on a full annuity after 30 years of service, regardless of age. In addition, he also wants an increase in present benefits without any increase in payroll taxes. Above all, he wants nothing to do in any way, shape, or form with the Railroad Retirement Act becoming related to the Social Security Act.

It is unfortunate that we have so much difference of opinion with respect to the proposed amendments. For example, members of the Railroad Retirement Board are divided, actuarial experts cannot agree in their opinions, the House Interstate and Foreign Commerce Committee is divided and railway labor groups have opposite views. Among the thousands of railroad employees, you find the same state of confusion exists regarding the provisions of these proposed amendments. Frankly, from my conversations with railroad employees, there is no doubt that there is favorable sentiment for liberalizing the Railroad Retirement Act, but, as many employees have warned, all amendments should be sound and should not impair the financial stability of the railroad retirement fund.

In my great desire to protect the interest of active and retired railroad employees and the survivors of deceased employees, I have spent hours in diligently studying not only the many bills introduced in Congress but also the printed hearings in the Senate and House of Representatives, together with the viewpoints of various railway labor organizations.

In addition, I have studied the majority and minority reports issued by the House Committee on Interstate and Foreign Commerce.

At this point I should like to discuss House bill 3669 as originally introduced and which is commonly referred to as the minority or Crosser bill.

The original House bill 3669 provides that retirement annuities shall be increased on an average of 13.8 percent, pensions to be increased by 15 percent, survivor benefits to be increased from 80 to 100 percent, and in addition to provide for a spouse's annuity. The report on the bill states that—

"These substantial increases provided in the original bill, H R 3669, are made possible only because said bill makes certain of the adequate financing by assuring certain savings to the railroad retirement fund and by providing additional income for the fund. The Railroad Retirement Board estimated that the combined yield of such savings and additional revenue would amount to about \$230,000,000 annually."

It might be well at this time to discuss the source of these savings and additional revenue from which the proposed increases and new benefits are to be financed. Let us first discuss the \$50-work-restriction clause.

The Crosser bill provides that annuitants and pensioners are prohibited from earning in excess of \$50 a month unless they forfeit their monthly benefit for such month. This same provision is in the present Social Security Act and has been the basis of bitter and widespread criticism.

Under the present Railroad Retirement Act, the only work restriction imposed upon retired employees provides that while receiving an annuity, they must not be employed by a common carrier railroad recognized under the Railroad Retirement Act or by their last regular employer prior to going on pension.

Benefits under social security are not restricted in any way if annuitants are employed on the railroads or in any other employment except that covered under the Social Security Act. The retired Government employee is not restricted as to earnings because of employment in any other field except employment in the Federal Gov-

enment. It is only reasonable and fair that railroad employees who will pay a higher tax rate than either of the above-mentioned groups, beginning January 1, 1952, be given the same privilege to supplement their fixed retirement incomes in other fields.

One of the provisions of the present Railroad Retirement Act provides that an employee who has attained age 60 and has 30 years of service may retire on a reduced annuity. Each year a number of employees, who have been disqualified for work by the railroads and who do not meet the Railroad Retirement Board's disability test, as well as many others who meet the requirements for a reduced annuity before age 65, retire on such a reduced railroad retirement annuity and they obtain work outside the railroad industry to supplement their retirement benefits. This \$50-work-restriction clause will create a great hardship upon the disqualified employee who did not qualify for a disability annuity, and, of course, it would discourage others from retiring on a reduced annuity. It would practically nullify the reduced annuity provision in the present act.

The only argument that has been made in favor of the \$50-work restriction contained in the Crosser bill and which has been borrowed from the Social Security Act, is that such a provision will provide additional funds with which to finance the increases and new provisions sponsored by the Crosser bill.

Although the present Railroad Retirement Act provides for retirement at age 65, the average retirement age is about 68 years, which means that there has been a saving in the railroad retirement fund in two respects. First, no annuities have been paid for the 3 years from 65 to 68; second, taxes have been received during the same 3 years from these employees who could have been receiving annuities.

Of course the \$50-work restriction is intended to create further savings by discouraging retirement even at age 68. The Railroad Retirement Board has estimated that the \$50-a-month work restriction will save the railroad retirement fund \$50,000,000 in a year. When you consider that the average annuity paid each year is about \$1,000, then such a \$50,000,000-a-year saving would mean approximately 50,000 employees who are ready for retirement will not retire because of the \$50 limitation on earnings.

The Railroad Retirement Act as enacted by Congress was intended to make it possible for men to retire, rather than to retire by restrictive legislation. That is, it proposed to provide benefits and encourage retirement of railroad employees at age 65, instead of imposing restrictions upon the aged employee to discourage his retirement at age 65.

Another feature overlooked in the \$50-work-restriction clause is the administrative problem, which will mean the policing of some 200,000 retirement claims each month by a corps of new employees.

The Railroad Retirement Board's experience with respect to the policing once every 6 months of the present work-restriction clause as applied to the disabled employee, should certainly provide sufficient evidence as to the amount of extra work that can be expected if a monthly check is necessary.

Also included in the \$230,000,000 savings and additional revenue mentioned in the minority report is the \$100,000,000 savings estimated to be provided for in the financial adjustment between the railroad retirement and social security systems.

The Railroad Retirement Board's actuaries have estimated that approximately \$40,000,000 of this saving would be realized through the transfer to social security of railroad employees with less than 10 years of service, and the remaining \$60,000,000 savings would be the result of future contemplated

legislation, which is to be recommended jointly by the Railroad Retirement Board and the Federal Security Administrator by June 1, 1956.

Under this proposal, railroad service after 1936 is to be considered employment under the Social Security Act—see section 23 of original bill, H. R. 3369. It might be well to point out at this time that the Railroad Retirement Board actuaries have estimated that the cost of the Crosser bill would be 14 1/2 percent of a \$5,200,000,000 annual payroll. However, this cost estimate is based upon the financial adjustments between the railroad retirement and social security systems, which include the so-called \$50,000,000 contemplated savings for which no legislation has been introduced or recommended.

The Railroad Retirement Board's actuaries have also estimated the cost of the Crosser bill without the \$60,000,000 contemplated savings would be 15 3/4 percent of a \$5,200,000,000 annual payroll.

With respect to the adequate financial claim of the Crosser bill, Mr. Musher, chief actuary for the Railroad Retirement Board, in his testimony before the Senate committee, introduced a table—see page 238 of Senate hearings—which showed that, under the Crosser bill, the railroad retirement fund would be entirely exhausted by the year 2000. Mr. Musher in his appearance before the Senate committee also testified that to continue the railroad retirement system after the reserve was exhausted would require a payroll tax rate of approximately 20 percent. Also, according to exhibit on page 429 of the House hearings, which was prepared by the Railroad Retirement Board's actuarial staff, there would be an outstanding liability of \$16,200,000,000 when the railroad retirement fund became exhausted in the year 2000 under H. R. 3369, as originally introduced and commonly known as the Crosser bill.

Mr. Robert D. Holman, a member of the Railroad Retirement Board's actuarial advisory committee, also appeared before the Senate committee and testified that in his opinion Mr. Musher's cost estimates were on the low side. Mr. Donald M. Overholser, an associate of Mr. George D. Buck, labor's member, on the Board's actuarial advisory committee, in his testimony before the Senate committee, said that the plan embodied in S. 1347, which is identical to the Crosser bill, "would go on the rocks. That is definite." He further stated that if he were a member of the railroad unions he would "be scared about this plan."

Mr. Murray W. Latimer in his prepared statement on S. 1347—which is identical to the Crosser bill—stated that under that bill that—

"Either the railroad retirement system will collapse or there will be a Government subsidy. He further characterized the bill, from the standpoint of financial soundness as the extreme of recklessness."

Mr. Meyer, chief actuary for the social-security system, was in complete disagreement with Mr. Musher as to the amount of possible savings that could be realized by adjustments with the social-security trust fund under the Crosser bill. According to Mr. Meyer's statements the savings would be only about \$50,000,000 instead of \$100,000,000.

Under the Crosser bill there is a new eligibility requirement which provides that a railroad employee must have completed at least 120 months of compensated service in order to receive any benefits himself under the Railroad Retirement Act. The so-called residual lump-sum benefit is a death benefit that may be payable to survivors.

The bill provides that upon retirement or death of an employee who has completed less than 10 years of service, benefits to him or his spouse, or his survivors, will be pay-

able under the Social Security Act. However on the other hand there is also a minimum service requirement provided in the Social Security Act before benefits can be paid under that act. According to the amended Social Security Act of 1950, generally speaking, any individual who attains age 65 after 1970 must have completed 40 quarters of coverage—calendar quarters—in order to receive any benefits for himself, his spouse, or survivors under the Social Security Act.

Briefly this would mean that a railroad employee after performing less than 10 years of compensated service on which compensation he paid a tax three to four times higher than paid under social security, would not be entitled to any benefits at all under the Railroad Retirement Act, and if he attained age 65 after 1970, then he also would not qualify under the Social Security Act for any old-age and survivor insurance benefits.

Under the present Railroad Retirement Act an employee who has a current connection with the railroad industry, and who has less than 10 years of service and has attained age 60, is entitled to a monthly disability annuity provided he has been disqualified for work in his regular occupation. An employee who is totally disabled and who has less than 10 years of service is entitled to a disability annuity provided he has attained age 60.

Under the 10-year provision of the Crosser bill, such disabled employees would not be entitled to any benefits under the Railroad Retirement Act. However, if such employee had completed sufficient service to meet the requirements of the Social Security Act, he would qualify for benefits under the Social Security Act. According to the Board's statistics there were 453 disability claims awarded in 1949 to disabled employees at age 60 who had less than 10 years of service.

According to the Railroad Retirement Board's annual report for the year 1949 there were 4,811,700 former railroad employees with less than 10 years of service, of which some 4,000,000 had less than 1 year of railroad service. The Crosser bill proposes to forfeit the annuity rights of such former employees and transfer them to the social security rolls. To begin with, none of these 4,000,000 former employees with less than 1 year of service would qualify for benefits under the Social Security Act unless they had performed additional employment covered under social security. It is reasonable to assume that practically 90 percent of these 4,000,000 employees with less than 1 year of railroad service did engage in and are still engaged in social security employment. This being the case, and because of the new effective date of January 1, 1951, of the Social Security Act, the crediting of service and compensation earned before that date will not increase the old-age insurance benefits payable to such former railroad employees.

The statement has been made by the supporters of the Crosser bill that the transfer of employees with less than 10 years of service to social security will provide higher benefits than under the present Railroad Retirement Act. There is no doubt that if a study is made of these 4,811,700 cases of former employees with less than 10 years of service, it would reveal that in at least 90 percent of the cases the employee would receive higher benefits under the present dual system of paying both railroad retirement and social security benefits.

The Bureau of the Budget in response to a request from the House committee has the following to say with respect to the section of the Crosser bill providing for the transfer of the less than 10-year men to social security:

"1. The workers with less than 10 years' service in the railroad industry—and these

make up a very large percentage of the total—would get virtually all of their benefits from the old-age and survivors insurance system and nothing from the railroad retirement system; yet under the bill they would pay for the same OASI benefits four times as much taxes as nonrailroad workers pay currently. In a sense, the short-term employees would be forced to subsidize the longer-term employees, a situation that might result in considerable discontent."

The Crosser bill provides that the retirement annuity or pension of an individual shall be reduced beginning with the month in which such individual is receiving or is entitled to receive an old-age insurance benefit under the Social Security Act.

To give an example: Take the case of a former railroad employee who retired in 1941 on 30 years of service at age 65 on an annuity amounting to \$90 a month. Assume further that during the war he had social-security-covered employment from 1942 through 1946, and applied for and received a social-security benefit of \$20 a month, which was later increased to \$40 under the social-security amendments of 1950.

By the operation of the Crosser bill the railroad retirement annuity of \$90 would be increased to \$102 a month. However, under the above provision, where the retired employee in this case was receiving \$40 a month under social security, his railroad retirement annuity would be reduced from \$102 a month to \$62 a month, which would mean that, instead of this retired worker receiving higher total benefits, he would suffer a reduction of \$28 a month in his total railroad-retirement and social-security benefits, from \$130 to \$102 a month.

The impression has been given that the Crosser bill is to provide increases in all retirement annuities and pensions payable under the Railroad Retirement Act. That is one of its purposes. It has another purpose, and that is to reduce many thousand annuities which are now being paid to individuals who have acquired rights for benefits under both the Social Security and Railroad Retirement Acts.

Mr. Lester Schoene, counsel for the Railway Labor Executives' Association before the House committee in support of the original H. R. 3669, which is now the Crosser bill, when asked by Congressman BENNETT if, under the present act, an individual could draw benefits under both the railroad retirement and social security, he stated, "That is true under the present law; yes." Then, in answer to Congressman BENNETT's question, "Is that happening in a good many cases?" Mr. Schoene answered, "I do not know in how many cases it happens, but I would say in a substantial number, yes"—see page 542 of House hearings.

Mr. Murray W. Latimer, in his testimony before the House committee—page 278—in reference to the number of cases in which retirement annuities now being paid would be reduced under this provision of the Crosser bill, stated:

"I do not know, and neither does anybody else know, how many annuities that would be reduced, but I would guess it is in the neighborhood of 20,000 or 25,000."

Of course, this is another of the proposed savings provisions to provide additional income to finance the increased and new benefits of the Crosser bill. It sounds more like robbing Peter to pay Paul.

The additional income listed as part of the \$230,000,000 made possible under the Crosser bill to finance the increases and new benefits of the bill is provided by increasing the taxable compensation from \$300 to \$400 a month. The House report on the Crosser bill states that "by increasing the limit from \$300 to \$400, additional revenues of \$80,000,000 per year would be provided."

However, of the \$80,000,000 additional taxes obtained by raising the maximum taxable and creditable compensation from \$300 to \$400, only a fraction would be available to finance the new increases and benefits proposed in the Crosser bill. The greater part of this additional revenue would be used to meet the increase in benefits that would result from the use of creditable compensation up to \$400 a month in calculating employee and survivor benefits.

The proponents of the Crosser bill and other proposals, as well as the House committee, were unanimous on one point and that was in view of the rising cost of living, which substantially reduces the standard of living of retired workers and the survivors, who are on a fixed income, the first problem to be met was the urgent necessity for increasing the amount of the monthly benefits payable to retired workers and survivors who are now on the current retirement rolls.

In order to meet this need, it will be necessary to enact legislation that will not require any administrative difficulties. There are some 400,000 retirement and survivor claims in current status; therefore, there should not be any legislation enacted at this time that will require a reexamination of such claims before any increased benefits can be paid. Such a delay is an absolute certainty under the Crosser bill.

As an illustration, under the 1946 amendments to the Railroad Retirement Act, 200,000 claims had to be reexamined in order to determine if and how much increased benefits would be payable on each claim. It required over 1 year to complete the reexamination of those 200,000 cases, and, of course, that meant considerable delay in paying increased benefits as provided under the 1946 amendments.

The Crosser bill proposes many changes which will require considerable correspondence and handling before a claim can be certified for additional benefits.

For example, the spouse's annuity. This is a new benefit which is payable to the spouse and will require the filing of an application and evidence to establish the date of marriage and age of the spouse.

The Railroad Retirement Board does not even have a record of employees who have a spouse, let alone the necessary evidence to establish the date of birth and marital status of such spouse. In addition, the Board will have to hire and train additional employees to process these cases. The present employees of the Railroad Retirement Board that are trained to handle cases under the Crosser bill will be busy handling the current new claims.

On the other hand, we have before us for consideration the Hall bill which provides for a 15-percent increase to all annuitants and pensioners, and a 33 1/3-percent increase to widows and surviving children. This bill has been referred to as stopgap legislation because it does not contain any of the controversial features of the Crosser bill, but does provide an immediate increase to retired employees and to widows and surviving children.

My study of the so-called Hall bill reveals there is a difference of opinion as to its cost. Some say it will completely wreck the railroad retirement fund in some 20 years; while others are of the opinion that it is the only sound approach to amending the Railroad Retirement Act without increasing the payroll tax or adding to the cost of administering the existing law.

Advocates of the Hall bill support their position by stating that the increases are reasonable and will not impair the railroad retirement fund. They also point to the fact that the 1948 amendments granting a 20-percent increase did not cost as much as originally estimated, due to increased wages,

with the result that the railroad retirement fund is in a healthy condition today.

I recognize the honest differences of opinion that exist between advocates of the Crosser and Hall bills.

After detailed study and serious reflection, I am convinced that there is only one position I can take to guarantee the solvency of the railroad retirement fund and to grant immediate relief to retired employees and to widows and surviving children and that is to support the bill reported by the House Committee on Interstate and Foreign Commerce and referred to as the Hall bill.

In my support of the Hall bill, I realize it is stopgap legislation, yet it provides immediate relief to those in need of assistance, and that is the crying need of the hour.

On the other hand, I am in favor of many of the provisions of the Crosser bill, if it can be shown after further study on the part of the House Committee on Interstate and Foreign Commerce that these new benefits will not endanger the financial condition of the railroad retirement fund and that the relationship between the Railroad Retirement Act and the Social Security Administration, proposed in the Crosser bill, is not one that will eventually result in having the railroad retirement system absorbed by social security.

In supporting the Hall bill I am doing so with the understanding that the House Committee on Interstate and Foreign Commerce will be charged, as the result of a House resolution, with the responsibility of conducting a complete review of all the provisions of the Railroad Retirement Act for the purpose of liberalizing them if it is deemed possible to do so.

To guarantee action by Congress on the recommendations of the House Committee on Interstate and Foreign Commerce the committee is instructed to report to the House of Representatives in the form of a bill not later than February 1952. In my opinion such procedure is a sane and practical manner of liberalizing the Railroad Retirement Act.

In conclusion, by approval of the Hall bill we will furnish immediate relief to retired employees and to the surviving widows and children. Next February we can complete the task of liberalizing provisions of the Railroad Retirement Act in general.

Clarion Call of the Governors

EXTENSION OF REMARKS

OF

HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my remarks in the Appendix, I include an editorial which appeared in the October 7 issue of the Richmond Times-Dispatch.

This editorial, in my opinion, is an excellent statement of the fundamental reason why many of us in the House are urging action at this time to reverse an unwarranted and obnoxious invasion of State rights which has operated to the detriment of the taxpayer and the honest indigent.

The editorial follows:

CLARION CALL OF THE GOVERNORS AT
CATLINBURG

The 48 governors of the 48 States, representing all schools of political thought, from

conservative Republican to liberal Democrat, took a unanimous, and historic, step at their recent Gatlinburg conference.

They demanded the right to a much larger degree of control over the Federal-State-local social-security system, and specifically the right to control publicity given the names of persons on relief rolls.

The issue here is far more important than the particular question whether receivers of public assistance should or should not be permitted to remain anonymous. As is set forth in the article on this page by Roscoe Drummond, the question goes to the root of Federal State-local relationships.

The unanimous action of the 48 governors signals a rapidly reviving insistence on the part of leaders of all schools of political thought on the importance of reversing the trend toward centralization in Washington—under way for nearly two decades—and returning to the States many powers that have gradually drifted away from them.

Time was when some of the governors would have been unwilling to go on record as favoring these changes in the social security system. Yet, today we see the chief executives of such States as New York, Pennsylvania, Illinois, and Ohio uniting with those of Virginia, South Dakota, and Mississippi in demanding that the Federal Government stop dictating to them with respect to public assistance, and leave details of administration to State and local authorities, after certain minimum standards have been met.

The issue was precipitated by several developments. One was the action of the Indiana Legislature in voting to give publicity to relief rolls in that State, where chiseling is said to have been rampant. As a result of this action, Indiana was deprived of some \$20,000,000 annually in Federal welfare funds.

Another factor was the introduction in the House of Representatives by Virginia Congressman Burr P. Harrison of a bill to repeal those provisions of the Federal Social Security Act which deny Federal relief funds to States making their relief rolls public. Hearings on this bill have been scheduled to open tomorrow before the House Ways and Means Committee.

Here in Virginia, where the situation is relatively good, we have legislation which helps to hold down abuses. Names of all persons getting public assistance are made available monthly to members of city councils and county boards of supervisors, and this is believed to serve as a check against the kind of scandalous graft and chiseling that have become notorious in some other areas.

There is no reason, however, why the General Assembly of Virginia, or of any other State, should be forbidden by Federal law to make the names of all recipients public, if it should develop that such action is desirable.

Arguments have been made against such drastic action in Virginia at the present time, but the basic thesis is sound that the State ought to have the right to solve its own problems in its own way, as far as possible, free of dictation from Washington.

In sounding a call to the Nation on behalf of decentralization, economy, and simplification, as opposed to federalization, waste, and bureaucracy, the governors at Gatlinburg have taken a momentous step. It should do much to arouse the people of America to the dangers which confront them, and help markedly to revitalize our fast deteriorating system of local self-government.

Worth Thinking Over

EXTENSION OF REMARKS

OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. HORAN. Mr. Speaker, under the privilege granted me to extend my own remarks in the Appendix of the RECORD, I am pleased to include two articles. The first is an editorial from the Sunday edition of the Washington Post. The second is an article by Henry Hazlitt in the current issue of Newsweek:

[From the Washington Post]

DOLLARS AS DIPLOMATS

What the national commander of the American Legion, Mr. Erle Cocke, Jr., had to say in Chicago about the demoralizing effects of long-continued American aid abroad makes a lot of sense to this newspaper. Dollars, Mr. Cocke maintains, do not win friends for America—they only silence enemies. Such gifts, ladled out over a long period of time contribute not to the strength of a friend but to his appetite.

It is a truism in public welfare that the hand-out is demeaning. Wealth, to be sure, carries with it social responsibilities, but wealth expended unwisely brings not independence, or even gratitude, but envy and expectancy. Moreover, a criterion of economic aid is its cost-reducing potential. Self-help was the principle of the Marshall plan, especially in the latter days of technical assistance. It is also the principle of the kind of point 4 aid which this newspaper supports—the modest, village type of assistance which helps people to use better what they already have. This is the kind of aid, in other words, which brings steel plows, not elaborate tractors and combines, to areas where the tractor would be as impractical as a television set.

In the jumps from expediency to expediency that accompany the pleas for dollars, we are in danger of forgetting that the only form of economic betterment that is permanent lies in an increase in productivity. It is quite possible, as foreign aid becomes more and more institutionalized, for free access to the American dollar to constitute a new form of subversion.

[From Newsweek of October 8, 1951]

THE REAL PROBLEMS OF FRANCE

(By Henry Hazlitt)

PARIS—To a visitor who, like myself, has not been in France since 1947, the improvement in the physical appearance of the country, and in the better neighborhoods of the cities, is in some respects striking. Much of this physical improvement must no doubt be attributed directly or indirectly to American economic aid. Yet the ECA program, as at present conceived and administered, seems largely irrelevant to the real problems that confront France today. These problems might be grouped under three main headings: (1) Lack of confidence in the Government, (2) lack of confidence in the currency, and (3) lack of incentives for new enterprises and for expanding production.

1 When a Frenchman talks about necessary fiscal or economic reforms, he is apt to add resignedly that they would only be possible under a government with a majority dependable enough to give it reasonable security of tenure and courage. But the French vote for a multiplicity of warring political parties and become collectively disgusted with the over-all situation they have collectively created.

Much has been written about the great effect of Marshall aid in turning the tide against communism in Europe. In France, the statistical proof is not impressive. In November 1946, the Communist vote came from 28.6 percent of the French electorate. In the elections this June the percentage was still 28.5. How much credit Marshall aid can claim even for this reduction of only 2 percentage points is doubtful. For in the light of all that has happened in the intervening 4 years, no French voter has any excuse for still believing the old myth that Soviet Russia is a great peace-loving nation or that the French Communist Party has the interests of France primarily at heart.

2. The Frenchman's lack of confidence in his currency is hardly surprising. He has seen the franc decline to one-twentieth of its purchasing power in 1938. He has seen it decline since 1914 to one-seventieth of its former value in terms of the dollar and to less than one-hundredth of its former value in terms of gold. No one should be astonished to learn that the former French habits of saving have largely disappeared and that the kind of saving that does take place is more likely to go into gold hoarding than into Government bonds.

Today the franc is under new pressure of several different kinds. One is the rise in world raw material prices, owing to American rearmament. Another is the increased strain on the budget for increased French armament. A third is the continuing deficit in French socialized industries (of more than 90,000,000,000 francs, for one example, in the nationalized railways in the 1951 fiscal year). A fourth is the political pressure for adopting "l'échelle mobile"—"the moving ladder," or sliding scale, whereby the legal minimum wage will automatically follow prices upward. A fifth is the persistence of a low-interest-rate policy under which the volume of money and bank credit have continued to expand by 554,000,000,000 francs, for example, from June 1950 to May of this year.

3 Finally, as a result of the whole network of exchange controls, import quotas, tariffs, price controls, allocations, social-security deductions and payments on a huge scale, and the cartelization of business, there has been a great distortion of productive incentives, a growing lack of correspondence between effort and reward, and heavy obstacles to the appearance or success of new enterprises.

I have space to cite only one example. Price-fixing in wheat is unfortunately one of the chief reasons why France's wheat production since the war has been persistently lower than the average production in 1934-38.

The major problems of France today, in short, barring the menace of Russia, are problems of internal policy. They can be lightened, of course, by continuance of American military and economic aid. But they can be solved only by a courageous recognition on the part of the French that a halt to the present inflation, and the restoration of economic freedom and production, will come primarily only through their own efforts.

MacArthur's GOP Stock Soars

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. VAN ZANDT. Mr. Speaker, the high esteem that the American people have for Gen. Douglas MacArthur is revealed further by a recent Gallup poll described in the following article that appeared last week in metropolitan newspapers:

MACARTHUR'S GOP STOCK SOARS—REPUBLICANS BACK HIM 6 TO 5 BUT DON'T THINK HE WILL RUN

(By George Gallup, director, American Institute of Public Opinion)

A majority of Republican voters with opinions on the subject, and a substantial proportion of all voters, would like to see Gen. Douglas MacArthur run for President in 1952.

Despite the fact that he will be 72 at the time of the election and has disavowed any intention of running for office, the general could command considerable popular support if he chose to run, judging from interviews with a cross section of voters throughout the country.

Each person in the survey was asked:

"Would you like to see MacArthur run for President on the Republican ticket in 1952?"

Here is the national vote:

	Percent
Yes.....	38
No.....	52
No opinion.....	10

As might be expected, Democratic voters don't relish the idea of the general as a Republican candidate.

Among Republicans, on the other hand, the vote is 6 to 5 in his favor.

Here is the party vote:

	(Percent)	Rep- licans	Dem- ocrats	Inde- pendents
Yes.....	50	41	31	
No.....	42	56	69	
No opinion.....	8	13	9	

As the above results indicate, one possible handicap to a MacArthur-for-President drive would be the comparatively cool attitude of those voters who classify themselves as independent politically.

Their opinions regarding MacArthur for President contrast sharply with their views toward Gen. Dwight D. Eisenhower.

Recent institute surveys have found that General Eisenhower is the top choice of independent voters, on either the Republican or Democratic ticket.

There has been constant speculation over whether General MacArthur might throw his hat into the political ring. At the present time, most voters are guessing that he will not be a candidate in 1952. Only about one-fourth (26 percent) think he will try for the Republican nomination.

Each person in the survey was asked a second question:

"Do you think General MacArthur will try for the nomination for President on the Republican ticket in 1952?"

	Percent
Yes.....	26
No.....	59
No opinion.....	15

Another Truman Hemorrhage of Hypocrisy

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. REED of New York. Mr. Speaker, after reading the editorial in the Wall Street Journal under date of October 8, 1951, I am sure that the people will be amazed at the man whom they call President of the United States. This outburst by President Truman is one of the worst, and it does raise a question of vital concern to all whose lives and security rest upon this type of leadership.

Under leave to extend my remarks, heretofore granted, I am inserting this editorial in the RECORD:

The autumn of 1940 was such a one as this. The clouds, if anything, hung heavier, for the stalemate war of that time had already erupted. In the United States, the people were being asked to pay higher taxes, to prepare for sacrifices, because we were rearming again. The talk in Washington was of emergencies, tanks, guns, planes—and talk of the dangers of informing the public what was going on lest the enemy be informed, too.

In just such an October, 11 years ago, we assigned a reporter in our Washington bureau to write a series of articles on the rearmament program. A key subject was armor plate. We did not desire to reveal any technical secrets, but we did think people had a right to know something of the problems involved in the then time-consuming process of making it.

Inquiry at the War and Navy Departments brought consternation; our reporter was asking for military secrets. So our reporter repaired to the Encyclopaedia Britannica and found what he needed in an essay on armor plate. At once the consternation was compounded. It was only with difficulty that we extricated ourselves from the position of having shaken the security of the country, at one point we were told that it was dangerous even to call attention to what was in the encyclopedia.

The other day President Truman took the press severely to task for "revealing" vital war secrets. At one point he made the startling observation that 95 percent of the security information of this country has already been published. It was for this reason, he said, that he had signed a security order directing Government offices to stamp as "confidential"—and hence barred from publication—whatever the Government office thought it unwise for the public to know.

To illustrate abuses by the press, Mr. Truman cited an article in Fortune magazine on atomic energy development. This, he said, was an outstanding example of dangerous and irresponsible publication, for among other things the article revealed the location of our atomic energy plants.

Fortune quickly explained (without contradiction) that the article was passed by the Atomic Energy Commission and indeed the AEC bought 500 reprints of it for distribution. As to the plant locations, it turned out there was nothing in Fortune not available in any good library or in AEC publications on public sale.

Apart from this, a little reflection suggests that it would be a bit difficult, to say the least, to hide the location of Oak Ridge, Hanford, and the other atomic plants.

A second example cited was the irresponsibility of printing pictures of the Matador, a new jet-propelled bomber. These pictures had been given to the press by the Defense Department. To the President another terrible example was the air maps of big cities which some papers had published as part of their air-raid warning publicity. But these maps were developed and sponsored by the civil-defense agencies.

Mr. Truman's expressed view was that despite these circumstances publishers have no business printing this sort of thing if they have the welfare of their country at heart. The White House later "clarified" this, explaining publishers should only refrain from publishing what came from "irresponsible" sources.

It is against the background of these incidents, a decade apart, that the President's remarks about the irresponsibility of the press and the need for censorship must be judged.

Mr. Truman says that on the one hand no one will "seriously contend that military secrets should be published in the newspapers" and that on the other no one will argue that secrecy should cloak from the people "information about their Government which should be made known to them." He interprets his orders for secrecy as a way of steering between these two shoals.

We will agree on the objectives and we will certainly agree on the difficulties. And nowhere are the difficulties greater than in the basic decision of what constitutes a military secret and what is information the people have a right to know.

Here we have instances of an encyclopedia article on armor plate, a map of a city, a picture of an airplane, and some scientific and industrial information—all of which appeared to some eyes as proper public information and to others as dangerous military secrets. These are not isolated instances. They cover 10 years that any newspaper editor could find rich in examples.

And the peculiar difficulty is that those who make the most absurd classifications can have good reason. It would indeed have been better had the Germans not known how to make armor plate. It would indeed be better if the Russians knew not of Oak Ridge or the street plan of San Francisco.

The difficulty is, Where does it end and who is the omnipotent to say where it ends? The most valuable information imaginable to an invading army would be the highway maps of gasoline companies or the history of tides and weather along the vulnerable coasts. It could be argued well that to safeguard this information would be worth ignorance of the coming rain or inconvenience for motorists floundering in a charless countryside.

Nor does the difficulty end with the little absurdities of bureaucrats which one may ridicule. It is not got out of by the most careful limitation of what subjects are military secrets.

Indeed, the difficulty is deepest when it touches such vital things as atomic energy. Here the price of that safeguarding secrecy is complete ignorance of what our servants are doing; a free people have no way to measure, check, condemn or exhort their officials. It is not likely to happen—but it is by no means past possibility—that the people should awake one day to find that the trusted safeguard of secrecy had covered up such failure that there would be no safeguard at all.

How is that difficulty to be resolved? We do not think it can be. But if it cannot be resolved, if it will remain always with us, it can be met by following a course which will bring the greatest strength and the lesser of the dangers.

That course, we firmly believe, is not more secrecy by compulsion. It is one thing to

leave to the conscience of each official what he shall talk about; it is quite another thing to give an official the power to stamp a document in red ink and hence bar everyone else from talking about it. For beneath this red ink may hide all manner of things—not simply administrative mistakes, which is not the least part of the matter, but information which all unknown to the most conscientious censor is vital to the country if it is to make collective judgments on political matters or even technical problems.

At first this rubber stamping will lead to a multiplicity of absurdities, afterwards to a snarl of confusion that will not be funny at all. Soon it will lead us to a place where little dictators of the mind will sit back deciding what we shall know and what we shall not know. The people will sit not knowing, and what is worse, not knowing what it is they do not know.

We cannot operate a democracy unless the people have full information on which to make political decisions. Equally true, we cannot utilize our full scientific and technical strength without wide knowledge for all inquirers. Knowledge is for our own benefit. It should be withheld only in the most extreme cases and even then only with the greatest caution.

We will concede there are risks in this policy, in rejecting the Truman approach. It is risky to leave our enemies free to know about us, to know our accomplishment that they may imitate them, our weaknesses on which they may capitalize, and our confusions which they may enjoy. But knowledge for the people is, we firmly believe, the source of so great a strength that it will outweigh these risks. This is as true of free scientific knowledge as of political ideas. Real strength grows here, too, where ideas can feed upon one another.

Fortunately our enemies live where ideas stagnate, mired in this very sort of official secrecy which is now thrust at us. So if they steal from us, they will still be forever imitators and so forever lagging. They may profit a little from our seed, but it is better by far to risk giving them a little that we may acquire so much.

We believe that we strengthen ourselves as we make knowledge a wider domain. When we narrow it we weaken ourselves far more than we would help our enemies by enlarging it. In this jungle of a world it is safer to walk in the light than in the shadows.

National Association of Radio and Television Broadcasters of the Twelfth District Oppose Senate Joint Resolution 76

EXTENSION OF REMARKS OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. REES of Kansas. Mr. Speaker, under leave accorded me by the House, I am including in the RECORD a resolution adopted by the members of the National Association of Radio and Television Broadcasters at their twelfth district meeting in Wichita on September 28, 1951. I believe this resolution is of sufficient importance that the Members of Congress ought to have a chance to read it.

Whereas proposed Senate bill 1579 and the companion resolution, Senate Joint Resolution 76—the so-called Benton bills, authored

and initiated by Senator WILLIAM BENTON of Connecticut—would establish a presidentially appointed board of review charged with reviewing the program performance of radio and television stations and reporting conclusions to Congress and the Federal Communications Commission annually; and

Whereas such procedure, in the view of the broadcasters of the twelfth district of the National Association of Radio and Television Broadcasters, would be contrary to guarantees expressed in the Bill of Rights, insofar as the proposed board would have the implicit power of censorship; and

Whereas the legislation, if adopted, would impose even further regulation upon a medium that stands as one of the important national guardians of free speech; and

Whereas such proposals are in contradiction of the rights of the people to a broadcast medium free of government program surveillance. Be it

Resolved, That the members of the twelfth district of NARTB, in convention assembled, unanimously and vigorously oppose this legislation, and be it further

Resolved, That the NARTB president and staff continue their efforts to keep all broadcasters, members and nonmembers of the association, fully informed on this subject, and be it finally

Resolved, That copies of this resolution be sent to the chairmen of the Senate and House Interstate and Foreign Commerce Committees, to the chairmen of such subcommittees as may be designated to hear testimony on these legislative proposals, and to the Senators and Congressmen of Kansas and Oklahoma.

Mounted Cavalry Should Be Reactivated

EXTENSION OF REMARKS OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following remarks in behalf of my bill, House bill 5156, to reactivate the Mounted Cavalry as a basic branch of the United States Army.

Mr. Speaker, in behalf of my bill, I ask: Did the experience of General Wainwright receive any consideration at the hands of the infantry generals catapulted into high command because of their good fortune on the battlefields of Western Europe with its unique network of roads and with no cavalry on either side, a purely vehicular road war? None whatever. Neither did they pay any attention to the counsel of Patton, Truscott, and other Cavalry generals of much riper experience than they. Now Korea, with its lack of roads finds them off base with an army on wheels.

In this connection, I would like to insert the following portion of a memorandum submitted to Maj. Gen. John Herr, United States Army, retired, the last Chief of Cavalry of the Army, by Gen. Jonathan M. Wainwright, United States Army, retired, on September 24, 1951:

Long have I advocated the retention of at least one Mounted Cavalry Division at full strength with horse artillery, armed with the pack howitzer which may be moved in pack

(five loads to each piece) or may be drawn by horses. Such a division would be immediately available in an emergency or would serve as a nucleus for cavalry expansion if necessary.

It would appear appropriate to bring home the famed First Cavalry Division, reorganize it, reequip it, mount it, and officer it with experienced cavalry officers while there are some still left. They would all be in higher grades but could readily train the junior officers and soldiers.

In the campaign in north Luzon, December 1941 and January 1942, I withdrew my corps of four Philippine Army infantry divisions and the Twenty-sixth United States Cavalry, under orders of the high command, from Lingayan Gulf to Bataan, 140 miles.

These Philippine Army divisions, while they later became good defensive troops, were initially only partly mobilized, partially trained, and poorly equipped. The Twenty-sixth Cavalry was the only Regular Army unit available to me, so I used it very extensively to cover my withdrawal. This it did in a masterful and heroic manner. Without it I doubt if the withdrawal of my corps would have been successfully accomplished.

As the last senior commander to employ cavalry against an armed enemy, perhaps my opinion of the value of mounted cavalry is entitled to some consideration.

JONATHAN M. WAINWRIGHT,

General, United States Army, Retired

The Item Salutes Its News Boys and Girls

EXTENSION OF REMARKS OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. PHILBIN. Mr. Speaker, under unanimous consent to extend and revise my remarks in the RECORD, I include therein a splendid editorial from the celebrated Clinton Daily Item entitled "The Item Salutes Its News Boys and Girls."

This editorial, which was written by the Honorable Orra L. Stone, distinguished editor of the Item, admirably points up the important place of news boys and girls in our American life, the contributions they make, and the benefits they receive from their valuable work.

I congratulate Mr. Stone for his excellent editorial on the subject, which I know will be greatly appreciated by all the news boys and girls in his locality.

THE ITEM SALUTES ITS NEWS BOYS AND GIRLS

This is National Newspaper Boy Day in the United States and the Item halls the opportunity to eulogize the boys and girls who daily, in rain, snow, hail, sleet, and frigid cold faithfully cover their respective routes uncomplainingly in order that the thousands of subscribers of this newspaper may enjoy, at their firesides, the news of each recurring day.

While we have week-to-week and month-to-month days set aside in honor of many national movements it is doubtful if any is of greater importance than National Newspaper Boy and Girl Day.

Can any reader of the Item realize what their plight would be if they were forced to don outer garments and walk to a distributing center in order to obtain a copy of their favorite newspaper? If such were

the daily program it is self-evident that many copies would remain on the counters unsold and unread.

Stories of many heroic deeds performed by newspaper boys and girls appear almost daily in the press of the Nation, while many of their accomplishments, which are nonetheless worth while, are never brought to the attention of the public.

Even though we cannot single them out individually their constant faithfulness affords this newspaper an opportunity to give them a pat on the back.

Their work is just as important as that of the employees of the Item at its place of publication who hurriedly place in type all the news of a 24-hour period in as few columns as possible as without the source that enables the newspaper boy and girl to deliver the product to the homes of subscribers the Item would fall of its purpose.

The 500,000 newspaper boys and girls throughout the Nation are engaged in a service that sets a fine example for the youths of their respective communities.

It requires a steady, ambitious, and faithful boy and girl to deliver newspapers 6 days a week and it should be recalled by the readers that this group is not composed of drones, idlers, and malicious mischief makers, but rather youths who are building for the future and who are acquiring knowledge of the value of money which will stand them in good stead in the days ahead.

To all the Item news boys and girls, we salute you this day and wish you every success in the future.

The Rewards of Soil Conservation

EXTENSION OF REMARKS OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the Record, I include the following summary of remarks by H. H. Bennett, Chief, United States Soil Conservation Service, at the annual award presentation, twenty-ninth national convention, Izaak Walton League of America, Inc., at Cincinnati, Ohio, April 6, 1951:

THE REWARDS OF SOIL CONSERVATION

I am proud and honored to receive the Izaak Walton League's annual founders' award—for myself personally and in the name of those other conservationists with whom I have been closely associated. Your election of me as a soil conservationist for this year's award demonstrates what I have stated many times in speaking before sportsmen and other groups concerned with the conservation of our wildlife and allied natural resources; namely, soil and water conservation is invariably helpful to wildlife.

CONSERVATION ERA

The unprecedented attention to and progress in soil and water conservation which we are experiencing in today's conservation era is contributing as much, if not more, to the welfare of game, fish, and other beneficial wildlife as anything man has ever undertaken in this country or anywhere else.

If you, as national leaders in wildlife conservation, did not agree essentially with this proposition, I would not today be the recipient of this beautiful bronze plaque awarded for contributions to conservation of America's soil, forests, grasslands, water, and wildlife.

In this new era, conservation of land, water, forest, grass, cultivated crops, and wildlife are, for the first time in history, being tied together and scientifically appraised on the basis of land capability and need. This is the basis of modern soil conservation. Without this basic groundwork there can be no such thing as lasting conservation of our soil or other resources which depend on the soil for their perpetuation. This is one of the physical laws that were set up by nature but pretty generally overlooked until recently.

INTERDEPENDENCE OF LAND, WATER, PLANTS, AND ANIMALS

Nature's laws were so contrived that land, water, plants, and animals all should—and under natural conditions do, with the exception of civilized man—exist in harmony and interdependence for perpetual productivity. So, it likewise is a mandate of nature of precisely the same order that land and water must be treated and used according to capability and need.

The practical application of this principle is being demonstrated on a progressively wider scale from year to year all over the Nation by farmers in soil conservation districts receiving technical assistance from the Soil Conservation Service. This modern, democratic approach, by enlisting the cooperative effort of landholder, Government and the public together, is proving beneficial to an unprecedented degree to individuals and the public alike.

The Soil Conservation Service in fulfilling its authorized responsibilities is committed to doing everything possible within its resources to provide technical assistance in dealing with the erosion problem, siltation, floods, and water wastage. Thus, both its soil and water conservation activities are continuously geared to the needs of land and water users. We define soil conservation as the treatment of land with all those applicable measures needed to keep the land permanently productive while in use.

Similarly, we define water conservation, which we have always considered an inseparable part of soil conservation, in the following manner: Water conservation is the control, protection, management, and prudent use of water in such a way as to maintain crop, grazing, and forest lands, vegetative cover, and wildlife for maximum sustained benefits to agriculture, industry, commerce, and other elements of our national economy.

SOIL-CONSERVATION PROGRAM EMPHASIZES BIOLOGY

At this point, I should like to mention some of the biological aspects of our technical program. We give particular attention to training in biology for our farm planners and other technicians who work with farmers out in the their fields and pastures (not in an office). In planning farmers for conservation farming the technician considers the value of safeguarding various types of land, not only for crop production but also with an eye to any helpful modification or special practice that will result in more wildlife. He is expertly equipped to do this, because his understanding of the biological aspects of soil and water conservation is dovetailed with related techniques of land, hydrology, agronomy, and engineering.

I personally have seen how game has been driven from farms, watersheds, and larger areas by soil erosion. Fish, waterfowl, and furbearing game have disappeared from too many places because the streams and lakes have been polluted and filled with erosion debris. In many places the sources of water have dried up. I have seen these things in our own country, in Latin America, and in parts of Africa.

We have much to account for here in America in the decimation of the game and fish that abounded in our forests, meadows, and

streams in the days of Washington and Jefferson. And we can't blame the severe wildlife depopulation of many localities entirely to guns and dogs. We must credit a very substantial share of it to the axe and plow.

By and large, I am happy to say, wildlife conservationists and sportsmen in general have an unusually good understanding of the farmland conservation work which is progressing so rapidly all over the country, and a real and growing appreciation of its beneficial effect on wildlife. This positive support of soil and water conservation by such important groups as the Izaak Walton League is most encouraging, and is of real help in speeding the job along.

Less than 2 weeks ago, for example, I took part in the fourth semiannual seminar of the Marine Laboratory of the Texas Game, Fish, and Oyster Commission at Rockport, Tex. This seminar was participated in by marine biologists and other scientists, representatives of private industry and Government, college students, and soil and water conservationists. I found all of them genuinely interested in the bearing uncontrolled soil erosion has on the siltation of streams, reservoirs, and bays, and on marine and fresh-water life. I took particular pains to emphasize the fact that the only way by which water pollution from silt (eroded soil) can be controlled is by the widespread adoption of soil and water conservation practices on the land. Contour farming, strip cropping, terracing, good pasture and range development and management, proper woodland management, land-use changes, and various other specific land-management measures which have proved to be successful in the control of soil erosion and runoff must be applied to the land by those who use the land.

It is not enough to treat just part of a farm, or part of a watershed, or part of any other area of land. Every acre of cropland, pasture land, farm woodland, and idle land must be treated according to its needs and each acre used according to its capabilities. This is true, whether it is in major watersheds for flood control and silt-pollution abatement purposes, on individual farms and fields for erosion control, or through such group undertakings as conservation done by farmers in their soil conservation districts with which we cooperate at their request.

According to recent publicity, too many of our citizens seem to have lost something in the way of integrity, substituting gambling and favors for honest work, mendacity for truth, etc. But we can't cheat nature.

So, let's not lose the resources that nature gave us by refusing to work diligently with nature. Let's follow one of nature's laws that conservationists discovered some years ago—the law of treating land according to capability and need. Let's recognize the fact that without obedience to this law, there can be no lasting conservation of vegetation, soil, water, forests, wildlife, and people.

Recently the Soil Conservation Service's basic concept of safeguarding agricultural land was recognized for the first time at a significantly broader national level. I wonder how many noticed it?

I refer to that part of the reorganization announcement of the Secretary of Agriculture, on February 15, 1951, relating to conservation activities. This was the announcement that the basic soil conservation objective of the department would be guided by the principle of treating land according to kind and need.

This, I think, is the first time any nation ever announced the acceptance of this utterly basic principle to the conservation of our most indispensable resource—productive land.

I think I should add that our farmers are getting along with the conservation job faster than people seem to know about. For example, we completed the conservation job on 5,000,000 acres of land in 1942 and on 26,-

000,000 acres in 1950. This was an increase of 388 percent—nearly five times as much work done—with operating facilities increased during the 8-year period by only 54 percent. This is what we have been striving for—progressive advancement in soil conservation work. We still are not going fast enough, to be sure, and will never be going fast enough until the job is finished, because until it is finished we will continue to lose soil to uncontrolled soil erosion.

Now, I think I should announce one other thing while feeling so good over the award you have given me: Soil conservation is definitely a national investment and, what is very important, it does not put the Government deeper in debt. Rather, it yields dividends.

Beef Price Controls: A Colossal Hoax

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks, I am including a summary of a study made by Economic Trend Lines which is highly illuminating and which the public should understand:

The consequences of the effort to control beef prices have now become glaringly evident. Chiefly they are as follows:

1. The marketing of beef animals and the production of beef have been drastically reduced. The American Meat Institute has announced that the movement of beef into consumption through usual distribution channels since the imposition of price controls was more than a quarter of a billion pounds below the like period a year ago. Purchases of cattle during this period by the 95 leading beef-producing plants (doing 75 percent of the business) were 62.5 percent below the purchases in the same period of 1950.

2. Farmers are shipping fewer cattle to terminal markets. Since the imposition of price rollback and price controls, farmers have sent 17 percent fewer cattle to these markets. For the week ended August 26, 32 terminal markets received 165,593 head of cattle compared with 203,455 head in the same week a year ago. The Department of Agriculture has this pertinent comment to make, "Consumption of beef in the second half of 1951 is now expected to be less than previously estimated because considerably more cattle are being added to herds." This is the Government propagandist's way of saying that farmers are refusing to market their stock.

3. Meanwhile marketing of beef cattle and beef through other than regular channels has been mushrooming. In the September 1950 issue of the Livestock and Meat Situation, the Department of Agriculture pointed out that "If consumers use somewhat more than half of their deep-freezer and locker space for meat, they will have room for 1,000,000,000 pounds, or about 50 percent more than the meat and meat products in commercial cold-storage houses on July 1, 1950." As practically anyone can determine by simple observation, there is a vastly increased volume of meat that is bypassing meat packers and going directly into frozen-food storage.

In this connection a strange phenomenon has appeared. Although the prices farmers have to pay for feeder stock they buy for

fattening are so high in relation to price ceilings for the finished animals that the feeding profit approaches the vanishing point, the shipment of feeders is running far ahead of a year ago. How many of these feeders are going directly into consumer food lockers and frozen-food storage without fattening?

4. Consumer resistance to beef prices, even at roll-back levels, indicates that if the Government had permitted an unrestricted volume of beef to move into consumption channels, the prices of beef would have dropped substantially without any recourse to roll-back tactics. The Department of Agriculture, in fact, is predicting such a drop in beef prices with any marked increase in marketings this fall. Roll-back prices and controls simply acted to reduce the available beef supply and sustain prices. Even though beef production is running 13 percent under a year ago, the inventories of beef in commercial cold-storage plants on July 1, 1951, were 25 percent above inventories a year ago.

How has the free market adjusted to this situation? With beef prices out of line in relation to comparable foods, consumers have turned to poultry and eggs and other meat substitutes. Egg prices are sustained at unusually high levels even though production has been running at a rate that required immense Government support purchases a couple of years ago. In the poultry business, the commercial production of broilers is running almost double that of 2 years ago. The turkey crop this year is expected to be the largest on record. Pork production and consumption is close to record levels. Pork prices, however, did not follow beef prices to atmospheric heights but are currently close to pre-Korean levels.

In a free market it is more than likely that beef prices would long since have adjusted competitively to the prices of alternative foods. So a chief consequence of the roll-back price controls promulgated by Price Controller DiSalle and his cohorts has been to reduce ruinously the market for beef by encouraging the use of substitutes.

The withering hand of the Government bureaucracy has been laid on one more food industry. Those who doubt or who are not familiar with bureaucracy's blighting touch need only to study the fate of butter, which was a casualty of Government price controls in World War II. Under Government assistance in the form of price supports and promotion of the margarine substitute, the consumption of butter has sunk to new low levels, the lowest in the history of the industry.

Government support of potato prices was discontinued a year ago, at the urgent behest of important potato-producing sections, but not before potato consumption had dropped by 20 percent under price support. Can the glaringly unwarranted measures of an inept administration sabotage another food industry without evoking an outraged protest? How much is homo Americanus 1951 willing to take?

Mine Incentives Payment Bill

EXTENSION OF REMARKS

OF

HON. WALTER S. BARING

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. BARING. Mr. Speaker, I have today introduced a new mine incentives payment bill which is a revised ver-

sion of H. R. 2862. Because I believe that the small and strategic miners have not been dealt with properly by the agencies, and the Defense Materials Procurement Agency will not take care of their needs, I have introduced this new legislation. The new bill puts the Mine Incentive Payments Division within DMPA, where it now belongs. Nonproducing prospects of merit are made eligible for the automatic monthly exploration grants. The bill also provides that material may be diverted to industry instead of going into the national security stockpile if the Administrator of DMPA rules there is a critical industrial shortage. It is my belief that the bill will make up for the deficiencies and the shortcomings which have characterized the defense minerals program.

William N. Oatis

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. MURRAY of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a resolution on William N. Oatis which was adopted by Wausau Aerie, No. 251, of Wausau, Wis., of the Fraternal Order of Eagles on September 11, 1951:

RESOLUTION ON WILLIAM N. OATIS

Whereas William N. Oatis, Associated Press bureau chief in Prague, Czechoslovakia, a free newspaperman who was performing his duties according to the standards and criteria of the free press of the world, was brutally snatched and imprisoned by the Communist Government of Czechoslovakia without explanation, and

Whereas Mr. Oatis was arrested and held in detention without access to friend, Embassy representative or trusted legal counsel; and

Whereas he was brought to trial and accused of "insisting on obtaining accurate, correct, and verified information," which is the definition of the work of a free press; and

Whereas he was forced into admission of espionage because of his reporter's instinct for presenting the factual rather than the fictional; and

Whereas he was convicted and sentenced to 10 years of imprisonment by a trial which was universally condemned by all free nations as an outrageous "kangaroo court," completely bereft of the principles of justice and the dignity of the human being; and

Whereas by its action, the Communist-dominated Czech Government showed its scorn for the principle of freedom of information and its hatred for our free world; and

Whereas representatives of the Soviet News Agency Tass have the free run of the United States of America, and are permitted to attend press conferences at our national seat of Government, at which often much "off-the-record" information is discussed: Now, therefore, be it

Resolved, That Wausau Aerie, No. 251, of the Fraternal Order of Eagles, urges the Federal Government and its agencies to be unceasing in its efforts to secure the freedom of Mr. Oatis by honorable means, and we also

offer our support and the vitality of our membership to the executives of the Associated Press in their campaign to secure the release of Mr. Oatis by the communication of the true facts of the case to the free peoples of the world; and be it further

Resolved, That Aerie No. 251, of the Fraternal Order of Eagles, urges the Federal Government to bar the correspondents from the Soviet new agency Tass as well as all satellite nation correspondents from official Government press conferences where vital information may be revealed until the release of Mr. Oatis has been secured.

Adopted this 11th day of September 1951. Aerie No. 251, city of Wausau, State of Wisconsin.

CLIFFORD WAGNER,
Worthy President.

Attest:

FRANK J. DEICHSSEL,
Secretary.

Examine the System

EXTENSION OF REMARKS OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr KEATING Mr Speaker, perhaps the present system of selecting candidates for admission to the Military and Naval Academies is the best that can feasibly be devised. Certainly, however, no possible harm and probably much good would come from a careful review of present procedures.

Members of Congress should be the first to insist that any special privileges or powers they have enjoyed should be relinquished if the national interest so dictates. All I ask is that the Committee on Armed Services thoroughly and dispassionately canvass the situation.

Judging from the volume of favorable mail from all over the country which has greeted the introduction of my bill directing a congressional investigation, I am convinced that the American people would welcome and applaud such an inquiry. Under leave to extend my remarks, I include an editorial from the Bethlehem (Pa.) Globe Times. The editorial follows:

EXAMINE THE SYSTEM

Much has been said and written about violation of the West Point honor system that led to the wholesale dismissal of cadets. Little has been said how these men got to the Academy in the first place. Along this latter line Congressman KENNETH B. KEATING has come up with a resolution in the House. It would authorize the Committee on Armed Services to conduct an inquiry and make recommendations with regard to any changes which should be made in the manner of selecting and nominating candidates to the Naval and Military Academies. In discussing his proposal, Congressman KEATING said that the greatest contribution Congress can make to the situation created by the West Point scandal is to seek out the causes of dishonesty which has been revealed and try to prevent a repetition.

"No doubt a general lowering in moral standards has been a contributing factor," the Congressman said, continuing: "Without question the young men involved can point to more serious examples of betrayal of trust and disloyalty to country which have either

gone unpunished or with a slap on the wrist. Yet it seems to me a more basic cause may be the reason why widespread cheating exists at the military academy. Perhaps the fault lies, at least in part, with Congress.

"It has long appeared to me highly questionable whether the candidates for nomination to the service academies should be named primarily by Members of Congress. What peculiar qualification does a Senator or Representative have which enables him to select young men who are likely to make the best Army, Navy, or Air Force officers?

"I am not at all sure, however, that a higher caliber of youth in both character and ability would not result from selection through competitive examination or screening by an independent board or otherwise."

As to the present method, Congressman KEATING is not alone in doubting the efficacy of the present system. Many is the citizen—whether in Bethlehem or any part of the Nation—who often asked himself how "so and so ever got into the Academy." The answer is obvious—so and so's people knew somebody who knew the Congressman. Generally Academy nominations go to the lad whose folks have influence with the voters who sent men to Congress. Congressman KEATING may not have a solution, but he has offered some food for real thinking.

Dependency Allotments for Servicemen

EXTENSION OF REMARKS OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include the following resolution adopted by the Mississippi Department, Veterans of Foreign Wars:

Whereas many parents of men now on the battle front in Korea are in dire circumstances through no fault of their own, and are in many instances barred from Government aid by the rigid requirements of the Dependency Assistance Act of 1950, which set up the dependency allowances, or the so-called Q allotments, and

Whereas the morale of these men is not helped when they learn that their aged or invalid parents are hard-pressed to pay grocery bills, while other citizens are enjoying the greatest affluence they have ever known; and

Whereas there is no true equality of sacrifice when the parents of a boy now trying to push the Reds from "Heartbreak Ridge" in Korea are denied help from their Government just because the soldier was taken direct from the classroom and sent to the thirty-eightieth parallel, and has no way of proving he contributed at least 50 percent to his parents' support before being loaded on a transport. Now, therefore, be it

Resolved by the council of administration of the Department of Mississippi, Veterans of Foreign Wars, meeting at Jackson, Miss., on September 30, 1951, That the Congress be called upon to reexamine the requirements of the Dependency Assistance Act of 1950, and if it be found from the experience of the Congressmen and Senators that too many hardships are worked on widowed mothers of servicemen now at the front in Korea, or on the invalid fathers and mothers of other such fighting men, that steps be taken to so amend the law that these worthy people may be taken care of by a Government which is spending untold billions for defense; be it further

Resolved, That a copy of this resolution be sent to each of our Mississippi Senators and Congressmen, and that copies be given the press and radio.

Approved:

DELOS H. BURKS,
Department Adjutant.

Soil Conservation in Wisconsin

EXTENSION OF REMARKS OF

HON. GLENN R. DAVIS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. DAVIS of Wisconsin. Mr. Speaker, the Soil Conservation Service, under its capable State conservationist, Marvin F. Schweers, has been doing an effective job in Wisconsin. Mr. Schweers and his district conservationists have never stopped searching for better administrative and functional methods. Then, too, there has been a family feeling among members of the service of Wisconsin, both in their fraternal effort to do a good job and in their attitude toward the farmers and local agencies with which they work.

I have asked this permission to place these remarks herein, Mr. Speaker, in order that I might say a well-deserved word of compliment and insert a letter from my friend Charles Skaife, district conversationist of my home county, in which he enclosed a letter from State Conservationist Schweers.

UNITED STATES
DEPARTMENT OF AGRICULTURE,
SOIL CONSERVATION SERVICE,
Waukesha, Wis., October 4, 1951.

HON. GLENN R. DAVIS,
Member, United States Congress,
House Office Building,
Washington, D. C.

DEAR GLENN: You have on several occasions asked me to keep you posted concerning Soil Conservation Service developments in Wisconsin. Thus far I have never fulfilled your request in this connection. However, I believe you will be interested in the enclosed letter that our mutual friend and my associate, State Conservationist Marvin Schweers, sent to members of soil conservation district governing bodies in the State informing them of the assistance the Service will be making available to their districts during the 1952 fiscal year.

I believe this enclosure pretty well expresses the philosophy of the Service in its sincere desire to serve the farm people of Wisconsin. Furthermore, it points out how we are trying to correlate our responsibilities with PMA through the medium of locally organized and directed soil conservation districts, which we assist.

Looking forward to another pleasant field trip with you following the close of the current session of the Congress, I am,

Respectfully yours,

CHARLES W. SKAIFE,
District Conservationist.

UNITED STATES
DEPARTMENT OF AGRICULTURE,
SOIL CONSERVATION SERVICE,
Madison, Wis., September 28, 1951.
To: Soil Conservation district supervisors.
From: M. F. Schweers, State conservationist.
Subject: SCS assistance for 1952 fiscal year.

According to the supplemental memorandum of understanding entered into between

your district and the SCS "the Service will make available the assistance provided for in accordance with schedules to be furnished by the Service to the district . . . on or before July 31." The Agriculture Department appropriation bill was but recently enacted into law and we did not learn of our State allocation until a few weeks ago. Hence, this delay in writing you.

Before listing the types and quantities of assistance to be made available, we want to discuss briefly a few matters we believe will be of interest to you. Some of the information and thoughts will be new to you, some old. Our sincere desire to be of service to you supervisors has resulted in our repeating some references which we believe to be both timely and important.

OUTLOOK FOR STAFFING DISTRICTS

Our State allocation for the 1952 fiscal year is about equal to the amount available last year. Because of an expanded program and increased expenses we will have to spread our manpower somewhat thinner. We are planning to assign farm planners to two soil-conservation districts not previously staffed. Operating expenses, such as rentals, repairs, etc., are advancing. We understand that at least a couple more counties will be created as soil-conservation districts this fall. If so, their governing bodies will be requesting assistance of the Service.

All in all, our present plans call for permanent staffs about as they are today. We will be forced to make a reduction in the employment of part-time help to take care of the added costs and expenses referred to above.

CONSOLIDATION OF OFFICES

We are doing our best to fulfill Secretary of Agriculture's directive No. 1278 to provide one-stop service to farmers. We sincerely hope that it won't be too long until all agricultural agencies are housed together. At least, the consolidation of SCS, PMA, and FMA is a step in the right direction. Furthermore, this alignment should contribute to providing greater assistance to farmers, resulting in the establishment of more practices on the land and increased numbers of soil-conservation district cooperation.

PRODUCTION AND MARKETING ADMINISTRATION ASSISTANCE

Through the encouragement of the State PMA Committee, county committees throughout Wisconsin have set aside sufficient 1951 ACP program funds to provide for the employment of about 2,500 man-days of aid assistance. These men will be hired by PMA county committees and will work under the supervision of service personnel primarily on 1951 ACP approved practices.

PMA county committees, with the approval of the State committee, may also assign 5 percent of their program funds to the SCS for technical services. The several types of activities involved under this cooperative program were discussed in detail in our letter acknowledging your 1950 annual report.

Soil-conservation measures, such as strip cropping, may be marked out this fall with the assistance of PMA aids. These, with similar measures, will qualify for 1952 ACP payments.

WORK PLANS FOR 1952

Before long you supervisors, in consultation with representatives of the Extension Service, PMA, Conservation Department, SCS, and others, will be getting together for your annual work-plan development meeting.

At this point we should like to mention that according to memorandum No. 1278 the service has been assigned the technical responsibility for ACP permanent-type practices. Our assignment in this regard consists of—

"(1) a finding by SCS that the permanent-type soil-conservation work contemplated is

needed and practical on the farm; (2) necessary site selection, other preliminary work, and lay-out work of the practices; (3) the necessary supervision of the installation; and (4) certification of performance (or application of the practice to the land)."

To fulfill the above Service obligation, much of which will be carried out on farms of district cooperators, and continue normal soil-conservation district operations, we are taking the liberty of suggesting that you consider having your annual work plan dovetail with the agricultural resources conservation program for your county, which you will have a part in preparing. For your convenience we are quoting a portion of 1.278 having to do with this over-all program:

"Within the State-wide programs formulated by officers of the Department of Agriculture and others . . . the PMA county committee and the local technicians of the Soil Conservation Service shall, working with the governing body of the soil conservation district, jointly formulate and determine the soil-conservation policies and programs by conferences or other means to be initiated by the chairman of the county PMA committee. The county agent for the county and the county supervisor of Farmers Home Administration shall be invited to participate in these deliberations."

The basic objective of the Department is the focal point around which ARC programs are to be developed. You will likely recall this goal being as follows.

"The basic physical objective of soil-conservation activities by Department agencies shall be the use of each acre of agricultural land within its capabilities and the treatment of each acre of agricultural land in accordance with its needs for protection and improvement."

In reviewing the above you will note that its scope and intent is in complete harmony with the objectives of your district.

SCS ASSISTANCE FOR 1952

Unless unforeseen changes are made in our fund situation during this fiscal year, the Service will make available to you the part-time services of the district conservationist and other personnel to the extent indicated:

(The number of personnel per soil conservation district varies directly in proportion to workloads. As an example, the following insert appears in the letter sent to supervisors of the Waukesha County Soil Conservation District:

"One work-unit conservationist (farm planner), full time. The soil scientist assigned to work group office will prepare conservation surveys as needed, part time. Clerical assistance will be provided from work, part time group office."

We have made little, if any, mention of the key to the success of the soil- and water-conservation program, or any agricultural program for that matter. It's the family out there on the land. Everything we plan and do should be aimed at improving its status and result in sound and complete conservation.

In the event you have any questions concerning information contained in this communication please consult your district conservationist.

Extending personal regards, I am

Sincerely yours,

M. F. SCHWEERS,
State Conservationist.

P. S.—We believe you will be interested in knowing that Wisconsin's accomplishments during the first half of 1951 as compared to the first 6 months of 1950 is second to none in the region. We sincerely thank you, the fine farm families of your district, and all others who collaborated with us in making this record possible.

M. F. S.

Proposed U. N. Code Criticized as Bar to Anti-Red Undergrounds

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record, I wish to include the following article taken from the New York Times of September 26, 1951, entitled "Proposed U. N. Code Criticized as Bar to Anti-Red Undergrounds," which was written by Mr. A. M. Rosenthal:

PROPOSED U. N. CODE CRITICIZED AS BAR TO ANTI-RED UNDERGROUNDINGS

(By A. M. Rosenthal)

UNITED NATIONS, N. Y., September 22—Organizations representing Americans of Polish and Lithuanian descent have issued strong warnings that in international legal code to come before the United Nations General Assembly in the fall could "outlaw" western support for anti-Communist underground movements in the Soviet world.

It was revealed today that the Lithuanian-American Council and the Polish-American Congress had filed separate protests against a code drawn up by the International Law Commission setting down offenses against the "peace and security of mankind."

The charges were centered on provisions in the code making it an international offense for authorities of a state to organize, encourage or even tolerate "activities calculated to carry out terrorist acts" or stir up civil war in another country.

Both complaints attacked Vespasian V. Pella, Rumanian Minister to the United States in 1948, and said that he had provided the inspiration for the code. "This in our opinion speaks for itself," said the Lithuanian-American Council.

But Mr. Pella, now living in New York, bitterly denied that the code was meant as a blow at liberation movements. He said it was a reflection of General Assembly resolutions denouncing attempts to stir up civil war, as in the case of Greece.

Mr. Pella said that he was a refugee from Communist Rumania, that he was under sentence of death there and that all his property had been confiscated. Mr. Pella added that he was a member of the Rumanian National Council in Washington that works with the National Committee for a Free Europe.

One legal expert gave it as his opinion that at it stood now the code could outlaw the work of the National Committee for a Free Europe and its Radio Free Europe, which beams anti-Communist programs toward the Soviet world. At the offices of the National Committee, 350 Fifth Avenue, officials had no comment but said they would study the case.

The session of the International Law Commission at which the code was drawn up took place in Geneva this summer. The members of the commission sat as experts in their own right, and as official delegates from their countries, and there were no Iron Curtain experts at the session.

UNITED STATES EXPERT VOTED FOR CODE

Mr. Pella said that the expert from the United States, Prof. Manley Hudson, voted for the code which also denounces aggression as an international crime. The code is on the agenda of the General Assembly session opening in Paris on November 6. Professor Hudson himself declined to comment.

The former Rumanian Minister also said that the code was not based on his opinion but was largely the work of a Greek expert, Prof J Spiropoulos, who served as rapporteur of the International Law Commission.

The protest of the Lithuanian-American Council was sent to Gen. Omar L. Bradley, chairman of the Joint Chiefs of Staff. It asked that the governments and groups concerned be allowed to express their opinion on the case "from the point of view of military security in general and in particular in connection with the peculiar situation in the strategic Baltic area."

The Polish-American Congress sent its complaint to members of the House of Representatives and the Senate. The letter said: "Any liberation movement or activities within the nations captured by the Soviet Union will fall within the definition of civil strife or creating a state of terror."

The protests were similar in some respects, and both included an attack against the code as weakening the International Convention on Genocide. The charge was that the inclusion of the crime of genocide in the "controversial and highly political" code was a deliberate Soviet effort to create confusion regarding the convention itself.

Judges as Witnesses

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr KEATING. Mr. Speaker, under leave to extend my remarks, I include an editorial from the El Paso (Tex.) Times. The editorial follows:

JUDGES AS WITNESSES

Justices of the United States Supreme Court would be barred from testifying as character witnesses or on matters of opinion under a bill soon to be considered by the House Judiciary Committee and endorsed on July 9 by a subcommittee.

Representative KEATING, Republican, New York, who introduced the bill, has declared that he was motivated by the appearances of Justices Frankfurter and Reed as character witnesses for Alger Hiss (in his first trial).

Justice Reed has been subpoenaed by the Hiss defense. Justice Frankfurter was a volunteer witness. Chief Judge Magruder, of the United States Court of Appeals in the First District, was also a character witness for Hiss.

An alternative bill, introduced by Representative SMITH, Republican, Wisconsin, would provide simply that no Federal judge could be compelled to testify as to character or to appear as a witness if similar testimony could be obtained from other witnesses.

Representative KEATING points to the possibility of some smart lawyer subpoenaing most or all members of the Supreme Court as witnesses in a lower court trial. Then the Court would be unable to pass on an appeal in the case. Reed and Frankfurter both disqualified themselves in the Hiss appeal.

An earlier case, of 1905, has been unearthed in which two Supreme Court justices appeared on the list of witnesses. There is no indication that they were actually called to the witness stand.

Prior to making its favorable report on the Keating bill, the House subcommittee had received a letter from Chief Justice Vinson, declining comment on the measure. Vin-

son said he and other justices felt that they should not go on record. Deputy Attorney General Ford had advised the subcommittee that the Justice Department also preferred to make no recommendation.

The Keating bill ought to be made into law.

Justices of the United States Supreme Court never should be called upon to testify as character witnesses. Their task is to interpret the law, to uphold the Constitution, and endeavor to see that justice is done in cases that come before them. They should never be called upon to play any other role.

Bibliography on World Communism

EXTENSION OF REMARKS

OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. KERSTEN of Wisconsin. Mr. Speaker, the American Legion's National

Americanism Commission has done an excellent job in compiling a list of books and periodicals which provide detailed background material on all phases of world communism. Every American should read at least a few of these books to firmly convince himself of the true horrors of communism and in order to better understand the Communist methods of seizing power.

I include herewith this list which has been compiled by the American Legion. Anyone who desires copies of this list can obtain them by writing to American Legion National Headquarters, National Americanism Commission, Indianapolis, Indiana.

RECOMMENDED BOOK LIST, NATIONAL AMERICANISM COMMISSION, NATIONAL HEADQUARTERS, THE AMERICAN LEGION, INDIANAPOLIS, IND., SEPTEMBER 7, 1951

The following 10 titles are recommended by the research staff as elementary or basic reading for those who know little or nothing about the whole complex problem of world communism in all its aspects and the threat it presents to America today. These titles should be in every library:

Title	Author	Publisher	Price
11 Years in Soviet Prison Camps.....	Elnor Lippert	Henry Regnery Co.....	\$3.50
I Chose Freedom.....	Victor Kravchenko	Scribners.....	1.49
1984.....	George Orwell	Signet Book Co.....	.35
Out of the Night.....	Jan Valtin	Alliance.....	3.50
Red Masquerade.....	Angela Calomiris	Lippincott.....	3.00
Seeds of Treason.....	Lasky and Toledano	Funk & Wagnalls.....	3.50
Soviet Spies.....	Colonel Hirsch	Duell, Sloan, Pearce.....	1.00
The Front Is Everywhere.....	Colonel Kintner	University of Oklahoma Press.....	3.00
Total Empire.....	Rev. E. A. Walsh	Bruce Publishing Co.....	3.50
Whole of Their Lives.....	Gillow	Scribners.....	3.50

The following books are recommended for those seeking more advanced knowledge or specialized information, i. e., Life Behind the Iron Curtain, Soviet Foreign Policy, International Communism, Soviet Espionage, Infiltration, and Propaganda Techniques, Front Organizations, etc.

Title	Author	Publisher	Price
Blueprint for World Conquest.....	William H. Chamberlin	Henry Regnery.....	\$3.50
Case of Comrade Tulayev.....	Victor Serge	Doubleday.....	3.00
Comes the Comrade.....	Orme	Morrow, N. Y.....	4.00
Communism, Its Plans and Tactics.....	U. S. Library of Congress	Infantry Journal.....	2.00
Communist Party in Action.....	Rossi	Yale University Press.....	4.00
Communist Trail in America.....	Spolunsky	MacMillan.....	3.50
Forced Labor in the Soviet Union.....	Dallin and Nicholayevsky	Yale University Press.....	3.75
Handbook for Spies.....	Foot	Doubleday.....	3.00
I Believed.....	Douglas Hyde	Putnam.....	3.50
I Chose Justice.....	Victor Kravchenko	Scribners.....	3.75
Invitation to Moscow.....	Stypulowski	Thames & Hudson, New York, N. Y.....	3.50
I Spied for Stalin.....	Nora Murray	Wilfred Funk.....	2.00
Lenin.....	Boris Shub	Doubleday.....	5.00
Lost Illusion.....	Freda Utley	Fireside Press.....	3.00
My Retreat From Russia.....	Vladimir Petrov	Yale University Press.....	1.00
Men Without Faces.....	Louis Budenz	Harper Bros.....	3.00
Neither Three Nor Five.....	Helen MacInnes	Harcourt Brace.....	3.00
New Soviet Empire.....	David Dallin	Yale University Press.....	3.75
Pattern for World Revolution.....	Yostlin	Ziff Davis.....	3.50
Power in the People.....	Felix Morley	Van Nostrand.....	3.50
Red Prussian.....	Schwartzchild	Scribners.....	4.00
Russian Purge and Extraction of Confession.....	Beck and Godin	Viking Press.....	3.50
Slave Labor in Russia.....	American Federation of Labor		3.00
Soviet Gold.....	Vladimir Petrov	Farrar and Strauss.....	4.00
Theory and Practice of Communism.....	C. Jew Hunt	MacMillan.....	3.00
Truth Will Out.....	Charlotte Haldane	Vanguard.....	3.50
Under Two Dictators.....	Margaret Buber Neuman	Dodd, Mead.....	4.00
Verdict of Three Decades.....	Steinberg	Duell, Sloan, Pearce.....	5.00
Voyage No. 39.....	Christensen	Vantage Press.....	3.00

All the above titles can be secured directly from the American Legion Book Service, 1608 K Street NW., Washington, D. C.

ADDITIONAL BIBLIOGRAPHY

The following titles represent the "cream" of the more worth-while and important books published in recent years. Libraries, whether

in colleges or the larger cities, making any claims of having fairly complete collections of books on Soviet Russia, international communism, and related fields should have at least 50 percent of these titles on their shelves to justify such claims. A few of the following titles are out of print and are so indicated:

International communism and related subjects

Title	Author	Publisher	Price
China Story.....	Freda Uteley.....	Henry Regnery.....	\$3.50
The Choice.....	Boris Shub.....	Duell, Sloan, Pearce.....	2.75
Coming Defeat of Communism.....	James Burnham.....	John Day.....	3.50
Czechoslovakia Betrayed.....	Ripka.....	MacMillan.....	3.50
Defeat in Victory.....	Jan Ciechanowski.....	Doubleday.....	3.50
Foundations of Leninism.....	Stalin.....	International Publishers.....	2.75
Great Globe Itself.....	William C. Bullitt.....	Scribners.....	3.00
Half Slave, Half Free.....	Abend.....	Bobbs-Merrill.....	3.00
History of Bolshevism (out of print).....	Rosenberg.....	Oxford University Press.....	1.00
History of Communist Party, Soviet Union.....	International Publishers.....	10.00

Ireland's Friend

EXTENSION OF REMARKS
OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the Record, I include a recent news item appearing in the columns of the esteemed Clinton (Mass.) Daily Item on Tuesday, October 2

The material follows:

IRELAND'S FRIEND—BOSTON AMERICAN EDITORIALY LAUDS CONGRESSMAN PHILIP J. PHILBIN

Monday night's edition of the Boston American carried the following leading editorial, under the caption, "Ireland's friend":

Congressman PHILIP J. PHILBIN, of Clinton, an outstanding member of the New England congressional delegation, did not receive the right kind of support last week when he called for a square deal for Ireland.

The vote against the gesture of good will to the Irish people was 206 to 186, with many Congressmen making remarks which would be more proper in the British Parliament than in the Capitol at Washington.

Congressman JOHN W. McCORMACK, the majority leader, brought out this fact when he backed Congressman PHILBIN and said:

"I am disgusted when I hear some of the arguments made against Irish unity. Some Members of Congress ignore the history of our country. They have forgotten that since the infant days of our Constitution one of the basic policies of our country has been the right of all nations, large and small—particularly the small ones because they need an expression of this policy—to determine their own future. The House has passed similar resolutions many times before. Yet Members take the floor and deny it in the case of Ireland. Why? That is an interesting question. Why?"

Despite the opposition which Congressman McCORMACK condemned, Congressman PHILBIN made a plea for justice for Ireland which will long remain among the noblest records of Congress.

He said:

"I can see no valid reason why our Government which has shown so much tender solicitude for other nations seeking to unite and liberate their people should not promptly and vigorously move in behalf of the Irish Nation.

"In fact, there are most abundant and eloquent reasons why it should do so.

"Our own great country is much indebted to Ireland and the Irish people. Men of Irish blood have been in the vanguard of every American war. History is replete with their deeds of valor, their sacrifices for America, their distinguished service.

"Our civil and religious life, our educational and political systems, our marts of trade and commerce, our sanctuaries of art, literature, and law, all our great cultural institutions have drawn liberally upon the blood and upon the brains of our Irish citizens whose loyalty to God, to America, and to the cause of freedom has been and will be an ever-shining light and an invincible shield of inspiration for those who would know the ways of good citizenship and how best to preserve the blessed heritage of America.

"Our Government should have no hesitancy in calling upon the British government at an early date to take action long overdue in behalf of and for the relief of the oppressed Irish nation and to repeal the Ireland

Act of 1949 and the infamous Partition Act of 1920.

"Such a move by the British Government at this time would do more to bring unity, enthusiasm and the spirit of militancy into the defense of the free world and democratic institutions than all the Marshall plans that could be devised."

Congressman PHILBIN might have gone even further and reminded the House of Representatives that it is inconsistent for it to favor a war in Asia to unite North and South Korea while it refuses even to vote for the unification of Ireland.

The Reds Could Entrap Us at Paris

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record, I wish to include the following editorial taken from the national Catholic Weekly Review America, volume 86, No. 1, of October 6, 1951, entitled "The Reds Could Entrap Us at Paris".

THE REDS COULD ENTRAP US AT PARIS

Just a year ago we expressed our concern over a draft code of "Offenses against the peace and security of mankind" prepared but kept "restricted" by the U. N. International Law Commission. How large, we asked, was the part played by Communists and Communist sympathizers in its drafting? We inquired because, 2 years previously, the Soviets had tried to have the crime of genocide in just such a code, instead of in a separate convention. If they had succeeded, they would not have been liable under the code for their own patented form of genocide, which they perpetrate in times of "peace." But they failed (America, November 4, 1950, p. 126), and on December 9, 1948, the U. N. Assembly adopted a separate Genocide Convention at Paris. It has since been ratified by 32 nations, but not by the United States.

Meanwhile, 12 members of the International Law Commission completed the final draft of their code of offenses. Remarkably enough, though no iron-curtain experts participated, the crime of genocide is included in the code. It deals, besides, with such touchy matters as incitement to war, preparations for war, arms, military training, location of armed forces, and fortifications. The document has already been placed on the agenda of the U. N. Assembly, which begins November 6 at Paris.

Normally, such legal drafts are submitted to member governments for 1 year of study. This has not been done in the case of the completed code. Why this reluctance to let the governments study the code before submission to the Assembly?

The Lithuanian-American Council and the Polish-American Congress think they have one answer. They charge that section 5 of article 1 was deliberately designed to outlaw their efforts to assist the Lithuanian and Polish undergrounds. They likewise charge that Vespasian V. Pella, mysterious envoy of Rumania's notorious Anna Pauker, inspired this section.

A. M. Rosenthal, for the New York Times, and Peter Kihss, for the Herald Tribune, interviewed Mr. Pella September 21 about his part in drafting the questionable code. Mr. Pella bitterly denied that the code was meant as a blow at liberation movements.

He also declared that the code was not based on his opinions but was largely the work of a Greek expert, Prof. J. Spiropoulos.

Let us see. Section 5 of the completed code outlaws:

"The undertaking or encouragement, by the authorities of a state, of terrorist activities in another state, or the toleration by the authorities of a state, of organized activities calculated to carry out terrorist acts in another state."

The Lithuanian-Americans and the Polish-Americans proudly admit their guilt under this section, and claim that if the code were adopted, the United States could be found guilty of tolerating their activities.

What of Mr. Pella's assertion that the code was "not based on his opinions"? On November 24, 1950 the U. N. published a 216-page basic memorandum on this code by Vespasian V. Pella, No. 122, page 157, reads:

"Acts of terrorism affecting international relations. Under the code it should be a punishable act to incite, encourage, or tolerate activities designed to spread terror among the population in the territory of another state."

The give-way is the presence in both drafts of the key word "tolerate." Why such modesty, Mr. Pella?

The Lithuanian-Americans and the Polish-Americans demand that the draft code be taken off the agenda of the Paris Assembly in order to give the United States and its allies time to study its provisions, which, they claim, touch upon many phases of Western security. That study may even reveal that, except for the section on genocide, the code remarkably resembles a legal formulation of Vishinsky's famous speech against war mongering delivered at the U. N. Assembly on September 18, 1947.

President Ingersoll's Resignation

EXTENSION OF REMARKS

OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include the following editorial from the Greenville (Miss.) Democrat-Times:

PRESIDENT INGERSOLL'S RESIGNATION

Exactly what does the Government want? When buyers try to buy the Federal Barge Lines, the sale always falls through. When the Congress is asked for money to properly equip the line, it is refused.

Some months ago President A. C. Ingersoll, Jr., and his staff on the Inland Waterways Corporation offered to buy the line at a price to be determined by the Interstate Commerce Commission. Here are the men best able to conduct the business of the line. They have been working with the river for years and their administration of the Federal Barge Lines has brought the line from deep in the red to a small profit. If there was anyone the Government would agree to sell the line to, here was certainly the group.

But the Department of Commerce turned down this offer.

Now, Captain Ingersoll has resigned from the presidency of the Inland Waterways. The Federal Barge Line which it administers is not to be permitted to give service, either through Government ownership or through private service. The river traffic seems doomed to inadequate handling though the Government and people have put the waterways into good condition.

Is there no way free enterprise can be permitted to use the facilities the Congress has provided? Who's putting the hitch in the way? And why?

Those are questions the river people have a right to have answered. And President Ingersoll's resignation may crystallize some action that will mean increased use of the waterways. But in the meantime, let's hope that Captain Ingersoll has not resigned his interest in the subject along with the presidency. We need able leadership.

Cattlemen's Views on Controls

EXTENSION OF REMARKS

OF

HON. HAROLD O. LOVRE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. LOVRE. Mr. Speaker, Glenn Martz, United Press radio farm editor in Washington, comes from the Middle West. He knows the problems cattlemen have faced and conquered through the years. His daily program, *On the Farm Front*, is prepared for some 29,000,000 listeners. The program for Wednesday, October 10, presents a clear, concise picture of the cattlemen's views on controls. I include it as part of my remarks:

Mike DiSalle has denied rumors he might give up his fight to control meat prices.

His statement was made to reporters after a group of western cattlemen stormed into his office to reiterate they have never asked for Government help in times of economic stress and they are not going to submit passively to Government controls now.

Little did Government price fixers realize that when they locked horns with beef producers over high prices they were going into a knock-down, drag-out battle with one of the most independent—and courageous—segments of American agriculture.

The cattlemen—ever since the buffaloes were driven from the range to make room for beef—have alone and unaided fought everything from Indians to disastrous drought to supply the Nation with meat.

They've driven lean, hungry herds to market when prices were way below cost of production. They've argued with bankers to stave off foreclosures when times were rough. And with the indomitable spirit of the pioneer they've rebuilt foundation herds after each successive setback, clinging to the hope that some day they'd bask in economic sunlight.

Now that they've attained a favored place in the national economy, they resent being called price gougers.

Everybody—including the cattlemen—will admit beef prices are now too high in relation to the prices of other food commodities. And cattlemen don't deny they're making more money today than they ever have before.

But they point out that high prices aren't the result of any conniving on their part. It's just a combination of economic circumstances over which they have no control. A situation whereby consumers, with more money in their pockets than they ever had before, are bidding for short beef supplies and thus are forcing prices up.

In their battle to keep free of Government control, the beef producers remind the price fixers that Government didn't offer to bolster prices back in the early thirties when they were selling meat for American dinner tables at below cost of production prices. By pulling in their belts they weathered

that economic storm without Government assistance. Why, then, they ask, should the Government be so concerned when the "price shoe" pinches the consumer's foot?

Back in those days, you'll recall, literally thousands of head of cattle were seized by the Government for \$10 or \$15 a head, driven to slaughter pits, shot under Government supervision, and buried because there wasn't enough feed available to keep them alive.

These Federal boneyards are still dotted with bleached skulls—a grim reminder of a financial catastrophe which took cattlemen years to overcome.

The history of the cattle industry is replete with economic disasters. Some of the Nation's brainiest men—men with plenty of money—went broke trying to buck repeated droughts and low prices.

The late Theodore Roosevelt—before he became President—tried to build a fortune for himself in the cattle business on the North Dakota West River range. Thousands of head of cattle, bearing the famous Maltese cross brand, once grazed on the Roosevelt spread in the Little Badlands. But the financial returns were lean, and Roosevelt gave it up as a bad venture.

The dashing Marquis de Mores—that intrepid little Frenchman who went West in the early eighties heeled with \$1,000,000 in cold cash to start a cattle empire—4 years later found his fortune melted away. A 20-room chateau on the bluffs overlooking the Little Missouri River near Medora, N. Dak.—and the crumbling walls of a huge slaughterhouse in the valley below—are all that's left of his dreams.

Yes, the cattlemen haven't always had it rosy. They've trailed their herds over seared ranges in search of grass and water all the way from the Texas Panhandle to the Canadian line. They've battled rustlers and drought, blizzards and bankers, heartaches and hard times to get where they are now.

No wonder Mike DiSalle's finding they're a tough bunch to deal with.

Regardless of whether they're right or wrong in their contention that the Government has no business meddling in their affairs, that's their conviction. It's a spirit of independence born in the days of the Old West and nurtured through the years by men who have always believed in the principle of free enterprise and a sky's-the-limit philosophy.

They compare their fight to a game of stud poker—the best hand should win. Now that they hold a royal flush they believe they ought to have the right to rake in the winnings.

Right or wrong—that's their belief. And it's doubtful whether Mike DiSalle's Price Stabilization Agency can ever make them see it any other way.

With both sides bowing their necks, it looks as if the big battle over beef has barely begun.

Pulaski Day

EXTENSION OF REMARKS

OF

HON. FRAZIER REAMS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. REAMS. Mr. Speaker, under unanimous consent, I insert in the Appendix of the Record an editorial from the *New York Times* of Sunday, October 7, 1951, concerning Gen. Casimir Pulaski, who gave his life magnificently aiding our fight for independence nearly two centuries ago.

The views expressed in this editorial are most appropriate today in honoring this great Polish fighter for freedom because his native land is now under the control and domination of the Red Soviet tyrants. It is to be hoped that a free Poland will once again join with the other free nations of the world in the not distant future.

The Times editorial follows:

PULASKI DAY

Pulaski Day has its sadness for Poles and Americans of Polish descent who turn out today to commemorate it. Poland was not free when Count Pulaski fell at Savannah in defense of American liberties and it is not free now. The Polish leader who defended Warsaw in 1944, General Bor-Komorowski, is today a welcome visitor in New York City but he could not return to Warsaw without risk of imprisonment and death.

Liberated from the Germans, Poland has fallen into the hands of the Communists. Whether or not it is formally incorporated into the new Russian empire makes little difference. Its people cannot raise their voices for Polish interests, nor act as Polish patriots, nor openly cherish what is good and noble in Polish traditions.

But the Poles have survived partitions, conquests, and suppressions over the course of many centuries. Today we do not worship political nationalism as uncritically as we used to. A liberated Poland may some day be, not fiercely independent, but part of a voluntary federation in a free Europe. But the Polish character, personality and culture will survive. Today we do them honor.

In Ironing Out All Inequities, a Completely New Air Force Is at This Very Moment Being Developed for Congressional Action and Approval in February.

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. BROOKS. Mr. Speaker, during the recent recess taken by the House, the fifth annual national convention and reunion of the Air Force Association was held in Los Angeles, Calif. It was not my privilege and pleasure to have been in attendance at that gathering inasmuch as my presence was precluded by the pressure of official business.

I have, however, received a copy of a speech made by the Honorable Eugene M. Zuckert, Assistant Secretary of the Air Force, currently charged with the formulation and establishment of a long-range program which will provide for the organization, operation, administration, maintenance, and training of the Reserve components and Air National Guard.

Mr. Speaker, the future of this Nation will be made more secure by the establishment of this long-range program for Air Force Reserves. The country itself is fortunate in having Secretary Finletter designate the Honorable Eugene Zuckert, Assistant Secretary of the Air

Force, as the man to iron out the many disappointments—the contradictions—and, I might add, the difficulties—that seemingly have developed in handling the National Guard as well as the Active and Inactive Reserves in the armed services of the Nation since the beginning of the Korean conflict.

In discussing this and other similar difficult and tedious matters handled by Eugene M. Zuckert, the Honorable Leo E. Allen, ranking Republican member of the powerful Rules Committee of the House, in extending his remarks in the *RECORD* as of March 12, declared:

There might be other men in public life who elected to undergo such training and follow such a career, but there is none who has made a greater sacrifice of his personal time and fortune in order to translate his learning into action programs that looked to the eventual introduction into Government of the same high standards of business administration that characterize our multibillion-dollar corporations.

Mr. Speaker, with a background of a great many years in the Reserves, I think the plan brought forth by the Smith committee for our Air Force—and as disclosed by Mr. Zuckert—meets requirements that the Special Subcommittee on Civilian Components might expect. It is a constructive measure, and though submitted to this Congress late rather than early, the Air Force program laid out by the committee—headed by Brig. Gen. Robert J. Smith—gives evidence that great study, ascertainment, deliberation, and ability have been directed to the equitable solution of this vexatious question.

Mr. Speaker, no expression of mine with regard to Mr. Zuckert's speech and the over-all question of the treatment which has been accorded civilian components of our armed services would be complete were I not to say that the country found itself militarily in a "tight" insofar as personnel was concerned at the outbreak of the Korean war.

We entered the war in Korea to stop aggression. Who knows but that if we had not entered at the time we did that half of the civilized world would not have been wiped out by atomic bombs dropped by the democratic forces in world-wide global conflict against the forces of communistic aggression.

I note the frankness with which Mr. Zuckert points out that 78 percent of all officers on active duty during these difficult days are reservists, and suggests that "the backbone of the Air Force aptly describes the men who stood so firmly behind the Air Force in the post-War II years."

I can imagine no document that could be more expressive of the great accomplishments made in Korea by the Reserves than was the talk made by Eugene Zuckert before the recent national convention and reunion of the Air Force Association. But more important still is the response by those in the Air Force that were mandated by the Armed Services Committee to bring up a Reserve program that is equitable to all types and classes of civilian components not alone with respect to compensation, tenure of service, grades, and promotions, but with

respect to their contributions to the peace and security of the Nation as contrasted with the contributions made by those of the regular Air Force insofar as compensations, promotions, and other material benefits are concerned.

The splendid work which the Smith committee has rendered in this matter is to be commended. At least we on the Special Subcommittee on Civilian Components of the House Armed Services Committee now have the format of a program highly suited to the objectives indicated, and deemed requisite by the findings disclosed in the first interim report.

As I have heretofore stated here on the floor, I believe basically, fundamentally, sincerely, and honestly that the type of defense most needed for the United States of America is a strong, efficient, consolidated, well-equipped, and well-trained standing army of a small or reasonable size dependent on the international conditions, and, backing that up, as it were, should be a well-trained, well-equipped, and well-organized economic and efficiently handled Reserve program. Until we have such a program, we face the possibility that the country will go too far in the military line. The way to obviate that difficulty and keep this Republic safe and sound, civilianwise, is to have that type of a highly integrated defense congressionally established as a long-time program.

Mr. Speaker, this Congress has taken care of most of the needs of all Reserve Components. We have taken care of their pay situation; we have taken care of their retirement provisions and of their equipment needs. We have taken care of their armories. Insofar as the Civilian Components of the Air Force is concerned, every other desired feature is taken care of in the program submitted by the Air Force.

In pointing out this fact, the Assistant Secretary of the Air Force, in his talk to the Reserve Association, declares.

The organization, administration, training, and supply of Air Force reservists * * * shall be completely integrated with the organization, administration, training, and supply of the Regular Establishment under the Secretary of the Air Force and the Chief of Staff and * * * that the Secretary of the Air Force * * * and the Chief of Staff shall hold the same relation and responsibility to the Reserve forces as they do to the active establishment. This is an order, and it is, indeed, a big one.

Mr. Zuckert reports that the plan is designed to mesh into the existent 1952 program "without noticeable jar," and will definitely provide a far greater unity between Regulars and Reserves. This altogether desirable feature will do much to insure better handling of both the services and the facilities for all Reserve activities.

Furthermore, it provides for the expansion and contraction of Reserve programs in response to world tensions, including a long-range Air Force plan for the Reserve forces with a special provision that reservists will receive exactly the same treatment and support as regulars in time of peace and in time of war.

Above all, the Air Force has evolved and presented a plan and program which they themselves are satisfied they can make work—a plan which gives the entire Air Force a good, sound incentive to support.

Mr. Speaker, there is much that is good about many things which have to do with the future relations of the Air Force toward its civilian components in all branches of that service—as disclosed in Mr. Zuckert's statement—that I am asking the unanimous consent of my colleagues to incorporate into the *RECORD* of this day's proceedings his speech before the fifth annual national convention and reunion of the Air Force Association.

That speech is as follows:

Mr. President, members of the Air Force Association, and guests, I am naturally more than pleased to be able to address a group so vitally interested in the United States Air Force and the whole vast realm of air power.

I am especially happy because most of you are reservists and I have come here today to tell you about the Air Force's new plan for its Reserve Forces.

During the past few years the reservist program has had its up and downs. It was up, for which we can all be thankful, when the Korean crisis came, and 120,000 reservists returned to active duty to bolster our strength in the air. But it had been down in 1949 when our good friend Harold Stuart took over as Assistant Secretary with special responsibility for the Reserve Forces. He built it up with the tools at hand—and then had to stand by and watch it torn down as the cream of its strength was drawn off to fight a war.

Hal Stuart, himself a reservist, brought with him a real understanding of the reservists' problems—and made those problems felt throughout the Air Force. He was a vigorous proponent of the Reserve program, and he made his office an effective mechanism for hearing, and acting on, reservists' grievances—the reservist, believe me, never had a better friend in Washington.

I personally think that Hal Stuart did one of the outstanding jobs in Air Force history by whipping together a going Reserve organization.

When Hal Stuart resigned, Secretary of the Air Force Finletter gave my office the responsibility for the welfare, organization, and training of the Reserve Forces. The job looked staggering, but when we took a good look at the situation we realized that we had a splendid opportunity to revise the entire Reserve structure and program. The needs of the war in Korea had moved so many reservists into active service that we were able to start with virtually a clean slate.

We went to work with one big idea fixed firmly in our minds. This was to keep the welfare, the advancement, and the status of the reservist constantly before us—not just for the sake of the country and the reservist himself, but to gain the support of his family and his employer.

Today I want to give you a report on the past 4 months' work that we have done on the Air Reserve forces. I'm bringing you today the details of a long-range plan for the Air Reserve forces, approved by the Secretary of the Air Force and the Chief of Staff.

It is a long-range plan that extends through 1958 and, we believe, puts teeth in the entire Reserve program. It establishes realistic missions, it places responsibility for making the program work directly on the shoulders of the Air Staff and the major command; it will tell the reservist and his family and employer exactly what his status is; and it will blanket the entire country.

But don't expect miracles—as I said, it is a long-range plan, and we don't intend to go off half-cocked and try to put everything into effect overnight. We now have a plan, and we're going to follow it in planned sequence.

Its success is going to be dependent on two factors:

First, the effectiveness of the integration of the organization, administration, training, and supply of the Reserve forces with those of the Regular Air Force Establishment.

Second, the effectiveness of the parallel Air Force public-relations program which can bring about public understanding of the need for participation in Reserve activities.

Obviously, the first thing we had to do when we were given responsibility for the Reserve forces was to take a good look at these forces in the light of the present difficult world situation and the tremendous commitments this Nation has accepted, commitments which extend far into the hazardous future. We knew that any Reserve force to be effective, must be regarded from the standpoint of its role as a military necessity.

This Nation has assumed world leadership in the cause of peace—and assumed all the penalties that go along with such leadership. Among the greatest of these penalties is that we must provide a major part of the police force necessary to discourage war. We are bound, not only for our sake but for the sake of friends the world over, to do everything to defend the position we have assumed.

To do this we need abundant military strength—and to keep this military strength at the peak of its power we vitally need that extra stock of strength maintained in the Air Reserve forces. Anna Rosenberg, Assistant Secretary of Defense, expressed this need graphically when she told the Brooks Subcommittee on Reserve Forces:

"The Armed Forces Reserve bill and the Universal Military Training and Service Act are twin foundation stones in a sound structure of national security for our country. . . . The Armed Forces Reserve Act is intended to assure that the flow of trained men will be organized in a way that will give this country an insuperable fighting force when it is needed."

The accomplishments of reservists and Reserve units during the past year's conflict—and when I say "reservists" I mean members of both the Air Force Reserve and the Air National Guard—have shown vividly that such reliance on our Reserve forces is amply justified. When you consider that the latest figures show that 78 percent of all officers on active duty during these difficult days are reservists, I think you will agree that the phrase "backbone of the Air Force" is an apt one to describe the men who stood so firmly behind the Air Force in the post-World War II years.

And when you look at the record of the feats accomplished by reservists and Reserve units in Korea, you can only say, "Thank God for the Air Reserve." Flying fighters and bombers, huge transports and little Mosquito planes, reservists have taken every sort of active part in the Korean air war, and have given a remarkable account of themselves.

The leading Mig-15 killer of the Far East Air Forces next to jet ace Capt. James Jabara is a reservist. Capt. Milton E. Nelson, of Tarrant, Ala., has shot down 4 of the Communist's best fighting planes while flying his F-86 on 79 sweeps through "Mig Alley," and has won the DSC and the Air Medal with oak leaf cluster for his brave work.

One of the most spectacular rescues in the history of aviation was performed far behind enemy lines by a reservist. Lt. John J. Najarian, of Fresno, Calif., landed his big SA-16 Albatross amphibian in pitch darkness on a small river to pick up a downed fighter

pilot, and took off from the debris-strewn stream under heavy enemy fire without any visual reference points except the flashes of enemy guns to bring the rescued pilot safely home.

An all-important lesson, learned in World War II, and driven home forcibly by the Korean conflict, is the great need for airlift of every description. In Korea today the entire combat cargo operation—the evacuation of wounded, the dropping of paratroopers, the parachuting of supplies to cut-off units, the backbreaking job of ferrying men and supplies to and from the front—is run by a Reservist, Brig. Gen. John P. Henebry, the youngest general officer in the United States Air Force.

The Three Hundred and Fifteenth Air Division (combat cargo) which General Henebry commands, not only contains hundreds of reservists and Reserve corollary units serving in its many wings, but has as an important element an entire Reserve unit, the Four Hundred and Thirty-seventh Troop Carrier Wing, General Henebry's old outfit. This wing, which once trained at O'Hare Field, Chicago, flew 7,000 miles to Japan last fall after a brief accelerated training program. Only 15 hours after its arrival, it was flying its first combat mission—led, of course, by General Henebry.

Since that time, the Four Hundred and Thirty-seventh has flown nearly 12,000 missions, carried 85,000 passengers, and set up a record of 8,000,000 ton miles. It has participated in every sort of operation from dropping paratroopers at Munsan-ni to carrying Christmas mail, and brought drastically needed airlift support.

Another complete Reserve unit, the Four Hundred and Fifty-second Light Bomber Wing, has been fighting still another sort of war in Korea. This California outfit has flown 5,000 dangerous low-level sorties in every kind of weather, and Reserve crews in their B-26's have dropped 8,000 tons of bombs, fired 12,000 rockets, and expended several billion rounds of ammunition in their task of destroying enemy troops, airfields, and supply lines. Using proximity-fused bombs, they have given the closest kind of support to our ground troops, and they fought an aerial rear-guard action for the men retreating from the now-famous Chosen Reservoir last winter.

Men of the Four Hundred Fifty-second have performed many acts of heroism, freeing fused bombs from bomb bays at the risk of their lives, and bringing home badly crippled planes under all but impossible conditions. They are credited with destroying tens of thousands of enemy troops, buildings, and vehicles in their hazardous battle of interdiction, and their night intruder operations have kept dozens of enemy airfields constantly out of action. All this was accomplished by Reservists who found themselves flying over enemy targets only 77 days after their recall to active duty.

The Korean war has proved to everybody what the Air Reserve forces can do when called upon to bolster our national strength during an emergency. And it is a matter of pride that this splendid record has been made despite the difficulties which beset our Reserve program.

General Vandenberg, in a recent letter urging greater care and discretion in the recall of inactive reservists, said, "I recognize that there was a great urgency due to hostilities in Korea to recall great numbers of Reserve personnel and due to this urgency a great number of mistakes, as outlined by the Brooks subcommittee, were made. I know also that we have made a great deal of progress in handling this Reserve problem during the past year, and that many of the deficiencies outlined by the committee have been corrected. Nevertheless, the problem . . . is still acute."

The first thing we did when we began working on this new long-range plan was to hold a series of conferences with key officers in Air Force Headquarters, recommended by the deputies as their best men, who had been dealing with plans and policies for civilian components—as you gentlemen are sometimes officially called. Then we met with officers on the staff of Continental Air Command who had had actual, down-to-earth experience in working directly with all aspects of the Reserve problem. About the same time, I made a trip to Colorado Springs to meet with the Reserve Section V Committee, a statutory group which advises the Secretary on Reserve matters. We talked to many reservists, in and out of the Regular Establishment, to get every possible side of the Reserve picture.

What we heard and what we learned gave us a good, fast briefing, and we knew more than ever that the situation called for immediate action. On the 4th of June, following a meeting with the Council of Deputy Chiefs of Staff, a committee was formed, made up of members of the air staff representing all major phases of Air Force planning, plus two reservists recalled temporarily for service on the committee. Brig. Gen. Robert J. Smith, United States Air Force Reserve, was appointed chairman and the committee has been known around the Pentagon as the Smith committee. Bob Smith, who I'm sure is known to many of you, is a Dallas, Tex., resident, a very active reservist, worked with ATC in World War II, runs an airline, was Vice Chairman of the National Security Resources Board, and is an outstanding executive, organizer, and sound thinker. His committee was charged with the development of a realistic long-range plan for the Air Forces Reserve, related and responsive to the defined requirements of the United States Air Force, and capable of meeting those requirements in numbers of personnel and standards of training.

The committee had access to stacks and stacks of reports on Reserve matters from Air Force Headquarters, Continental Air Command and other major commands, and to a thorough study of Reserve matters made by the Reserve Policy Board—and I want to remind you again that several of its nine members were taken directly from major air staff agencies.

This is what the Smith committee accomplished.

1. The report set forth plans for a truly long-range program which not only extends to fiscal year 1958, but is strongly established as a major mission of the Air Force. In the words of the report itself, ". . . the organization, administration, training, and supply of the Air Forces Reserve . . . shall be completely integrated with the organization, administration, training, and supply of the Regular Establishment under the direction of the Secretary of the Air Force and the Chief of Staff, and the Secretary of the Air Force and the Chief of Staff shall hold the same relation and responsibility to the Reserve forces as they do to the active establishment." This is now an order—and a big one.

2. The Smith committee report evolved a plan which, while new in concept, was so designed as to mesh into the existing fiscal 1952 program without any noticeable jar. It retains those features of existing programs which have proved workable, and at the same time provides for the eventual input of reservists from the Universal Military Training and Service Act, and for a unity between regulars and reserves which will insure better handling of, and facilities for, Reserve activities.

3. The report provided for a flexible format which will allow the Reserve program to expand and contract smoothly in response to

changes in world tensions. Any realistic plan must foresee drastic fluctuations if it is to be effective.

There are a lot of things about this long-range Air Force plan for Reserve forces that give me definite grounds for substantial encouragement. For the first time, we have a plan that is tied directly to the very real, crucial needs of the Air Force in the years to come—and that has been worked out, what's more, in terms of the actual ability of the Air Force to support the sort of program envisioned in the plan. This plan contemplates the best ways in which a Reserve organization can be utilized, and works out its future, I believe, accordingly. Reservists will especially like those provisions of the plan which insist that they receive exactly the same treatment and support as regulars in times of peace as well as in times of war.

There's another thing about this plan that encourages me. Because it is so closely geared to the future needs of air staff and the major commands—especially in its emphasis on the necessity for adequate supporting organizations—air staff and the major commands have every reason, in their own interests, to give the fullest possible assistance and encouragement to every last part of the plan.

For instance, when the commanding general of the Tactical Air Command reviews his operations program for his combat units, he will be charged with automatic responsibility for providing training for that same program to the Reserve units earmarked for his command after D-day. This responsibility is exercised through, and under the supervision of Continental Air Command but the accountability rests squarely on the shoulders of the Tactical Air commander.

In other words, we have a plan that we are sure we can make work—and one that the whole Air Force has a good, sound incentive to support.

But is it more than this—it is a plan which shows every promise of eliminating many of the troubles which have plagued the Reservist and the Reserve program in the past.

First of all, because it is a stable, long-range plan, it gives the Reservist a clearly mapped-out future on which he can rely, on which he can base his own plans, and through which he can show his family and especially his employer exactly where he will stand Reserve-wise for years to come in the event of varying degrees of national emergency. The plan is based directly on the Department of Defense concept of the Ready, Stand-by, and Retired Reserves, of which you doubtless have already heard, and because it is correlated both in terms of predetermined personnel needs and of the probable input from U M T. & S sources, the plan provides for a much surer knowledge on the part of the Reservist as to where he fits into the Reserve organization and what need the Air Force has for his services.

The plan also gives real meaning to Reserve training activity. At the request of Continental Air Command, Training Command will be charged with providing up-to-date, intensive correspondence courses, conducting two-week blitz training tours in accordance with all regular training practices, and arranging for the use by Reservists of civilian contract training facilities, just as is done in the regular Training Command program.

Older reservists, who have little to gain by taking training courses, will act as instructors in their various specialties.

What is even more important, this plan calls for the resumption of scheduled Reserve flying training by fiscal year 1953. Through special procurement and levies on major commands, sufficient aircraft—in as many instances as possible they will be first-line planes—will be acquired to provide for practicable, useful, concentrated flying training. Through the increased use of Air Force

and Air National Guard facilities, plus the sharing of bases with other services, a geographical distribution has been developed to bring flying training within easy reach of as many rated reservists as possible. These will be in 95 metropolitan areas.

I want to stress the point that under the provisions of this plan, all training will be conducted on a realistic individual proficiency basis, and geared to the best possible extent to the reservist's civilian occupation. We are going to do away with this business of killing time during training periods by having instructors read long, dreary stretches from out-of-date, irrelevant field manuals—instruction will be planned and conducted in terms of specific skills needed by the Air Force and the specific capabilities of the reservist.

I have an illustration of the realism and earnestness of this wedding of the Air Force and its Reserves. The Air Force will start immediately to seek approval for a program for building special ground-training centers in areas of potential Reserve population. These special buildings will have classrooms, projection booths, and workshops for training in all those skills the Air Force needs. We plan to build more than 100 of such centers. These centers will not, obviously, spring up overnight, but they will be built once we get the approval of Congress—and with all possible speed.

No plan, however excellent in form and intent, is going to work without the proper personnel to carry it out and without a good framework of organization in which these competent people can work. This new plan recognizes as an urgent necessity the selection of the highest caliber of officers and other personnel for duty on the Reserve forces program, and provides for direct supervision and control from the Secretary's office through the Chief of Staff to Continental Air Command, which is directly charged with all field responsibility. The plan tentatively calls for the creation of an adequate number of district headquarters to carry the supervision and control to the local level.

To tighten up the administration and even further, the plan envisages that master files on every reservist will eventually be kept up at ConAC headquarters, instead of being scattered all over the country the way they are now, while field files on every reservist will be maintained at district headquarters, enabling the reservist to keep in close and constant touch with his records. Many of you read several weeks ago the news released by the Department of Defense that we are seeking authorization for the construction of a new multi-million-dollar headquarters for ConAC centrally located at Grandview, Mo., near Kansas City. One of the primary functions of this new installation will be the proper handling and storing of Reserve records. It is scheduled for completion in late 1953.

There's something else about this plan that is refreshingly new and different. Even though we believe in it, even though it has been approved, even though we know that it has been worked out with care and intelligence, we are not going to rush into it with our heads down until we're sure that it will work. This time, before committing ourselves all out to a piece of paper, we're going to run some tests to make certain that all our thinking has been in the right direction.

We're going to set up four test districts in four widely varying types of communities, to try to get the bugs out of the plan before it becomes a fully operational program. We'll try one, say, in the Southwest, where reservists run about one to a county, another in the Northeast, where you've got a crowd of small, separate towns, one in a Midwestern one-industry region like Detroit, and still another in a mixed agriculture-small business complex like southern California.

Once we have seen the new program actually in operation at these pilot installations and have ironed out whatever difficulties show up under these stringent tests, we can go ahead and start the whole program rolling with the assurance that we have not uselessly gone out on a limb for the sake of a plan that looked very good on paper.

Now I know very well that reservists have other gripes besides those stemming from actual deficiencies in the Reserve program—and the one that I hear the most often deals with the touchy matter of promotions. I want to say first of all that while the Air Force is the first to admit that there have been instances of injustice in individual cases—which no plan or program known to man can completely avoid in times of feverish expansion—I intend to do something about the problem in order to help make the Smith plan work.

To iron out these injustices, a completely new Air Force-wide promotion policy, integrating Reserve and Regular promotions into one integrated advancement system, is this very minute being developed for congressional action in February, bringing all Air Force promotion policy in line with Department of Defense service-wide directives.

I'm sure that even after this plan is in effect there will always be one great-grandfather reservist writing in to the magazine *Air Force* claiming to be the world's oldest living first lieutenant, but we will do our best to see that he either gets his captaincy or is lent to the Smithsonian Institution as a permanent exhibit.

Cases like these prehistoric first lieutenants remind me to remind you that no plan, however well-studied, well-tested, and well-carried out, is going to cover every contingency. The Smith plan I have discussed with you today is in my opinion the best plan of its kind I have seen, both in concept and in its practical potential, but there are some things which, by the very nature of military organizations, and because of the uncertainty of our times, it does not even pretend to accomplish.

It is not, for one thing, any immediate cure-all for all Reserve Force ills. As I told you, this plan must first be tested, and then must be put into effect with sufficient care, and attention to changing circumstances, to ensure that a plan so fine in concept is not irretrievably damaged by trying to start it off with a blind rush. It is going to take time to make this plan work the way we want it to work, and because it is, for the first time, a truly long-range plan, I think the time taken will be well worth while.

The new Reserve plan will not, and cannot, keep reservists at the same peak of efficiency, skill, and training as the men on active duty. Since it is still a plan for part-time activity, taking up only a small fraction of a reservist's time, nobody expects it to. We do believe, though, that it will keep all reservists at a far higher peak of efficiency, skill, and training, and make them far better prepared for possible return to active duty, than any previous or existing plans.

No plan for Reserves forces, I'm afraid, can guarantee complete freedom from the hardships entailed in recall. National emergencies do not run on nice, tidy, timetables, and there is no indication that they will in the future. The new plan does, however, give the reservist a realistic opportunity to gauge the possibility of his particular recall chances in the event of varying degrees of emergency, and to show his employer just what these chances are; no plan, believe me, can give you more.

And the plan, though it does provide for a broad program of flying training, simply cannot bring flying within the reach of every last reservist. We all know that this is a vast country geographically; its resources, though great, are not limitless, and the ex-

pense and effort entailed in bringing flying to every remote settlement would just not produce results worth the expenditure. We are sorry to have to say this, but we must, for the sake of national security, look cold-bloodedly at the facts.

I have taken some time to tell you what the program cannot do; but I don't want you to forget the many things we think it will accomplish. I would like to go into many of the interesting details that make the plan a good one, but time is short, many of these details are still classified, and they cover too much ground to be spelled out minutely to the satisfaction of every one of you. While a thorough briefing on the plan will be given you by Colonel Toole immediately after this talk of mine, I do want to reiterate that:

1. The plan is carefully related to the master mobilization plan, and all personnel and training requirements are spelled out in terms of the military needs imposed by this plan.

2. Adequate and numerous facilities are provided for both the Reserve and the Guard.

3. Provision is made for a full supply of the best first-line equipment.

4. The joint use of facilities, and the employment of equipment by satellite units and individuals will promote both economy and thoroughness of training.

5. The reservist's civilian occupation is to be taken into consideration much more than it has been in the past; training in the new study workshops will be in line with the reservist's civilian specialty when that specialty has a useful application in the Air Force. This insures that the Air Force obtains the most efficient use of reservist skills, and that the reservist gets the sort of training which ensures advancement in both the Air Force and civilian life.

6. The plan will show employers where their employees stand in the Reserve picture, and provides for a vigorous campaign to show employers the need for encouraging employee participation in Reserve activities.

7. The plan is long-range but flexible; it is projected through 1958 to give it stability, but at the same time is so worked out that it can expand or contract in response to changes in world tension.

8. It makes the Reserve forces an integral part of the United States Air Force, and ensures the backing of every part of the active establishment.

I can only add that I am deeply aware how much of the success of this plan depends on the cooperation of the civilian side of the Air Force, the Air Staff, and the major commands, and that we are going to do everything in our power to see to it that this cooperation is forthcoming.

And I am equally certain that if we do our part, the reservists will more than do theirs; their splendid performance in the Berlin airlift and in the Korean crisis is guarantee enough of this. From this point on, reservists and regulars will work as close partners in our common enterprise of insuring the security of this great Nation.

Alarming Facts Concerning Our Boys in Korea

REMARKS
OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES
Monday, October 8, 1951

Mr. RANKIN. Mr. Speaker, I am just in receipt of some of the most alarming facts that have come to my notice since I have been a Member of this Congress.

Several days ago I had a bill for the admission of a foreign individual held up temporarily until I could investigate it. Although I withdrew my objections to the measure, I have been attacked from one end of the country to the other—ostensibly because this individual was a minor.

I was not particularly interested in the individual involved in the bill which I had held up, but I am interested in the welfare of my country.

I have just received a letter from an American woman, who is now in the Medical Service Corps in Japan, in which she gives the most alarming information concerning the treatment of our American boys now in the service in Korea.

She encloses an article relative to that incident, and in her letter she says:

After reading the enclosed article, I had to write my first letter to a Member of our Congress. I don't altogether disagree with you in your stand, but I wish to state a few facts about a much worse infiltration of "un-American elements," as you called them.

As a laboratory officer in the United States Army, stationed in Japan, I am in possession of some alarming facts about the marriages of our American boys, to the Japanese girls over here. Do you realize that there have been thousands of our "American element" boys marrying the lowest type women in Japan, those who yesterday were walking the streets and selling themselves to the highest bidder?

The venereal disease rate of these applicants is appalling. Twenty to forty percent with positive serologies; 30 to 50 percent with positive chancroid; 20 to 30 percent with positive gonorrhea (who are treated at Government expense before the marriage is sanctioned).

Young boys who have been fighting in Korea are given the opportunity of returning to Japan, if they are going to get married. They flood in by the hundreds, anything to get out of Korea. Boys who haven't been home since they were 18 or 19 and haven't seen our young, clean, American girls, are marrying these women over here every day.

Perhaps I've been over here too long and have become prejudiced, but when I left the United States, I was under the impression that our standards were quite high, and to see them lowered by these uncalled-for marriages is quite sickening.

Can any Member of this House imagine any procedure that could be more alarming, or more dangerous, than that outlined in this letter? I hope every newspaper that carried the attack on me will publish these alarming quotations from this letter, written by this patriotic American woman who is on the ground and knows what is being done to corrupt our boys and to try to drag them down to the lowest possible level.

God save America.

Censorship of Newspapers

EXTENSION OF REMARKS
OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES
Monday, October 8, 1951

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article

under the headline "Capitol Stuff," written by John O'Donnell, which appeared in the October 5, 1951, issue of the New York News.

There being no objection, the article was ordered to be printed in the Record, as follows:

CAPITOL STUFF (By John O'Donnell)

WASHINGTON, D. C., October 4.—Even President Truman's best political friends had to exchange ill-bred snickers when our distinguished Chief Executive sat down at his press conference piano, tossed aside the carefully prepared musical score of his "consorship concerto" and started to play by ear the most bewildering discords on the control of American news writers that White House reporters have heard in over a half century. Perhaps longer.

This issue of White House censorship of our own newspapers, radio, and television was so startled up by Truman that the only newspaperman who could make sense of his observation was Mike Federov, the Moscow engineer, now chief of Tass, the Kremlin's news agency, in Washington.

STARTS WITH WRITTEN EXPLANATION

All in all, it was a mighty sorry performance. Truman started out with a carefully written and reasonably intelligent explanation of his recent Executive order by which the White House, on its sole authority and without congressional action, advised all Government departments and agencies that they were keeping under the same security censorship blanket which has covered the vital military secrecy of the atomic-energy set-up and the Defense and State Departments.

Truman got away with his reading of the prepared statement, which was a well-done job of writing. But it was also obvious that Truman did not have the slightest idea what it said. And, more importantly, Truman disclosed that he had no idea what it did not say.

Hence, while Press Secretary Joseph Short and the boys of the palace guard tried to pluck at Truman's coat tails and hoarsely whisper that "everything should be put off the record" after the reading of the prepared statement, Truman charged ahead in a most shocking revelation of ignorance. Old-time White House correspondents could hardly believe their ears when Truman blamed them and their publishers for printing news and pictures which had been officially handed out for publication by the Department of Defense or the administration's own civilian defense organization.

HICKENLOOPER WARNS OF DANGERS

It is interesting to note that at the same time Truman was damning the newspapers for printing news and pictures, "even if they had been given out by the Defense Department or the Atomic Energy Commission," Republican Senator Bourke B. Hickenlooper, of Iowa, was speaking on the same subject in Chicago before a newspaper audience. He said:

"Censorship is now becoming the order of the day with the administration. It is not new by any means. Congressional committees over the past several years have been unable to function properly because the President has refused them access to information files concerning people strongly suspected as security risks to our country. Under the so-called loyalty order of the President, hearings against those charged with being dangerous risks are held in secrecy and the public never knows the nature of the evidence. People have been cleared by such boards when later investigations, blocked at every turn by the administration, have shown them to be traitorously guilty. But the censorship goes on and increases, and has now come to the point where great

newspaper associations of our country have formally called attention to its dangers.

"There is the new technique of vilification and intemperate outbursts from the White House, unique in Presidential conduct. Let me give you some of the terms which have been flung at critics by the President, who has not seen fit to cooperate in developing the facts, but resorts to smoke screens of violent words.

"Some of these terms are: liars, slanderers, mud slingers, reactionaries, isolationists, undercover saboteurs, Republican gluttons for privilege, Wall Street dictators, double-talkers, resounding misrepresentations, scandal-mongers, hatemongers, warmongers, scare-mongers, demagogues, special interests, villifiers, selfish interests, professional antis, economic fossils, anti-defense, anti-control, anti-everything, pullbacks, false economizers, blind, sordid, sowers of distrust, besmirchers, character assassins, scurrilous workers, defeatists, enemies of progress and S. O. B's

"Some of these terms have been applied on occasions to Republicans, Members of Congress, newspaper people, music critics and the Marine Corps."

And this is the same Truman who, when asked today why it wasn't proper to print information handed out by Harry's own Department of Defense, rapped back that newspaper publishers had no business using such material even if it was given to their reporters by the Defense Department or the Atomic Energy Commission.

At this point, the newspaper men clutched their skulls and called the session off with a "Thank you, Mr. President." Everybody had the dizzy sensation of standing tiptoe on a mountain top shaken by an earthquake and surrounded by a hurricane of Missouri horsefeathers.

Dr. E. Paul Knotts, Maryland's Family Doctor for 1951

EXTENSION OF REMARKS OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, October 8, 1951

Mr. O'CONOR. Mr. President, the family doctor, for years the counselor and friend of families throughout the Nation, particularly in the rural areas, has at last come into his own.

The Maryland Academy of General Practice, at its third annual assembly last week, paid deserved tribute to the work of one of Maryland's outstanding general practitioners, Dr. E. Paul Knotts, of Denton, Caroline County, by naming him Maryland's family doctor for 1951.

Dr. Knotts, who has practiced medicine successfully in his county for 30 years, is 1 of 10 general practitioners now actively serving the people of their county. An article in the Baltimore Sun of Friday, October 5, recounting the reasoning behind the award, will be of interest to families everywhere who have benefited from the services of the family physician in their own area.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STATE PHYSICIANS HONOR DR. KNOTTS—SHORE PRACTITIONER NAMED FAMILY DOCTOR OF 1951

A 56-year-old Eastern Shore doctor, a practicing physician for 30 years, was honored yesterday as Maryland's family doctor for 1951.

Dr. E. Paul Knotts, of Denton, won the award, the first of its kind in the State. It was presented at the third annual assembly of the Maryland Academy of General Practice. Yesterday had been designated by Governor McKeldin as General Practitioners' Day.

Dr. Knotts, the award recipient, a vice president of the academy, is one of the 10 general practitioners, the old-time family doctors, now practicing in Caroline County.

TO DIGNIFY EFFORTS

The award and the assembly both had one thing in common, "the effort at focusing attention on the general practitioner and dignifying his efforts at promoting and maintaining high standards of general practice," in the words of one of the members.

The nearly 500 doctors yesterday, aside from witnessing the presentation to Dr. Knotts, also heard a group of specialists from the eastern seaboard discuss various phases of medicine that might be of value to a general practitioner.

MUST CONTINUE JOB

In receiving the award, Dr. Knotts stated that he could accept it, not as a personal tribute, but only as a "humble member of that grand group of men designated as the old family physicians."

Dr. Knotts recalled that the Maryland Academy of General Practice, a branch of a national organization, was formed 3 years ago, so as to "raise the standards of practice of medicine." He added that "we must so elevate that practice and continue to do the job that all general practitioners do, so that our people will not hearken to the voices of the social planners or ever give you up."

The presentation was made by Dr. Walter D. Wise, president of the Medical and Chiropractical Faculty of Maryland.

Dr. Knotts, who early in his career had two opportunities to train for the role of specialist, turned them down for a schedule which now begins at 8 a. m. and ends at 11 p. m. on a routine day, in which he sees at least 35 patients.

FORCED TO LET UP

Twice during his career Dr. Knotts was forced to let up temporarily owing to illness, and to turn his practice over to a substitute doctor. An admirer of Dr. Knotts recalled yesterday that on one of those occasions the visiting doctor could only keep up "with one-third of the work Dr. Knotts did as a matter of daily routine. The substitute left to go to Baltimore as a specialist."

But does Dr. Knotts sometimes regret that he once made the choice between a 7-day week and a 16- to 18-hour workday and that of the life as a specialist?

"Not at all," he answers.

"I made the choice freely and completely. I charted my life and am completely happy doing the job I want to do, taking care of the people I love," he says.

FABRIC OF THE PRACTICE

To Dr. Knotts, the general practitioner is "the foundation and the fabric of the practice of medicine in all its ramifications."

Last year, Dr. Knotts was nominated by the Maryland medical and chiropractical faculty for a similar award of the American Medical Association.

A graduate of Washington College, from which he received his bachelor of science degree cum laude in 1916, Dr. Knotts graduated from the University of Maryland School of Medicine in 1920.

WAS AT HOPKINS

He later did postgraduate work at Harvard University, Rush Medical College, McGill University, and the Johns Hopkins University.

He is a fellow of the American Medical Association, a member of the Caroline County Medical Society, the medical and surgical faculty of Maryland, the American Academy of General Practice and the American Association of Railway Surgeons.

Aside from having held the chairmanships of many committees of these organizations, Dr. Knotts is a staff member of Memorial Hospital at Easton and chairman of the Maryland State Medical Board.

WROTE FOR PERIODICALS

A contributor to many medical periodicals, Dr. Knotts also has found time to serve in the Interracial Committee for the State of Maryland.

He was a member of the Governor's commission that inaugurated the plan for abolishing almshouses and establishing hospitals for the chronically ill. For 4 years he was a member of the Selective Service System.

A former chairman of the medical examiners of Caroline County, Dr. Knotts was a member of the veterans advisory committee in 1945 and a member of the Army advisory committee, Second Army, in 1949.

He is also a member of the Board of Regents of the University of Maryland.

During the sessions of the academy, Dr. Eugene I. Baumgartner, of Oakland, Garrett County, was elected president for 1952.

Dr. Harold Plummer, of Preston, was named president-elect.

Stassen on Asia

EXTENSION OF REMARKS OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, October 8, 1951

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Stassen on Asia," which appeared in the St. Paul Dispatch on October 2, 1951.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STASSEN ON ASIA

Harold E. Stassen's appearance before Senator McCARRAN's security committee with a transcript of his part in a State Department Far East policy conference in 1949 is another proof that over a long period of years he has been right in his judgment of major national and world problems.

The conference was held at a time when the Chinese civil war was at a critical stage and the purpose was to discuss American policy. Harold Stassen was one of a number of experts and leaders of opinion who were invited to attend.

In the more than 2 years that have passed, China has been lost to the Communists, the delusion that these Reds would be independent of Soviet Russia has blown up, and loss of South Korea has been prevented only by war.

Former Governor Stassen did not share the illusions and delusions which were current then, but stood for a staunch anti-Communist line throughout Asia. Had his views instead of those of the Jessup-Lattimore group prevailed with the State Department, even at that belated hour much might have been done to retrieve earlier failures and mistakes, and almost certainly South Korea could have been held without the war.

The State Department should now release the transcript of the 1949 conference in its entirety. With the committee's acquiescence, Mr. Stassen used only the portion of the transcript in which he figured and followed his own judgment as to whether security was involved.

Whatever may have been the justification for keeping the conference confidential at the time, security is better served now, as Mr. Stassen said, by making it public than by continuing to suppress it. Any security data can be censored out, as was done in the MacArthur hearings, but all material throwing light on the issues of our Far Eastern policy, and the part played by various individuals in its formation, should be brought out.

Embarrassment of individual policy makers there may be, but here is another illustration of the ease with which officials can cover up mistakes by withholding public information on the grounds of national security.

Let's Make the Draft Make Sense

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Admiral Ben Moreell from the Saturday Evening Post of September 15, 1951:

LET'S MAKE THE DRAFT MAKE SENSE

(By Admiral Ben Moreell, Civil Engineer Corps, U. S. Navy, retired)

We live in a grim world, with no security on any frontier. Innumerable books have been written about the last war, and if they make any one point completely clear it is this: We came close to defeat and utter disaster in the early months of 1942.

It would be presumptuous in anybody to state with assurance precisely how the United Nations might emerge victorious from another conflict, if that dreadful possibility strikes us. But it is easy enough to say how the war could be lost. We can lose it, and we shall, by continuing to waste, or improperly use, our manpower.

By that I mean squandering our engineers, scientists, and other technicians through using them—as we are now doing all too frequently—in combat or as supply officers or in public relations. The situation is further aggravated by the acute shortage of technically trained young men and women, which will get worse before it gets better, and by the short-sighted and unrealistic attitudes of some of the selective-service authorities. Their policies do not make sense. They often want to draft every physically able young American, whatever his skill or potentiality. And we mustn't forget that the selective-service people are in the saddle. They have the last word.

That is why, in December of last year, the National Security Resources Board created a

panel called the Scientific Manpower Advisory Committee. It was made up of 12 men—industrialists, scientists, engineers, educators, and a retired Army officer—with Dr. Charles A. Thomas, of the Monsanto Chemical Co., as chairman. I had the honor to be a member of that committee. We had an excellent staff. I know that we worked hard and I think that we worked effectively. We issued our report in January 1951.

The Scientific Manpower Advisory Committee recommended the enactment of universal military training whereby all boys would receive 4 months of basic training. After that, the ones who were qualified would go to accredited technical schools of their own choice. I must say, in all candor, that I have never been a great drum beater for UMT. The cost will be very large. I have been afraid that the tendency would be to use funds which might otherwise be available for the development of new weapons and that UMT would take into the Armed Forces young men vitally needed for scientific training. But I went along with my colleagues on the issue. I learned long ago that practically all reports of boards, committees, and panels are the result of compromises. Without them, in most cases, there would be no report.

In a sense, UMT was incidental. The core of our committee's proposal is the creation of a National Scientific Personnel Board which will delegate its very great authority over scientific personnel to regional boards. With this machinery, which would doubtless have to be created by Congress, we could supply the scientific skills we now so sorely lack.

Will anything result from our report? Certainly there exist influences which will do their best to shelve it. Technically speaking, the committee is still in existence. But it is dormant, and it is safe to say that little will be done about our recommendations unless the public gets behind us.

The issue is deep, basic, and terribly important. Selective service wants to maintain the control it now has over the procedures by which all young men are either taken into the military or are deferred. We believe that the ultimate decisions with respect to scientific personnel should be in the hands of men eminent in the fields of science, engineering, and education. Both our national and regional boards would be made up of such men. We have no possible doubt that they will agree to serve. They are fully aware of the crisis.

It will be the job of these specialists to make sure that an unbroken supply of trained technicians would be provided, on the fairest possible basis, to all branches of the services, as well as to industry and to our educational institutions. The regional scientific personnel boards would be the local operating agencies. They would have power to make decisions, subject only to appeal to the National Scientific Personnel Board. Thus they would function in the same way the local selective-service boards do for other military eligibles.

The picture has become confused by regulations in Washington which lead us to believe that everything is under control and give us a false sense of security. About 3 years ago Maj. Gen. Lewis B. Hershey, of the selective service, created an Advisory Committee on Scientific Personnel. But that committee has no power. What is needed—and I don't know how to make this too strong—is a top-level scientific body composed of men renowned in their fields. Nobody, except the President, could dispute their rulings.

The system would insure a uniformity in policy quite impossible with the local selective-service boards. Such uniformity requires knowledge which those boards cannot have. So we find a wide disparity in what is done. Bill Jones of Seattle is told to go

on with his college courses. Jim Smith of Philadelphia, equally qualified for a technical career, is called into the Army. I do not know how the aptitude tests over which so many of our boys sweated last spring and summer turned out. They were given the impression that they would be deferred if they passed with certain grades. Again it's up to the selective-service panels. The amendments to the draft law did not, by the way, diminish their powers.

The time has come to look at some facts. The United States, even combined with her allies in the United Nations, cannot hope to win any ponderable war by matching man for man. The United Nations are clearly outnumbered. This was proved in Korea, where, so far as the numerical strength of our troops was concerned, we would most certainly have been pushed into the sea. I am no defeatist. I know we can win with superior weapons, aircraft and naval vessels. If we are to have this power, though, we must have available the scientists and engineers who can devise, design and build the instruments of modern war. Today the number of students receiving technical training is dwindling to an alarming extent.

Take engineering alone. A survey made last June by the Engineers Joint Council brought replies from almost 400 companies and Government agencies. It showed that some 80,000 new engineers were needed, apart from the armed services. This year's graduating classes produced only 42,000 engineers. The military, it now appears, will take about 19,000 graduates, with a resulting shortage of 60,000. Nor does the future seem any brighter. Only 26,000 engineers will get their degrees in June, 1952, possibly 17,000 in 1953, and a mere 12,000 in 1954. Other scientists are in just as urgent demand.

What has caused these shortages? Some of the blame must be admitted by the Bureau of Labor Statistics, of the Department of Labor. Over a year ago that Federal agency issued a most discouraging report on job opportunities in engineering and related fields which doubtless kept many young men from entering them. From other sources came statements that engineering and science would be overmanned. The youngsters undoubtedly had these pessimistic predictions in mind when choosing their careers. The Russians are getting well ahead of us. The most authentic reports we can get are that they have graduated 150,000 engineers in the past 5 years. This is roughly the same as our own record. But our graduates will be cut by a third in the next 5 years unless something is done.

You can't entirely blame the American college boys. Many of them must feel that it makes little sense to embark on a long, arduous and expensive engineering course and then get drafted in the middle of it. It isn't a very intelligent policy to enlist a lad trained in electronics and make a platoon leader out of him. And yet I think the students must share the responsibility. Engineering and science are generally regarded as tough, with long periods of uphill digging. Some of the boys would rather go into business and become, as they hope, highly paid executives in short order.

Certainly, because of the great demand, part of the current crop of technical men has a pretty swollen idea of its importance. Employment managers from most of the big corporations begin to interview senior students early in the academic year. I have been told about one graduate student at Columbia University who took a post at \$6,000 a year before he received his degree, and that this was raised to \$7,200 before he began work. More than 200 employers sent representatives to Cornell this past year.

Radical changes are needed in our method of conserving scientific manpower. The General Electric Corp. decided last spring

that it needed 1,600 science and engineering graduates in its many plants. Its recruiters were instructed to offer places to 2,200 on the theory that 600 might fall by the wayside. But only 700 could be hired.

The picture is the same everywhere. The entire faculty in the engineering school of the University of California, I'm informed, has been employed at good pay for this summer. A steel company which needed men for its research laboratories was unable to get a single graduate. The payoff, though, was at a New Jersey corporation which offered a post to a girl engineer in its design department. She said she couldn't take it, because she had a young baby.

"Don't worry," the head of the department said, "bring him along with you. We'll build you a play pen."

So she took the job.

Inquiries made by the engineering manpower commission of the Engineers Joint Council brought similar reports. F. J. Thomas, of the Goodyear Tire & Rubber Co., said that he was much worried about the future supply of trained men. The Sperry Gyroscope Co. answered that it was seriously handicapped in current classified research development and design contracts. The Westinghouse Electric Co. regarded conservation of present manpower and a continuing supply in the years ahead a major problem. And I am daily aware that my own company is having plenty of trouble getting the type and number of boys we must have.

It takes time to train a technician, however bright and competent he may be, to become really effective in a particular plant or laboratory. We spend considerable energy and money on such postgraduate training and then, in a lot of cases, our employee is snatched away by his draft board. Most of the time he refuses to ask for deferment. He is afraid that he may be branded a slacker if he does so. Our committee's program would end that danger, a very real one to any patriotic boy. Rules would be established which would eliminate any possible slur.

Another complication in this very involved situation is the number of scientists and engineers who are in the Reserves or the National Guard and are, for those reasons, being called up for active duty. As many as 18,000 scientists and 50,000 engineers may be subject to service. A study by our committee in 15 key plants indicated that the number of engineers with Reserve status varied from 32 to 75 percent of the total on the staffs.

Other countries, as far as I can gather, handle their manpower problems more intelligently. I have it on good authority that the United States was the only important belligerent on either side in World War II that had not taken special measures to assure an unbroken flow of young people who had been trained in science and technology. We were willing to trust to luck. Let me contrast our hit-or-miss method with the one now operating in England. Our committee looked into that too. All young Britishers are liable for military service when they turn 18. But if they have been admitted to a university they can postpone active service until after they have received their degrees.

Recently, I read a report by Senator LYNDON B. JOHNSON's subcommittee of the Senate Committee on Armed Service. His group has also been studying the proper utilization of manpower and it found, in part:

"Today the great weakness of America is lack of manpower. Of resources and technology and industry and arms, we have much, of men, we have few. We are thus weakest where our enemy is strongest, for the enemy's great strength is manpower.

"The enemy's superiority in manpower strength is assured, virtually for so long as the struggle between the East and the West continues. . . . The enemy's inferiority in technology and firepower is by no means certain."

A lot of Americans—like some members of Congress—are reluctant to face these frightening facts. We think they run counter to the long span of our history. We have been so utterly confident, to reverse the song in *Porgy*, that we had plenty of everything. Plenty of the necessary skills and materials for either peace or war, and plenty of men. But those happy days are with us no longer—I indeed, they ever existed at all.

We like in this country, I sometimes think, to enunciate policies and then let time and inertia and petty jealousies among Federal agencies scuttle them. Actually, President Truman's statement of January 17, 1951, set forth about all that was necessary for a national manpower-mobilization policy. It was vital, he said, "to expend our supply of persons with highly developed skills essential to civilian and military activities." Regarding operation of the selective-service system, the President added, "the occupational deterrent of persons possessing critical skills, if they are currently using such skills in essential activities," was to be a basic Government policy. So was the "determent of a sufficient number of individuals in educational and training institutions to provide an adequate supply of professional and highly skilled manpower."

"This policy," said Mr. Truman, "shall be adhered to by all departments and agencies under their control."

Few people, unless they are rank partisans, will question the purpose of the sincerity of the President in promulgating this policy. But the Government has become so big that it is quite impossible for any Chief Executive to be familiar with more than its broadest operations. A President may issue an order or state a policy, but how is he to make it stick?

Yet the problem of the way to use most effectively our scientific personnel is quite definitely a question of defeat or victory if still another war should desolate the world. My convictions on this are based on my own experiences in the last war, when I saw, on every side, evidence that our greatest weapon was our technological superiority. When I retired from the Navy and entered industry, I found a serious gap in the supply of technically and scientifically trained people who might improve our means of waging war.

Sailors on our fighting ships win wars, just as do the brave, weary footsoldiers who suffer such terrible hardships. Wars are also won by skilled commanders on land and sea and in the air. We have a common and utterly obligatory duty toward all fighting personnel, of whatever rank. That obligation is to provide the weapons which will make them most effective on the front line, and which will reduce casualties. We cannot do either without competent men assigned to basic research or without technical men in the laboratories and plants.

We did not do the job we might have done in World War II. May I cite torpedoes? They are extremely intricate weapons. They were a serious handicap during the first years of the war in the Pacific because many of them were inefficient. Vice Adm. Charles A. Lockwood, Jr., who was commander of submarines, Pacific Fleet, from February 1943 until December 1945, has made the flat charge that our torpedoes were inferior. Fletcher Pratt, the naval historian, offered specific examples in a magazine article about a year ago. He told of the submarine *Sargo* sinking at a Japanese invasion fleet steaming toward the Philippines a week after Pearl

Harbor, in December 1941. The torpedo missed. A fortnight later the *Sargo* aimed five torpedoes at another convoy. All of them went wild. Some of our early torpedoes exploded prematurely. Many ran under the target.

The complicated devices which make torpedoes operate effectively are developed in laboratories of course. The armor plate of tanks is perfected by metallurgists. By the time bad weapons reach the fighting lines it is too late to do much about them. So engagements are lost and men die. That is not war. It is suicide.

I would not hesitate for a moment in saying that our war effort would have been more effective and that the struggle would have been shortened, with consequent saving of lives, had our industrial plants and the armed services been supplied with enough scientifically trained men. We suffer from the same lack in the United Nations defense program today.

We Americans like to pride ourselves on being practical men. We talk glibly about know-how, whatever the phrase really means. I've never been quite certain. I admit that I have a definite gift for utilizing what has been called practical research. We can make gadgets work. I'm pretty confident that we can turn out the best automobiles, at least on a mass-production basis, and I'm sure that our refrigerators, our vacuum cleaners, and our nylon stockings are second to none in the world. Yet I have little faith that we can overcome a future enemy by attacking him with vacuum cleaners or by waving stockings at him.

We are still lacking in what has been called fundamental or pure research. Maybe that is due to a kind of national impatience. Our desire is to get on with things to put new products on the line so they will earn dividends, and this has its virtues. But it also has grave defects. I'm quite sure that fundamental research in Europe was, at least up to the start of World War II, well ahead of American research. I don't mean that there are not individuals in this country who compare favorably with the best abroad. But I think we have only to look at the number of Nobel prizes awarded to Europeans for scientific achievements, in proportion to the population of their countries, to realize that we have quite a way to go.

We let the Europeans bring to the point of usefulness a fundamental scientific principle. Then we make something out of it. One need go no farther than the atomic bomb. Scientists of many nationalities worked out the basic data—Einstein, Fermi, and other Europeans. We used the data and we beat the enemy in making the bomb.

So, again, we need scientists with top-flight brains. It might be well to look again at the causes for this crisis in which we find ourselves, for these shortages of trained manpower which so gravely endanger the Nation. It is too pat to say that everything would be solved if the draft boards in New York, Chicago, Detroit, and the small towns which dot the land would only adopt more enlightened deterrent policies.

Those of us in the technical professions have, I'm afraid, talked too much about how hard we work and too little about the satisfactions we derive. We have offered average figures on possible earnings, sometimes averages do not look very attractive. We have failed to make it clear that the technologist can get a decent share of the world's goods if he is competent and industrious.

But that is not all. We have been backward in portraying the nonfinancial rewards of our callings. We talk about opening frontiers of science, about designing bridges and building dams. Yet we have not really shown the inner gratification which comes from

spending a life in such work. What is much more important right now is to impress on our students that a vastly greater reward lies in working toward another goal; making our country safe after 175 years of independence so that it and the rest of the world may do more than merely hope for peace. The dollar seems unimportant in the face of that consummation.

Yet these ends, so greatly to be desired, need further examination. Who is to pay for the scientific training? Possibly I am a bit of a shellback, due to my long years in the Navy. But I can't persuade myself to accept the plans for Federal aid to education. I'm aware that many fine educators have endorsed the idea that superior students should be awarded Federal scholarships. But I'm worried about Government interference with our schools and universities, and I shrink from the idea.

Obviously those of us who feel that way should come up with a substitute. For myself, I believe there is a growing realization on the part of American industry that it has a definite responsibility to see that the people it needs—scientists, engineers, and other technical men—must be cultivated. By that I mean that industry must take an interest in young people early in their college careers if it hopes to have adequate personnel. In our company, the Jones & Laughlin Steel Corp., we have taken some action along this line, although not enough. We have given financial help to technical schools and have encouraged students to take jobs with us during their summer-vacation periods.

Other companies are doing the same thing. Many are offering scholarships without any commitment that the students will work for the particular company when they graduate. The idea that industry has an obligation to interest boys and girls in higher education is spreading rapidly. Another possibility is financing the education of exceptionally able sons and daughters of corporation employees. To do so would be a morale builder in the sense that it would make our people take a greater interest in the continued success and stability of the company. I have no doubt that the labor unions would cooperate with enthusiasm with any such project.

On the other hand, I will stick my neck out and say that it is easier to work one's way through college than it was 30 or 35 years ago. I posed this question to the educators who worked with our committee. Most of them thought that it was less difficult. They pointed to very much higher hourly wages and to the large number of job opportunities. Naturally I admit that attending college is a lot more expensive than it was in my day.

People often ask me whether those of us who must have technicians do enough to encourage girls to enter the field. I am sure I have no closed mind on that. I think women have special qualities, such as manual dexterity and patience, which are extremely valuable. I know very well that our company would have no hesitation at all in taking on some brilliant young women. Yet we cannot ignore the probability that the girl who has been trained at considerable expense will resign in order to get married and raise a family. Her objective is most worthy and I am all for it. It is a hazard, just the same. A man will usually stay with his profession.

We will take the girls on, too, if they are able to hold the jobs. But the principal interest of our committee was, quite rightly, in the boys. About 1,000,000 of them reach the age of 18 each year, and the number will increase substantially during the next decade. Technology wants its share of these young men. We want them—and I am really not exaggerating—to insure the safety of the world. Their parents must be con-

vinced of this. So must all parents. They must realize why their own son is drafted while the boy across the street, who is studying to be a physicist, is deferred. Quite a few mothers and fathers already understand.

I heard about one father whose son was in law school, while a neighbor's boy was taking engineering.

"My son should go into the Army," he said, but Bill should finish his college course. Without such Bills, working on weapons, my son would be a sitting duck if he has to fight. His one chance of survival depends on whether American science moves ahead faster than that of any possible enemy."

United States Policy in Asia

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, October 8, 1951

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a statement by Gov. Harold E. Stassen, now president of the University of Pennsylvania, which he made this morning before the Sparkman subcommittee of the Senate Committee on Foreign Relations.

I am informed by the Public Printer that the manuscript is estimated to make 3½ pages of the Record, at a cost of \$273.34.

There being no objection, the statement was ordered to be printed in the Record, as follows:

May I, at the opening of my appearance this morning, thank the committee for their courtesy in hearing me this morning instead of last Friday morning.

I received your telegram of invitation to appear last Friday in Philadelphia at 7 p. m. on Thursday night, and it was not possible to assemble my staff and my documents and be in Washington on such short notice on a matter of this importance.

May I also briefly state the background of my appearance here.

Two weeks ago the McCarran committee, in the course of an investigation of the Institute of Pacific Relations, had before them as a witness a former member of the Institute's editorial committee, Dr. Kenneth Colegrove, of Northwestern University. During the examination of Dr. Colegrove, he testified about a conference held in the State Department on October 6, 7, 8, 1949, which was presided over by Dr. Philip Jessup, and at which Mr. Owen Lattimore was an active participant. Dr. Colegrove further testified that I was present and that he recalled that I had opposed Mr. Lattimore in the discussion and that I had insisted upon a copy of the stenographic transcript of my own remarks from the stenotypist who was present throughout the conference.

I had no advance knowledge whatsoever that Dr. Colegrove was to testify nor of what he intended to say.

After his testimony the McCarran committee subpoenaed me to produce my transcript. This I did, and I answered their questions in relation thereto.

I said to that committee and I say now that I do not intend to make accusations nor to give exonerations. I will testify of the facts which I know. The conclusions to be

drawn from these facts, and from other facts assembled by this or other committees, are for you to draw. As a witness, I do not give conclusions. As a witness, I do not associate myself with any other person; I do not attack any other person; I testify of what I know, and I will be personally responsible for what I say.

Let me also add that I am not interested in post mortems—especially not for the sake of post mortems. I am interested in the future, in the future of the American people and the future of mankind. I am very interested in history as an aid in decisions for the future.

Now, as you know, the testimony which I gave when subpoenaed before the McCarran committee was reflected in a number of ways into your hearings and in recent press releases by the State Department and statements of the President.

I therefore now present the facts which I do know, which are pertinent to your immediate task and which are also important on a much broader base than your immediate task.

May I also state that I address myself especially to the Democratic Senators in my presentation. I know that they are just as patriotic and just as interested in the future of our country as I am. I will endeavor to be objective and to avoid partisanship, and I believe they will do likewise.

The two major central points of my testimony today, upon which I will present extensive evidence, are these:

1. There has been for a number of years a world-wide pattern of action which has had as its consequence the undermining of the Chinese Nationalist Party and of Chiang Kai-shek and the turning of China to almost complete domination by the Chinese Communist Party and by Mao Tse-tung.

2. There is now in its early stages a similar world-wide pattern of action which would have as its consequence the undermining of the Congress Party of India and of Premier Nehru and the turning of India to the domination of the Communist Party of India.

I take it there is no need to dwell upon the tragic results of the first pattern of action to America, to the people of China, and to the world. Korea, with all of its heavy loss of lives, is only one of the sad derivatives.

I take it there is also no need to dwell at length upon the catastrophic results which would flow from the second pattern of action to America, to the people of India, and to the world. In numbers the 350,000,000 of India, added to the 800,000,000 now under Communist domination would bring a total of 1,150,000,000, or slightly more than one-half of the peoples of the world under Communist control. In strategic position, India in Communist hands, added to China in Communist hands, would place the rich southeast of Asia, Indochina, Malaya, Burma, and Thailand in the position of a lush plum in a nutcracker. In political position, India in Communist hands would provide a ready-made antagonist against the Moslem nations including sturdy and courageous Pakistan.

I am aware that the State Department has denied that it in any way participated in the pattern of action in China which I describe.

I am aware that the Secretary of State, Mr. Acheson, and the Ambassador at Large, Dr. Philip Jessup, have both testified and have repeatedly stated (1) that the State Department rendered every reasonable assistance to Chiang-Kai-shek and the Chinese Nationalists against the Chinese Communists; (2) that they have never proposed cutting off all military aid from the China Nationalists, (3) that they never have been

willing to permit Formosa to go to the Chinese Communists, (4) and that they never have considered or contemplated the recognition of the Chinese Communist Government.

The record will directly contradict this testimony of theirs on all four points. It is a further fact that I would have greater confidence in the future actions of the State Department officials if past mistakes were admitted, if they said these were errors of judgment, if they said they were now alert to the facts, and would not repeat the mistakes. As it is, the denials by the State Department of things I know are true, the claims by the State Department of things I know are not true, leaves me very uneasy and disturbed with regard to our country's future policy.

Turning now to present the evidence of the two patterns of action with reference to China and to India, I will not endeavor to assess motives or intentions of the participants. There can be no question but that many of the participants had the best of intentions and had good motives. There can be no question but that many of the participants were such due to ignorance or misunderstanding of vital facts. There can be no question but that many of the participants were patriotic citizens of their countries who made errors of judgment. There can be no question but that many of the participants were knowing associates of the Communist design in connection with the pattern.

I will not attempt to classify any of the individuals that I will name today. In fact, so far as the consequences to our country are concerned the classification is not the most important feature. The results are equally tragic whether they follow from honest mistakes or subversive treason.

But what is very important from a standpoint of individuals is the fact that all over the world men who were participants in the China pattern of action are now transferring to India.

I will now proceed to develop some of the major evidence with regard to the China pattern of action.

During World War II I spent more than 2 years on the staff of Admiral William F. Halsey in the Pacific. For more than half of that time and up to the time of the surrender of Japan and its occupation I served as assistant chief of staff and as officer in charge of the admiral's flag plot, which is the center in the superstructure of the flagship in which information and communication with the fleet and with other commands is assembled and integrated.

In these capacities it was my duty to know the contents of plans and intelligence reports of the admiral's command and of related commands.

Thus I know that it was the recommended plan of the armed services when the war ended, which I assume is no longer classified material, and which national security no longer requires to be secret, that the Japanese armies in Manchuria should be directed to march to the sea with their arms, be there disarmed by the United States Marines and United States Navy, and be repatriated to Japan.

This recommended procedure was disapproved by the State Department on the ground that the morale of the Chinese and Russian people and our relations to both required that the Japanese Armies be disarmed in the interior by the Russian and Chinese forces.

As a result the Japanese arms in Manchuria were turned over to the Chinese Communists by the Russian forces, and the Japanese soldiers were taken to Siberia, where a substantial number still remain as an armed force under Communist command.

In my service in the Navy I was also aware of the extended and careful consideration in the Navy of postwar China policy and of the combined consideration of this matter with the Army. I know of this both from my service with Admiral Halsey in Japan at the end of the war and from my brief service in the office of the Secretary of the Navy after the occupation command in Japan was turned over to Admiral Spruance by Admiral Halsey.

I find that my recollection in this respect are confirmed in detail by the diary of Mr. James Forrestal, who was the Secretary of the Navy at that time.

I now present to you the appropriate references in the Forrestal diary as published in the book, the Forrestal Diaries, by Walter Mills and E. S. Duffield, issued by the Viking Press.

From these entries it is apparent that the combined Navy-Army study and recommendation contained in the Patterson-Forrestal memorandum for aid to Chiang Kai-shek against the Chinese Communists was rejected by the State Department, with Dean Acheson, then Under Secretary, taking an active part in its rejection.

Instead, direct consultations regarding China were conducted with the U. S. S. R. by the State Department, and the Marshall mission was dispatched to China with its instructions to force the Chinese Nationalists to accept the Chinese Communists into their Government and into their armies on a compromise basis, and to stop the aid to the Chinese Nationalists unless this was accomplished.

The Marshall mission, the unfortunate directive from the President under which it functioned, and its results are familiar to all of you.

Following this period the next significant period is the latter half of 1948. During this period Congress had voted an appropriation for military aid to the Chinese Nationalists in their struggle against the Chinese Communists. But the record shows that very little of this military aid was actually shipped, that there were unduly long delays in the issuance of export licenses and permits, and that as Admiral Oscar Badger testified, many of the rifles and machine guns lacked essential parts when they arrived in China.

During this period, Mr. William Remington had direct administrative supervision over these shipping licenses in the Commerce Department.

In the late months of this year (1948) the Chinese Nationalists suffered their first serious reverses. The appropriate officials in the State Department then recommended a course of action which Secretary of State Marshall characterized as "administering a final coup de grace to Chiang's government," and which he rejected.

I present a copy of the appropriate pages of the "Forrestal diaries" to prove this point.

Early in 1949, General Marshall resigned as Secretary of State and Mr. Acheson took his place on January 21, 1949. At the same time Mr. Lovett resigned as Undersecretary of State and Mr. Webb took his place.

On January 28, 1949, Mr. Forrestal was notified by the President that his resignation would be accepted. (It became effective on March 28, 1949.)

Then on February 5, 1949 the White House conference with Senator Arthur Vandenberg took place.

I testified regarding this conference before the McCarran committee on my first appearance on October 1, 1951, as follows:

"Mr. MORRIS. Will you relate what you know about that particular subject, (stopping arms aid to Chinese Nationalists) Governor Stassen?

"Mr. STASSEN. I know what Senator Arthur Vandenberg told me.

"Mr. MORRIS. Will you tell us what he told you about it?

"Mr. STASSEN. When I saw Senator Vandenberg, for whom, as you know, I have the very highest regard, for the last time in his home in Grand Rapids, Mich., in November of 1950, just prior to my last trip through Asia and around the world, he told me of a White House conference on this question of stopping supplies for Chiang Kai Shek.

"Mr. MORRIS. Will you develop that for us, if there is any more to develop?

Mr. STASSEN. Senator Vandenberg told me in this conference he was called in to, which he said was the only conference that he had been called in to on Asiatic policy, it was there proposed by Secretary Acheson and Dr. Jessup to the President that the supplies which were then being loaded in ships in Hawaii and San Francisco for the Chiang Kai-shek government be dramatically stopped as a move toward world peace.

"That is that all armaments should be immediately cut off from the Chinese Nationalists and that the ships that were then on the way and then being loaded, as I recall—he said there were five such ships that would be carrying supplies to the Chinese Nationalists—they should all be stopped in a dramatic and direct announcement to stop the supplies that were continuing the internal war in China; that he then vigorously opposed it and analyzed it, and that after discussion with members of the Cabinet who were present, the President decided not to go ahead with the recommendation of Secretary Acheson and Dr. Jessup in view of Senator Vandenberg's statement he would publicly oppose it, and he was certain he would get the majority of the United States Senate to join with him in the opposition to that policy.

"Mr. MORRIS. Were these supplies purchased by the moneys appropriated by Congress during the 1946-48 period?

"Mr. STASSEN. Yes.

"Mr. MORRIS. Were they the supplies referred to by Senator Vandenberg?

"Mr. STASSEN. They would be purchased by various sources, by the Chinese Nationalists. It was to be all arms en route to the Chinese Nationalists, just a complete stoppage of all supplies of a military nature for the Chinese Nationalists, whatever their source of purchase had been.

"Mr. MORRIS. What was the date of the White House conference that Senator Vandenberg told you about?

"Mr. STASSEN. I do not know the date. It can be traced down at the point when these ships were going to sail from Hawaii and San Francisco with these supplies."

On the next day (Oct. 2, 1951), the Department of State issued a release which included these statements:

"Secretary Acheson has no recollection of such a meeting. Ambassador Jessup has no recollection of such a meeting. We have checked the records at the White House thoroughly. We have checked the Secretary's records and find nothing."

I challenged this release in this specific direct question:

"Does Secretary Acheson deny that at a meeting in the White House in 1949 he recommended stopping military aid to the Chinese Nationalist Government and that Senator Vandenberg opposed it?"

The Department of State on the following day issued a further release partially reversing their earlier release. They admitted the conference, placed responsibility for the recommendation to stop military aid on General Barr, declined to state what the position of Mr. Acheson was in the conference, and stated that Mr. Jessup was not present at the conference. Mr. Jessup also testified before you that he was not present.

Senator Vandenberg's personal diary substantiates the essential facts of my recollection of his statement to me. It does not say who was present. But it is a fact that a recommendation of this nature would not be prepared for action and presented at a conference between the President and Senator Vandenberg unless the Secretary of State had approved it and recommended it.

The military situation in China at the time of this conference was approximately as indicated on this map. In other words, two-thirds of the people of China were then under Chinese Nationalist administration and only one-third under Chinese Communist control.

The developments immediately preceding this conference included the following:

On January 21, 1949, Chiang Kai-shek retired as President of China and Gen. Li Tsung-jin was named as acting president.

On January 22, 1949, the Peiping garrison surrendered to the Chinese Communists.

On January 31, 1949, Gen. Hsueh Yueh, Governor of Kwantung Province, declared in Canton that Kwantung, Kwangsi, Hunan, and Fukien Provinces would make a last-ditch stand against communism.

The developments following are outlined here:

On March 15, 1949, Secretary Acheson wrote a letter to Senator CONNALLY rejecting the McCarran-China aid bill which had been supported by letter by 25 Democratic and 25 Republican Senators.

On April 3, 1949, the Peiping Communist radio broadcast a statement that the Chinese Communists would fight on the side of the U. S. S. R. in the event of a world war.

On May 3, 1949, Gen. Claire Chennault told the Senate Armed Services Committee that South China could be held with United States aid.

On May 26, 1949, Acting President Li Tsung-jen, of the Chinese Nationalists, asked for moral encouragement from the United States and for some statement that the United States realizes the import of things that are happening in Asia.

On June 20, 1949, the Chinese Nationalist Government declared all Chinese Communist ports would be closed to traffic on June 26 to prevent war supplies from reaching the Communists.

On June 29, 1949, the last 1,500 troops of the United States Army left Korea.

On July 27, 1949, Secretary of State Acheson announced that a thorough review of United States policy toward the Far East would be made under the guidance of Ambassador at Large Jessup, with a view to making recommendations to the Secretary of State for the formulation and implementation of policy concerning those areas.

On August 5, 1949, the State Department issued the White Paper on China, edited by Dr. Jessup, marking off the Chinese Nationalists, and declaring that they had lost through their own decay and not through any inadequacy of American aid.

On August 6, 1949, Senator Vandenberg states publicly that the review of policy by Dr. Jessup should not overlook the possibility of finding a way to aid the non-Communists in China.

On September 12, 1949, the Senate Foreign Relations Committee passed 20-3, the one and three-tenths billion military assistance program, including \$75,000,000 for the "general area of China."

On October 1, 1949, the Chinese Communist Peoples Republic was proclaimed.

On October 2, 1949, the U. S. S. R. recognized the Chinese Communist Peoples Republic; Bulgaria and Rumania followed on October 3, and Poland and Czechoslovakia on October 4.

On October 5, 1949, the line of the internal war extended across China at a point

about 125 miles north of Canton, with the four southern provinces and approximately 40 percent of the people not under Communist control.

On October 6, 7, and 8 a conference of approximately 25 citizens and State Department officials was held at the State Department under a call arranged by Dr. Jessup. The major portion of the session was presided over by Dr. Jessup and other portions by Dr. Fosdick.

At this conference the prevailing group was led in the discussions by Mr. Owen Lattimore and Mr. Lawrence Rosinger. This prevailing group recommended 10 points for American policy in China and in Asia, as follows:

1 That Asia should be approached as a long-term problem to be studied and deferred, that the Russian Communist attention was concentrated first on Western Europe with its industrial strength, that the United States should likewise give priority to Europe.

2 That an aid to Asia program should not be started by the United States until after long and careful study because of the complexity of Asia and the dangers of a Communist charge of United States imperialism.

3 That the Russian Communists were not as aggressive as Hitler and would not be apt to take direct military action to expand their empire.

4 That the United States should recognize the Communist Peoples Republic Government of China under the leadership of Mao Tse-tung at an early date.

5 That the United States should encourage the recognition of the Communist Peoples Republic Government by Britain and India and follow with its own recognition soon thereafter.

6 That it should be United States policy to turn Formosa over to the Chinese Communist Government.

7 That it should be United States policy to permit the Chinese Communists to take Hong Kong if they insisted.

8 That Premier Nehru had shown reactionary and arbitrary tendencies and should not be leaned on or assisted as a leader of non-Communist forces in Asia.

9 That the United States should not approve of the blockade of the Communist Chinese coast by the Chinese Nationalists under Chiang Kai-shek, should assist in breaking it, and should send economic aid to the area of China under Communist control.

10 That no aid should be sent to the non-Communist Chinese guerrillas in the south of China, nor to the Chiang Kai-shek forces, and the military supplies en route to them should be cut off.

During the conference I opposed all of these 10 points, and as the stenographic transcript will show I urged the following:

A. That American Asiatic policy should be given immediate attention as I considered Asia to be the number one priority of the Russian Communists and that they would move into the vacuum in Asia at an early date. That this was true because Asia was the vast underbelly of the Soviet Union, and the Communists would not move aggressively toward either Europe or Alaska so long as they were uncertain about Asia.

B. That an American Aid to Asia program should be promptly established under able men with a headquarters in Bangkok, to assist the non-Communist peoples and that study and action should move forward together as in the Marshall plan.

C. That the Russian Communists were potentially just as aggressive as Hitler and that America should consider aggressive action by the Soviet Union as one of the definite alternative possibilities.

D. That the United States should not recognize the Communist government in

China, and that to do so would be one of the most tragic moves the United States could make in long-term world strategy.

E. That the United States should announce that it considers Formosa a vital part of our perimeter and that we would not permit an armed assault from the mainland on Formosa.

F. That the United States should back up the British at Hong Kong, and that if the British, who must be our close partner in the world, decided to stand and fight at Hong Kong we should back them up with planes and ships.

G. That Nehru was an important leader of the non-Communist areas of Asia, that India should receive economic aid, that he should not be opposed in his effort to develop his third position in the world struggle.

H. That for the sake of world peace and our own security high American policy should be to prevent Russian Communist Imperialistic consolidation of Asia, that every move of opposition to the Communist advance in Asia should be made, and that all forces resisting communism in Asia should be aided militarily as well as economically.

There was considerable support in the discussion for my position, but the Lattimore-Rosinger group prevailed.

Near the conclusion of the sessions I said, directly across the conference table (see "d," pp. 6 and 7 of original transcript; p. 15 of transcript of Stassen remarks) that the steps advocated by the opposing group could best be characterized as steps that would hasten the victory of the Communists and that these steps would be a very sad mistake in American world policy.

At recess at about noon on the third day, disturbed by the prevailing trend of the discussion I spoke to Dr. Jessup. I said I certainly hoped that they would not make the tragic mistake of following this recommended program that had been advocated by Mr. Lattimore and his group.

Mr. Jessup responded that he felt that the greater logic was on that side.

Then I pleaded with him that he should not follow that view and urged that before he moved in that direction, he should go to Tokyo and see General MacArthur and discuss the whole situation with him. I told him that I had not seen General MacArthur or had any communication with him since the end of the war, but that I know from the whole wartime experience that he was extremely brilliant and well informed about those very problems we were dealing within this conference, and that it was, in my judgment, tremendously important that he go promptly to see General MacArthur and discuss with him the recommended Lattimore program. Dr. Jessup said he might do that, and that was the end of the conversation.

At this point one of the important questions of correctness of memory and of testimony is involved.

Dr. Jessup has testified to this committee that he does not recall such a conversation and further that recognition of Communist China never was considered or contemplated by him or by the State Department.

Senator ALEXANDER SMITH has reported a recollection similar to mine in connection with a November 1949 talk he had with Dr. Jessup.

Dr. Jessup states that Senator SMITH must be under a misapprehension.

General Fortier testified before the McCarran committee that in the first week of January 1950 Dr. Jessup told him that the United States would recognize Communist China within 2 weeks after Britain, who had just issued their recognition at that time, on January 5, 1950.

Dr. Jessup says that General Fortier is mistaken.

Thus, on this central point he disagrees with the recollection of Senator SMITH, General Fortier, and myself.

After a careful search, Mr Robert Matteson, of my staff, has discovered remarkable corroboration of the position of Senator SMITH, General Fortier, and myself from an unexpected source.

You will recall that on July 1, 1949, Secretary Acheson wrote to Senator CONNALLY that the United States would not recognize Communist China until he had first consulted with the Senate Foreign Relations Committee, and reaffirmed this publicly August 5, 1949, and August 24, 1949.

Then, on November 16, 1949, Secretary Acheson said that the recognition of Communist China was out of the question so long as they held Angus Ward.

On the same day Foreign Minister Bevin, of Britain, said, in the House of Commons, that Britain was waiting for the United States to join with Britain before Britain recognized Communist China.

On December 12, 1949, Angus Ward was released.

On December 30, 1949, India recognized Communist China.

On January 5, 1950, Britain recognized Communist China.

And here is the confirmation of the recollection of Senator SMITH, General Fortier, and myself.

In the January 11, 1950, edition of the New York Times there is a report of a long closed conference on January 10, 1950, of Secretary Acheson with the Senate Foreign Relations Committee. It is written by William S. White. It contains a lengthy reference to disclosures by Senator CONNALLY as to the nature and content of the conference.

It includes these words:

"Senator CONNALLY strongly indicated also that while United States recognition of Communist China would not be accomplished 'in a hurry', it was on the way. Asked whether Secretary Acheson in today's discussion has fulfilled his pledge to consult with the committee before acting on the recognition question, Senator CONNALLY observed:

"I think he has fulfilled it now. But very likely he will consult us again before final action."

I present a complete copy of the New York Times story.

This same report is confirmed in a report by Phillip Porter in the Baltimore Sun, who wrote:

"CONNALLY said Acheson had taken up with the committee the question of extending recognition to Communist China and added that, in his view, the administration had thus 'fulfilled' its promise to consult with the appropriate congressional committees before taking action."

My staff has found no indication in the days following January 11, 1950, of Senator CONNALLY or any one else disputing the accuracy of these stories.

The public reaction in America to this report, however, and to the January 5, 1949, statement of the President abandoning Formosa was very adverse. Soon thereafter the Chinese Communists committed new adverse acts against American property and personnel in China.

The warnings which some of us issued years ago with reference to China were ignored with tragic consequences. This is now recognized by nearly everyone and the efforts to conceal or twist the evidence are of no avail.

I now issue a new warning with regard to India.

The evidence thus far is not extensive but to me the pattern is clear.

I reiterate that I do not prescribe motives. I do not attempt to differentiate between the intended and the unintended.

On August 15, 1947, India won its independent sovereignty. It came into sovereignty partitioned from Pakistan, with acute problems of food, refugees, water, land, and poverty. It has a population of approximately 350,000,000.

In September 1947 the Communist Cominform met in Eastern Europe. Soon thereafter evidence appeared in India of a new line of the Communist Party of India.

On October 18, 1947, an article appeared in The Nation, written in India by Andrew Roth, who will be remembered as one of the men mentioned in the Amerasia matter.

The title of the article is "Rice and Riots in India."

It contains a reported quotation from an unnamed young North Malabar lawyer as follows:

"I don't know much about China, but it seems to me that here in south India the conflict between landlords and tenants is so sharp that it may grow into a civil war of Chinese proportions."

The article further reports that the head man of one Indian village said, "Ninety-five percent of the people here are Communists."

In the December 25, 1947, issue of Bolshevik, Nehru was attacked, and the third-force idea of neutrality was attacked.

From February 28 to March 6, 1948, a Communist conference was held in Calcutta. In attendance were 800 delegates from India and some representatives from other countries. Also present was a Soviet delegate whose identity was not disclosed but who sat on the rostrum and was referred to as the Russian comrade.

This conference attacked Nehru and established an anti-Nehru violent line.

Following the congress, Communist-led strikes and violence flared in many cities in India.

In October 1949 Premier Nehru visited the United States. While he was here he indicated to the United States Government that what he most needed was 1,000,000 tons of wheat as this would ease up the profiteering in wheat in India, would improve his bargaining position with Pakistan and other countries for wheat imports, would strengthen his currency, and would allow him to improve the meager ration of his people. He indicated further that India would to a considerable extent repay in future years with raw materials produced in India.

This request was not presented to the United States Congress until 15 months later in December 1950 after the situation in India had become very acute.

At the time of Premier Nehru's visit to America in October 1949, Mr. Lawrence Rosinger wrote an article in Far Eastern Survey of the American Institute of Pacific Relations, which stated that the position of the Indian Communists, as stated in March 1948 by its central committee, was as follows:

"At a time when the anti-imperialist democratic camp is engaged in a life-and-death struggle with the imperialist camp led by American imperialism, Nehru refuses to take the side of the former camp and poses neutrality. This so-called neutrality . . . is only a mask to cover collaboration with the Anglo-American imperialists."

Rosinger further reported that "Sarat Chandra Bose of the Socialist Republican Party . . . has expressed sharp criticism of New Delhi on the ground that it is not independent in its foreign policy."

"Bose declared of Nehru: 'His surprise of yesterday will probably mean abject surrender to President Truman and Clement Attlee tomorrow.'"

In March of 1950, a public affairs information conference was held in the State De-

partment. I attended as a representative of the Council of Religious Education.

The reports which were made included no reference to wheat for India, and knowing that this was India's great need, I raised the question from the floor. The question was parried and when I followed it up in the sub-conference on Asiatic affairs, I was first told that the United States did not have any surplus wheat to ship and I replied that I knew that this was not true, as our carry-over of wheat was at the highest level for many years. Then I was told that a satisfactory trade agreement for raw materials had not been consummated. I urged then that the matter be presented promptly to Congress. This was not done until 8 months later and in the meantime the situation in India became much more adverse both in economic conditions and in the attitude toward the United States.

On December 16, 1950, another article by Andrew Roth appeared in The Nation entitled the "Scars of Imperialism" which reflects adversely on Nehru's government.

Throughout 1951 the crucial issues with India have been handled in a manner such that our relations have further deteriorated.

In closing it is also well to keep ever in mind that Lenin said, "The outcome of the world struggle will be determined by Russia, India, and China, inasmuch as they constitute the overwhelming majority of the population of the globe."

Encirclement of Russia

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, October 8, 1951

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Russians Don't Like Being Encircled, Either," which appeared in the Hartford Courant on February 19, 1951.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE RUSSIANS DON'T LIKE BEING ENCIRCLED, EITHER

Suppose you're a Russian. You pick up a newspaper, not Pravda or Izvestia, but a typical American newspaper. And you read the following news item:

"PARIS, February 9.—The United States and her Atlantic allies are blueprinting a network of fighter-bomber bases all around the Mediterranean authoritative sources said today.

"Equipped to handle everything from jet fighters to B-50 bombers, the bases will stretch from the Atlantic to the Persian Gulf.

"Some of them are to be built from sand or jungle, others are to be expanded and improved out of existing airbases.

"The main purpose of the network . . . is to advance the forward positions available to high-speed aircraft for use 'against any possible enemy.' Some of the new bases will be within 500 miles of Russia."

How are you—in Russia—going to react to that news? Can you be blamed for wondering who is encircling whom? We all know how Americans would feel if the Russians were openly building a ring of air bases around this country, at distances ranging

from 500 to 1,500 miles. Couple the news item above with the belligerent, irresponsible talk some among us are indulging in, and it is not surprising that much of the rest of the world distrusts our peaceful intentions.

Senator McMAHON and Representative RUSKOFF are sponsoring in Congress a joint resolution of friendship for the Russian people. That is a sound and sensible step, a beginning on convincing the world that we really want peace not war. But how much weight will such a resolution carry if we continue flaunting our growing circle of air bases in Russia's face?

The vast majority of Americans have no aggressive intentions. That ring of fighter-bomber bases is intended actually as another deterrent to prevent Russian aggression. But could not we make that a little clearer to those who are quite naturally concerned? We fumble from what looks like appeasement to belligerence. Is there no middle ground?

Can the Voice of America carry any more vital message than the reiteration that we do not want war, preventive or otherwise? Any sensible step to dissuade Russia from war is justified. But let us make sure that we know, and that others know, what we are doing, and why. Let us not make the stupendous error of goading Russia into doing just what we are trying to prevent.

Ignorance in the State Department

EXTENSION OF REMARKS OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I am enclosing an editorial which appeared in the Polish-American Journal of September 27, 1951, entitled "Ignorance in the State Department," and I wish to commend it to the attention of the Members of this body. I am doing this because on several occasions in the past I have encountered incidents similar to the one described in this editorial and because I strongly feel that the use of the term "satellite nations" should be discontinued with respect to Poland and other similar nations which are today dominated by the Soviets against the will of their peoples.

I am also deeply concerned about the attitude of certain officials who, while applying the term "satellite nation" to such countries as Poland, either openly express their conviction or imply that the Communist-dominated regimes of these nations have the support of their peoples. It should be clear to all that such is not the case. In Poland, for example, only approximately 5 percent of the population consists of Communists. The remainder of the population, while opposed to the Communist government imposed upon them, is simply unable to free itself from that regime which is backed by the armed might of the Soviets, and which ruthlessly suppresses all instances of open resistance.

I think that these facts should be borne in mind, particularly by our Government officials. The opposite attitude is not compatible with the long-standing

friendship of the American people for the people of Poland and for the people of similar nations who are today, not of their own choice, ruled by Communist regimes.

It is my hope that incidents such as the one described in the following editorial will cease, just as it is my sincere hope that the people of Poland will once again have a government of their own choice and be able to join the free nations of the world as a sovereign, democratic, independent power, helping us in our fight against Communist totalitarianism:

IGNORANCE IN THE STATE DEPARTMENT

Last week an amazing example of high-level ignorance in the State Department regarding Poland was discovered by us during a conversation with Durward V. Sandifer, Deputy Assistant Secretary for United Nations affairs:

Here is the evidence:

We have told Mr. Sandifer that it is an injustice to Poland and to other iron curtain countries to brand them as "satellites of Russia" and that it would be much better to refer to them as "captive countries."

Mr. Sandifer disagreed, contending that the term "satellite" is fitting on the basis of their pro-Soviet record of performance in the United Nations and elsewhere.

A discussion ensued during which we have tried to explain to Mr. Sandifer that 99 percent or at least an overwhelming majority of the Polish people are against the Communist government of Poland, and that they cannot be held responsible for the doings of that government, etc.

Mr. Sandifer again disagreed, arguing that if the majority of the Polish people would not be behind the government—it could not exist, and moreover the Polish people do not manifest their disapproval of the governments etc.

Of course, we did our best to explain that the Polish people did not elect their government but that it was imposed upon them and that to resist that government openly, under the present circumstances, would be foolish and disastrous. However, not having experience in dealing with the diplomats, we wonder if we were able to dispel the clouds of doubt and confusion in the matter.

Be that as it may, we believe that some action should be taken to remove such ignorance from the State Department, as it is harmful to our international interests.

P. S.—We were informed by several exile leaders from behind the Iron Curtain that they have encountered similar ignorance in the State Department regarding their countries. All of them also object to the term "satellite" and favor the term "captive." One of them, Carlos Davila, former Rumanian Ambassador in Washington, recently stressed this point in a letter to the New York Times.

Another Seed of Growing Militarism

EXTENSION OF REMARKS OF

HON. THOMAS H. WERDEL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. WERDEL. Mr. Speaker, in my remarks made on the 3d day of April 1951, in connection with our Growing Prussian Staff, I quoted from the remarks and

book of Donald Nelson, former head of the War Production Board. He told us of the devices and means by which the Military Establishment attempted to create public opinion so as to gain more powers in the management of American industry.

I am disturbed by recent news releases which are apparently advising the American people that American industry cannot produce or deliver the goods to Europe or Korea.

Mr. Speaker, I think this is a subject that needs immediate investigation. I think the same wheels are being turned against Charles E. Wilson, Director, Office of Defense Mobilization, and his office that were so well operated against Donald Nelson, as evidenced by his own statements.

Mr. Speaker, I feel that many Members of this House will be very much concerned by news releases published by our Military Establishment before the Second Session of the Eighty-second Congress convenes next January. I refer you again to my remarks where I published surveys made for our general staff at their request and in which surveys they were advised that they could not expect efficiency while operating through the red tape created by overcentralization. It is my belief that a complete investigation will show that our industry is producing but that delivery is handicapped through overcentralization of our Military Establishment.

I also want to point out that there has recently come to light a distressing case evidencing the destruction of professional integrity by the military service. The case indicates that there is a necessity for the Military Establishment to politically support the administration. The example in point is contained in the July 1951 issue of Combat Forces Journal, pages 10-11, published by the Association of the United States Army. This is the journal of Regular Army officers of our country. The president of the association at the time the article was published was General Haislip, Vice Chief of Staff of the Army, and the board of directors of the association are all Regular Army officers on active duty. The Journal passes itself off as being devoted to the professional as distinguished from the political advancement of its members.

The issue mentioned devotes considerable space to an attack on the integrity and professional honor of General MacArthur. It discusses the recent hearings by the two committees of the other body of the Congress. It makes disparaging and sarcastic comparisons of General MacArthur's conduct during the hearings relative to the conduct of General Bradley and General Marshall. It flatly accuses General MacArthur of dishonesty when it charges him with "distortions, evasions, and unfairness."

If the Journal is justified as a publication for professional soldiers, it goes to unprecedented lengths when it trumps up a case of incompetence against General MacArthur for not joining up the Eighth Army and the Tenth Corps in Northern Korea. We all must wonder

if the men back of this article are not those who were seeking to exercise illegal powers in the report of General MacArthur to the Congress in 1931 and 1932. As a lay person, it seems to me that the fabricators of the article also display a lack of professional objectivity. At least, that point is arguable, even though they do not admit it. The article points out the success in joining the Eighth Army and the Tenth Corps across the waistline of Korea after the time that it criticizes General MacArthur for not making such juncture. Presumably, the writers of the article knew that the juncture was possible after a retreat of many miles had resulted in a much shorter defense line across the more developed and narrow part of Korea. Presumably, they also knew that the longer defense line across the widest part of Korea was also across inaccessible mountainous wilderness.

I do not think any Member of this body can read the article and still believe that the Joint Chiefs of Staff are truthful in their contention that they stand upright as professional men and are doing only their duty in expressing debatable opinions opposed to those of General MacArthur. Their article demonstrates that they have, in fact, an animus against MacArthur. They, too, have become puppets of a totalitarian political machine issuing propaganda with the hope that the prestige of office may lend it weight. When the article says, "The Joint Chiefs of Staff have proved its case against General MacArthur," what happens to its previous statements that it was not opposed to General MacArthur?

The only case that it has sought to support is the political case of its Commander in Chief against the fathers and mothers of those in the fight. If they desire to write such publications, I think it would be more pertinent if they would tell us politically what we must do to get back the prisoners of war of these United States when we do not know where they are, why they were fighting, who we talked peace terms with, or what the subject of peace discussions will be, and when our Joint Chiefs of Staff have told us that we cannot send military expeditions into the land mass of Asia.

The Communist Attempt To Take Over Hollywood

EXTENSION OF REMARKS OF

HON. RICHARD M. NIXON

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Monday, October 8, 1951

Mr. NIXON. Mr. President, I call to the attention of the Members of the Senate an article entitled "The Strange Story of the Hollywood Ten," which was written by Victor Lasky, coauthor of *Seeds of Treason*, which I ask to have printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE STRANGE STORY OF THE HOLLYWOOD TEN (By Victor Lasky)

The biggest headache in Hollywood's history centers around seven writers, two directors, and one producer who, after refusing to tell a congressional committee whether they were Communists, became known as the Hollywood 10. Their reticence resulted in their going to jail on contempt charges.

The story of the Communist attempt to take over Hollywood can now be told in its startling entirety. The Communists took the industry for a ride it will never forget, and they managed to do it despite the fact that the overwhelming majority of people connected with the movies detest the Communist Party.

Who are these 10 men who, in the public mind, came to symbolize Hollywood communism? How did they, out of the many pro-Communists and intense left-wingers in the movie business, suddenly find themselves in the limelight?

When the House Committee on Un-American Activities decided, in 1947, to investigate Communist activities in the motion-picture industry, its researchers prepared a list of almost a hundred Communists and fellow travelers who held positions of importance. Since there was not time to call that many witnesses the committee finally decided on 19 men—actors, writers, and directors. Exactly how the men were selected is not known; perhaps some of the names were picked arbitrarily. All of the men, as it happened, were married, and none of them was a veteran.

The committee thereupon issued subpoenas to the 19. But when the hearings took place in Washington, in October 1947, there proved to be time to call only 11 of them: writers John Howard Lawson, Albert Maltz, Samuel Ornitz, Dalton Trumbo, Lester Cole, Ring Lardner, Jr., Alvah Bessie, and Berthold Brecht; producer Adrian Scott; and directors Edward Dmytryk and Herbert Biberman. As a result of their appearance as witnesses, 10 of these men were convicted of contempt of Congress. (The exception was Berthold Brecht. Brecht, a German-born playwright whose pro-Stalinist record was clear enough, later returned voluntarily to live in the Soviet zone of Germany. He readily admitted to the committee that he had been affiliated with a long list of party-line organizations, but denied that he had ever been an actual member of the party.)

The testimony of the 10 ran in a fixed pattern. They answered a few perfunctory questions, demanded the right to read prepared statements (in some cases they were allowed to do so), delivered several abusive observations about the committee and the proceedings, and refused to answer directly the question, "Are you now, or have you ever been a member of the Communist Party?" The appearances were short and violent. Albert Maltz addressed the committee counsel, Robert Stripling, as "Mr. Quisling." John Howard Lawson, the obvious leader of the group and the first to be called, announced pontifically, "I am not on trial here, Mr. Chairman. This committee is on trial before the American people. Let us get that straight." Samuel Ornitz intimated that the committee was motivated by anti-Semitism. Dalton Trumbo yelled, "This is the beginning of an American concentration camp." During the proceedings, most newspapermen referred to the witnesses as the "Unfriendly 10." To the dismay of the motion-picture industry, the Communists were able to change that phrase to the "Hollywood 10."

The 10 behaved alike before the committee because, as we now know, they had met in advance and coordinated their strategy.

In fact, 18 of the witnesses—again excluding Brecht—had held a strategy meeting at the home of director Lewis Milestone. Milestone was one of the eight witnesses the committee didn't find time to call. The other seven were writers Dick Collins, Gordon Kahn, Howard Koch, and Waldo Salt; directors Irving Pichel and Robert Rossen; and actor Larry Parks. Collins, who has since broken violently with the Communists (as has Parks), told the story of that meeting in Milestone's luxurious home.

At the meeting, Larry Parks made an impassioned appeal for unity. "Let's stick together," he pleaded, "and go to Washington together." But the real leader of the meeting—in fact, the real Communist boss of the Hollywood talents sections—was John Howard Lawson. It was Lawson who decided on the strategy of not giving direct answers to the \$64-question about party membership. Actually, this was the only strategy he could advocate. A decision to admit that they were party members would have meant perjury citations for Biberman, Ornitz, and Lawson, who had previously told the California Un-American Activities Committee that they were not Communists. On the other hand, most of the 18 men could not deny under oath that they were Communists, because, as they were painfully aware, the committee's research staff had photostats of their party cards; a denial would have meant perjury citations for them, too. The only course left was the swashbuckling speechmaking and wordy attack on the committee's legality that they finally adopted. They knew that course would probably lead to contempt-of-Congress indictments, as it finally did, but the penalty for contempt is much less severe than that for perjury.

"They didn't explain all this to us," Collins later said bitterly. "What they sold us was a bill of goods about the highest devotion to basic American principles."

Before the committee's hearings in Washington got under way a gigantic Communist front had been organized to defend the unfriendly witnesses. This was the Committee for the First Amendment, an organization that pulled in more names than almost any front organization in the previous 10 years. (Four Senators joined.) The committee's first act was to send a delegation, headed by Humphrey Bogart, to protest the hearings in Washington. Bogart, who later admitted he had been "taken in" and that the whole affair had been incredibly stupid, is the only one of many Hollywood luminaries who would rather forget that trip. John Garfield, Canada Lee, Lauren Bacall, June Havoc, Marsha Hunt, Danny Kaye, and most of the others who flew to Washington to applaud for the "persecuted liberals," were thrown into confusion when committee investigator Louis Russell began pulling out the party cards of the witnesses.

However, the Communists knew when they had a good thing. Before the 10 finally went to jail, most of them were sent on a Nationwide tour, during which they denounced Hollywood, the Committee on Un-American Activities, and America's foreign policy. A 15-minute film short, *The Hollywood 10*, was produced by Paul Jarrico. A heavy-handed, propaganda-packed job, it was never very popular in this country, but it became a big success in the iron-curtain countries. Gordon Kahn wrote a book called *Hollywood on Trial*. By the time the comrades were through, the 10 men were known all over the world; in fact, they were more famous abroad than in this country. Let us take a closer look at these men.

The real leader of Hollywood's Communists was John Howard Lawson. Jack Lawson, whose first play was produced in 1914 when he was only twenty, was a founder and an early president of the Screen Writers' Guild. A stocky man, with uncombed brown hair, jughandle ears, piercing brown eyes,

and a domineering manner, Lawson had little difficulty riding herd on the Hollywood comrades. "To me, as to other writers and, I imagine, to some actors," Dick Collins later reported, "Lawson was father. His book—on screen-writing—was the bible. He had enormous intellectual baggage. He gave a tremendous amount of energy to the party. After meetings, which usually ended at 2 a. m., Lawson would sit down and write his reports to the central committee. He was a dynamo, and set the pattern for the Hollywood comrades." Lawson was a tremendous admirer of Earl Browder up to 1945, and the only time his leadership in Hollywood was menaced was when Browder went on the skids that year. Lawson put up a tremendous fight to retain his position, and finally succeeded. "He was an intensely ambitious writer at one time," Collins recalls, "but he never quite made the grade in Hollywood, a pretty tough place for the best of them. But as a party leader, Lawson was an honored name behind the iron curtain. I think the greatest thrill Lawson ever had was when the Soviet writers at the Waldorf-Astoria peace conference in 1949 jumped to their feet when he was introduced to them."

Lawson was the party's top fund-raiser in Hollywood; he was the final authority on cultural matters among the town's Communists; and he was the leader of the Red faction in the Screen Writers' Guild. It would hardly have been a secret to anyone, even before the House committee dug into it, that Lawson was a Communist, he wrote for the Daily Worker as far back as 1933. And while he was up to his ears in Communist work, he was also making a good living writing scripts for such movies as *Action in the North Atlantic*, *Blockade*, *Aiglers*, *Sahara*, and many others.

Beside Lawson, most of the other members of the 10 seem to lack forcefulness, though some of them are brilliant writers. But Sam Ornitz, for example, has virtually no solid accomplishments in his career outside of a fairly good novel written in the twenties, *Haunch*, *Paunch*, and *Jowl*. He worked regularly as a movie writer from 1930 to 1938, after which he got very few screen credits. Herbert Biberman has a similarly undistinguished record. He wrote such pictures as *Action in Arabia* and *The Master Race* and directed several inconsequential items; but he and his wife, actress Gale Sondergaard, were always more proficient at rank-and-file Communist work than at turning out anything worth while in motion pictures.

Lester Cole, who is now fighting a legal battle to get back his job at M-G-M, is cut to pretty much the same pattern. A balding little man, now 47 years old, he has spent 20 years in Hollywood without writing a single first-rate picture; the best known of his accomplishments are *Objective Burma* and *High Wall*.

Adrian Scott will doubtless go down in film history as the man who converted Dick Powell from a smooth, singing hero into a professional tough boy. He produced *Murder, My Sweet* and *Cornered*, and also worked on several other pictures, notably *Crossfire*. He is only 39 years old, and did not begin his Hollywood career until 1940; before then, he was an associate editor of *Stage* magazine.

Ring Lardner, Jr., the son of the famous humorist, is a tall, bespectacled man, now 36, who looks like the standard caricature of a writer. During the midthirties, he left Princeton and went as a tourist to Russia; he returned to this country with great admiration for socialism. Lardner's whole career has been something of an accident. He was originally brought to Hollywood as an actor, but his screen test was a complete fiasco. He became a press agent and later graduated to

a post as junior writer. He made his mark in 1941, when he collaborated with Michael Kanin on the script of *Woman of the Year*, which, starring Katharine Hepburn, made a small fortune and ended up with an academy award. At the time of the 1947 hearings, he was making \$2,500 a week. Lardner became one of the Hollywood Ten by an accident. Although he had been one of the 19 originally subpoenaed by the committee, he received a wire at the last minute announcing that his appearance had been indefinitely postponed. However, he felt an obligation to go along to Washington with the others, and when the committee saw him there it changed its mind and called him to the stand. Lardner is described by people who worked with him as a real gentleman, extremely bright and witty, but rather shy (he speaks with a nervous stutter). He has always been a close friend of Dalton Trumbo's.

Trumbo is one of the most talented and also one of the most erratic, of the 10. As a child he lived in humble surroundings in Grand Junction, Colo., but moved to southern California during his youth and grew up in the movie colony. A complete individualist, he lived about 50 miles outside of Hollywood and rarely came to party meetings, or even to meetings of the 10. By avoiding the town's social whirl, he was able to turn out a fantastic amount of work, his associates recall that Trumbo was addicted to 20-hour uninterrupted stretches of writing and that he once turned out a finished hundred-page screen story in 2 days and 2 nights. He got screen credits for *A Guy Named Joe*, *Thirty Seconds Over Tokyo*, and *Kitty Foyle*, among others.

Alvah Bessie, who came to Hollywood after fighting with the Abraham Lincoln Brigade in Spain, was a Communist who liked to refer to himself as a professional soldier. In between writing more than 85 articles for the Communist *New Masses* and acting as a kind of adjutant general to Lawson, Bessie found time to work on such films as *Northern Pursuit*, *The Very Thought of You*, and *Hotel Berlin*. A bitter, sensitive man who played at being tough, he was regarded as one of the most fanatical Communists in Hollywood.

Another of the 10 is Albert Maltz, who was born in Brooklyn 42 years ago, became deeply involved in party activities during his youth, and went to Hollywood during the thirties. "What I have written," he told the Un-American Activities Committee, "has come from the total fabric of my life—my birth in this land, our schools and games, our atmosphere of freedom, our tradition of inquiry, criticism, discussion, tolerance. Whatever I am, America has made me." This rhetorical flourish failed to impress the committee; it knew Maltz's record too well. He had been an open, belligerent Communist who, during the war, had cabled Moscow: "Please use my literary royalties for the defense of the Soviet Union." Maltz is an unusually gifted writer who wrote the screen plays for such motion pictures as *This Gun for Hire*, *Destination Tokyo*, *Pride of the Marines*, and the House I Live In, and is also the author of the serious novel, *The Cross and the Arrow*.

The committee was not impressed by Maltz's talk about criticism, discussion, tolerance, because it knew the story of his battle with the Communist Party. This battle had begun with an article Maltz had written for the party's magazine, *New Masses*, on February 12, 1946. It was a remarkable article to have appeared in a Communist publication, and why it was published is still uncertain. In general, the article called for a greater degree of freedom for Communist writers. "An artist can be a great artist," said Maltz, "without being an integrated or

a logical or a progressive thinker on all matters." He ridiculed the party for attacking an anti-Nazi play during the Nazi-Soviet pact and then praising it after Hitler attacked Russia. He complained that it was almost impossible for a "socially conscious writer" to create real characters because the party was always demanding black-and-white stereotypes.

As soon as the article appeared, the house fell in on Maltz. The Daily Worker came out with an immediate blast expressing sorrow that "Albert Maltz seems to have let the luxury and phony atmosphere of Hollywood at last poison him." He was accused of sympathizing with the Trotskyites. For weeks, every Communist intellectual in New York and Hollywood denounced Maltz in the terms of abuse only the comrades know how to handle so well. A special meeting of left-wing Hollywood writers was called. Samuel Sillen, a Communist "cultural expert" from New York took charge. Lawson launched into a violent diatribe against Maltz, and the others pitched in.

It was too much for Maltz to take; on April 7, 1946, he finally capitulated completely. For the Worker, he wrote a long, scathing criticism of his earlier *New Masses* piece. He attacked the few comrades who had liked it; he even attacked those who had protested against the violence of the language used against him. And he ended up by reaffirming the necessity of having the Communist Party dictate to "progressive" writers. Maltz was taken back into the fold.

The last of the 10 is Director Edward Dmytryk, who was a Communist briefly during the last war. He was still friendly to the party at the time of the 1947 hearings and went along with the unfriendly witnesses. After being cited for contempt, however, he developed a number of serious reservations about the party's course. To have pulled out them would have given the Communists a chance to accuse him of being "yellow," so he went ahead and served his jail sentence. But when the Korean war broke out, he decided to break for good, and when the Chinese Communists came into the war last winter, Dmytryk, still in jail, prepared an affidavit expressing hostility to the party. This brought the expected blasts from the Daily Worker, but he had long since ceased to care. When his prison term expired, he told his story to the House committee, and was eventually hired by King Bros. Productions to do a film called *Mutiny*, a story of the War of 1912. Producer Maury King explained: "We're proving we here will give jobs to these fellows if they'll go ahead and tell us who these rats are. It'll help us to clean out these rats. We don't want the fellows who can talk to be scared to talk."

Actors also fell for the Communist line. Most of the actors who went into the party left it after a relatively short time. They had gone in for a variety of reasons. For instance, a feeling of guilt affected many Hollywood figures during the depression. When 9 to 12 million American workers were unemployed, when real destitution could be seen almost everywhere, when Fascist rabble-rousers were attracting big audiences, a reasonably sensitive man who had several luxury cars, a swimming pool, and a salary of \$2,000 a week often developed a sense of guilt because of his good fortune. In the beginning, he would try to ease this feeling by making substantial contributions to "liberal" causes. Then the comrades would go to work on him, appealing to him as an "advanced" thinker and great artist, and finally asking him the direct question that brought actor Sterling Hayden into the fold: "Why don't you stop talking and join the Communist Party?" (Hayden got out after 6 months in the party, and later observed,

"It was the stupidest, most ignorant thing I have ever done")

Besides the feeling of guilt, there was a desire to escape the intellectual sterility many actors and writers believed to be characteristic of Hollywood, there was the need to feel that, despite all the boy-meets-girl pictures, they were doing something really "worth while." For some, there was a muddled notion that the party was just a good liberal organization

Actor Larry Parks, who went into the party in a state of intellectual confusion and came out of it still bewildered, said that "being a Communist Party member fulfilled certain needs of a young man who was liberal in thought, idealistic, who was for the underprivileged, the underdog."

How can you explain Karen Morley's involvement with the Communists? She was named as a comrade by several witnesses before the House Un-American Activities Committee. Her former friends have different opinions on why the glamorous, hazel-eyed blonde became involved. Some say she is "one of those chronic idealists who are always bleeding for mankind." Miss Morley herself supplied the answer in an interview she granted several years ago, when she accepted a job as a labor organizer for a party-line union. She told the interviewer that she had traded her screen career for politics because "I washed out as an actress." She appeared in such films as *Black Fury*, *Arsene Lupin*, and *Dinner at Eight*. She said Hollywood seemed very artificial and unreal to her.

"I remember," she explained, "when I was working in *Pride and Prejudice* it seemed as if every time we shot a scene, Hitler took another country." (That Stalin is doing the same these days does not seem to cause her any concern, however.)

The House Un-American Activities Committee had considerable trouble trying to locate Miss Morley. During the recent hearings she was reported in Paris, avoiding a congressional subpoena. Miss Morley attempted a comeback in several Broadway shows that failed. Then she obtained a job with the Office of War Information. "That didn't satisfy me either," she said. "When a friend asked me if I'd like to pass out pamphlets for the CIO, I jumped at the chance." In 1947, Robert Taylor charged that she was a disruptive influence in the Screen Actors' Guild.

Another reason for young writers and actors' going over to the comrades was just plain opportunism. In some cases, a "correct political line," as the Communists would call it, was almost indispensable to advancement within the studios. Most of the big producers were unaware of it at the time, but in some studios a few key positions had been infiltrated by the ever-active "progressives." They controlled hiring, firing, and the awarding of choice opportunities.

The Hollywood Communists never had much success in influencing the actual content of the movies. For one thing, none of the major producers—the men with the final word—was ever pro-Communist, and very few of the directors were. The writers and actors were not in a very good position to be able to influence the finished content of a movie as it would finally come from the cutting room.

Today the movie industry is working energetically to rid itself of the Commie label and to keep the Communists out of the studios. As a result, the Communists and pro-Communists are openly repentant, on the scrap heap, or on the run. Hollywood, it seems, has learned a painful lesson from the revelations at the trial of the Hollywood Ten—and the lesson will be remembered for a long time to come.

Beef Price Controls: A Colossal Hoax

EXTENSION OF REMARKS

OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. HILL. Mr. Speaker, under leave to extend my remarks, I include the following statement:

BEEF PRICE CONTROLS: A COLOSSAL HOAX

Cattlemen and meat packers from Montana to Texas would love to see Price Controller DiSalle and his cohorts sitting on the top rails of the cattle pens of the stockyards throughout the western country carrying out their threat to put an individual ceiling on every beef animal sold.

Such a ridiculous threat reveals with shocking vividness the fog of ignorance concerning the processes of beef production and distribution that seems to shroud the price controller's office. Indeed there are many who wonder whether the price controllers know that the prices of beef cattle are made in the pens of the stockyards where cattle buyers can inspect and appraise the quality of the cattle.

Moreover, the cattle buyers for the meat packers must appraise pretty accurately the quality and grade of the animals they buy or their employers would soon be candidates for the bankruptcy courts. The reason is that meat is not graded as to quality until after the cattle are killed and dressed. The carcasses are then graded by Government inspectors and these grades largely determine the wholesale and retail values of the meat which is to be sold. Thus it is evident that a ceiling price cannot be put on a live beef animal until the quality and grade of the meat it produces is known, and this is finally determined only after it is dead.

Of all the commodities that might have been selected to spearhead the price reduction and control program, beef is probably the thorniest and most difficult. The obstacles to fair and equitable enforcement of price control measures are indeed so great as to defy practical administration.

Why did the administration attack this porcupine of the food industries? Could it have been prompted by the stinging defeat the cattle industry delivered to the President in 1946 when he admitted consideration of a proposal to send soldiers into the country to force rebellious farmers to market their stock?

At any rate, as a problem in price controls, consider these facts concerning beef. Beef, as sold at retail, varies so much in quality and types of cuts as to constitute not one product but many, not to mention the by-products, hides, tallow, and so forth, which have markets of their own. This is indicated by the fact that on August 31, for example, the prices paid for beef cattle ranged from a low of \$18.50 per 100 pounds to a high of \$39.60. To complicate matters further, the various qualities and cuts of beef go to widely separated markets more or less related to the varying standards of living of different segments of the population. The largest share of the top grades of beef, for example, goes east to New England and Atlantic seaboard States. The poorer cuts go to the Southern States and to the poor industrial areas of the large cities.

This, however, is only part of the picture. On the production side, beef is the end product of a slow and leisurely 3-year process of cattle raising. This process begins on the ranges of the Western country and on farms everywhere and continues through lush

pastures and feed lots until the beef animals reach the stage of maturity that commands the best prices in a given set of circumstances. The cattle, or at least a major part of them, change hands several times before the conclusion of the process.

For a panorama of the industry think of a vast stretch of grassy ranges and meadows and farms, 3,000 miles broad and 1,600 miles deep. As the animals mature year by year their feed is improved until finally a large proportion of the best go into the feed lots of the richly fertile Mississippi and Missouri valleys. Here they are fattened on corn to produce the prime beef whence come the tender steaks and the rich, red roast meat that city eaters prize so highly.

In this rashly oversimplified panorama there are, of course, infinite variations of the cattle-raising process. For instance, it is a little-known fact that the dairy farms of the country, chiefly the Middle West, produce or feed to maturity half of all the beef and three-fourths of all the veal produced in the United States.

It can thus be readily seen that the production of beef is a cumulative process which must carry forward the costs of feeding and tending through all the successive steps by which the animal is eventually prepared for market. Hence a reduction in beef prices by arbitrary Government edict is immensely unfair to producers of a product which represents an irretrievable 3-year investment in capital, labor, and feed. The cattle raiser readily accepts the risks of the free market because the free market possesses none of the rigidities of the bureaucratic mandate but, in its ever-continuing adjustments, gives constant warning of impending overproduction and its consequences, and presents alternatives and opportunities that compensate for its rigorously impartial operation.

This, in large, is the situation and the circumstances of the industry which the price controllers invaded. Unable and probably unwilling for political reasons to reduce and control beef prices through ceiling prices imposed on the farmers' live animals, the price controllers imposed their will through the meat-packing industry, which customarily processes more than 80 percent of all the beef produced. The balance is butchered by the farmers themselves. Instead of putting a ceiling on the animals, the price controllers put a ceiling on the average price paid by the meat packers for the beef animals they buy. Elsewhere the farmers can sell their cattle freely for what they can get.

Historically it has always been taken for granted by governments whenever they have imposed price controls that the controls would not reduce the available supplies of the commodities affected. They base this assumption on the belief that the economic processes of production are more or less automatic and must go on no matter what happens. They ignore completely the element of free choice in the processes of producing and marketing any commodity.

By now, however, Price Controller DiSalle and his cohorts know that cattle and beef production are still in the hands of men who are able to exercise free choice as to whether or not and where they market their cattle. As a result, beef price controls have become a colossal hoax. They have succeeded mainly in sustaining high prices, reducing the available supply of beef, and in diverting cattle from the regularly established channels of processing and distribution, the commercial meat packing establishments, into the new and free marketing channels that exist outside the packing industry.

The consequences of the effort to control beef prices have now become glaringly evident. Chiefly they are as follows:

1. The marketing of beef animals and the production of beef have been drastically re-

duced. The American Meat Institute has announced that the movement of beef into consumption through usual distribution channels since the imposition of price controls was more than a quarter of a billion pounds below the like period a year ago. Purchases of cattle during this period by the 95 leading beef-producing plants (doing 75 percent of the business) were 62.5 percent below the purchases in the same period of 1950.

2. Farmers are shipping fewer cattle to terminal markets. Since the imposition of price rollback and price controls, farmers have sent 17 percent fewer cattle to these markets. For the week ended August 25, 32 terminal markets received 165,593 head of cattle compared with 203,455 head in the same week a year ago. The Department of Agriculture has this pertinent comment to make, "Consumption of beef in the second half of 1951 is now expected to be less than previously estimated because considerably more cattle are being added to herds." This is the Government propagandist's way of saying that farmers are refusing to market their stock.

3. Meanwhile marketing of beef cattle and beef through other than regular channels has been mushrooming. In the September 1950 issue of the Livestock and Meat Situation, the Department of Agriculture pointed out that "if consumers use somewhat more than half of their deep-freezer and locker space for meat, they will have room for 1,000,000,000 pounds, or about 50 percent more than the meat and meat products in commercial cold storage houses on July 1, 1950."

As practically as anyone can determine by simple observation, there is a vastly increased volume of meat that is bypassing meat packers and going directly into frozen-food storage.

In this connection a strange phenomenon has appeared. Although the prices farmers have to pay for feeder stock they buy for fattening are so high in relation to price ceilings for the finished animals that the feeding profit approaches the vanishing point, the shipment of feeders is running far ahead of a year ago. How many of these feeders are going directly into consumer food lockers and frozen-food storage without fattening?

4. Consumer resistance to beef prices, even at roll-back levels, indicates that if the Government had permitted an unrestricted volume of beef to move into consumption channels, the prices of beef would have dropped substantially without any recourse to roll-back tactics. The Department of Agriculture, in fact, is predicting such a drop in beef prices with any marked increase in marketings this fall. Roll-back prices and controls simply acted to reduce the available beef supply and sustain prices. Even though beef production is running 13 percent under a year ago, the inventories of beef in commercial cold-storage plants on July 1, 1951, were 25 percent above inventories a year ago.

How has the free market adjusted to this situation? With beef prices out of line in relation to comparable foods, consumers have turned to poultry and eggs and other meat substitutes. Egg prices are sustained at unusually high levels, even though production has been running at a rate that required immense Government support purchases a couple of years ago. In the poultry business the commercial production of broilers is running almost double that of 2 years ago. The turkey crop this year is expected to be the largest on record. Pork production and consumption is close to record levels. Pork prices, however, did not follow beef prices to atmospheric heights, but are currently close to pre-Korean levels.

In a free market it is more than likely that beef prices would long since have adjusted

competitively to the prices of alternative foods. So a chief consequence of the roll-back price controls promulgated by Price Controller DiSalle and his cohorts has been to reduce ruinously the market for beef by encouraging the use of substitutes.

The withering hand of the Government bureaucracy has been laid on one more food industry. Those who doubt or who are not familiar with bureaucracy's blighting touch need only to study the fate of butter, which was a casualty of Government price controls in World War II. Under Government assistance in the form of price supports and promotion of the margarine substitute, the consumption of butter has sunk to new low levels—the lowest in the history of the industry.

Government support of potato prices was discontinued a year ago at the urgent behest of important potato-producing sections, but not before potato consumption had dropped by 20 percent under price support. Can the glaringly unwarranted measures of an inept administration sabotage another food industry without evoking an outraged protest? How much is homo Americanus 1951 willing to take?

ECONOMIC TREND LINE STUDIES.

Wisconsin's Stake in the Andresen Amendment

EXTENSION OF REMARKS

OF

HON. GLENN R. DAVIS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. DAVIS of Wisconsin. Mr. Speaker, the entire State of Wisconsin, because our State relies so heavily on the dairy industry, has a great stake in maintaining import controls on dairy products, fats and oils, as inserted in the Defense Production Act of 1951 through an amendment offered by our colleague from Minnesota, the Honorable AUGUST H. ANDRESEN.

The urgency of this matter, and specifically the defeat of S. 2104, the administration's attempt to repeal this provision, is outlined in a letter I received today from William O. Perdue, general manager of the Wisconsin Pure Milk Products Co-operative. I hope my colleagues will ponder the contents of this letter—which follows—before acceding to the administration's request to repeal this provision previously approved by the House:

PURE MILK PRODUCTS CO-OPERATIVE,
Fond Du Lac, Wis., October 6, 1951.

Hon. GLENN R. DAVIS,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN: The Senate will quite likely take action next week on S. 2104, a repealing of import controls on butter, cheese, and other dairy products. I hope you will talk to members of our Wisconsin delegation urging them to contact their friends in the Senate to the end of defeating such action. We will need tough aggressive action to protect our great dairy industry against a well organized foreign group of importers and jobbers. As you well know, the repeal of section 104 of the Defense Production Act will have a paralyzing effect on the entire dairy industry of this Nation. This is especially true when proper weight

is given to the high quality standards for American dairy products—both in the field of production and manufacturing. Our own State of Wisconsin is now enforcing a new and effective brucellosis-control law—we have for many years had a tough standard well enforced TB program—by 1955 every farmer in the State who offers milk for sale must meet new and stringent health and sanitary requirements, even to the point of requiring a milk house separate and apart from the barn. These all add tremendously to the cost of production of milk. It doesn't make sense to provide support prices for dairy products now burdened with high surplus and then offer foreign markets ways and means to cut our prices and create further surpluses. Wisconsin farmers have a big stake in this national picture. We produce nearly 15,000,000 pounds of milk per year. This is far in excess of any other State production and represents nearly 13 percent of the entire national production. A major portion of our production goes to manufacturing products such as cheese, butter, and evaporated milk—a larger portion of the foreign-type cheese of our Nation is produced here in Wisconsin. These farms will be hurt beyond measure if proper safeguards are not adopted. So we look to our Members in Congress to help us, and help enlist the aid of other Congressmen.

In view of the fact that foreign markets cannot adequately supply the American public with good wholesome fresh milk and dairy products and because the American people are dependent upon our farmers for this supply, why then, handicap the only available supply? If the American consumers are to be supplied in part or whole by foreign markets with the cheese, butter, and other manufacturing products, then ultimately the cost of fresh milk for bottling purposes will be so high that the average consumer will be priced out of the market because of the fact that our farmers must have an outlet for the spring surplus which is necessary to guarantee fall and winter needs. This outlet is the market some would give to other countries with poorer quality and cheaper cost of production. (Won't you please see some friend of yours in the Senate and help us tell our story.)

We are transmitting a similar communication to other Representatives in Congress from Wisconsin.

Yours very truly,

WILLIAM O. PERDUE,
General Manager.

Vivid Testimony

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Globe-Democrat of September 29, 1951:

VIVID TESTIMONY

Exhibit A is what happens when bureaucrats are permitted to suppress information that should be available to the American people, was supplied by the Office of Price Stabilization within a few hours after President Truman issued his dangerous directive to department heads of civilian agencies granting them the right to use their own discretion in making public news with which they are directly concerned. It was a perfect example

of what can happen when the pattern of a news blackout is laid down by the administration.

An assistant in the OPS, in the absence of Director DiSalle, arose in the majesty of his bestowed authority and issued instructions to all employees of that department not to make public any information that "might cause embarrassment to the OPS." Here was a specific order to suppress any information which, in the estimate of any employee with even a modicum of authority, might cause the people to question the wisdom of department rulings or even request the reason why.

In short, each little bureaucrat from DiSalle on down was instructed to rely on his own judgment—and it could be very bad—as to what the American people should know about the regulations that affect them more intimately than any at issue at the present time—the cost of living. Here was an order that would prohibit the press from obtaining any of the answers to questions the people are asking if those answers embarrassed the department. Of such things are dictatorships born.

The President, smarting under the Nation-wide criticism of his news clamp-down directive of last Wednesday, acted quickly in view of certain political repercussions. He demanded that the instructions be withdrawn forthwith, and they were. Director DiSalle in Chicago professed dismayed surprise that the order was issued. Assistant Director Cook said he didn't issue the instructions personally, but they were signed "under a delegation of authority from him," an ambiguous explanation but probably meaning that amid department confusion some bright lad had an idea and swung his weight around. Such are the possibilities when little Caesars operate even on the fringes of important authority.

Commenting on the President's directive, this week, we said it was simply a manifestation, and a vicious one, of the trend toward news suppression at Federal, State, and city levels. The people's right to information is being distorted into a censorship that could be projected into a complete black-out unless it is stopped now.

At the national level principally it masquerades as a necessary step to guard our defense secrets. No sensible American wants our military or production secrets made available to a potential enemy if they are important to him. But under the guise of a safeguard, authority has been delegated to or assumed by Government employees far beyond their wisdom to discriminate or even their desire to keep the people reliably informed. The President's directive confirmed their right to censor without supervision.

And to repeat, the OPS adventure in this domain of news suppression offers a perfect illustration of what can happen

editorial appearing in the Milwaukee Journal on September 17, and entitled: "Short-Sighted Seaway Foes." Under leave to extend my remarks, I include it in the Record as follows:

SHORT-SIGHTED SEAWAY FOES

The St. Lawrence seaway project will be permanently postponed, if the AFL railway employees' department has its way. Michael Fox, president of the union group, has announced his organization's opposition to any effort to revive congressional consideration for the seaway.

Fear of the loss of thousands of jobs in the railroad industry motivates this obstructionist feeling, we conclude from the union president's statement.

This perpetuate-the-job philosophy of labor is out-dated, short-sighted, and unprogressive. More enlightened unions are coming to see that intelligent self-interest forbids labor from opposing real progress in any form.

Labor's interests cannot be divorced from those of the whole population, and any technical improvement in manufacturing, any great transportation development which strengthens the country as a whole, will, in the long run, improve the lot of labor.

What sort of living standards would the workingman have today if labor had successfully blocked modern methods of mass production because the introduction of machines would result in "the loss of thousands of jobs?"

Temporary dislocations may follow a change in the way of doing things, it is true. It is possible that railroads will lose somewhat immediately after the seaway is opened—if it is ever built.

But if the seaway brings a great expansion and prosperity to industry in the Midwest and other affected regions—as there is every reason to believe it will—then there will be more traffic than ever for the railroads. Many products are better suited to transportation by train than by the slower waterborne carriers. Many markets are out of reach of water transportation entirely, and must be served by rail or highway.

The big question for the railroad employees as for other citizens, should be: Does America need the St. Lawrence seaway? The overwhelming weight of evidence says that we do.

elling evidence that we are headed straight for the tomb.

The local dailies have outraged us the past week with the shame of the heavy, the slicker, and 'he moll. The press, which thinks itself free and responsible, exploits the filth of press agents while the moguls prepare fatter contracts. Respectable papers flaunt this stuff for the delectation of the moronic fringe, and all the while the decent folk dismiss the insult with amused contempt in an apathy from which rises neither dismay nor apprehensions of doom. There has been before this heralding of harlotry in the public press, but more than ever the newspapers delight in their vomit. When shall this license come full cycle when the conscience of the people will reel in punishing disgust of this cynical acceptance of immorality? This way lies the tomb.

Into our homes too the past week by television has come a parade of Hollywood hoodlums masking disloyalty behind the convenient facade of the fifth amendment. Just fears have given way to proved facts of even wider infiltration by subversives of a great industry than was at first suspected, but there is not yet the adamant resolve by the Hollywood people for the kind of housecleaning that the nature of the crisis demands. There is an admitted ex-Communist in the very front offices of a major studio which screamed to high heaven when a conscientious critic detected the familiar sign and symbol in a major production, and others of questionable patriotism are harbored there and elsewhere. To cry "red hering" and "witch hunt" is no longer diverting, it is self-revelatory. Clothing drives for Korea may be a beginning in atonement for former questionable front and dubious alliance, but vigilance is the price of liberty. Any other way, lies the tomb.

There is this cynical acceptance of dishonor too in the affairs of government. President Truman in his Legion talk might breezily dismiss the charge of communism and corruption in his administration, but with the almost daily recital of irregularities in Washington, people will continue to whisper and wonder. It is not only a question of mink coats, of 5-percenters, of RFC scandals, the pathetic "take" of minor officials—"I only got a 9-pound ham"—it is the blind dismissal of guilt and the bland refusal to punish by the Chief Executive himself which shocks and disturbs.

There is a new cynicism in politics which has learned how to perpetuate itself by the doling of liberal largesse. Is there a conservative district represented in Washington by a caustic critic? Perhaps some war contracts with an influx of new voters in the wake may turn up a new face at the next election. Is there a club leader disturbed with certain trends in Government affairs? Perhaps an appointment to one of the far-flung bureaus or an official errand of good will might console and flatter. Is there a group restive with restraint? Even a sop will stop a bolt. This is the way of politics, no doubt, but never before has it had wider vista or freer scope. And this way too, lies the tomb.

Finally, there are enough old-fashioned, Jeffersonian Democrats hereabouts and elsewhere in the country, leaders of the stamp of Al Smith and Governors Ely and Ritchie and Mr. Farley, who resent in mounting intensity the inspiration in foreign affairs and on domestic issues which flows not from the hard core of common sense in the rank and file of the people of America but from a handful of benighted intellectuals on Manhattan's lower East Side. Their liberalism devoid of supernatural springs has reaped diplomatic failure abroad and secular conceit at home, and bankruptcy not alone of the purse but of the spirit impends. And this way lies the tomb.

This Way Lies the Tomb

EXTENSION OF REMARKS

OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. POULSON. Mr. Speaker, I am inserting in the Record this editorial by Msgr. W. E. North in the September 28, 1951, issue of the Los Angeles Tidings, the official Catholic paper in the Los Angeles area. It should be read by everyone.

THIS WAY LIES THE TOMB

No election looms, so we may safely quote, without fear of political hacks upbraiding us for toying with politics, the elder statesman who is our only living ex-President. Mr. Hoover writes: "Our greatest danger is not from invasion by foreign armies. Our dangers are that we may commit suicide from within cynical acceptance of dishonor." We do not have to go far afield to find com-

Short-Sighted Seaway Foes

EXTENSION OF REMARKS

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. ZABLOCKI. Mr. Speaker, now that Canada has refired the country's interest in the St. Lawrence seaway and power project, I think it important that we appeal to those who have traditionally opposed the project to reexamine their position. This was very ably done by an

Water Power and the Power Trust**EXTENSION OF REMARKS**

OF

HON. JAMES E. MURRAY

OF MONTANA

Monday, October 8, 1951

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "Not by a Dam Site," by Alfred M. Green, published in the *Machinists Monthly Journal* for October 1951.

This article points out the tremendously important public issues involved in litigation now pending in the United States circuit of appeals in Richmond, Va., with regard to the comprehensive development of the Roanoke River Basin and its effect on other similar programs.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NOT BY A DAM SITE

(By Alfred M. Green)

Should all of America's water power resources be turned over to the private power companies? Put bluntly, that is the issue in a tremendously important legal case which the United States circuit court of appeals in Richmond, Va., has been called upon to decide this fall.

For months, the propagandists for the power trust have been spreading extravagant charges about the law suit, on which hearings were scheduled to open on September 4. They charge the suit is part of a plot to "socialize," not only all electrical power, but even every other industry.

An amazing feature of the case is that two agencies of the Federal Government are on opposite sides of the dispute. The Interior Department is asking the court to set aside a decision of the Federal Power Commission granting to the Virginia Electric & Power Co the right to build a power dam on the Roanoke River at Roanoke Rapids, in North Carolina.

Appearing as attorney for the Interior Department is Gregory Hankin, who in the last 20 years has handled on behalf of the Government some of its most historic power disputes. He is credited with winning the famous "New River Case," which gave to Uncle Sam authority over all navigable streams—not only the parts that are navigable, but the entire streams right up to their sources.

But Hankin regards the Roanoke Rapids case as possibly more important, at least on a dollars and cents basis.

MIGHT BAR ALL BASIN PROJECTS

The point is that Congress has approved a plan for comprehensive development of the Roanoke River "basin," and already has appropriated \$78,000,000 for a start on the project. If a private power company is to be allowed to step in and grab the choicest power site in this, or any other "basin" project, that would probably mean the end of all such projects, Hankin warns.

"It is high time that the readers of newspapers and magazines realized the difference between socialization of industry, as it is called, and the program of the Government," Hankin declared, referring to the power trust attacks on the suit.

"To socialize an industry means for the Government not only to embark upon it, but also to exclude all private enterprise from that industry. It is entirely different to say

that the Government may enter an activity without excluding private enterprise.

"It is still another thing to say that private enterprise should operate to the exclusion of the Government, especially in such a monopoly field as producing power from our navigable rivers.

"The so-called public utilities really perform a Government function, which is why they are called public. To say that the Government should be excluded from the production of power means that private business should engage in the performance of a government function, to the exclusion of Government itself."

COMPETITION BENEFITS COMPANIES

"Another peculiar thing about the power trust propaganda is that it overlooks one important fact. That is that, wherever the Government has offered some competition to the private power companies, the result has been to benefit not only the public, but also the private companies as well.

"They have been forced to give better service at lower rates, which has increased the use of power, and that, in turn, has increased the companies' profits."

For the Roanoke Basin, Congress has approved 11 dam projects, with the aim of providing flood control, navigation, power development and recreational resources. Two of the dams are already under way, one at Buggs Island, near the Virginia-North Carolina border, and the other at Philpott, far upstream on a tributary, the Smith River, in the western part of Virginia.

ALL PART OF SAME PROJECT

But the two sites which offer the most in the way of power, for the least outlay, are at Gaston and Roanoke Rapids, both somewhat downstream from Buggs Island. In fact, Hankin contends, Buggs Island, Gaston and Roanoke Rapids really should be considered part of the same project, with Gaston and Roanoke Rapids, the power stations for the Buggs Island Dam, which is designed to hold back a large volume of water to form a lake of considerable size.

If the Virginia power company, usually called Vepco, gets a permit to go ahead with its power plant at Roanoke Rapids, it plans to apply for another at Gaston. That would give the private company most of the benefit for the \$78,000,000 which Uncle Sam already is spending upstream.

Since Congress already has approved the entire basin project, including dams at both Gaston and Roanoke Rapids, the Interior Department declares, the FPC has no right to grant a license for a private company to use the sites.

According to law, Congress may approve only projects that will be "self-supporting," that is, that will pay for themselves through the various benefits they offer, such as power, reclamation, navigation, flood control, and recreation.

Treated as a whole, the Roanoke basin program meets this test. But it no longer would if the best power sites are to be handed over to Vepco. That means that, if Vepco gets its Roanoke Rapids license, Congress probably will appropriate no funds for the other parts of the development.

WOULD PREVENT FLOOD CONTROL

Vepco's plan is to use the Roanoke Rapids Dam for a "peaking plant," which means that it would produce power only when it is needed to supplement other plants in the Vepco system. At such times, there would be a heavy flow of water, but, when the power is not needed, the water would be held back.

That would interfere with what might be the most important function of the whole development—the control of floods.

And, if Vepco is to be permitted to block the entire Roanoke Basin development, there is no reason why other power companies can-

not do the same thing elsewhere. That is what Hankin means when he says this case may decide whether Uncle Sam is ever again going to be able to carry out such a project as the Tennessee Valley Authority anywhere in the country.

If the FPC and Vepco win, the power company will be almost the only one to benefit from the \$78,000,000 of Federal funds appropriated.

The value of the Buggs Island Dam, built by Uncle Sam, to a power plant at Roanoke Rapids has been estimated by Government engineers at \$1,500,000 a year, or a total of \$75,000,000 for the 50-year term of the license the FPC proposed to issue to Vepco.

In other words, Uncle Sam's \$78,000,000 appropriation would be returned almost in full, but it would be returned to a private power company instead of to the people of the Nation, who put up the money, or to the people of the Roanoke Valley.

Should the U. S. A. Ratify the Genocide Treaty?**EXTENSION OF REMARKS**

OF

HON. BRIEN McMAHON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Monday, October 8, 1951

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article presenting the affirmative in a debate on the question, Should the U. S. A. ratify the Genocide Treaty? The article was written by John D. Hickerson.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SHOULD THE U. S. A. RATIFY THE GENOCIDE TREATY

(By John D. Hickerson)

YES—FOR MORAL LEADERSHIP

History is full of examples of man's inhumanity to man on a wholesale scale. The persecution of the early Christians by the Roman Empire, the massacre of the Armenians by the Turkish Empire, and the slaughter of some 6,000,000 Jews and Poles by the Nazis are only a few instances of the kind of deliberate mass murder that is now called the crime of genocide.

The conscience of mankind was so shocked by the bestial actions of the Nazis that the General Assembly of the United Nations at its first session affirmed that "genocide is a crime under international law which the civilized world condemns," and recommended that a convention be prepared to facilitate the speedy prevention and punishment of that crime. In 1948 the General Assembly, after 2 years of careful preparatory work by other bodies, adopted the "Convention for the Prevention and Punishment of the Crime of Genocide." This defines genocide as—

"Any of the following acts committed with intent to destroy, in whole or in part, a national, ethnical, racial, or religious group, as such:

"(a) Killing members of the group.

"(b) Causing serious bodily or mental harm to members of the group.

"(c) Deliberately inflicting on the group conditions of life calculated to bring about its physical destruction in whole or in part.

"(d) Imposing measures intended to prevent births within the group.

"(e) Forcibly transferring children of the group to another group."

The convention states that persons committing genocide shall be punished, "whether they are constitutionally responsible rulers, public officials, or private individuals." The contracting parties undertake to provide effective penalties for persons guilty of genocide. Any contracting party may call upon competent organs of the United Nations to take such action as they consider appropriate for the prevention and suppression of acts of genocide.

The convention came into force on January 12, 1951. The President of the United States has strongly urged that the Senate consent to the ratification of the convention, and the convention is now before the Senate Foreign Relations Committee.

It is a tragic commentary on the state of our civilization at this midpoint of the twentieth century that one has to admit that genocide may again occur. But what assurance have we that another dictator may not someday go berserk and slaughter millions of people belonging to a particular national, ethnical, racial, or religious group? The Republic of Korea recently charged that genocide had been committed by the North Koreans, Chinese Communists, and the Soviet leaders. These charges, which will have to be examined with care, show that the danger of genocide is not a thing of the past.

Genocide was immediately recognized by the General Assembly as a matter which could not be handled by national action alone. Genocide, the Assembly decided, is a crime against international law, the prevention and punishment of which requires international cooperation.

The convention does four important and useful things: It brands genocide as a crime under international law; it brings the full moral weight of world opinion to bear against this crime, it binds the contracting parties to prevent and punish acts of genocide; and it gives formal and legal recognition to the fact that genocide is a matter of grave international concern and therefore a matter of grave concern to the United States.

No one contends that the Genocide Convention is a perfect treaty. Like any treaty, it represents a compromise between differing points of view.

The convention has been criticized, for example, because it does not refer to political groups. This term was debated by the General Assembly, but many delegations including some Latin-American ones, argued that it could not be defined precisely enough for use in the convention. For the same reason, no reference was made to economic groups. These omissions may be considered as a flaw by some people, but they certainly do not warrant the rejection of the convention and the consequent denial of protection to four very important groups—national, ethnical, racial, and religious.

The convention defines genocide narrowly: any one of five acts committed with intent to destroy, in whole or in part, a national, ethnical, racial, or religious group as such. Thus neither a murder nor a lynching constitutes an act of genocide; they are crimes against an individual, not a whole group. Ordinary acts of war are not genocide, they are acts designed to defeat a national group but not to destroy it as such. The atomic bomb dropped on Hiroshima was merely another instrument of war and not an instrument of genocide.

Genocide, as defined in the convention, does not embrace economic or social discrimination against a group, or mistreatment of a group, or suppression of a group's civil or political rights. Genocide embraces acts committed with the intent to destroy a group—by outright killing or by other acts which, in the course of time, will eliminate the entire group. Some critics have questioned one of these acts—"causing serious bodily or mental harm to members of the

group." They might ask whether producers of comic books, grade-B movies, and certain radio and television programs are guilty of genocide by causing mental harm to our children. No, this unusual phrase "mental harm" refers to the kind of act the Japanese war lords committed when they deliberately stimulated the distribution of opium in order to injure and weaken the Chinese people.

The five acts which are punishable under the genocide convention are carefully defined: a person must have actually committed genocide or have attempted to commit it, or he must have been directly involved in such acts, as in a conspiracy.

Only one of these acts has given rise to any question—direct and public incitement to commit genocide. This prohibition, it is alleged, might violate the freedom of speech guaranteed under the Constitution of the United States. The clause does not mean, of course, that a person who reviles all Methodists or ridicules an Irishman is guilty of genocide; however deplorable his conduct may be. If, however, he directly incited a mass meeting in Madison Square Garden, and millions of others over the radio and television, to massacre all Methodists or Irishmen in the United States of America, he would most certainly be guilty of genocide.

Some lawyers, including a committee of the American Bar Association, have opposed ratification of the covenant on the ground that it runs contrary to the United States Constitution. Other lawyers, including a section of the association and several local bar associations, have supported the convention. As I am not a lawyer, I am willing to accept the view of the Solicitor General of the United States and the legal adviser of the Department of State that the convention is constitutional.

That the convention accords with our Constitution is the view not only of the executive branch, but also of a subcommittee of the Senate Foreign Relations Committee. Four of the five members of that subcommittee, which recommended ratification of the convention, were lawyers. In order to leave no doubt on this point, the subcommittee proposed the adoption of four understandings (not reservations) to make clear the Senate's interpretation of the constitutionality of this treaty.

The heart of the matter is whether it is proper for the Federal Government to undertake, by means of a treaty, the obligation to prevent and punish genocide. Article I of the Constitution leaves no doubt on this point. It expressly authorizes the Congress to define and punish piracies and felonies committed on the high seas, and offenses against the law of nations. The General Assembly of the United Nations, which one of our great statesmen, the late Senator Arthur Vandenberg, called the town meeting of the world, has twice declared, in 1946 and 1948, that genocide is a crime against the law of nations. It has twice done so without a single dissenting vote.

Genocide has thus been recognized as a proper subject for international action, like piracy, slavery and slave trade, the international traffic in narcotic drugs, and counterfeiting. The fact that the representatives of 43 nations signed the convention and that 23, including several outside the United Nations, have already deposited their ratifications or accessions means that the world community has reaffirmed the view of the General Assembly that genocide is a crime under international law.¹ Under the Constitution of the United States, this means that genocide is a proper subject for action by the Congress.

¹ Five other nations have transmitted ratification or accessions with reservations, and the question as to the legal effect of these reservations has been referred by the General Assembly of the United Nations to the International Court of Justice for an advisory opinion.

Some lawyers seem to fear that the convention somehow infringes on States' rights under our Constitution. As a Texan, I know what the phrase States' rights means—legally and emotionally. Nevertheless, I do not see why States' rights is an issue here. Genocide means the mass destruction of a group of human beings, which should be punishable under international law; it does not mean individual acts of homicide which, in this country, are punishable under State law. Genocide has never occurred in the United States and, pray God, it will never occur here. But in the purely hypothetical event that some conspirators undertook to massacre all the Episcopalians or all the Jews in this country, would not such a crime be of national concern?

Another point of controversy is the fear of some that ratification of this convention would mean that the Federal Government is trying to legislate through the treaty power. Treaties, under our Constitution, become the supreme law of the land. Is it right, some critics ask, for the Federal Government, acting through the President and two-thirds of the Members of the Senate present and voting to place a new crime on the statute book?

The convention itself is quite clear that this is not the case: Article V states expressly that this treaty is not self-executing and that it must be given effect by subsequent legislation. Once the United States Government had ratified the treaty, it would be necessary for the Congress to enact legislation declaring that genocide is a crime under Federal law and providing penalties for its punishment.

Some concern has been expressed over article VI of the convention, which provides that persons charged with genocide shall be tried by a competent tribunal of the state in the territory of which the act was committed, or by such international penal tribunal as may have jurisdiction with respect to those contracting parties which shall have accepted its jurisdiction.

This means, they allege, that an American citizen could be deprived, against his will, of a trial before an American court and brought before some international court; or it might even mean that a decision of our Supreme Court in such a case might be reversed by some international court. This is not true, for the article makes clear that a party to the covenant would have to accept the jurisdiction of some international penal tribunal before one of its nationals could be tried before such a tribunal. If any such proposal is made after our Government ratified the convention, it would have to be considered on its merits by the Congress; and no such tribunal could be given jurisdiction over an American citizen without the consent of the Congress.

Our Nation has come into a position of great influence in world affairs. Everything we do or fail to do affects the destinies of all mankind. Ratification of the Genocide Convention would show the whole world that we are determined to play our part in preventing and punishing an odious crime.

Questions of the Week

EXTENSION OF REMARKS OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. BENDER. Mr. Speaker, Cost of living index? How high is high, Mr. Di-Salle?

Chairman GEORGE, of the Senate Finance Committee, says that this is the last tax increase bill he will support, short of an all-out war or war crisis. Do not worry, Senator. Have we ever been short on war crises since your party took over?

Religious Liberty Committee Report of the Illinois State Council, Knights of Columbus

EXTENSION OF REMARKS OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES
Monday, October 8, 1951

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the appendix of the RECORD the report made by the religious liberty committee of the Illinois State Council of the Knights of Columbus. This committee was headed by a loyal, patriotic, and conscientious American, Mr. Vincent Knaus, of Chicago.

It seems to me that the recommendations made by this group are especially meritorious, and I would like, especially, to call attention to points IV, V, VI, VII and VIII. I am confident that any organization which is interested in getting into the fight against communism could well utilize the outline which has been presented.

We all recognize the valiant efforts which the Knights of Columbus have made against the insidious encroachments of communism in this country. The Illinois State council has been in the vanguard in this fight and all Americans will applaud the program which these patriotic, Christian men have designed to promote loyalty to our country.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

RELIGIOUS LIBERTY COMMITTEE REPORT

I

These are extremely dark days for the church and mankind. Materialistic communism seems an irresistible force that will engulf and destroy civilization. To conquer this atheistic foe we must appeal to Our Lady to give us extraordinary confidence and inspiration to overcome this obstacle to world peace. To protect our interests we must fear nothing—not life itself—for conquer we must. Our Blessed Lady made a promise attached to the devout wearing of her scapular: "Whoever shall die clothed in this shall not suffer eternal fire." Mary concluded her message at Fatima by holding out to all the world the same sign she had given to her beloved Simon Stock. The Scapular is her special mark of love and eternal peace.

We recommend that the members of our order join in this appeal of the mother of Christ and sponsor the devout wearing of her badge of honor.

II

We wish to again call your attention to point V of last year's report and include another martyr:

That annually in the State, as an observance of the Illinois State Council and by local councils—at a suitable date—we offer

our prayers and hold an annual Communion Sunday in memory of Archbishop Aloysius Stepinac, Joseph Cardinal Mindszenty, and Archbishop Joseph Boran (and all other martyrs to the same cause), of the torture and struggle they underwent and now remain the symbols of freedom against depravity in government.

That our beloved State chaplain and bishop be consulted on this program—to make it a fitting tribute to these three men and others of our faith who stood up against tyrants and confessed that faith before men.

III

We again convey to you point IV of last year's program with special emphasis:

That the revelations at Fatima and the occurrences at Lipa demonstrate beyond the shadow of a doubt that in waging a war against this Satanic ideology we must be spiritually armed and protected—that prayer and sacrifice are concomitant barrages to storm heaven to avert our threatened catastrophe and destruction.

We recommend the family rosary, recited daily in the homes of our members. That the Knights of Columbus inaugurate in our beloved State, a 15-minute radio program, State-wide, under the direction of our beloved State chaplain and bishop, to reach Catholic and non-Catholic alike, to a method of prayer that has never failed and will not fail us now.

That at our council meetings, at the closing prayer a decade of the rosary be recited, dedicated to the coronation of our Blessed Mother as Queen of Heaven.

IV

Our Declaration of Independence and Constitution of the United States with the cross symbolizes the soul of America. A child, by his belief in Almighty God and obedience to his commandments, which is the citizenship creed of America binding on Congress, as on the home and school, on the Nation and the President, as well as on men and women, boys and girls, should recite a pledge of allegiance that conforms to a belief in these ideals.

Communism seeks to preserve children and adolescents from all contamination of love of God and country and the child, especially must be freed from the debilitating influence of family, paternal and maternal authority and preserve his ears from all such infection to the end to dechristianize him and make him Godless.

We believe that the present pledge of allegiance to the flag—in this day and age—is incomplete and insufficient, and suggest the adoption of the following:

"PLEDGE OF ALLEGIANCE

"I, ———, citizen of the United States, hold these truths to be self-evident: That all men are created equal; that they are endowed by their Creator with certain unalienable rights; that among these are the right to life, liberty, and the pursuit of happiness; that, to secure these rights, my Government, represented by this flag, was instituted among men, and to this Government, and to this flag of the United States, I pledge my undying allegiance."

V

Free speech is not an absolute right. It becomes license if there are no bounds. Free speech is restricted by the criminal laws, libel, and slander, as well as ordinances of the city or village on disorderly conduct.

Free speech has been employed by the enemies of a free representative government as an instrument of its own destruction. Communists under the guise of liberty have held elections to end all elections.

As a Catholic lay organization, it is our solemn duty and obligation as free men and women to pronounce on controversial legislation seeking to control communism and its adherents. This is not a matter of opinion but a struggle involving life and death.

VI

The Fourth Commandment places upon all the obligation of obedience to all civil rules who command lawfully. We select our rulers by the use of the ballot—this must be done intelligently. There is an obligation on the voter to understand the political issues, know the character and ability of each candidate he selects or elects. There should be no blind fanaticism in voting for a party or a particular candidate. Failure to vote has been held to be a mortal sin of omission. It has been aptly said that unchecked power is no less tyranny because someone has voted for it. We must get off the gold standard and on the moral standard. We are paying dearly for our lazy thinking in the past.

We recommend that you think before you make the sign—that may seal your doom.

VII

In point III of last year's report, we recommended that the Illinois State Council and the Supreme Council affiliate with the "All-American Conference to Combat Communism" at once.

Whereas it appears that this conference is now being organized on a grass-root principle or basis to reach the mass of people not only on a State-wide basis but people in the city and village as well.

We therefore recommend that the Illinois State Council, the local chapters in the State and individual councils and officers cooperate in this endeavor to unite all our people of all races and creeds to destroy the ugly scourge of communism in the formation of such local units.

VIII

Clarence Manion, dean of Notre Dame law school, has written an inspiring statement of the basic principles which make our American way of life and are the source of our past progress and present strength and he has called this small volume *The Key to Peace*.

It is attractively titled and timed. The book is American rather than Catholic in a sectarian sense. It clearly sets forth the rich roots of religion that guided the thinking of our founding fathers. This book should be in the hands of every council in the State to be read, discussed, and analyzed. It is an excellent antidote for the Communist Red terror.

We recommend that a copy of *The Key to Peace* be given to every Grand Knight as a gift from the Illinois State council for a refresher course in the greatest traditions of America.

IX

In order to properly combat foreign isms, particularly communism, we must be able to separate the wheat from the chaff. Double talk, upside-down words have been employed by the enemies of our free institutions seeking to ensnare even the elect—so that we must dispel the clouds of confusion and muddleheaded thinking. In order to be prepared in an educational way, we recommend the holding of a countersubversive seminar to be held at least once a year (one in the city of Chicago and another at Springfield for down-State) in order to fully and completely understand the position of the church on communism and other totalitarian isms and give the required answers.

X

We recommended in our last report that our State deputy appoint a committee on religious liberty representative of the whole State and that meetings be held at least four times a year. In addition, we recommend that a State chairman be appointed together with diocesan chairmen with an executive committee to pass on all activities of the committee. That the administrative assistant be placed on this committee. That all matters pertaining to legislation affecting our church, State and home be referred

to this committee and that the scope of this committee be broadened to take in all subversive activities affecting these subjects.

VINCENT L. KNAUS,
Chairman.

HENRY H. FONKE,
Vice Chairman.

HARRY T. STOUT,
ELMER ZWELLING,

BERNARD WIRTH.

California's Dewey Anderson

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, October 8, 1951

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the RECORD a brief article from Frontier magazine, published in California, concerning interest in the possible candidacy of Dewey Anderson for the Democratic nomination for the United States Senate.

I have known Dewey Anderson for a good many years during his service with committees of this Congress interested in the national economy and in small business. He rendered outstanding service with the TNEC and later with the Senate Small Business Committee, working tirelessly not only to help develop facts and wise national economic policy, but to see that small-business institutions were protected in the war and postwar periods.

Since leaving Government service, Mr. Anderson has founded and securely established the Public Affairs Institute here in Washington, a research agency similar in structure to Brookings, which puts emphasis on the study of those problems which are immediate and current. I am sure that many members of this body know Mr. Anderson as favorably as I know him. He has appeared many times as a witness on problems before our committees, and he has made a real contribution to those hearings.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CALIFORNIA'S DEWEY ANDERSON—IN THE 1952 GOLDEN STATE SENATORIAL SWEEPSTAKES, HE IS EYING HIS CHANCES

(By Benton J. Stong)

Dewey Anderson is a husky Californian with a smile well proportioned to his broad shoulders. As he moves through the House and Senate Office Buildings, the Capitol and elsewhere around Washington, you may see him stop and visit with a Senator, a Congressman, a high administrator, a guard at one of the doors.

Anderson, author, economist, legislator, executive, and a man with a Ph. D. degree that doesn't protrude, knows the people of the Nation's Capital from top to bottom. The statesman puzzling with the problems of world affairs and the page boy following the Washington ball team are both friends of his. Anderson has a genuine interest in people and their affairs, and it is this interest which kindles warmth and friendship wherever he moves.

It is no surprise in Washington that a section of Democrats in his home State of California are discussing him as a potential can-

didate next year to oppose reactionary Senator WILLIAM KNOWLAND. Few men who could be named to carry the Democratic banner in California would, as a personality in contrast to KNOWLAND, give the voters of the State a clearer, sharper choice between liberalism and reaction than Anderson, say his friends. The big question is, of course, whether he has the qualities, experience, demonstrated ability and electability. The Democratic cause in California, despite a majority of registrations, faces a steep uphill battle to unseat KNOWLAND.

Perhaps first it should be conceded that California Democrats must build up any candidate. There appears to be no ready-made leader, but it would take a long search to find a more personable and competent candidate than Anderson, who is obtaining increasing recognition for his work as director of the Public Affairs Institute of Washington.

Many Californians have gone on record with their opinions of Anderson. John B. Elliott, a Democratic Party leader, wrote: "He is an experienced public servant whose record is without flaw."

James Roosevelt and Attorney General Pat Brown are both among the founding sponsors of the Public Affairs Institute. J. Frank Burke, a leader of the good-government cause in California, says that Anderson would be outstanding in the United States Senate.

The Democratic delegation in the Congress endorsed Anderson for appointment as the Chairman of the President's Council of Economic Advisors recently in this way: "Dewey Anderson is well known in California as an expert economist and liberal thinker. He has become nationally prominent as the director of the Public Affairs Institute . . ."

Nor is this recognition confined to Californians. Senator JAMES E. MURRAY, dean of Senate liberal leaders, says of him: "Dewey Anderson is a leader whose integrity and ability are recognized by a wide circle in the Congress." Representative ADAM POWELL speaks of Anderson's professional competency and liberal views.

Senator PAUL DOUGLAS considers him and his work in Washington of vital concern to the entire public, of real importance in a functioning democracy.

A CALIFORNIA PRODUCT

Anderson is a stockily built, energetic man in his early fifties. He grew up in California, graduated from the public schools in San Jose, and took three degrees at Stanford University, ending up with a Phi Beta Kappa key. His wife is Erma Sams, who prior to marriage 31 years ago, was the metropolitan girls work executive for Los Angeles. They have two children, Harry, a law student at Denver University, and Mrs. June Jensen, who lives in Menlo Park, Calif.

Dewey Anderson makes friends easily and holds them even when he may have to part company over important issues. Witness the time he resigned from Gov. Culbert Olson's administration over a difference in policy in handling the State's big relief problem. Later the breach between the two was healed, and Olson is now one of the sponsors of the Public Affairs Institute.

Anderson was born into a pioneer family whose Norwegian-immigrant father proved up on a homestead in Dakota Territory. His father in later years, after retirement from ownership of a manufacturing enterprise in California, became the unanimous choice of the several political factions as the reform mayor of a Los Angeles suburb. This is the atmosphere in which Dewey was raised, and effective political action in good causes was his daily fare. He has engaged in a variety of successful business ventures and recently was chosen founding president of the Inter-Continental Development Co., a Washington, D. C., corporation formed by American business leaders and engineers to

conduct economic and business surveys and operate development projects in the undeveloped areas of the world under our point 4 program.

Anderson's life has been amazingly varied. He joined a circus as a member of an acrobatic troupe when not yet in his teens, but was knocked out of a career under the big top by a fall that sent him to a hospital for most of a year. He has driven a dog team 1,100 miles from the frozen wastes of Nome to the lower Kuskokwim in Alaska, collecting economic and social information about the natives as the director of a study for Stanford University commissioned by the United States Government. And many a summer has seen him exploring the back country of the High Sierras.

Why is Dewey Anderson potential material for the United States Senate? He was nurtured on fundamental American liberalism in his boyhood by a father who was a member of the Democratic National Convention that first nominated William Jennings Bryan. He followed the reform progressive leadership of Hiram Johnson, the elder Bob La Follette, and Senator George Norris. Then, as Franklin Roosevelt came on the scene with the compelling features of the New Deal, Dewey Anderson became an early supporter of F. D. R., who appointed Anderson California's representative along with Judge Ben Lindsey to the White House Conference on the Care of Children. Later in World War II, he again called on Anderson, making him a member of the War Food Advisory Board, as well as director of the monopoly investigation of the concentration of economic power in the United States.

WATER PUT HIM IN POLITICS

What started Dewey Anderson in active politics was the urgent need of his own Santa Clara Valley for water to irrigate the parched areas of its valuable orchards. This caused him to study the water needs of the State, and made him one of the team of speakers in what finally became a successful effort to launch the Central Valley project. He has maintained a continued interest in the water, power, and land problems of California ever since, being called upon by such men as Samuel B. Morris, head of the Los Angeles Water and Power Department, for assistance in Washington.

In the depression mid-thirties, the educational people of Santa Clara County were concerned over the drive to cut back support of public schools. Their representative in the legislature was considered a leader in this effort, and they sought a candidate to unseat him. They drafted Anderson, who was elected in two successive campaigns. He became a recognized leader of the liberal forces in Sacramento. When the next election to select a governor came around, he was one of the small group that prevailed upon Olson to run, and campaigned vigorously for him.

When Olson was elected, he chose Anderson to help prepare the biennial State budget, which became a model of budget construction. Then, Anderson took over the politically ridden Republican-managed State Relief Administration. He put the SRA in some degree of order and refused to permit the exploitation of the unemployed by the corporation farms.

Anderson fights for the right things. That is why, when public education was confronted with the beginnings of what later turned into the Goetz affair in Pasadena (which stirred the National Educational Association to positive action against present-day bigots in their recent San Francisco convention), the rank and file of classroom teachers drafted him to run for State Superintendent of Public Instruction in 1946. With only 6 weeks in which to actively campaign, but with the nearly unanimous endorsements of State-wide labor and liberal

groups, he rolled up 546,000 votes, getting a higher percentage of the votes for that office than the Democratic candidate for governor obtained in his race.

The Democratic National Committee is aware of Anderson's usefulness in campaigns. Presidential Adviser Clark Clifford once wrote him, "I think you might have noticed in the President's State of the Union message references to the philosophy contained in the material you sent me. I want to extend my congratulations for the fine work you are doing."

Dewey Anderson's practical political experience has been almost continuous for the past 15 years. For 5 years he had the privileges of the Senate Chamber itself, first as the head of the monopoly investigation (TNEC), and later as the director of the active Senate Small Business Committee.

How really effective Dewey Anderson has been is indicated by the remarks in open hearings of Representative CHARLES HALLECK, Republican leader, who acknowledged: "You have been working on just about everything that is 'hot' around here, as we say," to which Representative CLARENCE BROWN, Ohio Republican leader, added, "I suggest that we designate Mr. Anderson 'moulder of public opinion'; * * * I am sure your organization would have done better than the Hoover Commission (of which he was a member). I want to give you public credit for that."

Church and welfare groups of California recognized Anderson's leadership by choosing him the president of the California conference of social work. More recently, a federation of 30 national organizations, embracing farm organizations, labor, a cross-section of church leaders and other groups, which are banded together to make point 4 a reality in national policy, chose Anderson as the chairman of the group's drive to establish a Nation-wide grass roots citizens' organization similar to the effective Stimson committee for the Marshall plan.

WHAT HE STANDS FOR

A man is known by what he fights for, how he stands up under fire and how effectively he works in the muddled field of politics. The list of Anderson's battles is long. Outstanding are the following:

Pioneer participation in the campaign to establish the Central Valley project, and continuing efforts to help provide California with more water and power.

More equitable taxation. He was chairman of the Legislative Interim Committee on real property taxation, seeking to make taxes fairer on homes, small farms and small business properties.

He has long been involved in the fight to protect and strengthen independent and small business. His efforts in this direction are many sided, the most recent being the successful use of his proposal to establish a Smaller War Plants Corporation to take prime contracts and assist independent businesses to obtain capital to expand to do defense business.

Organized labor frequently looks to Anderson for advice and support. He supplied the minority membership of the Joe Ball Watchdog Committee on Taft-Hartley with the facts used in their report which offset Ball's whitewash of the bill's first-year operation. He published a treatise on Taft-Hartley After 3 Years—and the Next Steps in which Anderson challenges Taft to give objective proof that the act should be continued.

He has long championed adequate old age pensions, and wrote a critical evaluation, "The American Pension System." He sought to have the revisions of social security include a cost-of-living factor in all old-age pensions.

He has long been identified with the conservation movement.

He is a close student of Government efficiency and economy; was early made a mem-

ber of the Citizens Committee on the Hoover Report.

His concern for a peace without appeasement is shown in numerous public addresses and writings. One of these was *The Ruhr: A Better American Policy*, which more than a year before the Schuman plan outlined almost an identical solution of this danger zone in central Europe. His latest study, *Defense of America*, is an argument for a foreign policy which will enable us to defend ourselves against any totalitarian aggression of either the Left or Right varieties. At the same time he proposes to strengthen America at home through welfare, education, resources development, and other programs, and abroad through a bold new program to remove the triple threat to international friendship—poverty, disease, and ignorance in the underdeveloped two-thirds of the world.

The Full Employment Act introduced in the Senate by Senator MURRAY and championed in the House by then-Congressman George Outland, of California, declared it to be the policy of this Government to never again allow large-scale unemployment. This measure was strongly influenced from its inception by Anderson.

Here, then, is a broad sample of the range of his activities and interests. It marks him as a man of singular qualifications and practical liberalism.

But can he be elected?

His friends, some of whom are among the leading political figures of California, say he can. At any rate, Anderson is a man to watch.

Europe Trapped Between Stalin and the United States

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks, I am including an article by Mr. David G. Dallin, which appears in the current issue of the *New Leader*. Mr. Dallin has been in Europe and writes most interestingly about the real situation as it exists in Western Europe. The American people ought to fully understand and appreciate the significance of the Eisenhower mission in Europe.

The article follows:

The pace of history has slowed down; that was my dominant impression on my second postwar visit to Europe, after 3 years' absence, and it necessarily formed the background for all the political conclusions I drew. Fewer great events occur today; there are fewer major upheavals, and the man in the street has entered the scene once more as a sort of everyday life is resumed.

Postwar recovery is complete in some countries and virtually so in others. Food and clothing, for the great majority of Europeans, are at approximately the prewar level, although there is still a lag in housing, the chief exceptions are England, with her austerity program, and devastated Germany, where it will be decades before the last traces of the war are finally erased. It is surprising how few mutilated ex-soldiers one sees in the streets and how great a display of wealth and luxury one finds again in the upper social strata, though, in the latter respect, England is again an exception.

Not so long ago, wartime and postwar motifs still set the tone of European life: mothers and wives in mourning, trials of collaborationists and Nazi war criminals, tales of heroic partisans, homeless children, inflation, milk and meat shortages. In 3 years, all this receded into the background. Sports and dancing are important once again. The newspapers have become monotonous and even dull, with little noteworthy front-page news, and bank robberies and rape cases are back in the headlines. The average man is satisfied, life having resumed its easy, comfortable course.

Not only has the pace of history slowed down, but it sometimes seems as if political institutions were frozen. Europe's political curiosities—like West Berlin, the non-Communist island in a Communist sea, and turbulent Trieste—are still there, fascinating and absurd as ever. Austria is still the same—a nation at once divided and united. And France and Italy remain the chief bastions of Western European communism.

The Communists' numerical strength has undergone little change, freezing in France at about 25 percent of the electorate and in Italy at thirty-some-odd. And yet, in spite of the fact that the Bolsheviks commanded far less support than that at the time of their successful revolution in 1917, no one in Europe today thinks in terms of possible Communist uprisings. The Communist movement is like a chained beast; it emits fearsome roars, but it cannot burst the bonds created by unfavorable political conditions. Even in weak nations like Italy and Germany, the authority of the state has been restored; law and order largely prevail, the courts and the police function in a more or less normal fashion, and law violations—both criminal and political—have fallen off sharply.

And yet, the picture I have drawn of a return to normal conditions in Europe is one-sided and therefore deceptive. The real state of affairs is one of the utmost precariousness and every intelligent European realizes the paradox of this abnormal normalcy.

For the basis of this general improvement is not international amity and sound progress in world affairs, but rather a state of equilibrium between two giants poised for a possible death grapple. Whether we like it or not, most Europeans think of themselves as standing helplessly between the two mighty contestants. The giants are afraid of each other and are therefore avoiding a clash for the moment, permitting Europeans to enjoy peace, prosperity, and happiness. However, everyone is aware that this is a purely temporary state of affairs.

Here in America, we generally talk of the struggle between west and east, identifying Western Europe with the United States. The average European, however, is not in complete agreement with American political policies and methods, even though he views them more sympathetically than he does Moscow's. In his eyes, Western Europe today is much like no-man's land: Between the two lines of trenches, the farmer tills his land, tends his cows, and celebrates holidays. But he knows that, at any time, his little hut may be blown to bits and his family wiped out.

That is why the whole of Western Europe, in spite of the apparent return to normal conditions, never ceases to talk of war. Europeans are more fearful and less ready for war than we in this country and, though they sometimes affect a confidence they don't actually feel that it will never come, war remains their chief preoccupation and a contingency that is taken into account even in making private plans.

"If the Russians start a new drive on the Korean model," says the American, "we will strike back in force."

But the European says: "If Moscow launches a new aggression, they will strike back."

"If Soviet armies invade Europe, our bombers will destroy Soviet cities," say people in New York, Washington, Chicago, and Los Angeles.

But the people in Brussels, Paris, Rome, and Frankfurt say, "Their bombers will obliterate Moscow and Leningrad."

In other words, Europeans by no means tend to identify themselves completely with the United States; the "west" as a perfect alliance, as a community of homogeneous and united nations does not exist. The sooner we rid ourselves of this dangerous delusion, the better.

The nations of Europe vary, of course, in their attitudes toward Moscow and Washington. Generally speaking, however, the Western European outlook on the cold war differs from ours in the following respects:

1 All of Western Europe lies within the range of Soviet bombers, and is likely to feel their devastating power long before the Western Hemisphere suffers any major damage.

2. Europe is too small to be economically self-supporting, and must of necessity trade with the Soviet Union. To do so, it is forced to supply the Kremlin with goods that the latter needs.

3 Europe is politically and militarily too weak to defy the Soviet Government and react to its provocation in an appropriate manner.

4 A trend which may be called Bevanism, or Nehruism, i. e., a tendency toward appeasement of Moscow, still constitutes a political force in a number of European countries. This tendency inevitably assumes the form of anti-Americanism.

As a result of all these factors, Western Europe cannot be viewed simply as one element in the western alliance; not only in a geographical sense, but in a political sense as well, it lies between America and Soviet Russia. Moscow has skillfully played upon Europe's differences of opinion with the United States and will certainly continue to do so. Moreover, at the critical moment, Stalin will doubtless attempt to win some European countries over to a position of neutrality, exploiting their fear of his military might as well as anti-American sentiments.

But, one may well ask, doesn't the Atlantic Pact constitute complete, effective consolidation of western power against the eastern bloc? The fact is that it does not; the 14-nation alliance based on the pact is far less powerful than is generally supposed in this country.

Large Manufacturer Achieves Excellent Results When Utilizing Neglected Productive Capacity of Workers Over 45

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. JAVITS. Mr. Speaker, our unemployment pool is down practically to a minimum, and the postwar establishment of so many new families cuts down the number of women who can go into defense production. This is a golden opportunity to integrate our older workers into our economy and to keep them employed. The older worker and the

handicapped, therefore, become a most important part of the manpower available for our defense mobilization—it is significant that estimates of the manpower category which includes older workers is about half of the total estimated available manpower supply to meet the emergency. Appended is a letter from Leonard Ashbach, president of the Majestic Research Fund, detailing the very favorable experience the Majestic Radio & Television Corp. has had in utilizing the skills of older workers:

MAJESTIC RESEARCH FUND, INC.,
New York, N. Y., October 3, 1951.

HON. JACOB J. JAVITS,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN JAVITS: As president of the Majestic Radio & Television Corp. I wish to congratulate you on your legislation, H. R. 4731, the National Act Against Age Discrimination in Employment. We wish you great success in this important undertaking and I want you to know that my company is in complete agreement with your program.

The Majestic Radio & Television Corp. employs an average of 2,000 workers in its several plants. Management in this company takes a particular interest in the older and disabled worker.

You may be interested to know that our records reveal some exciting statistics regarding the older worker:

1. Older workers are generally as efficient as younger workers.

2. Older workers, in a great many cases, are more efficient than younger workers. This applies to the assembly line as well as nonproduction departments.

3. The productivity of the older worker, in many cases, surpasses that of the youthful worker.

4. The older worker demonstrates an intense desire to progress to higher and better-paying positions within the plant.

5. The older worker has a greater feeling of responsibility and loyalty toward the plant operation.

6. The older worker demonstrates a higher degree of dependability which is reflected in a lower rate of unaccountable absenteeism.

Incidentally, Mr. Roland Baxt, executive director of Federated Employment Service, a nonprofit employment consultation service specializing in problems of the older worker has recently informed me that he is now completing a study conducted in general industry, which substantiates the findings outlined above. Mr. Baxt is regarded as an authority in the problems of the older worker.

As a result of our findings regarding the older worker, Mr. Congressman, we initiated a project 6 months ago, which has created wide interest and which we believe you will find most unusual. During the month of April 1951 Majestic Radio & Television Corp. established a scholarship fund known as the Majestic Research Fund to provide for complete degree granting courses in the field of television engineering for 48 worthy participants a year. Thus far, we have made provision for the fund to function for a period of 5 years. Since we are keenly interested in the problem of the older worker and also because we believe that the older worker group holds a huge store of untapped talent, we are offering the scholarships only to people over 35 years of age. Our scholarships are known as the "second chance scholarships."

The entire project is organized and handled by our public relations counsel, Calvin L. Fox & Associates. Soon after the information regarding this project was released, we were besieged with applications and letters

of inquiry from people over 35 from coast to coast. Thus far, we have had more than 12,000 applications. Some applications coming from people as old as 70. You may be interested to know that one of our applications from a retired professor of botany, who was most anxious to apply his intellectual skills to the field of electronics engineering. Wouldn't it be shameful to permit such intellectual talents to go unleashed and non-productive.

The training program for these older people is being developed under the direction of Mr. U. A. Sanabria and Dr. Lee De Forest—two eminent electronic scientists. All of our scholarships are being awarded to the American Television Institute in Chicago, a school picked for its high educational standards, and performance record during and after the last war. Before the project was undertaken, Mr. Sanabria attested to the fact that the older students at the American Television Institute have better performance records than the younger ones.

The Majestic Radio & Television Corp. believes that this second-chance fund will set a new precedent in providing for specialized training for the older worker. We believe further than this training will open a new reservoir of much needed talent and skills in our vital electronic industry.

Giving employment and training to the older workers is not an act of charity. The older worker group can and should provide industry with a reservoir of much needed talent. Industry should accept the older worker with open arms. We are in complete support of your legislation because we feel that it is a step in the right direction.

American industry has a huge job to perform in the years ahead; it must utilize every last bit of talent and ability. Age consideration is a taboo which must be discarded by industry.

Cordially yours,
LEONARD ASHBACH,
President, Majestic Research Fund, Inc.

What To Do if a Bomb Is Dropped

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Thursday, October 4, 1951

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an excellent article by William Lindsay Gresham, entitled "How To Save Your Life," which tells the story of what might happen if a bomb explodes nearby, and of what we can do to prepare ourselves.

There being no objection, the article was ordered to be printed in the Appendix as follows:

How To Save Your Life

(By William Lindsay Gresham)

The sun of an Indian summer morning strikes golden through elm branches on the cream-colored stone of the courthouse. A block away in the square, girls are still wearing gay summer dresses as they set about the day's shopping. A county-seat town of 5,000 people, friendly, hospitable. Carlinville, Ill.

Sixty miles south, in a wide bend of the mud-brown Mississippi, lies the gateway to the West—St. Louis, Mo., site of the largest small-arms factory in the country, center of chemical manufacturing, heavily loaded with aircraft construction, the second greatest railroad center in the world. Stretching

for miles along the west bank of the mighty river, it raises its factory chimneys and church spires into the blue autumn air.

A mile to the south of St. Louis' mammoth Union Station, in the yard of a brick house on Park Avenue, two children are playing in a sandpile.

Yesterday it was chilly, and mommy made them put on sweaters, but today it got hot again and mommy said they could play in the sandpile in just sun suits. Only Ellen, a dignified 6-year-old, wore a sunbonnet because it matched her suit. She filled her pail with sand and upended it, pulling the pail off carefully to make a cake. Carlie, who was only 4, reached out his shovel and said, "I cut it for you, Ellen," and she had to grab his hand to keep him from spoiling it. "I wanna cut it."

Their shadows struggled beside them on the white river sand. Then the shadows paled and Ellen's shadow shot out in a different direction, straight over Carlie, as the sky flashed white. Then it was as if somebody, playing rough and nasty, had pushed her down, bumping into her brother. The sun dimmed. And the sand was tearing away under her fingers in a roaring torrent of air. Ellen felt the ground shudder. When she could get her breath she screamed, "mommy!" and got to her feet, stumbling toward the back door. The wind spent itself, then suddenly it drove the other way, knocking her down. It ripped off her sunbonnet and whipped dust in her eyes. But she had seen enough—the house wasn't there any more.

Carlie was on his back, as if he had fallen asleep. Ellen cried again, "mommy! mommy! Something . . . hit me . . . and I hit Carlie, but not on purpose." And then Carlie started to howl, and Ellen crawled over to him and started to hug him, telling him not to be such a baby because really he wasn't hurt much. Finally she shook him. "Listen, Carlie— you hush up now and listen. Ellen's got to find mommy. You stay right here and don't you dare move."

"I don't wanna stay here. I want my Mommy!"

"Well, we'll find her. Don't be such a baby."

Their house was nothing but a heap of bricks. . . . Mommy had been in the house, she was downstairs, working the washing machine.

Ellen began to scream, "mommy! mommy! mommy!" and then she ran over to where the cellar door was, only there was nothing but bricks and pieces of wood sticking out, and there was smoke coming up from under the bricks.

Suddenly she felt tired, and so she sat down, and then she lay forward on the grass that was all yellow now and smelled funny. She was so tired she knew she was going to sleep. . . .

When Ellen opened her eyes again, Carlie's yell had died down to a snuffle. She sat up. "Carlie! What's the matter with your feet?"

They were red, where they had been sticking out before him—when the bright light came over them her shadow had covered him except for his feet. Now they were all red and bumpy.

Carlie was patting her and sayin, "Ellen, get up."

She must have fallen asleep again. There was a long piece of something like tissue paper in Carlie's hand, and she saw that it was wet and horrid-looking and said, "Carlie, drop that, it's dirty. Where did you get that?"

Carlie said, "I got it off your back. Your back's all funny."

Ellen began to howl then herself, not because it hurt but because she was so scared and it was all dark and dusty with things breaking. And Mommy didn't come.

But somebody in boots and a raincoat with a hood was climbing over the pile of bricks

where the house next door ought to be. It was Mrs. Carroll from across the street, only Ellen called her "Joan" because she used to take care of them when Mommy and Daddy went to the movies.

When Joan reached them, big drops of rain had started to fall. She said, "Come on, kids—we've got to get out of here."

"Where's Mommy?"

Joan knelt down. "She can't come now. She wants me to take care of you. Now come on, kids—beat feet."

Something went whoom in the house next door, and fire began roaring through all the broken stuff. Joan had them by the hands, hurrying them toward the street.

Ellen looked back to see if Mommy was coming, but it was so dark and dusty that she couldn't see. She started to whimper. Joan said, "I'll get a bandage on you in a second, honey. Does it hurt bad?"

Ellen didn't know what she meant.

The smoke was getting thicker. Finally Joan stopped and set Carlie down on part of a brick wall to keep his feet out of the dirt. Then she took off her raincoat and took off her house dress and stood there just in her slip right out on the street. She was tearing the dress up, too, and that wasn't right.

She folded a piece of dress and put it on Ellen's back, pressing it down hard and tying it in place with strips of cloth. "That'll have to do, honey. We've got to make tracks." Ellen's back began to throb at the edges like when you have bumped your head and it starts to ache. Then she had to laugh, because Joan had tied strips from her dress on Carlie's feet and they looked like little boots.

Ellen knew where they were going now—over to Lafayette Park. Only she didn't want to go to the park at all, she wanted Mommy, and it was too dark and smoky.

Joan sounded sort of cross, and Ellen thought that maybe it was because all the trees in the park had lost their leaves and looked bare and funny. A truck was rolling toward them right over the grass, and when it stopped a man got out.

Joan called to him and he shouted back, "Pile in!"

But Joan didn't get in the truck. She sat down and took a roll of adhesive tape from the pocket of her raincoat. She tore off a strip and wrote something on it with a pencil. Then she pressed the tape right on Ellen's chest and made another one for Carlie. Then she kissed both children. "Ellen—don't let Carlie pull off his tape. It has his name and address on it. Don't let him. Promise Joanie."

Ellen promised, and the man lifted them into the back of his truck. He turned and watched Joan hurrying back the way they had come, and then he said, "Boy, that babe's got what it takes, huh?"

The smoke was getting worse, and more children were coming. One was a big boy, and he was being carried on a door by two men. Ellen saw that there were bones sticking out of his leg. He was asleep.

The truck bounced and jolted out of the park and around a bulldozer that was pushing bricks away in the street. . . . Ellen was going to be sick.

Out through the back of the truck she could see the street going away from them, and sometimes people came out and ran behind the truck shouting and then fell down when they couldn't run any more, but the truck was too full and lots of people were being sick. The boy with the bones sticking out of his leg moaned and began to roll over, but somebody caught him and held him still.

When they stopped bouncing at last, the man came around and let down the back of

the truck. They were in front of a school-house with a Red Cross flag out in front.

Inside the school the classrooms were full of people waiting, and in the gymnasium they were lying on mattresses on the floor. A doctor looked at Ellen's back and then said, "Are you thirsty? Drink this, anyhow." It was a big glass of water which tasted salty, but she drank it.

Suddenly she missed Carlie and began to call him, but a doctor whose shirt was sticking to him with sweat said, "Your brother's O. K. young lady. You've got to go to sleep now." Something bit her arm and she howled, but soon she felt herself falling asleep fast.

When she woke up, she was crying and being sick. It was a different place, and it was night. She was in a bed and something was tied to her arm. A lady with a flashlight came in and said, "Hush, darling—let me clean you off."

Ellen's back was hurting now, and in the light of the flashlight she saw that a bottle was hanging up by the bed and a rubber tube was coming down to her arm. She was hot and stuffy and was tied up tight all around her chest. "I want a drink of water. I want Carlie. I want Mommy."

The water wasn't salty this time. The lady was very nice, but she said Carlie was with the younger kids and Ellen must go back to sleep and not worry about Mommy, either. "You're Ellen and Carlie's your little brother. You see, I know all about you."

"Where is this?" Ellen asked.

"This is a place called Carlinville. This is where you are going to wait for Mommy and get better. You've got a bad burn, but if you stay quiet and do just what we tell you, you'll be fine."

The next time she woke up there were other kids crying and some were being sick. Her back felt better, but she still had something tied to her arm that made it ache. Two men came in and took a girl in the next bed and put her on a little bed with handles and carried her out, and Ellen tried to tell them that the girl couldn't breathe with her head all covered with a sheet, but then they were gone.

Sometimes children fell out of bed and screamed, and sometimes they screamed before they fell out. But the next day a very nice little girl was put in the bed next to Ellen's. They could talk to each other and make believe. And there was lots of ice cream.

It didn't seem like a whole week until the day when one of the ladies said, "Ellen—surprise, surprise." And Mommy was there right by the bed.

When Ellen hugged her she said, "Oh, please be careful, baby. Mommy's ribs are sore."

"Mommy, why didn't you come?"

"I couldn't, darling. Mommy was down cellar and couldn't get out. Guess what—they had to dig Mommy out with picks and shovels."

Carlie was upstairs, and when they all got ready to go to their new home Carlie was crawling because his feet were bandaged, but he was fine.

They went to live with some people who were old like Grandpa and Grandma, named Mr. and Mrs. Ferguson.

And finally Daddy came back to them. They all lived upstairs, with the Fergusons downstairs, and Ellen started to go to school—but that was after Christmas. There was a Christmas tree in their own room, and Carlie was learning to walk all over again and his toes were all together in one piece, but he learned to walk fine.

One night Ellen heard Mommy say to Daddy, "It's horrible—she'll never be able to wear an evening dress."

Daddy said, "Listen—when her generation gets to the evening-dress stage, those

scars won't be any novelty. They'll be a decoration. They're Ellen's Purple Heart."

That is the story of two American children of the future. But the story is based on a number of ifs.

If Joan, the block warden, had not known enough first aid of the atomic age to put a dry compress on Ellen's back where it was burned in the heat flash, the child might have died while being evacuated.

If the first-aid station had not had morphine, tetanus antitoxin and plasma, the child might have died of shock or infection.

If Ellen, with a third-degree burn and radiation sickness combined, had not received whole blood and careful attention at the emergency hospital, she might have died.

If there had been no supporting community, like Carlinville, equipped to house seriously injured children in nursing homes and able to give them constant care through trained nurses' aides, the story might have ended differently.

If evacuation plans in St. Louis had not been carefully worked out ahead of time and administered by a trained corps of auxiliary police, the children might not have gotten out at all.

If trained rescue squads had not been able to plunge into the inferno of the badly shattered area a mile in every direction from "ground zero"—about which the enemy's atom bomb exploded—the children's mother would never have been saved from the ruins of her house.

If records had not been kept of the children's names and destinations and these checked with the mother when she had recovered from injuries, the family might not have been reunited for weeks or months. If Carlile were too young to know his last name and his address, some grief-stricken mother might have claimed him as her own and he might never have been returned to his own family.

The list of ifs could fill pages. But there is one last one which overshadows all the others: If Civil Defense had not been tightly and efficiently organized with trained personnel and supplies, the country's productive forces which feed the machinery of war might have bogged down. The war might have been lost. And the children might not have had a Christmas tree at all—it might have been forbidden by the "people's" Government as a "bourgeois superstition" which wasted timber.

For our typical example of how well-organized civil defense would work, we chose St. Louis and Carlinville for a number of reasons: St. Louis because it has a double tactical value to the enemy as a target: (1) Its tremendous production volume and (2) the effect on the rest of the country if a city as far inland as St. Louis were knocked out. Yet St. Louis is as vulnerable as Chicago or Detroit. Experts claim that if the Army's radar screen, antiaircraft batteries and fighter squadrons can down 30 percent of the enemy planes, this will be an all-time high.

Carlinville is the home town of Gen. John Homer, deputy director of Illinois Civil Defense. The model plan for a small town's organization in support of a major city was worked out for Carlinville. When I visited County Clerk Denby Boring, heading the local civil defense outfit, he was all set to go as soon as the State legislature passes the proper bill giving civil defense legal status and powers.

In St. Louis, director of civil defense Raymond R. Tucker and his assistant, Gen. Francis P. Hardaway, have been steaming ahead with a public-educational program with special emphasis on school children. But at the time I talked to them, there was still no civil defense legislation in Missouri.

In both of these communities everything has been done by civil defense and Red

Cross leaders that can be done, and the citizens are defense-minded far above those of most other places. Yet public apathy is present even there, to some extent.

Question: Does your State have a law giving the civil defense organization full legal authority to act? If you don't know, telephone your local newspaper and find out. And if there is no law as yet, the paper can tell you who your representative is at the State capital. Few of us know who these men are, and fewer still make their opinions known by letter or telegram.

The atom-bomb raids which will open world war III will strike at from 20 to 30 target cities. This is no military secret—it is just what we know is going to happen. Furthermore, as good as our radar screen is, it cannot, as of now, be depended upon to warn us accurately of planes flying close to the ground or shielded by mountains. The rural areas of Montana are as important to the country's survival as are any other areas. A network of aircraft spotters is being organized in rural areas, but this network must literally cover the country.

The oceans that wash our coasts are no barrier to enemies now. The sky is their road. Go to your window, look up at the sky. Take a good look. That's where they will be.

Many air-raid wardens during the last war were either people who liked to boss others around or devoted citizens who felt a bit self-conscious in white steel helmets because they knew that the threat of large-scale bombing just wasn't real. But it is real today.

We won't have to run around enforcing black-out regulations—the radar-scopes of enemy planes give them an accurate map of any city on the darkest night. The problem will be lighting a city, if they manage to flatten the power stations. Which is one reason why you should carry a pocket flashlight, starting now.

A power shut-off in an emergency is a great breeder of panic, while a few flashlights in the hands of calm people can restore order and save lives.

There is only one way to prevent panic: adequate training beforehand. Every able-bodied teen-ager and adult must have training and a definite job to do when the crisis arrives. Roy Wingate, chairman of the St. Louis chapter of the Red Cross, is a veteran with 28 years of Red Cross service in every sort of disaster, earthquake, flood, fire, hurricane, and tornado. He told me: "The way I look at it, an atom bomb on this city would be no worse than a bad tornado—except for the people directly under it in the ground zero area. The big danger is not lingering radiation, but fire and panic. And the only way to prevent lives being lost from panic is a thoroughgoing campaign of education beforehand. Unless the people know what to expect, what to do if it comes, and what to do afterward, you will have panic—with fatal results."

The Red Cross is training classes in first aid as quickly as they can be organized, but in most places the housewives of the country just aren't signing up.

Answer quickly: If your child were badly cut on the cheek by flying glass, how would you stop the bleeding?

When the A-bomb falls you won't be able to call a doctor or an ambulance. The telephone lines will be down or jammed with official messages. Doctors won't be in their offices, they'll be hurrying to their emergency stations. Many of them will be dead. Very well—how would you stop that bleeding? A first-aid course will teach you.

Answer quickly: If your child is suffering from loss of blood or severe burns, what substitute can you use in an emergency for whole blood or plasma? It's a solution

made from supplies you already have in your own kitchen, and you make the child drink it. But what are the ingredients? Take your Red Cross course and learn.

Question: Who is going to pay for stockpiles of medical supplies? A box of sterile gauze pads measuring 3 by 5 inches can be bought in any drugstore. You will pay 75 cents for a box of 25 pads. And if you get badly burned you are going to need 2.7 miles of gauze.

In Poughkeepsie, N. Y., a city of 40,975, Civil Defense has enlisted the local pharmacists' association: When an alarm sounds, each druggist will prepare a package of drugs and first-aid supplies and take it to a depot designated by the head of the civil defense medical committee. As of today, that is almost the only source of first-aid equipment except what the Red Cross has on hand for disaster work.

The supplies will have to come from the small towns. When the bombs land, mobile relief units, drawing on the resources of small towns and moving with the precision of well-drilled troops, will have to converge on the stricken areas. There is no other way to save our industrial resources—men and equipment—and win the war.

This is going to be a civilians' battle. When the frontier was pushing into Kentucky, the frontier woman was the family medico. Also, she took the precaution of carrying a rifle with her when she went to the spring for water. She could never afford to say, "I don't think the Shawnees will raid our settlement."

If you have young children, do they have identification tags? Do your children know what to do if they are playing outdoors and see a blinding flash in the sky? Do you?

Let us return to our little A-bomb victims in the fictional introduction to this article. Ellen and Carlile survived in that fable only because their city was completely organized for civil defense, and a town in the support area was ready down to the last detail. But St. Louis and Carlinville are not really ready—not completely and not yet. Most communities have very little else than plans on paper and lists of things they will do—when enough citizens can be aroused to sign up, study and learn how to do them.

Now go back and consider the story of Ellen and Carlile again. If the bomb falls tomorrow, they are not fictional characters—they are your kids. And if it falls tomorrow, your community is not prepared.

Then the story is different, is short, and is this:

Those children are dead.

High Cost of Electricity in New England

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following:

BOSTON EDISON CO.,

Boston, Mass., October 4, 1951.

HON. THOMAS J. LANE,
Member of Congress,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: For your information I enclose a copy of a telegram sent to the United States Tariff Commission in connection with the pending renegotiation of a

reciprocal trade agreement between the United States and Venezuela.

I am sure the users of electric power in Massachusetts will appreciate any effort you may make to obtain a reduction or prevent an increase in the cost of fuel oil delivered at Boston harbor.

Very truly yours,

J. V. TONER.

UNITED STATES TARIFF COMMISSION,
Washington, D. C.

Boston Edison Co., as one of the largest users of heavy fuel oil in the New England States, respectfully presents the following information in connection with pending renegotiation of reciprocal trade agreement between the United States and Venezuela:

Boston Edison Co. is an operating electric utility supplying electricity to the industries, public buildings, commercial establishments, hospitals, and other institutions, schools and homes of 40 cities and towns in metropolitan Boston. To produce this electricity, Boston Edison in 1951 will use approximately 4,500,000 barrels of fuel oil, most of which will come from Venezuela and other Caribbean areas. Any renegotiation which adds to the price of Venezuela oil delivered at Boston harbor will act unfavorably on our customers, as our rates for electric service are based upon the cost of fuel delivered at our generating stations. Recent publications of Federal Power Commission and other Federal agencies have stated that the cost of electricity in New England is higher than the national average due entirely to higher costs of fuel delivered at New England power plants and higher local taxation. Even though cost of electric power represents only 1 or 2 percent of operating costs of most industries in this area, any increase will tend to be a disadvantage to New England manufacturers in competition with manufacturers in other parts of the country.

BOSTON EDISON CO.,
By JAMES V. TONER, President.

A Wasteful Program

EXTENSION OF REMARKS

OF

HON. KARL M. LeCOMPTE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. LeCOMPTE. Mr. Speaker, a great deal of interest has already manifested itself in the effort of the Department of Agriculture to sell the farmers on the program of farm benefits that the farmers themselves are not asking for. An example of the reaction of some farm communities in Iowa is set forth in and editorial of the Ottumwa (Iowa) Daily Courier of October 2, and under permission to extend my remarks, I include the views expressed by the editor of this splendid paper:

A WASTEFUL PROGRAM

A great many people cannot consider themselves represented in Congress until an elected Representative stands there to demand an end to the wasteful farm program.

In recent days, the Department of Agriculture's hirelings have been holding public meetings for open evaluation of what is called the family-farm program.

In the next election campaign this move frequently will be referred to as taking the farm program from the grass roots. That will be so much talk. Careful scanning of

reports from these meetings shows, first, they were attended by fewer than 1 percent of the farmers of each county—even counting those paid by the Government for part-time jobs. It also shows many details of the various Government indirect subsidies were discussed, but practically no attempt was made for a grass-roots evaluation of the entire program.

Most of these programs the Department of Agriculture undertakes date back to the days of Rexford Tugwell and cronies in the Department. The present secretary, Charles Brannan, broached one stupendous flop as a new program, and now after its shelving is fishing for some popular way to hand out more millions.

A farmer at the Wapello County meeting asked: "Why should the Government pay landowners for doing something that is profitable to them?" He referred to payments for spreading limestone.

The production and marketing administration—one of the dozen agencies of the Department of Agriculture which may send a representative to a Wapello County farm—pays about half the cost of spreading lime under the guise of "soil conservation." It also pays for fertilizers, tilling, plowing under green manure crops, and other practices which the successful farmer was doing when some of the FMA boys were kids.

The Department pays for such practices, then lends money or the crop which results, lends money to the farmer to build storage facilities or builds them itself, and then pays the farmer for storing his own crop.

Why is any of this necessary? In times of high commodity prices, the farmers who produce high yields make money. The farmer who conserves the soil assures productivity for next year and future years.

It must be acknowledged that in production of agricultural surpluses—when there were such—orderly marketing was helped by the Government. It is not acknowledged that private enterprise could have been less helpful. It is true that the moratorium kept many farms and farm families intact, but it was not an essential function of the Government to do more than guarantee loans and deposits.

It cannot be justified to spend millions and millions of dollars in administering unnecessary farm programs, when tax money is so desperately needed for warfare and defense. The Government's farm program today has deteriorated so far from its past elements of worthwhileness that its complete abandonment would benefit rather than cripple the farming communities of the Nation.

A Government program dating back to the thirties to extend soil conservation practices to the country's farms is progressing so slowly that it will take almost a century by present progress to accomplish its goals. Progress like that would rob any organization, just as Government expenditures today are bankrupting people with exorbitant taxes.

Aiding Escapees From Communist Countries

EXTENSION OF REMARKS

OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. KERSTEN of Wisconsin. Mr. Speaker, in our efforts to mobilize the world against communism we have unfortunately done very little to utilize

those people who are in many instances the strongest foes of communism, namely, the escapees from behind the iron curtain.

Now, however, with the adoption of the new mutual security bill, these escapees who can be of great assistance to us in the fight against communism will no longer be neglected. The conferees on the mutual security bill have agreed to the adoption of an amendment to the mutual security bill which I had offered on the floor of the House. This amendment provides that \$100,000,000 of the foreign-aid funds may be used to aid these escapees.

Too often in the past our propaganda telling how much better things are in the Western World has backfired when we have refused to accept and help those who heeded our propaganda and sought a new life in the Western World.

If we make a sincere effort to help those escaping from tyranny the report of our actions will thunder back behind the iron curtain even without the aid of powerfully beamed radio broadcasts. Our actions will truly speak louder than any torrent of words.

I include herewith an editorial which appeared in the Washington Post of October 8, 1951:

ESCAPEES

At the very time that the United States is doing its utmost by radio and other means to encourage defections from the Communist regimes behind the iron curtain, the lack of a coordinated policy for dealing with escapees is frustrating the objective we seek. Recent stories have told how escapees reaching Germany or Austria have a 2-to-1 chance of landing in jail as "illegal" entries. Unless the escapee is fortunate enough to contact the International Refugee Organization or one of the private refugee groups, he is likely to spend long months in a camp where he is grilled incessantly by intelligence agents and then seemingly forgotten. Word of this inhospitality for a time virtually shut off the flow of escapees from Russia.

Perhaps the most pitiful conditions are in Germany, where some 80 percent of the escapees are branded as "illegal immigrants" and many are treated as common criminals. For example, a number of young people attending the Communist Youth Festival in Berlin asked for asylum in western Germany. Instead, many reportedly were thrown in jail or confined in reformatories with delinquents or mental defectives. Reports of these conditions quickly get back through the grapevine, and the Communists make the most of them in their propaganda. Meanwhile, of course, the real Communist agents who come through the border have their papers in perfect order.

Resettlement of these people, such as is carried out on a small scale by IRO and pleaded for by Queen Juliana in her appeal, is not enough, important as it is. Immigration does not provide an answer for persons who are looking not for permanent new homes, but for a chance to live elsewhere until their homelands are free. An entirely new concept is needed—one which would give such persons jobs in the western European rearmament effort so that they could support themselves, one which would coordinate the efforts of refugee groups and the refugee press, which would mobilize this resistance on a broad basis and not merely in military terms.

This is a field for governmental action, for the valiant efforts of private organizations are necessarily limited in scope. There

is the basis for such action in the provision of the mutual security bill which allows up to \$100,000,000 for the formation of escapees into elements of the North Atlantic Treaty army or for other purposes. The real need, of course, is for a fundamental, unified NATO refugee policy as a part of a program of strategic resistance which makes use of all the psychological weapons at our command. The refugees who come across the border now are for the most part accidental allies. A common western European policy to provide new hope for escapees could furnish an appeal to enslaved peoples that would really make use of the chinks in the iron curtain.

A Few Kind Words for Harry Truman

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. SABATH. Mr. Speaker, under unanimous consent to extend my remarks, I include an article appearing in the August 28 issue of *Look* magazine by Henry Steele Commager entitled "A Few Kind Words for Harry Truman."

Mr. Speaker, there are men in Congress and on the outside who make it their business day by day and week by week to criticize every action and every pronouncement of our great President, Harry S. Truman. Nothing he seems to say or do meets with their approval. Their carping criticism is basically unfounded; it is never in conformity with fact, nor, in many instances, is it in the best interests of our Nation during these critical times. They merely spout in the belief it is politically advantageous to do so, or in the hope their ill-advised words will benefit them personally. In many instances these critical expressions come from the headline seekers—those who believe the day is not complete when their names do not appear in bold type in the daily press attacking the President on some pretext or another.

To those acquainted with the history of our great Presidents of the past this is not new or strange. Its pages are replete with the mouthings of those who were bent on endeavoring to pull themselves up to the stature of these great leaders of ours through innuendo, deceit, trickery, and falsehoods, but in virtually every instance they found themselves grounded with a thud, the broken rope of their aspirations wound about their humiliated forms, while history went on to record the imperishable greatness of those they so foully attacked.

Mr. Speaker, when history brings in its verdict on the present incumbent of the Presidency, it will be clearly recorded that Harry S. Truman has done an outstanding job as President. He will be found ranked with our outstanding leaders of the past who were abused by their contemporaries.

The article by Mr. Commager, appearing in a magazine which, in the past, has been so highly critical of many of the actions and deeds of our President,

is so revealing and factually true, I felt it would be of vital interest to each and every Member of this Congress. I commend it as "must" reading to those who are sincerely interested in dealing with real facts on the President's record and achievements. The verdict to date is by far in Mr. Truman's favor.

The article follows:

A FEW KIND WORDS FOR HARRY TRUMAN

(By Henry Steele Commager)

Some months ago, President Truman, smarting perhaps under criticism which had reached new heights, or depths, of billingsgate, observed that the final verdict on a President cannot be made in less than a generation, and that when it comes it will emphasize not the day-by-day squabbles of party politics but the great positive achievements. He believed, he added, that there were a number of these to the credit of his own administration.

He was right on both counts. He was right in saying that the verdicts of contemporary critics and of the historian rarely agree. Every one of those Presidents whom we now call great was denounced by his contemporaries as a weakling or a tyrant, a tool of the privileged interests or a demagogue, a marplot or a traitor.

Washington himself was not immune from this kind of abuse. The last years of his Presidency were embittered by a campaign of vilification. Jefferson was denounced as an atheist, a tool of the Jacobins (the Communists of that day), a demagogue, a tyrant, a coward, a liar, and almost everything else that those past masters of invective, the New England Federalists, could think of.

Jackson was portrayed as ignorant, illiterate and uncouth, denounced as King Andrew, charged with immorality and even with murder. Lincoln was reviled for his lowly birth, compared in appearance to an ape or a baboon, accused of telling ribald stories on battlefields and funny stories at Cabinet meetings, charged with subverting the laws and the Constitution, with reckless interference with the military conduct of the war, with blundering in the domestic and incompetence in the foreign field.

The vilification heaped on Wilson passed the bounds of decency: He was a dictator and a tyrant, he had abandoned the Monroe Doctrine, he had pusillanimously surrendered to Mexico; he had lowered the Stars and Stripes over the Panama Canal; he was immoral in private life as in public.

The attacks on Franklin D. Roosevelt are so fresh in our minds that we can still blush for them; nothing, apparently, was too indecent or too profane for his opponents to say. He was a traitor to his class and eventually to his country, he had sold out to the British and then to the Communists; he fomented class war, he undermined private enterprise, he tried to destroy the American system; he joined hands with the spoliemen and bosses to corrupt the Government. And, as Roosevelt said in his teamsters' union speech, not content with attacking him, his critics attacked his little dog, Fala.

So in a sense Truman shouldn't complain. He is in good company. And he doubtless knows enough about American politics to know that this is what a President has to expect. It was Horace Greeley, Presidential candidate in 1872, who said he didn't know whether he was running for the Presidency or for the penitentiary. Yet, in another sense, Truman has a right to feel aggrieved. He might well ask what it is that he has done.

By all normal standards, his administration has been one of almost uninterrupted and unparalleled success.

At no previous time have Americans enjoyed such widespread prosperity. Unemployment has all but disappeared; farm in-

come and labor income are higher than ever before in peacetime, and even corporation income and dividends are at an all-time high. There have been no great crises in domestic affairs, unless inflation is such a crisis, and Truman has fought inflation consistently.

In world affairs, American power and prestige remain high. So President Truman is probably right in asserting that the verdict of history will not be the same as the verdict of contemporary critics.

It is a pretty safe prophecy, too, that Truman is right on his second point, that history will credit his administration with important achievements. For 6 years now, while critics have belabored Truman for venial sins, for tolerating a General Vaughan, for permitting the taint of corruption to reach high places, for replacing faithful New Dealers with cronies who have no real interest in progressivism, for loyalty to friends instead of to principles, Truman has gone ahead and chalked up one achievement after another in both foreign and domestic affairs.

The most important accomplishments are clearly in the foreign field. If we are to generalize here, we can say that no other President except Wilson and Franklin D. Roosevelt has appreciated as fully the extent to which American power involves American responsibility.

In foreign relations, President Truman has revealed a firm grasp on the necessity of combining vigor with moderation, generosity with tolerance, a zeal for peace along with readiness for war. Here he has displayed an understanding of the nature of the problems confronting the democratic world.

Perhaps the first indication of this came with the President's advocacy of a substantial loan to Britain, a proposal which had the isolationists fighting George III all over again. The loan bill was passed and that money primed the pump of British economy, enabling it to start on the road to recovery. Soon there was a more serious challenge to American resourcefulness and readiness. When, early in 1947, the British announced that they were no longer able to carry the burdens of the defense of Greece, Truman moved quickly to take over the responsibilities they had theretofore fulfilled. He seized the opportunity not only to save Greece from Communist domination but to promulgate what is known as the Truman doctrine.

One of the primary objectives of the foreign policy of the United States (he said in a message to Congress) is the "creation of conditions in which we and other nations will be able to work out a way of life free from coercion It must be the policy of the United States to support free peoples who are resisting attempted subjugation by armed minorities or by outside pressures."

ACHESON SPEAKS OUT

After the Truman policy declaration, and after military aid to Greece, came the Marshall Plan. It was in May 1947, that Under Secretary of State Dean Acheson announced that Europe must be made self-supporting and that the United States was prepared to help out to that end. The next month, Secretary of State George C. Marshall, in an address at Harvard, elaborated on this theme. Britain, France and other Western European nations responded with enthusiasm, and out of all this came the European Recovery Program—a program that pledged the United States to finance European economic recovery over a period of four or five years.

In boldness, in hardheaded realism, in imagination and vision, it was a program comparable to Lend-Lease. Republicans fought the proposal as they had fought Lend-Lease, as for that matter they had fought every major item in the program of internationalism. But after a full-dress debate, and after the Russians moved into Czechoslovakia, ERP went through and an initial appropriation of four billion dollars guaran-

teed a fair trial. That it has been successful beyond even the hopes of its sponsors is a matter of record.

Economic aid was crucial and, with that aid, Western Europe started on the long road to recovery. But ERP was designed for Europe only. Already, President Truman was contemplating American aid on an even larger scale. Even American resources would not stretch to Marshall Plans for every continent, but American resources in skills, techniques, organization and brains might be still more valuable than American money.

That was the principle behind the famous point 4 proposed in Truman's inaugural address. Point 4 caught the imagination of the world. But a reluctant Congress made only grudging appropriations and, for 2 years, the program has limped along without accomplishing what was expected of it.

Economic recovery of Europe was a long-range affair. Before it was even partially complete, Russia might strike or might persuade Communist elements in western European countries to revolt. To strengthen immediate barriers against communism, Truman next proposed a military pact. "The determination of the free countries to protect themselves," he said, "will be matched by an equal determination on our part to help them to do so."

The idea of a powerful Anglo-American alliance had been broached by Winston Churchill in his Fulton, Mo., address, and Churchill, too, had worked for the creation of western European union. Now Truman proposed that the United States move in with large-scale military aid to supplement the large-scale economic aid already transforming European economies.

Out of this came the Atlantic Pact—the first peacetime military alliance in our history. It provided that "an armed attack against one or more of the members should be considered an attack against them all." And when Truman persuaded Gen Dwight D. Eisenhower to take the post of supreme commander and weld together the disparate defense systems of Western Europe, the military balance of power in Europe began to right itself.

THE REPUBLICAN CHALLENGE

The Atlantic Pact was passed with bipartisan support, but when, in 1951, there came the problem of implementing it with American troops, the Republicans went into the opposition. That opposition took the form not only of challenging the possibility and the value of saving Western Europe but of challenging the Presidential power over the Nation's Armed Forces. This was the kind of challenge that Truman could not avoid and would not have avoided if he could have done so. Clearly, he had the Constitution on his side, and history and common sense as well. President Truman won a practical victory, though not a complete one, in that historic debate.

In other fields too, Truman's foreign policy will appeal hopefully for a favorable verdict from history. When, in 1948, the Soviet took advantage of a failure in the Potsdam agreement to provide for American access to Berlin and instituted a blockade, Truman met the challenge with the spectacularly successful air lift. Later, his administration formulated a German policy that went far to bring Germany back into the family of western nations and to heal some of the deep wounds of war. When there appeared some danger of Italy's going Communist, the Truman administration moved to meet the crisis—and met it.

Thus, even before the Korean crisis, President Truman had displayed in the field of foreign relations firmness, vigor, courage, and vision. The invasion of South Korea presented a challenge to the United States and

the United Nations that could not be ignored, and again Truman acted with boldness.

HE DID NOT DRIFT

We have only to contrast this action with the shilly-shallying of American policy toward the Manchuria invasion of 20 years ago, or toward Mussolini's attack on Ethiopia, to appreciate the extent to which Truman had learned the lessons of history.

The invasion of Korea had another consequence of far-reaching importance. Ever since his accession to office, Truman had been calling for the rebuilding of our Armed Forces and the development of our military productive capacity.

To most of this program, Congress was deaf. The Korean war speedily changed the situation. Under the compelling pressure of military realities, Congress accepted the Truman program, voted immense sums for the military, stepped-up taxes, organized production and created an Army big enough to meet aggression wherever aggression should strike.

That Truman's record is less impressive in the domestic than in the foreign field will not be denied. He has not been able to carry Congress with him. Nevertheless, the Truman administration will be credited with the following body of domestic legislation: the reorganization of Congress, a National Security Act unifying the armed services; an Atomic Energy Act that guarantees civilian control of the whole atomic energy program and greatly enlarges that program; an act increasing the number of displaced persons who might come to the United States; increasing Federal aid to education; the extension and liberalizing of social security, steady advances in the field of civil rights; progress in slum clearance and housing, and the maintenance of rent control.

Two negative acts may be counted in the long run, as important as any positive acts. These are the veto of a bill that would have handed over the immeasurably valuable tidelands oil, property of the whole American Nation, to a few States and the veto of another bill that would have exempted natural gas from Federal regulation.

The list of proposals that President Truman has urged upon Congress and that Congress has rejected makes, it is fairly safe to say, a record that will not redound to his discredit. Congress has refused him an effective civil-rights bill. It has refused effective measures against inflation. It has ignored suggestions for further Federal aid to schools and public health; it has rejected a farsighted conservation program. It has failed to act on findings of investigations of monopolies.

All in all, here is a record that is not only respectable but impressive. We cannot know what verdict history will pronounce upon it, but we can make a pretty good guess.

THE TRUMAN PARADOX

It will perhaps record the curious paradox that a man charged with being soft on communism has done more than any other leader in the Western world, with the exception of Churchill, to contain communism; that a man charged with mediocrity has launched a whole series of farsighted plans for world reconstruction, that a man accused of being an enemy to private enterprise has been head of the Government during the period of greatest prosperity for private enterprise; that a man accused of betraying the New Deal has fought one Congress after another for progressive legislation.

A good part of the hostility to President Truman is like the hostility to Secretary Acheson; it means merely that the opposition wants an issue and a victim. That there are many things amiss with the Truman administration no one in his senses will

deny. But it seems clear that the verdict is so far favorable, and that much of the criticism that fills the air is directed not to Truman's failings but to his successes.

A Formula for Peace

EXTENSION OF REMARKS

OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 16, 1951

Mr. KERSTEN of Wisconsin. Mr. Speaker, I wish to set forth herein a very excellent analysis of basic issues of our times as written by Thomas M. Blake, of Chicago, Ill., in his *Formula for Peace*, the text of which follows:

FORMULA FOR PEACE

(By Thomas M. Blake)

We Americans are troubled by the absence of a firm, wise and resolute American policy in the world problem which we face. It is imperative, for the morale of our youth, that we do not drift into world conflict without our objectives having been clearly defined. People the world over long for peace. The destruction wrought by two world wars has been so wanton and so ruthless that we must find a way to maintain peace in the world if civilization is to survive. Peace must be achieved not only from a military sense, but peace of mind, peace of soul, must be attainable to all.

Like other people throughout the world, I have asked myself why we have not secured peace. Our country has been engaged in two destructive world wars, the objects of which were to end aggression for all time. Great sacrifices were made to win these wars. In the prosecution of these wars thousands of noncombatants were killed or injured. The lives of our youth and the resources of our country were thrown into these conflicts, in the hope that victory would bring peace and freedom to all the world. But there is no peace and dangers more grave than ever now beset us.

We participated in World War I to "make the world safe for democracy." Our armies contributed to the victory, but Democracy was not "made safe." During World War II we campaigned for the "four freedoms"—freedom of speech and expression, freedom to worship God in our own way; freedom from want, and freedom from fear. Unfortunately, we failed to make secure the freedoms for which we fought, and what we thought we had won on the battlefield we had lost at the conference table, even before the victory in war had been achieved.

In our hour of victory the Communists, with whom we had made common cause, scuttled the plan for the four freedoms and proceeded to impose their will upon eastern Europe. Under the guise of encouraging the establishment of governments in the satellite countries that were "friendly" to Soviet Russia, the Communists actually installed governments that were subservient to their will. Too late, we recognized the true intention of our Soviet allies. Then it was that we began to rally the rest of the free world to the defense of freedom.

Not satisfied with subjugating the people of Eastern Europe, the Communists now seek to overrun the world. Communist indoctrinated disciples have seized power in China and are looking with lustful eyes at the rest of Asia. Soviet might truly has rung down "a curtain of steel" around the countries dominated by the Kremlin, and has engaged

in a war of "nerves," or a cold war, with the rest of the world.

The real objective of the cold war is the conquest of human minds. Communism is a godless philosophy, the disciples of which seek to enslave the mind of man not by military might but by a campaign of falsehood. An entirely new concept of warfare is being waged against us in which armed conflict is only a part and may indeed be only a small part. In our preparation to meet the onslaught we must prepare our defenses to overwhelm the military challenge to peace, but even more urgent is the need to expose the false philosophy of communism. Contemplation of the catastrophic destruction that can be inflicted by new and more deadly weapons, such as the atom bomb, causes grave concern among our people, but the insidious campaign of communism to conquer the minds of people is far more serious. The danger is that communism deludes people into thinking that its objectives are to further the brotherhood of man, when in reality the means used to achieve their objective are destructive of all the moral and spiritual rights which the brotherhood of man would imply. The basic clash between communism and Christianity is that communism interferes with the exercise of free will by destroying the individuality of man.

How, then, can we combat the false philosophy of communism? Should we continue to counter each communistic move with an opposing force on our part? Why should we permit the godless philosophy of communism to force us into a negative position in defense of our ideals? Why should we permit a campaign of lies to overwhelm the truth?

The time is now at hand for us to proclaim to the world our faith in God, ourselves, and our ideals. We are a peace-loving nation. Our way of life thrives only during peace. The greatest freedom, the greatest dignity of man, and the highest standard of living ever known in history, are achieved under our way of life. We believe that our way of life is superior. How, then, can the disciples of communism convert people from our way of life? Why? Because we have not proclaimed to the world that we believe in the basic principles upon which our country was founded, that man is endowed by his Creator with certain unalienable rights among which are life, liberty, and the pursuit of happiness, that no power on earth can intervene between man and his God-given rights.

Our people desire peaceful solutions to the world's ills. American ingenuity can surely devise a way to secure peace. We, who have amazed the world with our industrial progress, can surely bring forth the answer to establishing peace. We must mobilize, in waging peace, as effectively as we have marshaled our forces for war. We engage in war to secure peace. What, therefore, is more logical than that we should plan for the peace for which we are prepared to fight? Can we, by constructing the provisions of the peace we desire, bring it about without plunging the world into a third world war? Certainly it is worth a trial.

To guide the world to peace and freedom we need at once to establish a plan that leads to its achievement. We must find a way to provide qualified leadership for ourselves and the people of the free world, so that we can give them the inspiration and the will to support our plan. We must prosecute our campaign for peace and freedom throughout the world, on both sides of the iron curtain. Our plan must be a campaign of truth; a campaign to bring hope to all people; a campaign to again establish the dignity of man, and his relationship with his Creator.

There are three basic fundamental steps that should be taken in order to overwhelm

the forces of communism. They are as follows:

I. Provide qualified leadership for the world.

II Formulate an affirmative, ideological answer to communism.

III Work out a constructive plan for an enduring and just peace.

I To provide qualified leadership we should—

1. Select men of high ethical and moral standards as candidates for public office. Qualified men should be urged to assume governmental responsibilities. Political parties who do not seek out proper candidates should not get the support of the American people. Men who serve their Government should receive adequate compensation.

2 Our Government, in formulating policies, should adhere to the intent as well as the letter of the Constitution.

3 We should establish a standing committee of outstanding Members of the Senate to act as an administrative committee, to advise the President on vital issues (as, for example, the opposing aggression in Korea in the first place, and as to the wisdom of removing General MacArthur from all of his command). While the President has various committees which advise him on national policy with respect to foreign relations, the budget, the Armed Forces, and other important functions, the decisions as to administering those policies rests solely with the President. The need for wisdom in directing policy and administering the office of President is so great that sole discretion should not repose in the mind of one man. Members of the President's Cabinet are looked upon as advisers by the President, but they are appointed by the President and can be removed by him. The Senate represents the people.

(a) The President should consult with this committee before taking any action of a major nature that may affect the well-being of our citizens on the safety of our country, and then act in accordance with that advice.

(b) This committee should see to it that the citizens of the country are fully advised, insofar as it is possible to do so, regarding the situation we face in the Far East, and in Europe, and any other serious foreign-policy problems. Foreign policy should not be the subject of partisan political intrigue.

4. Appointment to the State Department an outstanding and capable American who has a zeal for our way of life and a sincerity of purpose beyond question, whom all the world can respect.

(a) Follow up the appointment of a new Secretary of State with a thorough reorganization of the personnel in the State Department to get the best results. Only men and women we can all respect should serve our country at such a critical time.

(b) Representatives abroad should be Americans of high integrity and truly representative of our people.

5 Continue to build up our defense as needed, to meet the world emergency.

(a) Cooperate with other nations who are willing to contribute their just share to the common defense effort.

(b) Draft outstanding American industrialists to manage the national defense effort and advise on world defense problems, and then have the courage to give them the support needed to carry out their program.

(c) Clearly define our position in opposing aggression so that our friends, as well as our possible enemies, may know that further acts of aggression will not be tolerated; that should such acts of aggression occur we may attack the source of aggression rather than the area where such aggression occurs; and if necessary attack with all the force at our command.

II An affirmative ideological answer to communism must be formulated. Express-

sion must be given to the tenets of the way of life to which we aspire; our answer to be based on the precept that "God, to be sure, framed man for an immortal destiny, the created image of His own endless being" (Book of Wisdom, ch II).

1. Our answer must be built around the basic truth that man was intended by his Creator to have the exercise of his free will and that no governmental dictum can interfere with the right of man to the dignity to which he was raised by his Creator.

2. The lines of conflict are drawn. There can be no compromise with communism. We must overwhelm it or we shall be defeated. There can be no lasting peace until communism is destroyed. We cannot destroy it by military might. The only way to victory is through a campaign to restore to mankind the dignity intended for him by his Creator.

3 We can have no Communist allies. Titism may seek to placate us to gain temporary help from us, but the ultimate aim of communism is to destroy us, and that purpose is being pursued by all segments of communism without deviation.

4 We must insure our own economic stability by pursuing a wise fiscal policy, to avoid inflation. The following steps should be taken:

(a) Adopt a fair and equitable tax without political complexion that will assure our operation on a balanced budget, on a pay-as-we-go basis.

(b) Reduce nonessential governmental expense to the minimum consistent with the performance of the necessary functions of government.

(c) Refrain from any further devaluation of the dollar.

(d) Facilitate production necessary to provide as high a standard of living as possible consistent with the needs for national defense.

(e) Provide an adequate national defense.

5. We must enlist the aid of eminent men and women from religion, education, science, industry, philosophy, sales, advertising, and other fields of thought, to work in groups to find the most effective means of expressing the answer to the lie of communism. Assistance of men and women who have escaped from behind the iron curtain should be used, to learn more thoroughly the intimate problems of the people within the sphere of Soviet might, including Russia. Time is an all-important factor in formulating our program, so continued diligent application to the task is urgently required. When we have found the way to give positive expression to the meaning of freedom and the dignity of man, we can launch a crusade to proclaim to the world the purpose of our way of life. We can seize the initiative from the Communist aggressors and maintain so effective and forceful a program that communism will fail utterly in its attempt to enslave the mind of many. To carry out this campaign we will need the best minds in sales and advertising to sell to all people, all over the world, the virtues of freedom.

(a) Secure cooperation of the governments of all free Nations in providing facilities to give voice to the campaign of truth.

(b) Relentlessly direct our intelligent effort toward converting people from the Communist philosophy of government wherever it may exist, for Communism knows no boundaries.

(c) Encourage peoples all over the world to start crusades for a just peace. Urge them to demand of their government that it cooperate.

(d) Proclaim our friendship for the people behind the iron curtain, including the Russian people, as distinguished from their communistic governments.

III. We must work out a constructive plan for an enduring and just peace. Peace is not insured by pious platitudes and high-

sounding phrases. To secure peace we must build from the people up. We must truly learn the causes that lead to war and eliminate them. No organization can promote peace unless every government of such a world organization truly represents the interests of the people that it governs. No firm peace can be established unless we recognize the relationship between man and his Creator.

1. We, in America, should take the initiative by appointing a peace planning board to work out a proposed formula for a just peace.

(What is more logical than establishing the objectives of the peace for which we are willing to wage war?)

2. Representatives, from all governments who are willing to participate should be invited to a council of peace. Representatives to this council of peace should include religious leaders and outstanding industrialists, economists, scientists and engineers, equipped to give the economic answers to constructing peace.

3. In establishing a formula for peace, we must give people the hope of getting the maximum out of their daily living, in the environment and standard of life that it is possible for them to achieve. No purpose is served in holding up the American standard of living as a basis for comparison when it is not possible for it to be attained. It is of no interest to the man in Warsaw, for instance, to know that the majority of workingmen in America drive their own automobiles, if it is not possible for him to do the same. We Americans must learn to wear our blessings modestly.

(a) No attempt should be made to export our political system. In our attempts to aid other people in establishing a political system we must be realistic, taking into consideration other peoples necessities and limitations. We must recognize that the cultural and political philosophy of a country is the outgrowth of the customs and nature of its people.

4. Grant all assistance we can afford to other nations in eliminating the economic distress which leads to war. But we must recognize that peace cannot be purchased by handouts. The greatest help we can give the world is in technical assistance in developing the natural resources of the world.

(a) By placing at their disposal the best techniques in developing the fertility of their land.

(b) By assisting them in improving the production methods required to make use of their natural resources, to give their people a better standard of living.

5. Demonstrate that a just peace will free scientific research from the need of finding new and unique methods of destruction, so that such efforts may be devoted to the betterment of standards of living and of health. With the help of God we may yet demonstrate that man can be made worthy of the power with which he has been blessed. Scientific research and the eminent scientists who have done so much good are deserving of the dignity of devoting their efforts to the noble purpose for which their Creator endowed their genius.

6. Bring a new and practical interpretation to the principles of Christianity. Our industrial progress; our scientific research; our highly developed mechanical ability; our ingenuity, can assist in solving the economic ills of the world; or the output of our industrial plants can be used to inflict catastrophic destruction on the people of the world, including our own. If, by patience, intelligence, and effort, we can lead the world to peace without war, great good will be done to humanity. Between these two alternatives we must ultimately choose, with the other nations of the world, the use to which we will put the scientific knowledge with which we have been blessed—for the betterment of the lot of man, or for his destruction.

We can use our God-given knowledge to uplift mankind, or we can continue man as man's worst enemy.

It is true that life as a man knows it is a period of trial or preparation for eternity and that there have been "wars and rumors of wars" throughout all history, and man's lot is to "earn his bread by the sweat of his brow." But it is also true that "To whom God has given much, much will be expected in return" and that man and nations will be judged by what they do with the blessings which they receive from their Creator. To accept war as inevitable, makes it inevitable.

We Americans have been blessed by our Creator with many gifts, and we have developed our talents in an atmosphere that has been conducive to our growth and development. The time has come when we must prove ourselves worthy of that which has been given to us. The banner of world leadership has been cast to us—the eyes of the world are upon us. We have the right way of life before us. The truth is on our side. Nothing more is needed from us but the will and the wisdom, and with the help of God we may lead mankind to freedom, peace, and a better way of life.

Forging Ahead in Soil and Water Conservation—Part I

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by H. H. Bennett, Chief, United States Soil Conservation Service, at premier showing of motion picture, *Neighbors of the Land*, the Oliver Corp., Vandalia, Ill., March 12, 1951:

FORGING AHEAD IN SOIL AND WATER CONSERVATION

I consider myself fortunate to be here this evening for the premier showing of this outstanding soil conservation motion picture, *Neighbors of the Land*. That private industry is doing this to help along our great soil and water conservation program is highly significant, I think. It means to me that people—business people and others—are coming to understand that here is a common problem that must be looked after before it is too late. I mean the problem of taking care of our productive land.

Twenty years ago, the few of us who for decades had been trying to bring attention to the alarming problem of soil erosion counted ourselves well rewarded for our efforts if we managed to get a few paragraphs on the subject included in a general bulletin once in a while. That would be without even a photograph to illustrate the text. We certainly could not foresee then that people would become so aroused over conservation within the next two decades that proverbially hard-headed businessmen would become soil conservation movie producers.

I congratulate you on *Neighbors of the Land*. It now has become a valuable addition to the growing body of pictures, books, and other educational vehicles by means of which the compelling conservation message is being carried to the farthest corners of our own land and to people of other countries around the world. It is at once an inspiration to the soil conservationists, a well deserved compliment to conservation farmers,

and a timely reminder to city and farm people alike that we all must work together as neighbors of the land in order to complete this big conservation job we have set out to do.

EVERYBODY HAS A STAKE IN SOIL CONSERVATION

It would be most convenient for the rest of us if we could pass all the responsibility for soil and water conservation back to the farmer and let the matter rest there; but our economy isn't built that way. The land is still the source of a very large share of our original wealth. Manufacturers, bunkers, merchants, railroad and other transportation interests, men and women in the professions, and all the rest of us are directly affected by what happens to the base of our land-wealth—our productive land. That is true whether we live in Chicago, Vandalia, St. Louis, or Atlanta. So it is that every interest in the country has a stake in getting the quickest possible solution to this problem of safeguarding our remaining productive land—which is the source of all but a small fraction of our food, as well as of all our wood products, leather, wool, vegetable fibers and oils, and many other things.

In spite of the remarkable progress we have made in soil conservation the past 17 years, there still are many people who do not know about or understand these facts. There are thousands of people—including farmers as well as businessmen, public officials, and others—who have yet to learn, for example, about the thoroughgoing, permanently effective soil- and water-conservation work being done and remaining to be done in farmer-organized and farmer-managed soil-conservation districts. These are the people—put the figure at 1,000,000 or some other figure—who need to see *Neighbors of the Land*.

That is about the next best thing they can do, short of actually visiting Director Rolle Eakin's farm and seeing at first-hand how acre-by-acre soil-conservation treatment is planned and put on the land of his farm and that of his Fayette County soil conservation district neighbors like Cyril Daniel, Carrol Bone, Walter Groves, and John Daniel. Here in this farm neighbor group—as throughout your district, the State of Illinois, and the Nation—is a living demonstration of the practical application and profitable results of research, education, land inventories, and land treatment and use according to need and capability.

DEMOCRACY IN SOIL CONSERVATION DISTRICTS—NEIGHBOR GROUPS

It is also a working example of our democracy in action. I think we all must agree that this is something that is fundamentally important at any time, and especially so in these days of international tension and domestic mobilization of our human and economic resources. This phenomenon of group action in soil-conservation districts is something I like to talk about, and I am happy that it has been emphasized the way it has in *Neighbors of the Land*. In fact, I don't know of another picture which has played up this important point this way.

Natural groups of farmers within districts all over the country, bound together by the ties of neighborliness and common interests, are contributing encouragingly toward speeding up conservation work. This they do, as we have seen, by planning together and working together, lending one another machinery and seed, and cooperating in conservation work in many other ways. The Soil Conservation Service is now working with some 20,000 of these natural groups.

In a great many instances these groups, which are not formalized, are coming together in planning and application meetings. As groups of people who have come together quietly through a natural process, they are helping the district directors and their own neighbors in many ways. It long has been known that people like to work together,

whether they are in rural areas or in cities. Many people work in groups far more effectively than as individuals. There is a certain stimulus to morale in the act of working with friends and neighbors for a common beneficial purpose. It leads to better feeling and cooperation here in America, and in other countries I have visited.

UNITED STATES SETS WORLD PATTERN IN CONSERVATION

In order to appreciate what this kind of democratic leadership and working together means in the Nation's basic agricultural economy—really means in terms of what we mobilize and fight for when pressed to it by others—you need only to study the contrasting situation in so many other countries. There, what the government says is law, with little or no opportunity for individual freedom of action, assurance of stability, or hope of security. I have observed these things in different parts of the world myself, and, of course, we read about them every day. I am convinced that the district method would be the best approach that farmers of the world everywhere could take for getting to the point where they have more voice in the affairs of their government and less discontent about directions and overlordships. It is encouraging to note that bona fide soil-conservation districts are in operation as going programs in several other countries now—as the philosophy of conservation spreads faster, world-wide.

The district organization, as it has stood the test of 13 years of peacetime and wartime experience under just about all possible economic, weather, and other conditions, definitely has proved itself to be superior to anything else we know about in coping with our basic land problems in a democratic fashion. The confidence we have in the ability of the Nation to safeguard our remaining land resource is based, to a large degree, on continuing active cooperation with the soil-conservation districts. This, plus the positive support of those agencies and groups—governmental and private, local, State, and national—which are in a position to help, will expedite the conservation program.

We now have the knowledge of how to do the job, the conservation tools have been perfected and tested, and, what is more important, we have the organization and public support for doing the job. We have no valid excuse for failing to go ahead and get the job done.

DISTRICT ORGANIZATION IS WIDESPREAD

As of January 1, this year, more than four-fifths of all our farms and three-fourths of all the land in farms in the United States were included within soil-conservation district boundaries. Every month farmers over the country are voting new districts into being under their State enabling laws. It seems not unreasonable to predict it will not be long until all the farmland of the Nation will be in districts. These districts, which are still being formed at an average rate of 8 to 10 a month, now number nearly 2,350 and cover 1,250,000,000 acres in the 48 States, Alaska, Hawaii, Puerto Rico, and the Virgin Islands.

Illinois landholders can be proud of this State's high standing in the soil-conservation districts column, with approximately 95 percent of your farms and land in farms in districts. Curiously enough, the number of Illinois districts also totaled 95, as of February 1, this year, in 98 of the State's 102 counties.

District organization, of course, is not enough by itself. It is the soil and water conservation work that actually gets done on the land that counts, which I shall talk more about in a moment. But I want to emphasize the districts, through which the Soil Conservation Service has made available to farmers virtually all of its technical and

certain other assistance; because they unmistakably point the way in which we are forging ahead with soil and water conservation in the United States. When we pause to consider that the great majority of owners of 82 percent of all our farm lands already have, of their own initiative, gone to the polls and voted to establish their soil conservation districts under State enabling laws, then I think it is pretty obvious the responsible landholders of the Nation are never going to let us go back to a wasteful system of land neglect.

I believe I can say that our national policy and public thinking, with few exceptions, are agreed on the utter necessity of conserving our interlocking resources of land, water, forest, grass, and wildlife. The occasion of our being here this evening is one good example of this trend in our thinking. We have a new concept of the importance of land and water and, also, of the need for keeping the land permanently productive and using our water to the greatest possible advantage. In short, we have entered on a new era in the United States—the soil conservation era.

ACCELERATED PROGRESS MADE IN SOIL CONSERVATION

Figures on the progress we have made in terms of actual accomplishments in conservation surveying, planning, and treatment of the land bear me out in that conclusion: Approximately 36,000,000 acres on which detailed conservation surveys had been made in districts; 941,000 conservation farm plans worked out by district farmers and Soil Conservation Service technicians out on the land together, covering 26,000,000 acres, and 131,000,000 acres treated with conservation measures called for in the plans.

All my figures are from the records of the Soil Conservation Service. They do not include PMA figures, or those from other Federal, State, or private agencies which have made contributions.

In considering the rate of progress on so prodigious a job as conserving the productive lands of the United States while using them, a major point to be considered is whether progress is speeding up from year to year. This has much to do with an appropriate appraisal of the rate at which any long-time job can be completed—what is ahead in soil conservation. Personally, I am more than happy over the great progress that has been made. It gave me great satisfaction, for instance, to be able to report for the fiscal year ending June 30, 1950, the sixteenth year of accelerated progress—the last 12 of them in work in the districts—with the exception of the one year when the Service took a severe cut in funds.

In 1935, before there were any soil conservation districts, we were able to report the farm conservation job completed on less than a million acres. Seven years later, in 1942, 5 years after the first district was established, basic conservation measures were applied in that 1 year to 5,338,000 acres. Then, in the fiscal year of 1950, the same kind of treatment was applied to 26,071,342 acres in that 1 year. This was an increase of 388 percent, nearly five times as much work done, with operating facilities increased during the 8-year period by only 54 percent.

THE CONSERVATION JOB AHEAD

In addition to the conservation measures applied to the land, much farm planning work was done, and enough soil conservation surveys were carried out for use in the preparation of a healthy backlog of necessary conservation farm plans, in most of the districts. Farmers' applications to their districts for conservation technical assistance continue to outrun available facilities, with a backlog of 185,000 applications on hand for the country as a whole as of last January 1, and they no doubt will continue to do so for some time to come. Meanwhile, how-

ever, we estimate that, based on experience, we could, with adequate facilities, complete the job of applying the basic conservation measures to the land by about 1970, or around 20 years from now.

As to finishing the job, actually there is no end to it; because, when the basic conservation measures have been applied to the land, there still remains the continuing task of maintenance, along with the adoption and putting to use of constantly improved methods developed through continuing research. This is true of all the works of man, if not maintained, they eventually disappear through the depredations of neglect. Our figures up to January 1, 1951, show that we have completed approximately one-fifth of the total job. In addition, there has been a considerable spread of practices to thousands of farms both inside and outside of soil conservation districts for which we have no records.

If we can raise the year-by-year rate of application of effective conservation measures a little more, and I believe this can be done with adequate facilities, it will not be long until we can begin to see the goal which for so long has seemed so far off. But the job ahead is still a big one, and one which is going to test our mettle. One thing we need to guard against is any temptation to look back on our accomplishments with a degree of satisfaction that might lure us into the error of complacency.

We are still losing some 500,000 acres of productive land each year in the United States through continuing erosion; whereas, we have left all together only about 460,000,000 acres of good, first-class land, counting all the good land that is in cultivation now and all that can be brought into cultivation by presently feasible means. Even right here in Illinois, which is uncommonly well off from the standpoint of its area of arable land, erosion has been severe on a million acres of farmland, and serious erosion has occurred on around 35 percent of the State's farmland. That is, more than 14,000,000 acres of Illinois land, worth anywhere from \$125 an acre up, has been either seriously or severely damaged. This would be a total land damage of around \$2,000,000,000, not counting the cost of stream and reservoir silting, damage to roads and railways, increased floods along small streams particularly and all streams in general. I am sure you businessmen here tonight would not tolerate a drain like that for any time at all on your plants, stores, machinery, buildings, railways, and so forth.

IMPORTANCE OF SOIL CONSERVATION IN DEFENSE

Another fact we have to face is that, for the third time within the brief space of 33 years, we find ourselves in a state of emergency and national mobilization for defense of our country and of democracies elsewhere. In order to maintain our national strength, we must safeguard and maintain the very source of our individual and national strength—our productive land. What some people still don't seem to realize is the fact that men with guns and bullets can't fight without food, and that there can be pitifully little food from poor land.

No one knows how long the present emergency may last—1 year or 25 years. But the longer it does last, with the continuing need for maximum production of food, fiber, oil crops, timber, the more indispensable becomes our productive land from which all these necessities are derived. And the more important becomes the conservation and efficient use of this land and of the water which makes it produce. The corollary is rather apparent, I think:

SPEEDING AND INTENSIFYING CONSERVATION WORK

Last year, already, we had fewer technicians available, county-wide, to give service to the steadily increasing number of soil

conservation farmers. As a result, we have had to tighten up all along the line, and increase the efficiency of operations, individual by individual and district by district. We don't know what the situation will be the next year precisely, but there is every logical reason to expect the manpower situation to get tighter rather than otherwise.

Forging Ahead in Soil Conservation— Part II

EXTENSION OF REMARKS OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. WICKERSHAM Mr. Speaker, under leave granted to extend my remarks in the Record, I include the following address by H. H. Bennett, Chief, United States Soil Conservation Service, at premier showing of motion picture, *Neighbors of the Land*, the Oliver Corp., Vandalia, Ill., March 12, 1951:

The Soil Conservation Service has every possible man out working directly with the farmers, close to the job (approximately 88 percent of its employees out in work units and other field offices). Only about 1½ percent work in the Washington office; and of the other roughly 11 percent in State and regional offices, a substantial number are technical, cartographic, and other personnel directly engaged in or concerned with field activity along lines of quality work, maintenance, and improvement.

We will continue to use every dollar of our appropriations to the maximum extent possible in providing technical help to farmers as in the past. The Service likewise stands ready to give full cooperation and every encouragement to whatever program or agency is contributing to our common conservation objective, financially, educationally, or otherwise. In fact, I have been spending considerable time the last 2 weeks working with the agricultural conservation program people on ways for making our facilities together bring about more conservation on the land as speedily as is possible consistent with getting sound, permanently effective conservation.

PUBLIC TEAMWORK IS ESSENTIAL

But getting the total soil and water conservation job done in the time in which it needs to be done requires considerably more than even the best efforts of one or a group of public agencies working with the people out on the land. It takes the teamwork of anybody and everybody who has anything to contribute to advancement of this major national undertaking—teamwork of the kind which went into the production of *Neighbors of the Land*, for example. That means just about everybody—from bankers to school-teachers, from railroads to newspapers, from manufacturers to retailers. The farm-machinery industry, a member of which is our host this evening, provides a ready illustration of what I am talking about, although I could draw examples from numerous other fields of business and professional endeavor.

The national farm equipment manufacturing and retailing people have launched an active program of direct cooperation with soil-conservation districts, looking to mutual benefits of improved farm machinery markets on the one hand and better equipment for doing the conservation job on the other. Good land and good machinery go together. Eroded, gullied land can't produce the in-

come to pay for efficient, up-to-date implements; neither can worn-out machinery, held together with baling wire, permit of efficient and profitable farm production.

FARM-MACHINERY INDUSTRY HELPING SOIL CONSERVATION

Farm-machinery makers and local dealers alike have to have customers in order to stay in business—good customers who come back year after year with money in their pockets. That means that the future of their business depends on the permanent productiveness of every farm and every possible acre of land in the sales territory. So naturally it would be extremely short-sighted and poor business for the machinery people to encourage their customers to squeeze the last ounce of fertility out of their farms and soon not have anything left to buy needed implements with.

This interest in fitting good machinery to good land is by no means one-sided, however. The farmers, in turn, have to have equipment adapted to their own needs in order to operate most efficiently and economically. This includes machinery suitable for conservation tillage, contouring, and other individual operations, as well as heavy and other special equipment for earth-moving jobs like building farm ponds and district group-drainage projects, and so on. They naturally look to the farm-implement people to come up with the machines or equipment modifications needed. There are also machinery credit facilities and other needs, including those of the growing number of private contractors doing soil- and water-conservation work.

When we stop and think about these and other sound factors which dictate a natural cooperative relationship between conservation farmers and the machinery people, this premier showing of *Neighbors of the Land* becomes a most natural and understandable event. That is, in case there should be anybody here who had any question about the matter. And what the farm-machinery people thus can do—and are doing—through such educational means, dealer consultation and cooperation with the farmers, physical improvements in equipment, and otherwise is one more substantial means to getting the farm-conservation job done.

CONSERVATION OVERREACHES FARM BOUNDARIES— WATERSHED APPROACH

The man on the land is, after all, the one who has to do the actual conservation job. Nobody else can do the whole job for him, even if he wanted them to do it, which I know from long observation and experience he certainly does not want. It not only is an obligation, but I sincerely feel, a privilege for any of us who can in any way do so to contribute our respective talents to this common conservation goal. This objective does not stop at farm boundaries. More and more farmers, and urban interests as well, are coming to realize that they need special technical help and other support in planning and applying adequate soil- and water-conservation programs on farmlands and watersheds.

Land treatment—watershed treatment—is basic and must be done first for conserving our productive land and for conserving our life-giving water supplies, reducing flood damage, and reducing costly siltation of our reservoirs, harbors, etc. The opportunities and promise are great for effective accomplishment in applying conservation techniques and information to individual parcels of land and to whole watersheds alike. This, as we know, is in both private and public interest.

A PROGRAM OF POSITIVE ACTION

Whether it is on a major watershed or in a comparatively restricted farming community, to complete the soil and water conservation job in time calls for a program of positive action, in which all groups have a

natural interest. This program includes, among other points:

(1) Completion of the national land capability inventory at the earliest date facilities will permit; (2) completion of the organization of the Nation's agricultural lands into soil-conservation districts, and strengthening district responsibility and work—with a scientifically developed soil-conservation district plan applied by a conservation farmer to every farm in the country at minimum public cost, (3) active participation of all interested rural and urban groups—business, professional, and patriotic—in achieving Nation-wide conservation; and (4) making a real conservationist out of every farmer in the country.

SOME REWARDS OF SOIL AND WATER CONSERVATION

The rewards for such conservation effort are most substantial. We can't afford to let them slip through our fingers. Some of these rewards are:

1 To landowners and operators—increased income, better living, greater security for the future.

2 To the community—better business, improved schools, churches, roads, and other community essentials; and people working more closely together as a result of a thriving agriculture.

3 To the public in general—protection of the land on which we depend for our food and other essentials, with reduction in floods and siltation.

4 To Government (local, State, and Federal)—increased revenues resulting from increased earnings and added wealth from land stabilized and improved through conservation farming.

5 To the Nation—assurance of continued national welfare and security.

It clearly behooves all of us to be neighbors of the land.

COMPLETING THE JOB OF SOIL CONSERVATION

In 1942, soil conservation was applied to 5,000,000 acres of land. In 1949, the same kind of job was completed on 24,000,000 acres, and in 1950, on 26,000,000 acres. And it looks very much as if, even with somewhat reduced funds, we may get the job done this fiscal year on 28,000,000 acres of land. During the 8-year period between 1942 and 1950, the increase in work completed was 388 percent but the corresponding increase in facilities was only 54 percent.

Speculating on what could be done, the indications are that with an increase in technical services to soil conservation districts from around 320,000 man-years to 380,000 man-years, the job could be completed in 20 years. At the present rate of progress it would take 35 years to finish. If the job could be completed in the shorter period, there would be a saving of 10,000,000 acres of land, which at \$100 an acre would amount to a billion dollars. There would be a further saving of 50,000 man-years, which would amount to a saving of \$120,000,000 more, and a still further saving of \$4 per acre, at least, in increased yields resulting from soil conservation on 10,000,000 acres over a period of 15 years. This would amount to \$600,000,000 more, or a total saving of \$1,720,000,000, without counting the silt kept out of streams, reservoirs, ditches, and harbors and without including damage costs to roads and railroads or any reduction in flood flows, as a result of the conservation work carried out.

INCREASED PRODUCTION IMMEDIATELY

If the emergency continues, we are going to have to do our best to increase our yields this year over last year by, as I am informed, 3½ percent. This would be a terrific undertaking, but apparently we are going to have to exert our every possible effort to do it.

I pointed out at a meeting of soil conservationists at New York on March 7, this year,

that the work of the Soil Conservation Service would yield a very largely increased production by reason of the increased per-acre yields that invariably result from doing a good job of soil and water conservation on farms. I pointed out that in a single instance the drainage work resulting from the research carried out by the Soil Conservation Service, in cooperation with the Imperial Valley Drainage District in California, had resulted in returning to good production land that was practically producing nothing—because of poor drainage and resultant salty condition of the soil—to the extent of 70,000 acres. An area of between 7,000 and 8,000 acres of land is being thus returned to production every year.

Last year the Soil Conservation Service improved the drainage on wet farm lands to the extent of 1,161,000 acres and prepared for irrigation by leveling 315,000 acres. Moreover, 617,000 acres were prepared for improved water application, making a total of 2,093,000 acres of what could be called essentially new land, put into production through improvement for irrigation.

This present fiscal year the Nation needs a great deal more cotton than was produced last year—some 50 percent more. I have been informed. Our technicians are going to advise farmers to put in more cotton, but they are going to advise them to put it on land that can be protected from ruinous erosion.

SCS PERSONNEL LARGELY IN THE FIELD

And last but not least, I think it may be of interest to you to point out that our force is not sequestered in comfortable offices scattered about the country, but are out in the field, very largely carrying on soil and water conservation work right along the firing line.

In 1942, 21 5 percent of our personnel were in Washington, State, and regional offices. At present, only 11 8 percent of our personnel are in these offices, 88 2 percent of our force is in the field force.

SUPERVISORS' ANNUAL MEETING

In February I attended the meeting of the National Association of Soil Conservation Districts in Oklahoma City. There were approximately 1,500 supervisors present from all parts of the country, together with something like 500 wives, and a good many children. In addition, there were visiting farmers, soil conservation technicians, bankers, and businessmen.

In talking to these supervisors, I found that to a man they were ready and determined to do everything they possibly could to help the Nation out of the emergency it has been forced into by the Communists.

With that sort of spirit and determination behind our farmers, and with the spirit and determination I see here in the exhibiting of this wonderful picture, I can tell you I am not losing confidence in the strength and general welfare of this, the greatest nation on earth.

Life in 1951 Is Best Ever

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

* IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. RHODES. Mr. Speaker, under leave to extend my remarks, I include herewith a special report published in the June 15, 1951 issue of the United States News and World Report.

The United States News contends that the article gives the results of an ex-

tensive research on the economic situation in the United States.

It refutes many of the claims made by reactionary columnists, editors, and administration opponents in and out of Congress who constantly charge that the Nation is in dire economic peril.

If danger threatens it is the result of such irresponsible and unethical attacks devised to confuse and fool the American people.

This article, published in one of the Nation's most conservative and anti-administration magazines, gives answer to the critics who are desperately seeking to gain political advantage by deceit and confusion.

LIFE IN 1951 IS BEST EVER—STANDARDS GO ON RISING DESPITE REARMAMENT

(Living standards, for most Americans, are getting better all the time. It's a good life, despite war, taxes, inflation. People generally are abundantly fed, clothed, housed. They have all the comforts, and ample time to enjoy them. And there's still room for improvement. There's a market for almost everything. High living standards are going higher.)

In spite of high prices, high taxes, rearmament, war in Korea, most of the people of this country are living better than ever before. They are better fed, better housed, better clothed, enjoy more leisure, enjoy more comforts than at any other time in history. Only the men called to the armed services and those on fixed incomes are out of the stream of prosperity.

People a year from now are going to be better off in most ways than they are at this time. This will be true in spite of cuts in the output of automobiles, appliances, other things made of scarce materials. It will be true despite credit controls and a reduced level of home building. Even with cutbacks there will be 5,000,000 new passenger cars produced in 1951, at least 850,000 new homes built, and millions of television sets and appliances made.

Down through the years people in this country have enjoyed a steadily rising standard of living. Brief slow-downs and rare reversals in that rise have occurred during wars or depressions. But across the sweep of the country's life its people have gone steadily toward better standards of living.

Better living in the United States shows up in the phenomenal growth of actual goods and services bought by individuals. Amount of these things bought for each person in the United States has risen five and a half times since 1870—measured in physical amounts, not inflated dollars.

In 1870, the average individual had only the equivalent of 196 of today's dollars to spend on clothing, food, luxuries. From that year on, the rise in living standards was sharp and steady. Even the depression of the 1930's reversed the trend for only 4 years.

By 1940, consumers were spending the equivalent of \$963 apiece on the things they wanted, five times as much as they enjoyed in the way of new goods in the years just after the Civil War.

Even World War II and the record inflation that followed interrupted the over-all trend to better living in only 2 years, 1942 and 1948. When products made of metal disappeared from store shelves, people spent more on food, clothing, and other things. Altogether, the amount of goods and services bought went on up.

Now, 11 years later, people have been buying a third more per person than they bought back in 1940.

Inflation, higher prices on nearly everything, higher taxes, have reduced standards

of living for millions of individuals whose incomes have not kept up. And millions of families—hard-pushed to meet all the installments on the things they were buying—have complained how much worse off they were than in the good old days. Yet, through it all, living standards of the average family have gone up and up.

At the same time, a shift in buying from necessities to luxuries shows what is happening to the way people live.

The job of keeping alive, warm, fed, and clothed took just about all a man could earn back in 1870, before the industrial revolution hit its full stride in the United States. Specifically, the average consumer used \$64 out of every \$100 of his spending money for food, clothing, other so-called nondurable goods. Now these necessities take only \$53 of each \$100 spent on consumer goods and services. That leaves 47 more to spend on gadgets and equipment.

Result is that the average consumer today buys ten times as much in the way of household equipment and other durables as he did in 1870.

Since 1946 alone—in the biggest inflation in history—more than 18,500,000 new automobiles have been bought. In the same period, 15,000,000 families have purchased new vacuum cleaners, 20,000,000 have gotten new refrigerators, more than 4,000,000 have moved into new homes, and 17,000,000 have acquired new washing machines.

At the same time, people have enjoyed more and more services of all kinds—from permanent waves to medical attention. Altogether, the amount of these services used by each person has increased by a third since 1940.

Result of buying on this rising scale is best shown in terms of examples. The chart on page 36 gives some of the changes that have occurred in the last decade.

Electric refrigerators, for one example, were not regarded as standard pieces of household equipment back in 1940—fewer than half of all homes had them. Now 78 in every 100 homes have electric refrigerators and some of the remaining 22 homes have the gas-operated type.

Home ownership itself has become the standard since 1940. In that year, 44 of each 100 families lived in homes that they owned. Now more than half of all families—55 in 100—are homeowners.

Dwellings, at the same time, have become less crowded. The census of 1940 revealed that 9 out of 100 homes were overcrowded—with more than 3 persons to every 2 rooms. The 1950 census showed 6 homes in 100 overcrowded.

Eating, too, is better than it ever was before. With more food, and more nutritious food, at prices that are lower in relation to incomes, the typical United States family never had it so good at the dinner table.

To show what has happened over the years, an hour of labor in a factory today will buy the worker and his family nearly 7 quarts of milk delivered to the door. That hour would buy only 5 quarts in 1939 and 4 in 1929. The same hour's labor will buy more—in most cases far more—bread, bacon, eggs, oranges, potatoes, canned tomatoes, margarine and many other foods today.

What many individuals are finding, in fact, is that they already are too well fed, as a current rash of special diets is indicating. Heart troubles, artery disorders are catching up with more people, in many cases apparently because of diets too rich in fats. Millions of individuals are overweight.

Markets for the products of factories still are immense despite the loading up on all kinds of goods in recent years. Just keeping the country's 43,000,000 families on the

standard of living to which they have become accustomed—keeping their equipment repaired and replaced—is a big job.

In addition, there still are nearly 7,000,000 homes without inside running water.

Altogether, more than 11,000,000 homes still have no flush toilet. Only one farm home in four has one. And three out of five farms have no telephone yet.

The biggest home-building spree in history still leaves more than 2,500,000 homes overcrowded. For nonwhite families, a sixth of the city homes are overcrowded, and nearly a third of the farm homes are.

Even eating isn't what it could be for all families. In Charlotte, N. C., for example, a community committee has just counted 761 school children who are going hungry through the lunch hour every day.

What it all adds up to is a standard of living that has risen with astonishing persistence for generations—and one that still has room to rise.

Better living—10-year gain

In 100 homes, the number 10 years ago	Now

The Place of the Paper Industry in the United States Economy

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. MURRAY of Wisconsin. Mr. Speaker, under leave granted to extend my remarks, I include the following paper by Dr. Louis T. Stevenson, economist for the American Paper and Pulp Association, presented before the thirty-second annual convention of the American Pulp and Paper Mill Superintendents Association held in Portland, Oreg., June 24-28, 1951:

THE PLACE OF THE PAPER INDUSTRY IN THE UNITED STATES ECONOMY

It is but repeating a many times twice-told tale to say that the paper and board industry ranks as the sixth largest industry in the United States, when ranked by value of product. Ahead of it, according to the United States Bureau of the Census, comes motor vehicles, meat packing, steel works, petroleum refining, and cotton broad woven fabrics. This ranking was established by the Bureau of the Census in a tabulation which eliminated duplications such as would arise by including with paper and board the pulp industry and the converted paper products industries. Yes, the paper and board industry is officially and accurately ranked sixth, and yet few people outside of the industry realize its size, complexity, and importance to the United States economy because few people stop to think about paper at all. Paper is so much a part of the everyday life of an American that he simply takes it for granted. It is there in abundance when needed, and its cost is so small that it is but

an incidental expense for most individuals and for most businesses.

Just where does the paper industry, and in that term I shall include all paper and board, fit into the American economic picture? The answer is—everywhere. There is not a farm, factory, business, railroad, or other transportation system that can operate without using paper. Its use is essential to the operation of our governments, local, State, and national; to our banking system; to our systems of communication, to our systems of distribution; and above all, to our armed services which, during the last war, listed over 700,000 uses for paper. The use of paper had become so essential to the operation of our economy that in 1944 Donald Nelson, head of the War Production Board, stated that the paper and pulp industry was one of the most essential of all our industries.

THE FUNCTIONS OF PAPER IN THE UNITED STATES ECONOMY

The first use of paper by man was as a medium on which to transmit and record ideas or facts. Paper has thus been used by all peoples since its original development by the Chinese about the first century A. D. In the storied libraries of our country and other countries are kept the vast treasures of knowledge on which our entire civilization and educational system are built. All kinds of research depend upon facts recorded on paper, as do all the sciences: chemistry, physics, etc. It is not too much to say that our western civilization was born on paper records and is disseminated through the use of the printed word.

In the United States the vast printing and publishing industry carries out the major part of this function. Local governments also keep the legal records of property transfers on paper, all kinds of other governmental agencies keep records of laws, official orders, transactions, and in most instances these are published. It is estimated that over 10,000,000 tons of paper were required in the United States during 1950 to record and transmit ideas. This estimate, of course, includes the newspaper imported and used in this country.

In this brief presentation it is impossible to list comprehensively all the uses of paper to satisfy this function. One can hope to mention but a few which may stir the imagination to review the subject and bring to mind many other instances in individual experience.

THE PACKAGING AND PROTECTIVE FUNCTION

One of the fastest growing fields for the use of paper and board is that of packaging. The modern package must perform satisfactorily under severe conditions of handling, climate, and storage. Paperboard has grown tremendously in volume in recent years because the product has been adapted to meet more and more exacting requirements. The advent of the paper shipping sack, both single and multiwall, has greatly expanded the use of kraft paper in that field.

Special research into the application of sulfite wrappings, glassine, greaseproof, and vegetable parchment, has widened the use of these papers.

Over 13,500,000 tons of paper and board were used during 1950 in packaging United States products.

THE SANITARY FUNCTION

It has been proved conclusively that when paper or board comes off the paper machine it is a perfect sanitary product so far as cleanliness is concerned—there are no coliform bacteria present. Paper is, because of its low cost and disposability, "a natural" for many sanitary purposes. Paper napkins, facial tissues, milk bottles and bottle caps, ice cream containers, frozen food containers and wrappers are but examples of the many applications of paper as a sanitary product.

It is not easy to estimate the total tonnage of these papers, but approximately 1,500,000 tons were consumed in 1950. This is one of the most rapidly growing branches of the paper industry.

SOME ECONOMIC ASPECTS OF PAPERMAKING

Papermaking is a mass production industry, generally located in small communities, and using large volumes of process water. Its power requirements are great because the machinery is heavy and the grinding action demands power.

The net result of these characteristics is the economic stimulation of many small communities by the steady stream of payroll and investment money brought to these small towns and cities by the pulp and paper mills located in them.

Wood pulp mills are dependent for their raw materials upon forest resources. The mills also require huge long-term capital investments. As a consequence of these two factors the careful plant management must assure itself of adequate forest resources and consequently the pulp industry is and has been in the forefront of commercial forestry developments to assure permanent wood supplies. A pulp mill without reasonably priced wood "dies on the stem," as it were. The joint use of a forest for the production of saw logs, other wood products, and wood pulp is an almost ideally economical set up when the forest is handled so as to assure a continuous flow of wood. Waste is reduced and a greater over-all utilization of the wood results.

SOME FACTS AND FIGURES

The primary paper industry in the United States will be able to produce over \$6,000,000,000 worth of goods this year. Employment in the industry is running currently at 209,000 workers, exclusive of woods workers and salaried individuals. The present annual payroll will approximate \$765,000,000. All told, it is estimated that, including woods workers, about 500,000 workers of all kinds are employed in our primary pulp and paper-making industry.

Directly dependent upon the product of the paper industry are the printing and publishing industry, and the manufacturers of converted paper products. Between these two industry groups and the pulp and paper industry over a million people are employed, drawing about \$3,400,000,000 annual pay. Thus over 1,000,000 people are directly engaged in the manufacture, printing, and otherwise processing paper. In addition to this, an almost immeasurable army is engaged in the distribution and use of paper.

For example, a manager of a large department store last fall asked me when he had difficulty in getting an adequate supply of wrapping paper, "What would you do, Dr. Stevenson, if you couldn't get the material without which you could not operate?"

We may think of stores as relatively small users of paper. They think that paper is an absolutely necessary material without which they cannot operate. They can close out a line of merchandise and still do business, but they cannot operate without paper.

But if we are going to include all direct and indirect users of paper in our statement, we cannot avoid mentioning all the 153,000,000 individuals in the United States who come within that category. And the entire gross national product of over \$313,000,000,000 is affected. Certainly, without paper it would be sadly deflated.

THE PAPER INDUSTRY AS AN INVESTMENT

During the past 10 years the paper industry has come to be considered by the investing public as an industry in which satisfactory investments can be made. Like all other industries, the paper industry offers investment opportunities that may vary company by company, but taking the industry as a whole, its record will bear analysis for years back as well as during the post-war periods.

The paper industry earnings record, taken as an industry, will stand up with all industry earnings in depression as in prosperity, for in fact, the paper industry has operated more steadily in depression periods than most industries. In the low year of the great depression (1932), the paper industry was operating at 58 percent of capacity, while steel was almost flat on its back below 20 percent and banks dependent upon the automobile industry were in distress.

The paper industry is, of course, a service industry, and it therefore is dependent upon general business activity for its own activity. But it must be remembered that whatever business is done demands the use of paper as a necessity. Business cannot be done without paper.

SUMMARY

The paper industry, sixth largest industry in the country, is dependent primarily upon adequate supplies of wood and water. Its products permeate the whole economy which is, as presently constituted, dependent upon a constant flow of products from the paper industry.

Paper production is located largely in small towns and cities in 37 of the 48 States. Consequently the payrolls and investment money of these mills are widely distributed and stimulate the business activity of these communities.

A United America Will Never Be Defeated

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. DONOHUE. Mr. Speaker, I have been asked to include, in the RECORD, the address I delivered Saturday, October 6, 1951, at the installation of officers meeting of the John E. Harkins American Legion Post No. 42, in the Town Hall, at Holden, Mass.

The address follows:

One of the penalties of being a Congressman these hectic days is that it deprives one of the opportunity of meeting with his friends and neighbors at home as often as one would like.

I am therefore particularly happy to be able to come here tonight and take part in this meeting, not only as your Representative, but more especially as a fellow legionnaire.

I am glad to join in the expression of thanks to the post and auxiliary officers who have performed such fine work this past year, and also in your congratulations to the newly chosen officers who I know will earnestly devote themselves to the individual discharge of their responsibilities and the general progress of your post's objectives.

I deeply feel each and every one of us have justifiable reason to be proud of our membership in the American Legion. Our organization was conceived in a spirit of vibrant love of country which is our heritage, and a pledge to serve it faithfully and tirelessly in peace as in war.

I can personally testify as a member of the Committee on Veterans' Affairs for years, that the Legion has fought the good fight for the disabled, the widows, and orphans of deceased servicemen. It has led the way in national defense, rehabilitation, child welfare, and Americanism;

It has furnished vigorous and intelligent leadership in every phase of community service. It has won the confidence of the

American people who recognize our organization as purely American in purpose, ever ready to work for whatever is best for community, State, and Nation.

Ours is a mighty record of organizational achievement, giving full promise that it will be equal to the challenge that faces us today in stopping the expanding Communist scourge threatening to overrun us and the rest of the free world.

This Nation is embarked today on a program designed to preserve the principles of individual freedom and personal justice for ourselves and the civilized world. Opposed to this objective are the leaders of the Soviet Union, whose expressed purpose is to reduce us and all freedom-loving people to the inhuman status of state slaves.

To accomplish their un-Christian purposes, the Soviet Government is using methods of military might, of demoralizing propaganda, and of secret undermining of other governmental systems from within. They have been most successful in their pressures where governments were weak, where peoples were divided, and citizens bowed down with poverty, which is evidenced by the fact that since 1945 the Soviet Union has taken over 7,500,000 square miles of new territory and the control of more than 500,000,000 people. It is now trying to extend its empire across Asia.

Soviet expansion has wiped out three nations—Estonia, Latvia, and Lithuania. It has reduced to servitude six nations which were independent before 1939—Poland, Hungary, Rumania, Bulgaria, Albania, Czechoslovakia, and, in many respects, Yugoslavia. It is now obvious that the Soviet leaders have marked China for the same fate.

Is it not evident to you and every sound-thinking American that as each day passes this threat is getting nearer and nearer to our homes?

I am not naturally a pessimist, but I have spent many anxious hours wondering if the American people realize what is at stake in this world revolution in which we are not merely spectators, but leading participants. Do we fully realize that the world we have known, the world of liberty, of our kind of private enterprise, of economic security, is finally, after two world wars, almost marooned on our half of the Western Hemisphere? Communism has crowded in on us from every side.

Millions of Americans are trying to evade the realities by turning all their attention to the secondary question of how world communism ever reached this peak of power. They seem to entertain the idea that if they can only pin the whole blame on some person in government they can then sit back and relax. These unhappy manifestations of apparent American disunity have prompted the Soviet leaders to question the capacity to sacrifice among the American people, they do not question our physical resources.

There are too many evidences today, unfortunately, that self-seeking individuals, high pressure groups, and ambitious organizations are stubbornly pursuing their personal profit objectives in opposition to the national welfare. Jealousies, passions, prejudices, partisanship, and unrestrained emotions have been in undermining operation against our orderly advance of concentrated determination to keep ourselves and the free world from being ground to pieces under the Soviet steamroller.

Too much valuable time is being taken up in defiance of, and challenge to, the duly constituted authority of this Government. In the industrial and farm theaters we have too many unmindful leaders of management, labor and agriculture questioning and opposing legal regulations to accelerate desperately needed war production and mobilization.

In our private lives we have too many unwitting individuals nullifying any real program to control inflation.

Any continuing demonstrations of such supercharged emotional controversies surely must give great aid and comfort to the Kremlin leaders and enable them to harden the purpose and perseverance of their unwilling slave followers.

It is my hope and, indeed my personal belief, that the great majority of true Americans will daily become increasingly aware of this insidious Russian challenge to our American spirit; when the Russian authorities forget our history, it becomes our obligation to recall to them some of its pages.

The signers of the Declaration of Independence closed their monumental appeal to the judgment of mankind with this passage:

"And for the support of this declaration, with a firm reliance on the protection of Divine Providence, we mutually pledge to each other our lives, our fortunes, and our sacred honor." That was in 1776.

Here again, in 1951, we stand in the tradition of our forefathers. Now again we must pledge our lives, our fortunes, and our sacred honor—not for national independence only, but for the independence of all the free world, ourselves included. While once again American soldiers are dying on foreign fields in resistance of the diabolical enemy, you and I can do no less.

The basic problem of your Federal Government is then to convince the Russian leaders that they should accept peace and, if they should choose war, they will be defeated.

In support of that basic objective your Federal Government must reasonably help friendly nations, maintain a strong American military organization, and preserve our national financial stability. If each of us will accept the personal individual sacrifice that these objectives require, there is every reason to believe that the Russian leaders will agree to peace on earth because any other course will involve their own destruction. Let us then unite in resounding answer to the Russian challenge to our American spirit.

I know the members of the John E. Harkins Post, together with the American Legion posts in every community in the country will prove, once again to be the spearhead of the patriotic national spirit we need today more vitally than we ever needed it before in all our history. With such a spirit there is no power on earth that can or ever will defeat a united America.

Censorship: Synonym for Dictatorship

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. BENDER. Mr. Speaker, if the power over the purse is the power over liberty, the power over the press is the path to dictatorship. Censorship of news released from Washington in the executive departments exclusive of the Defense and State Departments has seldom been practiced in American history. Even in Defense and State, we have developed a marked antipathy to any efforts to cut off our supply of information, and the extension of these restrictions into executive organizations such as Mr. Truman has now authorized is wholly uncalled for. Certainly, data

getting into the hands of espionage agents of foreign governments may be dangerous to our security, but this information is not released to the public. It is stolen from precisely those departments which are always protected by the most rigid standards of secrecy.

What most of us find most objectionable in the President's order is the ease with which it can be used to cover up blunders and incompetence, and the absence of any provisions for removing secrecy provisions after the emergency has passed. We may now find our friends in other countries revealing information which we are not permitted to publish or broadcast.

When a man gets the use of a blue pencil, he is strongly tempted to use it. America has grown great through the dissemination of news and information. No government has ever succeeded in fooling the American people too long because we have an alert press. If we stifle this source, we may well stifle America with it.

Tribute to W. K. Kellogg

EXTENSION OF REMARKS OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, September 24, 1951

Mr SHAFER. Mr Speaker, with deep regret I announce the death of a distinguished American, my fellow townsman, W. K. Kellogg.

Pioneer of the ready-to-eat cereal industry, founder of the Kellogg Co., and the W. K. Kellogg Foundation, Mr. Kellogg died Saturday afternoon in Battle Creek, Mich., the city in which he was born 91 years ago last April 7 and the city to which he contributed so much in the course of his remarkable career as an industrialist and as an exponent and practitioner of the philosophy of helping others to help themselves.

Despite his great age and the fact that he had been totally blind during the latter years of his life, Mr. Kellogg had maintained a keen and active interest in the affairs of the Kellogg Co., and the Kellogg Foundation until his final illness.

Mr. Kellogg was perhaps the last survivor of a generation of great individualists of American industry.

In the middle 1890's, while associated with his brother, the late Dr. John Harvey Kellogg at the Battle Creek Sanitarium, Mr. Kellogg developed a wheat flake, the first ready-to-eat flaked cereal. Before the turn of the century he had also produced the first corn flakes, and in 1906 entered business for himself, founding the Battle Creek Toasted Corn Flake Co., which subsequently became the Kellogg Co.

Besides the parent company in Battle Creek, the Kellogg Co. now has plants in Omaha, Nebr., and in Canada, Australia, England, South Africa, and Mexico. The ready-to-eat cereal industry which Mr.

Kellogg pioneered has, in the past 50 years revolutionized eating habits and developed a vast new market for agriculture on an international scale.

Mr. Kellogg credited his business success to the stimulus of free competition and remained, throughout his life, an exponent of the philosophy of free and fair competition. He was one of the pioneers of modern advertising. Only recently I had occasion to mention to my friend, the Member from Ohio [Mr. Bow] that a part of Mr. Kellogg's original, limited capital was spent in 1906 for a then very sizable magazine and newspaper advertising budget, and that his first expenditure for newspaper advertising was with the Canton (Ohio) Repository, a daily newspaper still published in Mr. Bow's home city.

In 1930, at the depth of the depression, Mr. Kellogg introduced the 6-hour working day at the Kellogg Co. plant in Battle Creek, paying the same wage scale for a 6-hour day as had previously been paid for 8 hours. This schedule is still retained in certain phases of the plant's operations. His program for spreading employment won national recognition when President Herbert Hoover called Mr. Kellogg to Washington for a conference on this approach to the unemployment problem.

Always a man with a profound sense of social responsibility and stewardship with respect to the fortune which his industrial success had yielded, Mr. Kellogg made his home community the beneficiary of numerous gifts, including a civic auditorium, a youth recreational center, a regional airport, a bird sanctuary, and several school buildings including the Ann J. Kellogg school, named in honor of his mother and especially designed and equipped for handicapped as well as normal children. He also made numerous other gifts to schools and colleges throughout Michigan.

A little more than 20 years ago, Mr. Kellogg established the foundation which bears his name, to which he turned over the bulk of his fortune to be used to advance the health, happiness and well-being of mankind, especially children.

It is noteworthy that the inspiration for both the Ann J. Kellogg school and the Kellogg Foundation was largely drawn, by Mr. Kellogg, from the Children's Charter, drafted by the original White House Conference on Child Welfare, called by President Hoover.

Today the Kellogg Foundation continues to contribute, nationally and internationally, to the advancement of training and physical facilities in the fields of education, medicine, dentistry, hospital administration, public health and nursing. In the international field its activities have extended principally to Canada, Central and South America and the Philippines.

Upon American entry into World War II, Mr. Kellogg directed the foundation to gear its activities to full cooperation in the war effort with the result that it contributed particularly to accelerated training of urgently needed medical, dental and nursing personnel.

The W. K. Kellogg Arabian Horse Ranch at Pomona, Calif., which Mr. Kellogg established many years ago and later turned over to the University of California was sold, at his request, to the Army for the sum of \$1 to be used during the war as an Army remount station. Mr. Kellogg's estate at Gull Lake, near Battle Creek, was turned over to the Army on the same terms and became an annex to Percy Jones General Hospital used for convalescent purposes. Three Kellogg Foundation camps near Battle Creek were converted into boot-training camps for the United States Coast Guard, on the same basis.

Personally, Mr. Kellogg was an individual of retiring disposition who shunned the limelight and abhorred the term "philanthropist" as applied to himself.

I pay tribute to him as a splendid gentleman, a loyal friend and an esteemed fellow townsman. I pay tribute to him for his achievements in industry and for the high sense of responsibility and foresightedness which prompted his creation of the W. K. Kellogg Foundation.

Most of all, however, I pay tribute to W. K. Kellogg as a symbol of the individual courage, initiative, integrity and social conscience for which government and governmental activity can offer no substitute, qualities which are in the highest American tradition, and which must ever remain a vital force in American life if this Nation is to remain true to its great heritage.

Relation of Soil Erosion to Coastal Waters—Part I

EXTENSION OF REMARKS OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by H. H. Bennett, Chief, United States Soil Conservation Service, fourth semi-annual seminar, Texas Game, Fish, and Oyster Commission's Marine laboratory, Rockport, Tex., March 22, 1951:

RELATION OF SOIL EROSION TO COASTAL WATERS

I am glad to have this opportunity to take part in your seminar. You who are concerned with the marine sciences and we with the science of soil conservation have certain common interests. These interests are joined across the deltas of silt that are constantly creeping out into our coastal waters. As soil conservationists, we welcome the constructive exploration of the relationship between these sciences.

SOIL CONSERVATIONISTS INTERESTED IN SEDIMENTATION

At the outset, I should like to make clear my position in your deliberations: We in the Soil Conservation Service have no thought of undertaking any extended investigations in either the biological or hydrological aspects of the marine sciences.

We operate on the land, with the primary objective of safeguarding that resource against the impoverishing effects of accelerated soil erosion. We have no intention of posing as authorities in the marine sciences. I can say, however, that soil conservationists are getting acquainted with some of the interesting aspects of the relation of sedimentation to marine bays, estuaries, reservoirs, and aquatic life. But thus far our explorations have not extended much beyond very general observations. We are desirous of getting better acquainted with our investigations.

As I wrote Dr. J. L. Baughman, your chief marine biologist, about a year ago, we believe the influence of siltation on (marine) organisms may be of considerable importance, inasmuch as environmental conditions usually affect all living things in some degree. My special purpose today is to direct your attention specifically to conditions, problems, and remedial actions being taken through soil and water conservation in the watersheds out of which flows the water—along with the silt—that feeds your bays and estuaries.

The silting of estuaries is, of course, a natural condition that was in progress for undeterminable time before there was any cultivation of the land. But there's much evidence, both historical and geological, indicating that the preagricultural rate of sedimentation of bays and estuaries was very slow in comparison with rates following extensive clearing, burning, plowing, and grazing activities. Too many historians and engineers, I am afraid, have attributed the rapid sedimentation of harbors to uncontrollable forces of nature. They too often have failed to notice the rapid changes brought about through man's deforestation and agricultural operations. Certainly in many instances the rapid sedimentation of bays and estuaries is an abnormal condition that developed after, or along with, the clearing, overgrazing, and cultivation of land in the contributing watersheds.

SEDIMENTATION OF HARBORS

This is nothing new. Sedimentation of harbors is as old as history. Sites of a number of Biblical cities, which we are told were originally seaports, are far inland today. Continuous deposition of sediment from eroding uplands gradually extended the land area and pushed the tidewater from their wharves. Ur, of the Chaldees, is said to have been a thriving seaport at the head of the Persian Gulf about 3000 B. C. Today its ruins lie in a desert 150 miles from the present shores of the gulf. For centuries, the sediment brought down by the Tigris and Euphrates Rivers from the overgrazed highlands of Turkey, Syria, Iran, and Iraq has pushed the head of tidewater out into the Persian Gulf, and the shore line today is reported to be advancing at the rate of 1 mile in 30 years.¹

A number of ancient harbors that were frequented by the ships of Phoenicia, Carthage, Greece, and Rome are now many miles inland from navigable waters. Adria, Italy, was a busy seaport in the time of Caesar Augustus, but today it is 20 Italian miles inland. Sedimentation forced the Romans from the harbor at Antium and caused abandonment of the once magnificent harbor of Ostia, built in 43 A. D. at the mouth of the Tiber River.²

² Gottschalk, L. C. *Sedimentation in a Great Harbor*. Soil Conservation, July 1944.

³ Saville, Sir Leopold. *Presidential Address to the Institution of Civil Engineers*. The Engineer (London), vol. 170, No. 4427, pp. 316-317, November 1940.

In early postglacial time the Tigris and the Euphrates flowed into the Persian Gulf near Hitt and Samarra, now some 600 miles north of the present shore line.

The Karun River, flowing westward from the Persian highlands also contributed its silt to the Persian Gulf and built up a bar which extended eastward from Basra and protected lower Mesopotamia from the inroads of the sea.

As irrigation agriculture spread to the land farther up the rivers, the problems of flooding and sedimentation became more serious. The powerful communities resorted to the only means that they knew for protecting themselves against floods and at the same time preventing accumulation of sediment in their canals. This consisted of completely shutting off the water from certain branches of the rivers by earthen dams. While protecting the area farther upstream, the lower delta lands were subjected to increased sedimentation and higher floods.⁴

Along the Euphrates, the irrigated fields lay to the east of the river. Irrigation waters were carried to the east and flood waters allowed to escape to the west. Babylon was protected from floods by two large natural depressions, the Habbania and the Abu Dibis. The Hindiya Canal provided additional protection by diverting the water to the west of Babylon. During the dry season it was barricaded by a temporary dam, which was constructed and destroyed yearly, a task requiring the labor of 10,000 slaves.

Near Beled, north of Bagdad, the flood waters of the Tigris were turned into a large basin with a hard bed of conglomerate underlying a thin alluvial deposit. The three heads of the famous Nahrwan Canal, whose construction is commonly attributed to Nimrod, led from the upstream side of the dam. The dam was maintained for 3,000 years and was not destroyed until about 600 or 700 years ago, during the later caliphate days. Since its destruction, the channel of the Tigris has shifted to the east, and the lands near the head canal, formerly among the most fertile of the Tigris Valley, have been so badly cut by ravines and gullies that, according to Sir William Willcocks,⁵ their restoration today is not financially practicable.

BUILDING LAND WITH RIVER SEDIMENT

In 1949, I saw extensive land-building operations in the lower alluvial plain of the Po River in Italy, near the Adriatic Sea. Dikes were being built on low-lying, unusable portions of marshland within the alluvial plain. Silt-laden waters from the Po were directed into these diiked areas, where deposits of water-borne sediment were laid down to build up new land. The surface of the finished fields was about 3 to 4 feet above the marsh level and the land was producing excellent yields of a great variety of vegetables, corn, alfalfa, fruits, and other crops.

SILTING OF HARBORS IN AMERICA

Here in our own country, almost an infant by comparison in the genealogy of nations, we have a number of similar examples of the abandonment of early colonial ports on Chesapeake Bay, because their harbors filled with sediment—silt washed down from the neighboring highlands—after the clearing and plowing of the land. When Captain John Smith sailed up the Chesapeake in 1608, he found many deep-water estuaries which afforded excellent harbors.⁶

⁵ Willcocks, Sir William. *Irrigation in Mesopotamia*. London and New York, 1917.

⁶ Gottschalk, L. C. *Effects of Soil Erosion on Navigation in Upper Chesapeake Bay*. The Geographical Review, April 1945.

This is what happened: Most of the land, in Maryland, was planted to tobacco, generally on newly cleared land having fertile woodland topsoil. When such fields were worn out or severely impoverished—usually after a half dozen years or so planted to tobacco, mainly—they were often abandoned and a new field cleared. Soil erosion inevitably set in, streams became muddy, and the estuaries and bays began to silt up. With this accelerated (man-induced) soil erosion, early open-water ports were converted into mud flats, in some instances within 50 years. Towns that otherwise might have become thriving cities and seaports thus were destined to die in their infancy—choked, indirectly, by the very industry that had promoted their founding.

Today's port of Baltimore is the head of navigation on the Patapsco River, but before the first street was laid out in Baltimore (founded in 1708) shops from Europe unloaded their cargoes at Elk Ridge Landing, 7 miles farther upstream than the present docks. A hundred years ago, the Patapsco was recorded as being 17 feet deep along the left bank just under the Hanover Street Bridge in Baltimore.⁷ By 1898, it was only 3½ feet deep in the same place; and, by 1924, it was a mere 6 inches in depth.

Sedimentation in the Baltimore Harbor prompted enactment of a law as early as 1753 providing a fine for throwing earth, sand, or dirt on the shore or in any navigable part of the harbor below high-water mark, and the first dredging of record in the harbor was in 1783. During the past 100 years the Federal Government, which began dredging in Baltimore Harbor in 1836, alone has removed more than 111,000,000 cubic yards of silt from the harbor at a cost of nearly \$17,000,000. And in the entire Chesapeake Bay area, the Government has spent in the past century more than \$56,000,000 for dredging, yet much still remains to be done.⁸

It is estimated that a million dollars' worth of topsoil from farms in the Brandywine watershed in Chester County, Pa., and New Castle County, Del., is carried into the channel of the marine terminal at Wilmington, Del., annually, filling it at the rate of 12 inches a month. Each year the Government pumps out 500,000 cubic yards of silt at a cost of \$300,000.⁹

If I have seemed to belabor these examples, somewhat, it is because I believe it is most important for us first to visualize the tremendous extent of this silt-producing erosion and the comparative rapidity with which it can proceed. I could list long columns of siltation figures, including the measured silt loads carried by your own major Texas rivers, like the Trinity, the Colorado, the Nueces, the Rio Grande, the Brazos, and others. But you probably are quite familiar with these facts, and with the sediment accumulations building up in your bays and estuaries as a result.

We have looked at some of the outright monetary costs and broader economic penalties imposed on the public by the physical problem of siltation. I think it is self-evident that there are various other mal-effects, too, including the harm done to marine life and inland fish and game, to navigable waterways, to municipal and other water supplies, to recreational areas, and, most important, to heavy costs of producing silt through the land-impoverishing effects of soil erosion.

EFFECT OF SILTING ON AQUATIC LIFE

In addition to filling up navigation channels in estuaries, sedimentation takes a heavy toll of aquatic life. Suspended matter in water diminishes the sunlight needed by certain organisms to grow, I am told, and thus eliminates the food on which aquatic life feeds. Sand, silt, and clay may completely smother out spawning beds.

Few fishermen will venture forth a-fishing when streams are muddy. A study of the fishing habits on the Meramec River in Missouri made several years ago by the Missouri State Planning Board showed that when the waters of this stream are muddy, recreational attendance drops (or did at the time) by one-third.¹⁰ It was found that stream flow was above normal and the Meramec muddy, on the average, about 25 times each recreational season. As a result, loss of attendance and income to the people of the area was estimated at \$49,000 a year.

The damaging effects of sedimentation on the oyster industry of the Chesapeake Bay area is one of the best illustrations showing the toll taken by the indirect effects of soil erosion on marine life in bay waters. Maryland's oyster production, once considered second only to agriculture among the State's industries, was 15,000,000 bushels a year during the period of 1883 to 1885. By 1950, it had dropped to only 2,500,000 bushels. The observations of biologists and other authorities confirm the fact that the decline of the oyster industry in Chesapeake Bay waters parallels strikingly the silting up of bay ports, described earlier. Curtis L. Newcombe, well-known biologist, with whose studies many of you no doubt are acquainted, has brought out this fact quite strongly.¹¹

"Studies have shown that over-fishing and siltation operate together to cause depletion," he points out. "Throughout the Chesapeake tributaries silt is the oyster's greatest natural enemy."

Newcombe supports that conclusion with statements from documents of colonial days and figures on present-day silt measurements and oyster populations. He reports, for example, that whereas several hundred boats plied the oyster trade in the York River in Virginia as late as 1900, fewer than 50 boats can be counted now; and the estimated 12,000 or more tongs who worked in Virginia alone in the 1880's has dropped to only about 2,500.

Heaps of oyster shells found on the shores of the upper tributaries of Chesapeake Bay show that the Indians took them from extreme upper bay waters, but the bottoms of these tributaries now are soft mud in which oysters cannot exist. The head of oyster propagation today is many miles down-bay from those former good producing sites.

Dr. R. V. Truitt, director of the Chesapeake Biological Laboratory of the Maryland State Department of Research and Education, at Solomons Island, is of the opinion that, at least in the last few years, upper-bay beds have been destroyed by freshets. He thinks there is reason to believe that the increased fresh water inflow is the result of erosion in the uplands.

Dr. Truitt had this to say, when interviewed recently: "Although there is no specific evidence, it is my firm belief . . . that poor management of the land around the bay and lack of conservation practices is responsible in no small degree for the declining oyster production. Unless the land is properly managed, erosion will bring about a further decline in oyster yields."

The Chesapeake Bay Institute's hydrographic program includes, in cooperation with Johns Hopkins University, a sampling

¹¹ Newcombe, Curtis L. *Treasures in Troubled Waters*. The Scientific Monthly, vol. LXX, No. 2, February 1950.

of the bottom of the bay by borings. It is expected that the silt figure will be helpful in showing the effects of such depositions on marine habitat and life in the bay area.

The decline in oyster production has in no wise been confined to the Chesapeake Bay, but applies to the whole east coast reporting area, including the Gulf of Mexico. Thus, in 1880,¹² the first year of record, the figures show, that production for this area totaled 153,405,000 pounds of shucked oyster meat. By 1945,¹³ the production had dropped to 65,392,000. That represents a decline of approximately 57½ percent. West coast production is not taken into account; because as you probably know, importation of Asiatic seed oysters spawned in Japan, particularly since the 1930's, has greatly expanded oyster production in that part of the country (from 1,050,000 pounds in 1888 to 10,074,000 in 1945).¹⁴

SOURCES OF SILT

Wherever silt is found, in reservoirs, streams, or bays, the bulk of it comes from the land as the result of soil erosion. The Soil Conservation Service estimates that in this country at least 4,000,000,000 tons of soil are annually moved out of place some distance downhill by water erosion. Of this amount, roughly 3,000,000,000 tons are deposited on lower slopes, over alluvial plains, and in reservoirs, ditches, canals, and fresh-water harbors. About 1,000,000,000 tons a year are carried on down to tidewater. Part of this silt is deposited as sediment in our harbors and navigable channels, where it must be removed by dredging in order to maintain proper water depth. Most of it goes on out to sea or is deposited on the lowest parts of deltas and over Continental Shelf positions.

Silt load measurements made on Texas streams¹⁵ indicate that the major rivers—the Sabine, Trinity, Brazos, Colorado, Guadalupe, and Nueces, Rio Grande, San Antonio—discharge an average of about 80,000,000 tons of sediment into the Gulf of Mexico each year.

That figure, however, represents only a small part of the soil moved downslope by erosion. For example, the 80,000,000 tons amounts to only about 1 ton per acre derived from the approximately 80,000,000 acres above the measuring stations. The Soil Conservation Service has measured annual surface losses of more than 25 tons of soil per acre by erosion from corn plots of Houston clay at the Temple, Tex., experiment station.

The silt load at tidewater would be even greater were it not for the sediment removed by deposition in reservoirs and stream channels within the watersheds upstream. Reservoir-sedimentation surveys made by the Soil Conservation Service show the annual rates of deposition to be about 5,500,000 tons in Buchanan Reservoir, 400,000 tons in Medina Reservoir, 860,000 tons in Lake Corpus Christi, 9,750,000 tons in Possum Kingdom, and 1,900,000 tons in Lake Nasworthy. This sediment is derived mainly from erosion of crop and range lands in Texas.

SOIL CONSERVATION AND SILT CONTROL

It should be clear enough, then, that the task of reducing floods and controlling erosion and thereby reducing the intake of silt

by our reservoirs, bays, and estuaries, is one which should begin where the rains fall and runoff starts, and end only when the runoff reaches the sea. A main objective of all the conservation work which the Soil Conservation Service does is to retard the discharge of water from upstream areas. In other words, the purpose is to put as much of the runoff as possible into the reservoir of the soil. Probably more than 75 percent of the Nation's total watershed flood damage occurs in the upstream tributary watersheds, along the little headwaters streams.

Relation of Soil Erosion to Coastal Waters—Part II

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave granted to extend my remarks in the Record, I include the following address by H. H. Bennett, Chief, United States Soil Conservation Service, at fourth semiannual seminar, Texas Game, Fish, and Oyster Commission's marine laboratory, Rockport, Tex., March 2, 1951:

And while thus retarding runoff, the rate of silt production by erosion is reduced. In our normal conservation work, the objective is always to keep agricultural land permanently productive while in use. In flood-control operations, more emphasis is put on the task of slowing down runoff. So, in the complete watershed program the principal effort is devoted to measures that help to store water in the soil and slow down runoff. The two types of control are complementary in effect, at least in some degree: generally speaking, slowing down of runoff reduces the rate of erosion, while the measures applied to the land for erosion control result in increased infiltration of rainfall, thereby reducing the runoff. Both actions are beneficial to the land, reduce production of silt, and lessen flood hazards.

The flow and quality of water in surface streams are influenced materially by the way we use and manage out land resources; but in a great many instances individual landowners and water users have little or no control over the activities involved with stream flow and hence are unable to deal with them alone. As a result, local agencies and groups like your own and the soil conservation districts are concerning themselves more and more with water-control problems.

The Soil Conservation Service in fulfilling its authorized responsibilities is committed to doing everything possible within its resources to provide technical assistance needed in dealing with the erosion problem, siltation, floods, and water wastage. Thus the water-conservation activities of the service are continuously geared to the needs of the land and water users and are coordinated with the activities of other agencies concerned with land and water. To this end, we define water conservation—which always has been part and parcel of soil conservation in our service planning, operations, and research—this way:

WATER CONSERVATION

Water conservation is the physical control, protection, management, and prudent use of water in such a way as to maintain crop, grazing, and forest lands, vegetal cover, and wildlife for maximum sustained benefits to

the people, agriculture, industry, commerce, and other segments of the national economy.

WHAT HAPPENED TO LAKE WACO

If erosion in a watershed can be reduced, sedimentation in reservoirs, harbors, and estuaries can be reduced. Recent studies made by the Soil Conservation Service at Lake Waco here in Texas illustrates this fact. This reservoir, built on the Bosque River by the City of Waco for municipal water in 1930, had an original capacity of 40,000 acre-feet and a drainage area of 1,666 square miles. From 1930 to 1936 the average annual capacity loss from silting was 3.35 percent, but from 1936 to 1947 the rate dropped to 2.06 percent. Actually, the rainfall and runoff were more favorable to erosion and silting during the second period; but silting actually decreased 36 percent as a result of changes in land use and the application of conservation practices in the watershed.

Since 1934, approximately 200,000 acres, or nearly 19 percent of the watershed, has been converted from clean-tilled crops—mainly cotton—to pasture. Conservation measures have been carried out through the soil conservation districts program on about 10 percent of the land in this watershed, and additional conservation measures not under district plans have been installed on additional acreages. Further reductions in the rate of silting of Lake Waco can be expected from the conservation land treatment being extended steadily over the watershed.

Similar examples are to be found all over the country. For example, conservation treatment in the 14-square mile watershed above Lake Issaqueena near Clemson, S. C., between 1941 and 1949 reduced the rates of silting of that reservoir by 53 percent. Here again rainfall and runoff were above normal during this period as compared with the years before 1941. Rotation strip cropping applied on some 1,400 acres was the major practice used. These results demonstrate, wherever they occur, that if you slow down erosion, you will reduce sedimentation. And the control of erosion on the watershed has many off-site benefits, such as reduction in flood damage and in rates of silting of reservoirs, harbors, and estuaries, in addition to creating more favorable conditions for the propagation of aquatic life.

SOIL CONSERVATION ONLY WAY TO CONTROL SILT

The only way, moreover, in which water pollution from silt, with the attendant problems of sedimentation, can be controlled or reduced effectively is by the adoption of soil- and water-conservation practices applied in accordance with the needs and capabilities of the land. Contour farming, strip cropping, terracing, good pasture and range development and management, proper woodland management, land-use changes, and various other specific land-management measures which have proved to be successful in the control of soil erosion and water runoff must be applied to the land by those who use the land.

It is not enough to treat just part of a farm, or part of a watershed, or part of any other area of land. Every acre of cropland, pasture land, farm woodland, and idle land must be treated according to its needs and each acre used according to its capabilities. That is true, whether it is in major watersheds for flood-control and silt-pollution abatement purposes, on individual farms and fields for erosion control, or through such group undertakings as conservation

drainage or irrigation projects. That is exactly what is being done by farmers in their soil-conservation districts, with which we cooperate.

I am convinced, also, that this unprecedented attention to and progress in soil and water conservation which we are experiencing in today's conservation farming era is contributing as much, if not more, to the welfare of game, fish, and other beneficial wildlife as anything man has ever undertaken in this country or anywhere else. In this new conservation era, conservation of land, water, forest, grass, cultivated crops, and wildlife are, for the first time in the history of man, being tied together and scientifically coordinated on the basis of land capability and need. This is a basic tenet of modern soil conservation.

PUBLIC BENEFITS

Ordinary soil- and water-conservation measures are for the protection and improvement of the land on which they are applied, and consequently the principal benefit is received by the owner or operator of the farm on which such work is done. Therefore, it is only proper that the farmer should bear the principal cost. On the other hand, the special measures and structures used in flood control are designed to benefit downstream bottomlands and to keep sediment out of stream channels, reservoirs, bays, etc. Because these are public benefits, the public—through community groups, or county, State, and Federal Government—should bear its proportionate part of the costs, so long as they are justified by the benefits to be expected.

FLOOD CONTROL ON THE TRINITY

Among the streams which dump sediment into your Gulf waters is the Trinity River. You probably are familiar with the flood-control program under way on this stream under the Army Corps of Engineers. Also this is 1 of the 11 major watersheds in the country—the largest 1 of the 11—in which the Soil Conservation Service is carrying on waterflow retardation works of improvement. Our Service and the Forest Service are the two United States Department of Agriculture agencies authorized under the 1936 and subsequent flood-control acts to engage in this work. We do it through the soil-conservation districts. We have been working on the Trinity since 1947, although the flood-control surveys were made earlier.

Watershed treatment work in the 3,860-acre Howard Creek subwatershed of the Trinity River watershed, near Jacksboro, is typical of much of the work done in the 11 authorized watersheds. This subwatershed was chosen for early flood-control operations because of local interest. The subwatershed improvement plan developed cooperatively by the Soil Conservation Service and the local people, included installation of terraces with protected outlets on many cultivated fields, contour farming, cover cropping, improved grazing practices, seeding abandoned cropland to pasture grasses, eradication of brush for the establishment of grass, building of diversion ditches and farm ponds, construction of a small upstream reservoir for retarding floodwater and reducing deposition of sediment in reservoirs and over bottom lands.

On June 24, 1949, 6 months after the reservoir was completed, 2 inches of rain fell in 1 hour on the lands above the reservoir. The runoff from this rain, which before the conservation treatment would have flooded cropland and pasture along this branch of Howard Creek, was retarded in the reservoir so that the peak flow in the creek was only 25 percent of channel capacity.

The May 1949 flood in the vicinity of Fort Worth, which did nearly \$9,000,000 of erosion, crop, and pasture damage and estimated

miscellaneous damage from \$15,000,000 to \$25,000,000,000 to city and other property, was from a storm in only part of the Trinity River watershed. It originated in the type of watershed in which we are working. The Trinity watershed area is completely covered by soil-conservation districts; so we may look forward to widespread beneficial results in the reduction of such damages in the future as more of the conservation treatment is completed.

COOPERATION OF LOCAL INTERESTS

A most important factor in this watershed planning and treatment is the active cooperation of local interests. In the case of the Trinity, the Trinity Improvement Association should be mentioned, among others. At San Antonio, through the San Antonio River Canal and Conservancy District, the local people have been so determined to speed up this kind of work that the conservancy district has arranged to set up trust funds to pay the cost of a flood-control survey on that watershed. That was after appropriations were not forthcoming for the Service to proceed otherwise with the survey as planned.

Flood control surveys are under way, meanwhile, on the Sabine-Neches watershed by the Soil Conservation Service and we have completed a survey on the Little River branch of the Brazos. Surveys have been made on the Bosque and are under way on the remaining part of the Brazos. Other flood-control surveys in progress involving Texas watersheds include those on the Pecos, in the lower part of the State; on Red River, a large part of which is in Texas; and the San Jacinto. Works of improvement are under way on the Middle Colorado, and the work already undertaken on the Washita River watershed in Oklahoma, which likewise affects Texas areas somewhat, have attracted national attention among the 11 authorized watersheds.

SOIL CONSERVATION DISTRICTS

It should be understood, however, that the soil and water conservation work which concerns you and every other segment of society in Texas and in the Nation is not confined to this flood-control type of operations. It is progressing at a constantly accelerated rate throughout the State and the whole country in the farmer-organized and farmer-managed soil-conservation districts.

As of January 1, this year, more than four-fifths of all the farms and three-fourths of all the land in farms in the United States were included within soil conservation district boundaries. The districts, which are still being formed at an average rate of 8 to 10 a month, now number nearly 2,350 and cover 1,250,000,000 acres in the 48 States, Alaska, Hawaii, Puerto Rico, and the Virgin Islands.

Texas is high up in the district column, with 93 percent of the State's farms and ranches and 89 percent of the total land in 160 soil conservation districts as of February 1, this year.

District organization, of course, is not enough by itself. It is the soil and water conservation work that actually gets done on the land that counts. To January 1, detailed conservation surveys had been made on 361,000,000 acres in the districts, 941,000 conservation farm plans had been worked out by district farmers and Soil Conservation Service technicians out on the land together, covering 260,000,000 acres; and 131,000,000 acres had been treated with conservation measures called for in the plans. All my figures are from the records of the Soil Conservation Service. They do not include PMA figures, or those from other Federal, State, or private agencies except as the activities of

¹ Noll, John J., Roehl, John W., and Bennett, Jackson. Effects of Soil Conservation on Sedimentation in Lake Issaqueena, Pickens County, S. C. United States Soil Conservation Service, SCS-TP-95, Spartanburg, S. C., June 1950.

these other agencies have contributed to the work done on the SOS planned farms.

I could, of course, give you the comparable accomplishment figures for the State of Texas; but, if you are not already acquainted with them, you may obtain them in detail from our local offices.

BIOLOGICAL ASPECTS OF SOS PROGRAM

I have already mentioned some of the various conservation measures which are used in this acre-by-acre land treatment. I should like to mention further, however, some of the biological aspects of our technical program. We give particular attention to training in biology for our farm planners and other technicians who work with farmers out in their fields (not in an office). The farm planner considers the value of treating various types of land, not only for their primary use but also with an eye to any modification or special practice that will result in more wildlife through complete and adequate land treatment. He is expertly equipped to do this, because his understanding of the biology aspects of soil and water conservation planning and treatment is dovetailed with similar basic knowledge and adeptness in soil science, geology, forestry, range management, hydrology, agronomy, engineering, and other phases of a complete, coordinated soil and water conservation program.

The Service's stated biology objectives may be of particular interest to you.

1. The apply to land-use problems biological knowledge useful in the prevention and control of soil erosion—that is, soil and water conservation — thereby preserving natural resources.

2. To achieve productive land use on all lands, including those not adapted to tilled crops, grazing, or wood production.

3. To assist in the solution of land-use problems which involve production of useful wild plants and animals on croplands, grazing lands, and woodlands.

4. To contribute to the prevention and control of biological damage arising out of measures established for soil and water conservation and related land-use practices.

We now can say that national policy and public thinking, with few exceptions, are agreed on the utter necessity of conserving our interlocking natural resources. Research, education, surveys, and the successful application of conservation measures have brought us to a new concept of the importance of land and, also, of the need for keeping the land permanently productive. Nature's laws were so contrived that land, water, plants, and animals all should exist in harmony and interdependence for perpetual productiveness of these essential resources.

The problem of soil and water conservation and wise use is not a problem that can wait until farmers solve it by any trial-and-error method, for that might be too late. This is an urgent problem, which demands the best efforts of the Nation's scientists and of all who use the land for agricultural purposes. And the understanding, cooperation, and active participation in its solution by industrial and all other groups in our society are indispensable to getting done in time this vital job which so importantly affects all of us.

We now have the knowledge of how to do the job; the conservation tools have been perfected and tested; and, what is more important, we have the organization and public support for doing the job. Not only is there no excuse for our not doing the job, but we dare not shirk it; because our individual and national security, peace, and prosperity depend on it.

The Thirty-eighth Parallel

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Boston Sunday Post, Boston, Mass., of Sunday, October 7, 1951:

U. N. DIDN'T SET LINE AT THIRTY-EIGHTH—RUSSIANS ARBITRARILY DECIDED ON PARALLEL, VIOLATING AGREEMENTS AT CAIRO AND POTSDAM

(By Lawrence R. Goldberg)

Here's a simple, unbiased guide—based upon United Nations intelligence reports gathered and examined carefully during the past year—to the present situation in Korea, now entering its fifteenth month.

At 3 o'clock the morning of June 25, 1950, the telephone rang in the New York suburban home of United Nations Secretary General Trygve Lie. Calling Mr. Lie was the United States deputy representative to the U. N. He had an urgent message from the American Ambassador to the Republic of Korea: The United States Department of State had received information that North Korean forces had invaded the territory of the Korean Republic.

The report from Korea upon which the telephone message was based was sharp, factual. "According to Korean Army reports, North Korean forces invaded Republic of Korea territory at several points this morning. Ongjin was blasted. North Korean Infantry commenced crossing the thirty-eighth parallel. Amphibious landing was reportedly made south of Kangnung on the east coast. Kaesong was reportedly captured. North Korean forces, spearheaded by tanks, are reportedly closing in on Chunchon. Details of the fighting in the Kangnung area are unclear."

"It would appear from the nature of the attack and the manner in which the attack was launched that it constitutes an all-out offensive against the Republic of Korea," concluded the report.

U. N. ACTS PROMPTLY

As a result the United States requested, in a formal note which followed the telephone call, that this message be brought to the immediate attention of the President of the U. N. Security Council. The United States considered the assault upon the Republic of Korea as a breach of peace and an act of aggression, and thus the prime business of a world organization dedicated to world peace.

The U. N. acted promptly. At 2 p. m. of the same day the Security Council was called to order. Meantime the U. N. had before it a report on Korea from one of its own commissions—the U. N. Commission on Korea. This report—direct from Seoul—gave much the same information which had been received in Washington some hours previous, then added:

PLANE ATTACKS

"At 17.15 hours four Yak-type aircraft strafed civilian and military air fields outside Seoul destroying planes, firing gas tanks, and attacking jeeps. Yongdungpo railroad station on outskirts also strafed."

"Commission wishes to draw attention of Secretary General to serious situation developing which is assuming character of full-scale war and may endanger the maintenance of international peace and security."

Now the U. N. had before it two reports: One from a member nation, the other from a U. N. commission itself, which told that on a large peninsula jutting out from the northeast coast of Asia, on which lived about 30,000,000 people, the peace had been shattered by organized forces.

"What is the thirty-eighth parallel all about?" asked many youths and students and others destined to service in Korea.

The thirty-eighth parallel is simply a demarcation line which came into being as a simple military expedient.

NOT DIVIDED

At the end of World War II it was decided that Japanese troops north of the thirty-eighth parallel would surrender to Soviet forces and those south of that line would surrender to United States forces. That was all.

There was nothing in any records anywhere to indicate that Korea was to be divided into two parts.

In 1943, at the Cairo Conference, and again in the summer of 1945, at the Potsdam meeting, it was quite definitely agreed that, in due course, Korea would be a free and independent country. Those who so agreed were China, the Soviet Union, Great Britain, and the United States.

Yet almost immediately after Japanese troops surrendered in Korea the Soviet military command arbitrarily decided that the thirty-eighth parallel was a permanent line separating two military zones.

The United States military command in southern Korea tried repeatedly to negotiate arrangements, all aimed at establishing the unity of the country, but could get nothing but a deaf ear from the Soviet military.

PROVISIONAL GOVERNMENT

This is the way matters stood until December 1945. Then at a foreign ministers' meeting in Moscow the United Kingdom, the Soviet Union, and the United States agreed that a provisional Korean democratic government should be set up for all of Korea. To this end it was decided that the Soviet and United States military commands in Korea were to form a joint commission which, with Korean democratic parties and social organizations, was to make recommendations to the big four powers for an all-Korean Government.

The United States command's attempt to get the Soviet Union to agree to some method to consolidate North and South Korea was marked by frustration. Time and time again the Soviet members of the joint commission blocked the planning for practical action. After nearly 2 years of effort all the United States command and the members of the commission could get the Soviet Union to agree to was a spotty exchange of mail between North and South Korea.

DENIED ENTRY

That was on September 17, 1947.

Subsequent events show how the United Nations took on the problems of Korea; how its representatives were denied entry north of the thirty-eighth parallel; the supervision of free elections in the southern zone; the establishment of the Republic of Korea with seats reserved for 100 representatives from the north as soon as elections could be held under the observation of a U. N. commission; the approval of the new republic by the U. N. and its recognition by more than 30 countries—have been related before.

Thus the Republic of Korea was not only the legal government of the Korean people, it was created under the auspices of the U. N.

But Korea remained divided. The United Nations, continuing its efforts, kept a commission in Korea working toward erasing that artificial line and uniting the country.

But this U. N. commission could make little headway. Its representatives were not even allowed to cross the thirty-eighth parallel, north of which there had been established a regime called the Democratic Peoples' Republic of Korea—a government formed by a mere transfer of power from Soviet occupation authorities. Elections—if any occurred—were never allowed to be observed by U. N. representatives.

Thus—briefed—stood matters on June 25, 1950, when the Security Council met at 2 o'clock in the afternoon with those fateful messages before it.

EVENTS MOVE SWIFTLY

Events moved swiftly afterward. The United States authorized Gen. Douglas MacArthur in Tokyo to furnish the already hard-pressed South Korean troops with military supplies. This was followed by orders to give the Korean Government forces air and sea cover and support, and prompt response in the form of pledges of aid from 53 of the 56 nations of the U. N. The three who opposed aid to Korea were Russia and her satellites, Czechoslovakia and Poland.

At the moment, the U. N. itself, as an organization, had no forces to combat the North Korean aggressor. The establishment of such forces had long been blocked by Soviet intransigence. Now the need for swift action was imperative to prevent the Republic of Korea from being overrun by the aggressive troops from the north.

REDS OBJECT

The Soviet Union, however, bluntly called the U. N. action on Korea illegal on two counts. One, the Soviet Union's absence when the vote was taken constituted a veto. Two, China's delegate had no legal right to vote, since he did not represent the Communist government which, the U. S. S. R. delegate claimed, was the legal government of China.

The Soviet position was utterly false and was for propaganda purposes only.

CAMPAIGN SUCCEEDING

From then on U. N. forces continued successfully to destroy the fighting power of the North Korean forces, and during the closing day of October 1950 there was every indication that soon peace would return to the 30,000,000 people of Korea, and, with this peace, a danger to world security would have been wiped out.

This hope diminished in November, however, when Communist China—a fresh enemy force—entered the war. The U. N. then named Communist China an aggressor.

What has been accomplished after more than a year of bloody warfare? Has collective action by the U. N. been worth the sacrifices? What has been gained by meeting the aggressor firmly, while at the same time trying to localize the conflict?

Here are the answers:

GENERAL WAR PREVENTED

By fighting a limited war in Korea, aggression has failed thus far, and a general war has been prevented to date.

The ability of the free world to resist Communist aggression has been greatly improved.

The conflict has unmasked the Soviet's phony world-wide "peace" offensive; has exposed the Soviet designs for conquest on the installment plan; has upset the Soviet timetable for new conquests on the Korean pattern; has rallied the first collective force and action behind U. N. principles, has stimulated the U. N. to develop new machinery and better methods for meeting future threats; has brought a free world to a new peak of unity in the U. N.

But most important of all: Has alerted people all over the world to the imminent danger of Soviet aggression, has strengthened the will of nations to stand together

and resist aggression; has aroused the free peoples to the necessity of mobilizing their strength for defense and may thus have saved civilization.

Mao Tse-tung's Bloody Regime in Red China

EXTENSION OF REMARKS

OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. KERSTEN of Wisconsin. Mr. Speaker, I include herewith the first of a series of articles which appeared in June in the New Bedford (Mass.) Standard-Times. This series of seven articles presents a vivid picture of one of history's cruelest regimes—that of Mao Tse-tung's Communist China.

Even if no more blood is shed in the remaining 40 years of the twentieth century, this century will undoubtedly be recorded as the bloodiest in the history of man. The murders and purges of Communist Russia are being repeated in saddening similarity in Communist China.

I include herewith the first of the series of articles by Everett S. Allen which appeared in the Standard-Times of June 26, 1951.

I will include the rest of these articles in subsequent issues of the CONGRESSIONAL RECORD.

MAO REGIME CALLED ONE OF HISTORY'S BLOODIEST

(By Everett S. Allen)

Death impending electrifies a mob

Seventy thousand persons watched brightly and tense as the firing squad raised its guns.

More than 300,000 unable to attend the public trial stood transfixed before microphones rigged up throughout the city.

The shots exploded rudely on the silence. And the woman, born Hauch Chihyou, died with the crowd chanting, "Kill her! Kill her!"

She was executed by a Chinese Communist squad for being a "special agent who had consistently sabotaged patriotic movements among the students."

The cheers of the multitude, directed by a party leader, rang through the streets.

CONDEMN'S OWN MOTHER

Hauch Chihyou died in Chungking April 11 because her daughter, Chen Kuo-taeng, a student, pleaded at the trial that her mother be put to death for being a counterrevolutionary—in other words, anti-Communist.

"Secret agents are not human," she declared to the crowd. "I don't recognize her as my mother, I ask the Government to execute her so she will no longer be a menace to the people."

Peasants who understood they must attend, walked 10 miles to witness the execution. Fanatics and opportunists, seeking to preserve their own skins, crowded to the platform to shout complaints against the accused. The Communist news agency reported with pride this triumph of loyalty to State over the decadent and imperialistic family ties.

More than 15,000,000 Chinese have perished during the past 2½ years as a result of Com-

munist misrule, man-made famine and the campaign in Korea, according to the Free China Anti-Atrocity League.

Twelve million have died of hunger, 600,000 have been killed in Korea fighting and 2,260,000 Nationalists have been put to death.

The Chinese Communists have reverted to purge and terror as weapons to keep themselves in power. Even according to official Peiping (Communist) reports, the agrarian reformers have massacred thousands in a nationwide purge, the real number of victims undoubtedly runs into hundreds of thousands.

FOLLOWS BOLSHEVIST COURSE

The Chinese revolution—which was more apathy than revolt—is following the course of many internal social revolutions, particularly that of the Bolsheviks in Russia. It produces such monstrous symbols as the public trial, in which a mob, under compulsion, fear and fanaticism, chants the death demand in proper response to the grim litany of the party official.

Natural revulsion of the people forces the Communist regime to perform much of its slaughter secretly, public trials keep wavering opinion in line. More naive elements in the west view this growing wave of terrorism as an indication of the opposition which the Communists are facing, and derive great hopes therefrom.

It would be a grave error to view this purge as a sign of Communist weakness. In Russia, the OGPU and their successors still employ terror to wipe out even suspected opposition and to cow the population into abject subservience. The China purge first was directed against spies, saboteurs, bandits and counterrevolutionaries. Now, it has spread to include landlords, merchants, students and the clergy.

Like all purges, it will ultimately lose all boundaries, like all terror, it will be hard to stop.

Death is a way of life to the Chinese Communists. In 1939 they pushed women and children ahead of their Manchurian troops, hoping the Nationalists, in the name of humanitarianism, would not fire until too late. Today, in Korea, they are pushing "human sea waves" of Chinese farm boys ahead of their own trained army units, buffers to absorb the initial shock of combat.

Months ago, the Central People's Government of the Chinese People's Republic was accused by anti-Communists of agreeing to liquidate one out of every four persons of its 450,000,000 population in accordance with a Mao Tse-tung-Stalin pact signed in Moscow February 12, 1950. Reason for this allegedly was that, due to lack of existing resources, China's economy could not support its present population.

MEANS OF REDUCING POPULATION

Whatever the truth of this, Communist China now is reducing her population systematically by five means:

1. Use of untrained, unsupported troops in Korea.
2. Annihilation of anti-Communist guerrilla groups.
3. Artificial famine, caused by Government seizure of crops.
4. Deportation of labor to Siberia.
5. Execution or imprisonment of political dissidents.

Certain of the purge deaths are announced by the Communists for their iron hand propaganda value. From December 1949 to April of this year, the Mao sources acknowledged the killing of more than 172,775 persons, the seizure of 49,462, some of whom were slain, and the arrest of 264,900, many of whom are now presumed dead. These persons were described as enemies of the people and bandits, stock party-line tags with the Moscow trade-mark.

During the first 5 months of this year, Nationalist reports have mentioned the deaths of 74,215 persons and the imprisonment of 415,616. Numerous other massacres of undetermined size were announced.

On February 6, the Communists reported units of the People's Liberation Army had wiped out 90,000 remnant bandits in east China during the past year. Militia, they added, was helping to carry out land reforms in combination with bandit-suppression work.

In March, Mao's Kwantung subdistrict announced that after more than half a year, about 15,000 counterrevolutionaries faced the firing squad. Nationalists said February 8 that more than 1,000 persons at Pinghsiang, including Government officials and teachers, were massacred by Communists.

MASSACRES SPREAD

Central News Agency (Nationalist) claimed on May 18 that Chinese Communist newspapers admitted 180,000 persons were executed in Fukien Province from January 1 through April. The China News, Formosa's English-language daily, reported 30,000 persons were arrested at Shanghai in a 4-day round-up through April 30, of whom it was believed all but 6,000 had so far been put to death.

On January 2, a Communist report from Wuhan said the central and south China military area of the People's Liberation Army announced that from January through November 1950, a total of 378,700 bandits had been accounted for, of whom 38,000 were either killed or wounded.

In April the Free China Anti-Atrocity League gave the following breakdown of figures by Provinces of persons put to death by the Communists up to the end of January. These do not include any Korean casualties.

Hunan, 350,000; Kwangtung, 200,000; Chekiang, 150,000; Kiangsi, 80,000; Hupeh, 80,000; Shantung, 50,000; Kwangsi, 200,000; Szechwan, 300,000; Shanghai City, 50,000; Yunnan, 30,000; Kansu, 20,000; Anhwei, 50,000; the nine Provinces of the northeast, 140,000; Hunan, 50,000; Hopei, 50,000; Shansi, 50,000; Sikang, 30,000; Kweichow, 30,000; Shensi, 30,000; Tsinghai, 10,000; Jehol, 20,000; Chahar, 20,000; Suiyuan, 20,000; Sikiang, 20,000, and Fukien, 80,000.

TEN THOUSAND EXECUTED

Taipei (Nationalists) in April said public notices announcing death sentences were so numerous in Changsha City there was no longer enough space on the bulletin boards for posting them. Since January, 3,000 persons were reported killed and 7,000 more were believed secretly executed and 10,000 held in custody.

The China Union Press announced the death of 700 at Kunming, capital of Yunnan, in the week ending March 20. Fifty thousand were arrested in Shanghai in the 3 days ending April 17, Taiwan's newspaper, Hsin Sheng Pao, reported. The Communists in Wuhan announced 10,000 bandits had been wiped out in northwest Kwangsi.

May Day is the Communist holiday of the year. In Peiping, on May 1, more than 600,000 citizens, 70 abreast, marched or danced cheering down the great square in front of the Gate of Heavenly Peace for 6 hours. It was a "demonstration of unity, of happiness," said the Communist leaders, "of strength, of a people joined in the defense of peace with all who seek peace and are willing to defend it."

On the same day, Hangchow Communists reported mass trials and the public execution of 162 "top counterrevolutionary criminals." And Sian's Communists reported on May 4 that 3,500 "bandits" were killed, captured, or wounded in the northwest army area. Mao's officials in Shanghai said on May 10 that 15 people's governments in

South Anhwei had sentenced to death and executed 58 counterrevolutionaries.

MASS MURDER DRAWS CROWDS

Like baseball in America, mass murder—and official compulsion, is drawing crowds. In Sian, 80,000 attended the trial and execution of "several" counterrevolutionaries; the Communists also said another 10,000 listened to the broadest of the event. Communists in Mukden reported on May 12 that 30,000 attended an accusation meeting, which was recorded and broadcast to an additional 822,000 persons. During the meeting, the head of the Mukden Public Security Bureau reported to the people on the crimes of counterrevolutionaries and exhorted the people to expose them.

Twelve "bandit agents" were paraded before the audience and accused and a "batch of counterrevolutionary elements" was executed.

Other citizens deemed undesirable are sentenced to hard labor. On June 12, Taipei reported 300,000 men concentrated at points along the Peiping-Hankow and Tientsin-Pukow railways for dispatch to the labor camps in Siberia. The men were mostly family members, relatives, and friends of persons killed by the Communists in their purge of "dissidents," "counterrevolutionaries," and "landlord tyrants."

This was the second such group to be condemned by the Communists to hard labor in Siberia in recent months. An earlier group numbered 1,500,000 persons, Taipei said.

Accentuated by propagandists and party agents, heightened by betrayals and fanaticism, the terrible paralysis of fear spreads.

The Real Crime: Bad Judgment

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Detroit Free-Press of October 8, 1951:

THE REAL CRIME BAD JUDGMENT

The Senate should not consent to President Truman's appointment of Dr. Philip C. Jessup to the United States delegation to the United Nations.

The ground for rejection has nothing to do with Senator McCarthy's charge that Dr. Jessup has an affinity for Communist causes.

Adequate cause exists in Jessup's record of poor judgment in an area in which we have already suffered grievous damage, as in Korea, and in which irreparable damage may be inflicted upon us in future by further bad guessing in foreign policy.

We can well believe that Ambassador Jessup is a loyal citizen and that he sincerely believes that he has the right answers to the problems which confront this Nation.

Yet in these perilous and treacherous times something more than loyalty and sincerity are required to stave off disaster. The men entrusted with this country's fate must also have sound judgment in formulating policies and courage in carrying them out.

Jessup's record shows neither.

At last Thursday's session of the Senate Foreign Relations Subcommittee holding hearings on his nomination, for example, Jessup disclosed a heretofore top secret directive addressed to him by Secretary Acheson

on July 18, 1949, the key paragraph of which follows:

"You will please take as your assumption that it is a fundamental decision of American policy that the United States does not intend to permit further extension of Communist domination on the continent of Asia or in the southeast Asia area."

With that assumption Jessup faithfully and industrially identified himself.

What steps did he and Acheson then take to check Communist expansion in Asia?

At the very time Acheson issued this directive, Jessup was putting together the white paper on China, a masterpiece of deception, which wrote off the Chinese Nationalists and invited the Chinese Communists to come and get it.

Consider this sequence of events:

December 10, 1949: Chiang Kai-shek quit the mainland, arrived in Formosa and established his regime there.

December 22, 1949: The Joint Chiefs of Staff recommended that Formosa be kept from the Communists.

December 23, 1949: The State Department sent a secret instruction to our diplomatic missions abroad to minimize the possible fall of Formosa and to emphasize that this island "has no special military significance."

December 29, 1949: At a meeting of the National Security Council, General Bradley, for the JCS, argued for a military mission to Formosa. Acheson vetoed the idea and Truman sided with Acheson.

January 5, 1950: At his press conference President Truman declared that the United States "will not pursue a course which will lead to involvement in the civil conflict in China . . . will not provide military aid or advice to Chinese forces on Formosa."

January 12, 1950: Acheson made his famous speech before the National Press Club excluding both Formosa and Korea from our defensive perimeter and thus gave notice that the Communists could have them.

June 24, 1950: The Communists attacked in Korea.

The dust which Secretary Acheson said he was "waiting to settle in China" was the screen behind which Moscow was preparing a war that has already cost us more than 13,000 dead and 60,000 wounded and the end of which is not in sight.

Yet President Truman now proposes to make Dr. Jessup, whose judgment in far-eastern policy has proved so tragically wrong, a spokesman for the United States in the bear pit of the United Nations.

We pass over Jessup's appearance as a character witness for Alger Hiss at both trials of that convicted traitor.

The question of his fitness to decide policy for the United States in a field of which he has only textbook knowledge has unfortunately been confused by Senator McCarthy's unproved charge of Communist sympathies.

A vote on confirm Jessup's nomination can now be represented as a vote against "McCarthyism."

Just as easily a vote to reject Jessup could be interpreted as a lack-of-confidence vote in Acheson, who sponsors him. As Acheson and McCarthy are about equally disliked in Congress, the issue is complicated.

The Senate and its Foreign Relations Committee should try to put out of mind all of these muddying irrelevancies.

The times are too perilous to pick men to uphold our interests abroad because they are for Acheson or McCarthy or against them.

The sole test should be fitness.

When his record to date is examined Ambassador Jessup falls in our opinion to meet that test.

The Senate should give President Truman an opportunity to select another representative of the United States in the United Nations whose judgment has not proved so consistently damaging to our national security.

Tribute to the Late Representative Karl Stefan

EXTENSION OF REMARKS OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES
Monday, October 8, 1951

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article with reference to the death of Representative Karl Stefan, which appeared in the Human Events for October 3, 1951.

There being no objection, the article was ordered to be printed in the RECORD, as follows.

OBIT FOR A CONGRESSMAN

When Members of Congress pass on, stiff obituaries in the papers give slight inkling of the real circumstances. We believe that in many cases the end is hastened by overwork and discouragement. This long and turbulent session has aggravated these causes. (Seven House Members have died since January.) The death yesterday of Karl Stefan, according to friends, was in no small measure the result of excessive labors and a feeling he was waging a hopeless fight.

Stefan represented the Third District of Nebraska. That is an area reminiscent of the early prairie communities so beautifully described by Willa Cather in her novels about Nebraska. The Congressman typified the friendliness, the sturdy individualism, and hatred of war and dictatorship which characterizes the folk out there. Like many of Miss Cather's characters, Stefan came to the prairies from his native Bohemia.

Although of Czech race, Stefan felt no bitterness toward the German people under Hitler and in 1948 did his bit for healing the scars of war. In that year he journeyed to the Rhineland where he presented a gift of relief money from a town in mid-Nebraska to a German town. A stout fighter against centralized government, Stefan was tireless in his efforts to curtail the veritable flood of dangerous requests for funds from Congress to expand collectivist power. Although discouraged by failure to stem this all-powerful tide, he never flinched. *Ave atque vale*

No Central Valley-Bonneville Intertie Means Less Aluminum

EXTENSION OF REMARKS OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Friday, October 5, 1951

Mr. ENGLE. Mr. Speaker, many Members of the Congress are aware that the power shortage in the Pacific Northwest has become a national problem which appears already to have affected production of aluminum in the defense effort. In connection with this regrettable situation, which could have been avoided, I wish to include two editorials for the RECORD, the first from the Sacramento Bee of September 25 entitled "Chickens Come Home To Roost in Power Crisis" and, second, from the Redding Record-Searchlight of September

25 entitled "No Bonneville Line, No Aluminum."

As the Sacramento Bee editorial says:

The possibility of a serious west coast power shortage has been evident for some time.

Notwithstanding the precarious outlook, Congress has been untowardly niggardly in providing for the development of power supplies, either because of a mistaken idea of economy, or because of the opposition of the private power interests.

As the Redding Record-Searchlight points up, one of the more sensible suggestions is an interconnection between the Bonneville power system in the Northwest, and the power systems of California and Utah. The proposed Bonneville intertie has been recommended by the engineers of Federal agencies, and we should, I believe, make every effort to overcome the political difficulty so that this sensible suggestion can be made a reality.

Only recently we have received word that the private utility in northern California would build a steam power plant of 600,000 kilowatts capacity. This move to build up almost non-existent power reserves is commendable. However, it seems extremely short-sighted and stupid to deny funds for public hydroelectric power plants in connection with irrigation and reclamation projects and at the same time proceed with the construction of these steam power plants which day after day will burn up irreplaceable oil supplies, while at the same time we allow the waters of our western rivers to cause flood damage and not put them to beneficial use.

If these streams were controlled by storage reservoirs, then the drain on our precious oil supplies would be reduced and we would not be guilty of wasting forever the power potential of these streams as they are allowed to flow uncontrolled into the sea.

It is also rather difficult to understand how this Congress is appropriating funds and urging reclamation development in a number of foreign lands and at the same time we are adopting budget policies which prevent development of our natural resources and obviously weaken our national defense. It is high time that we proceed again with a logical, far-sighted program for construction of storage reservoirs and hydroelectric power plants in our Western States. The editorials follow:

[From the Sacramento Bee of September 25, 1951]

CHICKENS COME HOME TO ROOST IN POWER CRISIS

Charles E. Wilson, the Nation's defense mobilizer, has called upon the west coast aluminum manufacturers to prepare plans for moving their plants from the Pacific Northwest because of a power deficiency.

The shortage, of course, is temporary. But it points up the undependability of our power sources, a weakness which could prove embarrassing if the Nation was at war.

What is tragic about this whole thing is that the contemplated move to be made at a great sacrifice of time and money would have been unnecessary had it not been for the shortsighted national power policy of the last few years.

The possibility of a serious west coast power shortage has been evident for some time.

Notwithstanding the precarious outlook, Congress has been untowardly niggardly in providing for the development of power supplies, either because of a mistaken idea of economy or because of the opposition of the private-power interests.

And while the acute shortage is in the Northwest, the matter is linked directly with California in at least two respects—one is the failure of Congress to provide for a great Pacific power grid as long has been recommended by engineers, and the other is the slowness of Congress in authorizing feasible projects in California which now could be sending a flow of precious energy into the power grid.

A 119-mile transmission line would tie together the power resources of the three Pacific States. As recently as September 19 the Defense Power Administration, in a memorandum to the Secretary of the Interior, stated:

"The advantages of this interconnection would result from the transmission of otherwise unusable excess hydro energy from the Pacific Northwest to California during seasonal high-water and off-peak periods on the Columbia River system, and transmission of steam power from California to the Pacific Northwest in low-water periods on the Columbia.

"Steam power would be transmitted at a time when the California steam plants are not operating on peak loads. There are water power reservoirs in both areas where energy can be stored. Advantage also can be taken of the diversity of run-off between different basins. Mutual advantages would result to the Pacific Northwest and the California power systems without disadvantage to either area."

It is a little late to think about meeting the current shortage. The chickens have come home to roost.

But the situation should cause Congress to reexamine the matter more closely to prevent future and perhaps more serious deficiencies—and to pay less heed to the voices of the private power interests which intone the false prophecies that there never will be a power shortage.

[From the Redding (Calif.) Record-Searchlight of September 25, 1951]

NO BONNEVILLE LINE, NO ALUMINUM

The production of war-vital aluminum has had to be cut 10 percent in the Pacific Northwest because there is a shortage of power. The situation is so desperate that all sorts of solutions have been proposed, ranging from steam generators (which would require several years to design and build) to artificial rain making (which might or might not work.)

One of the more sensible suggestions is an interconnection between the Bonneville power administration system and power systems in California and Utah. Such an interconnection would make more firm power available both in the Northwest and in California, because each system would make up for the lacks of the other.

Bonneville, operated by the low-head, big-volume flow of the Columbia River, turns out an almost steady flow of power, day and night, summer and winter. When the use of electricity falls off (late at night and early in the morning, for instance) Bonneville can't store the unused electricity in storage batteries, and it can't hold back the water to be used for power generation later. Shasta Dam, however, can store water for long periods, releasing it for power production when the power is needed. If the Shasta powerhouse had a connection with Bonneville, surplus power from Bonneville could be brought here during those wee, small hours when it otherwise would be wasted. The Shasta generators would be shut down, with only a small flow of water

going through the turbines. The water thus saved in Shasta Lake could then be run through the turbines later in the day, returning some power to the Bonneville system.

Representative CLAIR ENGLE, the Congressman from our district, has espoused the idea of a Shasta-Bonneville intertie, but private greed and partisan politics have blocked the proposal. The result is that today both California and the Northwest face power shortages, and aluminum output has had to be cut.

The interconnection, if accompanied by definite plans to develop the Trinity River power resources, could pave the way for an aluminum or magnesium plant near Shasta Dam. That would mean a lot to the economic development of Shasta and Trinity Counties. It would add to our national security. So far, however, those who are willing to endanger national security in order to prevent any development of public power facilities have had their way.

Bingham Formula for Solving Transit Problems

EXTENSION OF REMARK

OF

HON. RICHARD M. NIXON

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Monday, October 8, 1951

Mr. NIXON. Mr. President, Col. S. H. Bingham, chairman of the Board of Transportation of the City of New York, recently has made public a formula for solving some of the vexing transit problems which confront cities throughout the country. I commend the Bingham formula to your attention.

In recent years public transportation in many cities has found itself caught between rising costs, on one hand, and, on the other, a concentration of traffic in brief peak hours, increasing competition from private automobiles and a change in the pattern of metropolitan areas requiring steadily lengthening routes on congested streets. The result has been increasing financial strain, increasing fares, and in some cities, impaired service.

Colonel Bingham has spent more than a quarter of a century in mass public transit, not only as administrator of one of the largest systems in the world, but also as adviser to municipalities all over this country, in Europe and South America and as an expert in the United States Army in two wars.

Rapid, frequent public transportation in large urban areas at reasonable fares and in safe, modern vehicles is as vital as any other utility. Because, as Colonel Bingham says, "It may well come to pass that the individual private company may not be able to furnish the type of service desired at a fare considered reasonable," he has worked out a broad plan applicable to any city. It is a far-sighted, thoroughly feasible formula which might well be considered by authorities wherever streets have become costly, cluttered roadblocks rather than arteries for the free flow of commerce.

Mr. President, I ask unanimous consent that a statement of the Bingham formula as presented by Col. S. H. Bingham on July 16 in an address to a joint meeting of the metropolitan traffic and transit committee of the Los Angeles Chamber of Commerce and the Los Angeles Transportation Club, Inc., be printed in the Appendix of the Record.

There being no objection, the statement was ordered to be printed in the Record, as follows:

We must look for a new type of organization of transit that will provide this public service. The community must then take a much more active role in the provision of this essential service—even to the point of becoming a partner in the enterprise and controlling its operations.

I have given this long and detailed study. As a result, I have evolved a formula which I am confident is applicable in broad outline to most cities which may have to enter the bus transit business. Local conditions will, of course, require modifications in details of this formula. This is the first time I have discussed my formula in public. It calls first for a new type of government business entity.

This is a new kind of public transit corporation which, for want of a title, could be termed "City Transit Corp." It would combine the best features of private and municipal enterprise. It would retain the efficiency of operation known in the best competitive industry and the financial and other advantages of community operation.

This corporation would acquire the facilities and equipment of the existing private transit company or companies in its city through an exchange of revenue bonds for the physical assets and property. I shall go into this in greater detail later, but I should like to point out here that in this way the private transit line is acquired with no outlay of municipal funds and with no strain on municipal borrowing power. It is paid for out of earnings.

One of the principal benefits under my formula would be freedom of the public corporation from burdensome State and Federal taxes which have been a large factor in the financial problem of the private companies. Without additional fare increases or use of funds from other sources, I believe that essential service can be made readily available under public ownership in most cities and attractive enough to aid in the reduction of traffic problems. In cities where more than one local transit company operates, acquisition by the public transit corporation would permit elimination of wasteful competitive routes, and coordination of all mass transit facilities, to give the public the best possible service.

Now let us look to the method of acquisition.

I believe a city should acquire privately owned transit properties in return for revenue bonds issued for a term of, say 20 years. Naturally there will be negotiation on the purchase price which will depend upon conditions in each city and the book values of the physical assets involved. Purchase prices for some transit properties in the past have ranged between once and twice the gross annual income.

The bonds would be issued by this public transit corporation which would not be a part of the regular city government. Payment of interest and amortization of these bonds would be assured by a requirement that the fare should be sufficient to pay operating expenses and debt service. Since the transit property run by this public transit corporation would be tax exempt, the likelihood of the necessity for an increased fare to meet obligations would be small.

I believe it would be necessary to adopt this procedure because few cities these days have free borrowing power sufficient for the acquisition of a transit system. With tax exemption on the transit property and a 20-year amortization period for the bonds, I believe that transit operation could produce sufficient revenue at a reasonable fare. One of the critical problems, of course, is management.

It is essential that management be business-like. Therefore, my formula proposes a corporate form rather than merely establishing another city department.

The day-to-day operations and management control under my formula would remain in the hands of present management of the private companies—provided, of course, that the balance sheet and operating statement of existing management show it to be successful and alert to its responsibilities.

The management would be given authority to run the property in the most efficient manner possible, but complete regulatory control would be vested in the city. This would divorce transit operation from the red tape of government and civil service. It would be run as are the most progressive private enterprises.

To sum up, I think that in this type of public transit corporation we get the best features of both private and public ownership. We reduce the fare burden on the rider so that transit patronage is encouraged, and traffic congestion relieved.

Following this pattern we can have a well run, efficiently managed transit system. The rider has a stake in the enterprise. Management has the economic responsibilities of meeting operating expenses from the revenue derived from a low fare, and is given the authority and freedom from red tape to make such a result possible.

What I have tried to do today is point out to you that an essential public utility, mass transit, is in a period of severe economic stress. The powerful social and economic pressures on this industry are forcing it into a position where it may not be able to do its job under the usual pattern of private enterprise in this country. We must therefore devise a new pattern, using the best elements of both private and community enterprise to assure the continuity of this essential service.

I have suggested such a pattern, a public transportation corporation, in broad outline. Each community will, of course, have to work out the details to meet its own needs and circumstances.

Inherent in this formula, no matter how it is worked out in any city, are seven benefits which I have indicated and which I should like now merely to recapitulate. They are:

1. The municipality would ultimately become owner of the transit system which serves it.

2. It would acquire this system at no cost to the farepayer or taxpayer.

3. It would acquire this system with no outlay of its own general funds.

4. It would acquire this system without affect on its debt limit and without diminishing its borrowing power for other capital improvements.

5. It would have a coordinated transit system operating solely for the community's benefit.

6. The municipally-owned public transit corporation could operate without pressure or restriction from outside sources.

7. The city would have assurance of continuity of this essential service.

This is, of course, no complete cure for all the ills of public transportation and traffic in our cities. But it is a fair statement of the problem and a sound approach to solving it.

The Physically Handicapped**EXTENSION OF REMARKS
OF****HON. FRANK CARLSON**

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, October 8, 1951

Mr. CARLSON. Mr. President, I ask unanimous consent to have printed in the Appendix to the Record an address delivered by Mr. Paul A. Strachan, president of the American Federation of the Physically Handicapped, at their kick-off luncheon today, Monday, October 8. The American Federation of the Physically Handicapped, under the able direction of their president, Paul Strachan, has been carrying on an active and effective campaign in behalf of the Nation's physically handicapped. This address is most timely as we give national recognition to Employ the Physically Handicapped Week.

At a time when our Nation is entering into a program of expanded production for national defense, it is necessary that we make a greater effort to fit our physically handicapped into positions where they can be of real service, not only to themselves but to the Nation.

During my 4 years as Governor of the State of Kansas, I had an opportunity to work closely with the national organization, and our State, through the cooperation of civic and veterans' organizations, in conjunction with our State employment service, rendered outstanding service to these citizens. We had fine cooperation from the employers in our State, and made some very definite gains in the number employed and the results obtained.

I am confident that this year, during the Employ the Physically Handicapped Week, additional thousands of our physically handicapped citizens will be given an opportunity to make a livelihood for themselves and render a service to their Nation.

There being no objection, the address was ordered to be printed in the Record, as follows:

ADDRESS OF PAUL A. STRACHAN, PRESIDENT, AMERICAN FEDERATION OF THE PHYSICALLY HANDICAPPED, BEFORE KICK OFF LUNCHEON, "NEPHW," STATLER HOTEL, WASHINGTON, D. C., OCTOBER 8

Mr. Toastmaster, Rabbi Gerstenfeld, Monsignor McGowan, distinguished guests, friends. Ten years ago we began a militant campaign to inculcate in the minds of the American people the fact that their physically handicapped brothers and sisters are not worthless human wreckage, with the status of second- and third-class citizens, but are a valuable national resource.

We have not yet achieved our goal, although definite progress has been made. On employment of handicapped, alone, since 1940 we have come from 27,675 placements in that year to 276,822 in 1951, with a cumulative total of 2,355,000 handicapped so placed, over the 10-year span. These handicapped, so rescued from the human scrap pile, have proven their worth as workers and as citizens. They have shown willingness, loyalty, diligence, and their production performance is as good as nonhandicapped and, in many instances, better.

This is proving that the proper approach to solution of the handicapped problem is

not charity; not the crocodile tears of the I'll Cry for You pseudo philanthropists and humanitarians who are, really, more concerned about having their pictures in the paper, than actually giving needed service to the handicapped.

We shall never succeed with this problem, affecting in greater or lesser degree the lives of some 30,000,000 American citizens, until we cease attempting to futilely palliate the evil, instead of seeking and applying a real remedy.

After more than 36 years of study I am convinced that the only proper method is to regard this as a cold-blooded economic proposition. We have these millions of handicapped people. We must either form a Euthanasia League and thus kill them off, or we must find a way to integrate them into our social and economic life. We cannot longer ignore them and we cannot dismiss them by, once a year, mailing a check to our favorite charity and then rubbing our hands with smug self-satisfaction, while saying, "Well, we're all through with that for another 12 months."

No; you, and you, and you—all of us—must realize that in this matter we are our brothers' keepers, and we cannot escape or evade that responsibility by any shallow or false sophistries whatsoever.

While we know that employment of handicapped is, basically, the most important part of the program yet, we also know that there are other phases, medical treatment, education, and training, etc., which likewise are essential and to meet which needs, today, there is grave lack of trained specialists, facilities, and funds to do this highly important job.

It is my absolute conviction that the great pillars of this program are, on the one hand, industry and business and, on the other, labor. There you have the employers, so vital and necessary to the success of this program, and in the other extreme you have the people who make up the working population. Unless there is understanding of this problem and agreement between these two groups as to supporting the program it cannot win.

Today in many cities across country we have established labor-management committees. In my judgment there are the places to plant the seeds of the program for handicapped. There plans can be studied and in the light of experience, other plans adopted or amended, that will provide for the utmost use of our handicapped in the 25,000 different kinds of jobs existing today, and I may say, parenthetically, that we have already found—thanks to the fine but still incomplete research job done by the United States Civil Service Commission, the United States Bureau of Employment Security, and the Public Health Service—that handicapped can fill satisfactorily more than 10,000 of those jobs if they are fitted into work where their own particular disability is not a factor.

In these labor-management committees we have the means to do the greater part of this job because management, as representing the employers, will thus learn from actual experience the great value of handicapped people as workers, and labor will learn thus that its own people are not necessarily to be laid on the shelf, a drain upon their families, communities, States, and the Nation, when injury or disease incapacitates them for one job but there are many other jobs for which such persons may be trained.

In these labor-management committees, I firmly believe, we have the crucible which will melt down the metal and burn off the dross and slag until we develop to the fullest extent the great public service program to utilize our physically handicapped so that within their capacities to perform they will have the same opportunities as nonhandicapped, and no longer will they be told "not wanted" when seeking employment so that they may earn their way as taxpayers—not tax eaters.

The Problems of Youth**EXTENSION OF REMARKS
OF****HON. ALEXANDER WILEY**

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, October 8, 1951

Mr. WILEY. Mr. President, we hear a great deal of talk these days about the problems of American youth. There is much worrying about our young people—a good deal of it competently unjustified, incidentally. But comparatively few folks ever bother to do anything constructive for and with the young people.

One exception to that, however, is a new series of excellent television broadcasts, the American Youth Forum, conducted by Mr. Theodore Granik, founder and moderator of the famed American Forum of the Air. To my way of thinking, the American Youth Forum is one of the most constructive uses of television by any network.

Under the theme "Youth Wants to Know," some 50 bright young people, aged 16 to 20, from high schools and junior colleges, submit their questions to some prominent personality in public life. An audition program was presented on September 8 with my able associate, the senior Senator from Ohio [Mr. TAFT], as guest. The questions and answers proved so dynamic and spirited as to enhearten every one who saw and was connected with that initial program. Other guests have been my colleague the senior Senator from Washington [Mr. CAIN], the junior Senator from Minnesota [Mr. HUMPHREY], and last Saturday night Maj. Gen. Lewis B. Hershey, Director of Selective Service.

I have in my hands the transcript of General Hershey's talk. I must say that the youngsters really offered some splendid questions, evidencing mature, well-reasoned thinking.

Having long been interested in the use of television for educational purposes, I am delighted, indeed, to pay my respects therefore to Ted Granik, to the National Broadcast Co., and to all of the folks associated with American Youth Forum.

The program is presented with the cooperation of the American Legion each Saturday night over the NBC television network. It originates from the NBC-TV studios in the Wardman Park Hotel from 7 p. m. to 7:30 p. m.

The American Legion, as we all know, has long been interested in helping American youth fulfill our highest ideals. Its famous Boys' State and Girls' State, involving youthful government in action are, I believe, two of the most marvelous ideas which any organization has ever initiated in connection with young people. Next week the Legion convention is meeting in Miami. There will certainly be a great deal for the assembled Legionnaires and auxiliary members to be proud of indeed.

Yes, Mr. President, we hear a great deal of talk about the problems of youth, but American Youth Forum is the type of program that is going to help take care of those problems. It challenges the mettle of youth. It uses youth's

vital energy along wholly constructive lines. It shows young people that we value them. We want their best judgment. We want to treat them in as mature a fashion as they themselves can achieve. We want them to help solve their own problems and those of adult America.

Let me add, Mr. President, that we hear a lot of talk about the wrong type of program or television. Well, in American Youth Forum we have a very fine example of a right type of program, a program meriting the backing of parent-teacher organizations, youth groups, civic clubs, and, yes, everyone else in America who is interested in our young people. It is the type of program which merits commercial sponsorship and backing from the American free enterprise system. I feel sure it will get such backing. America always rewards fine projects like this.

I had hoped to place the full text of last Saturday's transcript in the Appendix of the RECORD, but since that would exceed the normal two-page RECORD limit, I have had to make certain necessary cuts in the transcript. I am reluctant to do so, but I think that General Hershey and the young people involved will forgive me.

I have concentrated on retaining those sections containing General Hershey's replies on the subject of the draft, with which he is most thoroughly familiar. As a matter of fact, General Hershey was very careful to point out that many folks have opinions about a lot of things in which they, comparatively speaking, are not expert. So he very carefully drew the line when questions arose on which he did not feel himself to be particularly well versed to give an authoritative answer.

I commend General Hershey for that careful, conscientious, and humble attitude. Many men in public life could benefit by using that type of careful approach, in which the individual does not presume that he knows everything about everything. I hope that the young people who heard General Hershey on Saturday learn that splendid lesson from him—Never to be "sure" of things when they simply do not have sufficient facts and background to really give a definite opinion.

I recall that Will Rogers once stated in his inimitable humble way, in effect: "It ain't the things that people don't know in this world which cause so much trouble; it's the things that people think they do know but which just ain't so."

Fortunately, we have in Lewis B. Hershey a man who is careful not to exceed the limits of his own background and authority.

I ask unanimous consent that the excerpts from the broadcast be printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

THE AMERICAN YOUTH FORUM

FRED W. LLEWELLYN III. How would the universal military training affect high-school students?

Miss MARIAN MANDELL. I want to know, is it democratic for the Government to defer college students with high I. Q.'s?

Mr. CLIVE R. DYSON I want to know, is President Truman justified in accusing newspaper officials for releasing information already released by the Pentagon?

ANNOUNCER These are a few of the questions young America is asking today. What are the answers? Youth wants to know.

The National Broadcasting Co. presents the American Youth Forum, a program dedicated to the principle that the future of America rests with the young people of our Nation. And to help resolve some of the questions in their minds, here is the founder and director of the American Youth Forum, Theodore Granik.

Mr. GRANIK. Good evening. Our guest tonight has one of the toughest jobs in the Nation, that of bossing our Selective Service System. I have a high personal regard for Maj. Gen. Lewis B. Hershey, the draft director. I had the great privilege of serving as one of his civilian aides during the last war. I recall he was a major then, secretary of the joint Army and Navy selective service committee when we first began our association and friendship. I shall always remember his affectionately dubbing me his corporal and the thrill I had in sending him his first stars when he was appointed a brigadier general.

The youngsters in our studio tonight, who were brought here under the auspices of the American Legion, want to question the general about his recent trip to Europe and the prospects for the draft.

But first here is a little background information about our guest. General Hershey was born in Indiana. He is a soldier but not a "brass hat," for he came up through the ranks. He has served as a rural school superintendent, a job he quit to join a National Guard unit at the Mexican border. In France, after World War I, he helped arrange for the return home of American troops. He is the father of selective service, as well as the father of four children. His hobby is psychology. He has a huge library and says he likes to know what makes people tick.

And now, General, our youngsters want to know what makes you tick.

General HERSCHEY. Well, if it wouldn't be presumptuous, I would like to say, Corporal, I think the problem tonight is not what makes people tick, but, after I look over this group of youngsters, I am wondering whether I am going to tick or not, and when we find that one out, then, they can go into what makes me do it.

Mr. GRANIK. Shall we take the first question, General?

General HERSCHEY. Let's go.

Mr. LLEWELLYN. General Hershey, my name is Fred Llewellyn, and I would like to know how universal military training would affect our high-school students.

General HERSCHEY. I think that is a pretty easy one to answer because every time the Congress has legislated in this field, they have always planned to let the individual finish high school before he took military training, that is, providing he could get through by the time he is 20 years old—and he would have to be a pretty good football player if they wanted to keep him much longer than that. So, my answer would be that, as far as high school goes, universal military training I don't think creates much of a problem for them. The problem is further on in the educational system.

Mr. LLEWELLYN. Then you don't believe that there would be any of this marks business, that is, that the highest half would get to stay in high school and the other half would go into military training?

General HERSCHEY. Well, I suppose, being a little facetious, we ought to let them go to school a while even if they aren't too bright.

Mr. GRANIK. Go ahead, ma'am. Do you have a question?

Question. General Hershey, I want to know, are you in favor of universal military training?

General HERSCHEY. Yes. I have been since 1908.

Question. Do you think we can avoid doing the same thing that happened to Germany before World War I?

General HERSCHEY. Well, I think we are jumping a little fast there. Just because people live in a white house, and the white house burns up, is no sign that everybody else who lives in a white house is going to be burned out. I think the people determine whether they are going to get into militarism, if that is what you are worrying about. It is a question of mind and a question of the way people approach things. The Swiss have been over there for a great many centuries, and one of the things that impressed me on this last trip was that the one place that you are conscious people are going to survive is in Switzerland; and certainly they haven't damaged democracy much in Switzerland because there they don't let the central government do anything.

Mr. GRANIK. Go ahead, young lady.

Miss MANDELL. I am Marian Mandell, and I want to know, is it desirable and democratic for the Government to defer college students with high I. Q.'s?

General HERSCHEY. Well, you kind of put me on the spot a little on two or three things, because, in the first place, I am not so sure what a thing is that is democratic, and I am not so sure that I know what you mean when you say "Is it democratic?" Now, is it democratic to send a boy 19 or 20 or 21 or 22 or 23 to fight and leave a 60-year old not to fight? I don't know the answer to it, but the reason you send the youngster is because he can do something while the 60-year old can't. Now, if we are going to send any one to college, we had probably better send some one who can get along in college. That is one of the basic reasons why you pick out the high I. Q.'er to go to college, the assumption being that he can do something.

Miss MANDELL. Don't you think there will be antagonism on the part of the people who are not so bright and who have to go into the military toward those who are brighter and who get to go to college?

General HERSCHEY. I think you are saying that we should lose the psychology that you should never have a competition because somebody has to lose. But if we lose that philosophy, there will be no football games and there will be nothing because somebody might be frustrated because they didn't win.

Mr. GRANIK. Do you have a question back there?

Mr. SHAW. My name is Russell Shaw. I want to know whether you think A. B. college students should be deferred as well as technical students?

General HERSCHEY. Well, yes. You have rather hit me in a weak place.

Mr. GRANIK. He knows one of your weak spots.

General HERSCHEY. When I was in college, I was an A. B. rather than a so-called technician. I do have one Bachelor of Science degree. But we have to have people in this world besides scientists. One of the things we are very low on is people who know something about human relations. Most of our troubles are because of human relationships, not because of the relationships of matter. I don't know whether this bill A. B.'er is going to do something about it sooner than the fellow with a degree in engineering.

Mr. DYSON. My name is Clive Dyson. I want to know whether the President is justified in accusing newspaper officials for printing and releasing information that has already been given to the press by the Pentagon.

General HERSCHEY. Well, I can say that if I had been back from Germany longer I wouldn't be able to answer that; but, fortunately, I just got back yesterday, and I haven't gotten myself into it. There are

three or four other excuses I could offer, but I won't give you those.

Miss JOHNSON. My name is Joan Johnson. I want to know if the rearmament of Western Germany will reawaken the militaristic spirit of the Germans and cause them to attack France again.

General HERSHEY. Well, I guess that is a good question, and I am one of these experts that has been over there 2 nights or so in Germany, and I suppose I ought to know the answer. I think that it is a debatable question, that is, how much militarism you are going to awaken by having people get into the posture where they can defend themselves. I think Aristotle or Socrates, one of those two philosophers, said: "Not too much of one thing," so I suppose one of the things we are going to try to get is a belligerent spirit in the West to defend themselves.

Miss JOHNSON. Don't you think we have learned that lesson from World War I and World War II?

General HERSHEY. I was over there a very short time. I have been in the United States, I won't say for how many years, but much longer, and I am not sure that America has learned the lesson of either war, so I would hate to say that the Germans have done so.

Mr. GRANIK. General, a teenager named Sam Rose telephoned me and asked whether, considering the number of American troops that the administration has made available for General Eisenhower's international army, after your first-hand survey of conditions in Europe, you think additional GI's should be sent over there?

General HERSHEY. If they need more troops then we are going to furnish them, there is no question that we should. I am inclined to think that the numbers we have over there are probably the minimum. That is quite a little country over there, small as it is, and as I looked at the line between us and the East, it is an awfully long line and I can tell you that it is not heavily populated with soldiers at the moment.

Mr. GRANIK. Do you think it is the very minimum?

General HERSHEY. I think it is less than the minimum, and having had a son-in-law about 50 miles from the Czech border for the last few years, I shall be happy to have that line better protected.

Mr. GRANIK. Go ahead, please.

Mr. ZIERNICKI. My name is Robert Ziernicki. I would like to know what age group produces the best soldiers.

General HERSHEY. Well, you flatter me. In the first place, I am in the procurement business. I am not in the using business. I think soldiers can be too young, but, on the other hand, they usually get too old.

One of the strange things was that when we went to the mechanized army we found we had difficulty in teaching the older people. We haven't been able to teach people of my age even to drive. I think the early twenties or the very late teens are probably the most dynamic, the most easy to learn. I don't want to say the most tractable because they sometimes don't act like it. But I would say the very late teens and the early twenties.

Mr. GRANIK. Young man, go ahead.

Mr. FENSTER. My name is Harvey Fenster. I want to know what chance a college student taking a more extended course has of finishing it?

General HERSHEY. By extended, you mean graduate?

Mr. FENSTER. Postgraduate.

General HERSHEY. I think that after you have finished your 4 years of college you get into a little different philosophy. For the first 4 years of college, you may have some rules on deferment. You allow a man to be deferred because you think he has the capacity to become useful. But after you finish your undergraduate work then I think the work that you are going to do has to be

useful or we probably had better have your 2 years in and then you can go to your graduate work after you get back.

Mr. GRANIK. All right, young lady.

Miss ANDREE. My name is Kathleen Andree. I want to know what your opinion is on the draft of women in the event of an all-out war.

General HERSHEY. I have a daughter named Kathryn, and I am quite able to be embarrassed by people of that name asking me questions, but I am not quite as much embarrassed as I would be otherwise. I try to stay out of that for several reasons. One is that I don't believe the demand for the women in the Armed Forces at the present time is great enough that we are going to do very much about it. But I do believe that if we get all-out mobilization and get to needing people, the women would go if necessary. If we can get all of the women in the Armed Forces without drafting them we would rather have it that way. But any time we need more women in the Armed Forces than we can get otherwise, I believe that when that time comes we will have no trouble passing an act making women liable.

Mr. GRANIK. All right, young man.

Mr. HILLIG. My name is Bernard Hillig. I want to know whether you think we should extend more military and economic aid to Franco Spain since she occupies such a strategic position on the European Continent.

General HERSHEY. Well, that thing I don't know anything about. I wasn't in that area of the world, and I don't even know how much we have sent. My remembrance is that we haven't sent very much, so if we send anything we will be sending more than we are sending now.

Miss VAN SCIVER. My name is Gloria Van Sciver. Mr. Granik mentioned that you are interested in psychology. As a student of this, I want to know if it is really possible for a people who have a warlike history such as the Japanese have to change their ways and actually work democratically when their culture doesn't have the traits that this needs.

General HERSHEY. Well, you sort of have worked me over on quite a little bit of evidence here. In other words, you have rendered some judgments, and I think your answer is "no." I don't know that I agree with you. I heard that question debated, coming back on the ship, about Germany. Both of them are allegedly warlike people. I don't know what makes people warlike, whether it is because of the climate or the food they eat, or some cussedness or something that came in them. I am not so sure but that one of the things that makes them warlike is their neighbors. I know people who live in neighborhoods around here and they kind of make a lot of noise but when they move into a quiet neighborhood they do quite well. I am not so sure but that the Japanese didn't find part of their need of becoming warlike due to what they thought of their neighbors. One of the strangest things is that when you meet the individual Japanese, and the individual German, he is about the most gentlemanly person you can imagine. I don't think they are necessarily condemned to being warlike. After all, if survival requires warlike, we had better be careful about not being too pacifistic.

Mr. KANE. My name is Matthew Kane. I would like to know whether, since you are in charge of procuring men, you advocate dropping an atomic bomb and saving all of this bloodshed that is going on in Korea without drafting and drafting and drafting ad infinitum.

General HERSHEY. It seems to me that if I was in charge of that job I certainly wouldn't be in favor of dropping the atomic bomb, because it might put me out of a job.

Mr. KANE. Aside from your job, are you in favor of it?

General HERSHEY. In the first place, I haven't the problem of whether we should drop an atomic bomb or not, and I certainly wouldn't want to drop an atomic bomb, knowing as little about the tactical and strategic situation as I do. And I am a little disturbed about the fact that sometimes people who know little more than I do about that are so positive.

Mr. KANE. Then you have no idea whether you want to drop an atomic bomb or not?

General HERSHEY. If you will give me the situation under which we would drop one, I will tell you; but I am not running around dropping even shotgun shells in the situations that I know nothing about. And you don't drop the bomb just on Thursday, or something. You drop it on some part of Korea or Manchuria, or some other base. I want to know a little more about why we want to drop it and what we expect to see left after it is dropped and what that will accomplish. Then after I know some of those things then I can give you an answer.

Mr. KANE. Take the bases in Manchuria, the supply bases in Manchuria which are keeping the Chinese Army alive.

General HERSHEY. Don't you think that if those bases were destroyed, the Chinese Army would still stay alive?

Mr. KANE. We have blockaded the water ports, and the supplies must be coming through them.

General HERSHEY. But there is a whole continent behind them.

Mr. KANE. The facts show that the railroads are running right through Manchuria.

General HERSHEY. Well, maybe the trucks will run through if you blast out the railroads. You are jumping at the conclusion that dropping one bomb is going to put Asia up on its ear. Asia is a very large country. Even around here, I believe that Montgomery County could stand one atomic bomb if they dropped it in the right place. Of course, there would be some differences of opinion where the right place would be.

Mr. VERDI. My name is Anthony Verdi. I want to know whether you advocate the use of Chinese Nationalist troops in Korea.

General HERSHEY. I never have. I don't want to say that I never would or wouldn't.

Mr. GRANIK. Young lady.

Miss STRACK. My name is Doris Strack. I want to know whether if Japan trades with Red China, which is now its most important source of raw materials, you think that will tend to break down the steps that Japan has taken toward democracy.

General HERSHEY. Well, I don't know a thing about that, hardly. China is a very large question and there are hundreds of things that enter into it. I think one of the things that perhaps I have lost as I have grown older—and I am not sure that it was wisdom to lose it—was the ability to settle all questions on the basis of getting them reduced down to a single area and then say "Yes" or "No." There are so many factors that enter here, that you swamp me a little bit and I don't know.

Mr. GRANIK. Young man.

Mr. GEARY. My name is Nathaniel L. Geary. I would like to know if, in your travels through the different parts of the world, you find that the people there have good attitudes and beliefs about the American people or whether they think we are a bunch of capitalists who are trying to take everything that we can.

General HERSHEY. Well, I don't think everyone—I don't know what the Germans think. I have a little ancestry way back that was German, but it is probably so far away as to be of little importance. I think they would like to have us out of there. I would, if I were a German. On the other hand, my observations at the moment are that there are some other things that might happen if we got out. As little as they like to have us there, they believe that what would happen to them if we went away would leave

them in a rather bad situation. They have two choices, neither one of them good. I don't think they think we are all capitalists. They might because we do have a reasonable amount of money. I think they think the average private in the Army is a fairly wealthy fellow. He happens to be on paydpy. But I still don't think they think we are all capitalists, nor do I think they think we are all angels. They probably think we are somewhere in between.

Mr. GRANIK. One more question.

Miss LOVING. My name is Rita Loving. I want to know just what is the status or the potency of the Communist Party in Europe.

General HERSHEY. I haven't the slightest idea. I think they are working as hard as they can. Sometimes they are gaining and a great deal of the time they are losing. I would say that in the latter part of the last 5 years, I don't think they have done as well as they did in the first part, but this again is something I don't know much about.

Mr. GRANIK. Thank you very much.

General. I know this give and take questioning could go on for hours, but now our time is up. Next week, our representative group of teen-agers will ask their questions of Senator BLAIR MOODY, a Democrat, of Michigan, who has been active in the congressional battles over taxes and economic controls. This is Theodore Granik inviting you to be with us again next week at our unrehearsed American Youth Forum.

Statement by the President Regarding Order for the Handling of Information

EXTENSION OF REMARKS OF

HON. HOMER FERGUSON

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Monday, October 8, 1951

Mr. FERGUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record the text of the President's prepared statement on his order governing the security of Government information and the transcript of the discussion which followed that statement at his press conference on October 4. The statement and transcript are taken from the New York Times of October 5.

The President prefaced his statement with an observation that reporters were interested in censorship and that he did not believe in it. He then read his prepared statement, and a discussion with the reporters followed. Subsequent to the press conference the President's press secretary, Joseph Short, issued a clarifying statement which is attached to his statement and the transcript of the discussion.

There being no objection, the statements and the discussion were ordered to be printed in the Record, as follows:

TEXT OF TRUMAN SECURITY STATEMENT AND TRANSCRIPT OF DISCUSSION

STATEMENT BY PRESIDENT

There has been considerable misrepresentation and misunderstanding of the Executive order issued on September 24, 1951, relating to the handling of information which has been classified in order to protect the national security. This executive order represented an honest effort to find the best approach to a problem that is important to the survival of the United States.

[At this point he looked up from the text and said that right here he wished to stop and say that the Central Intelligence Agency had reported to him that Yale University had made a survey and that survey found—it had no connection with the Government—that 95 percent of all our information was public property.]

I issued this order with great reluctance, and only when I was convinced after lengthy consideration that it was necessary to protect the United States against its potential enemies. I think my record in defending civil liberties in this country demonstrates that I have no desire to suppress freedom of speech or freedom of the press.

I would like for the public to understand what this order undertakes to do and why it was necessary to issue it.

In its simplest terms, the problem is what we should do to keep military and related secrets from falling into the hands of enemies of the United States.

I do not believe that anyone could seriously contend that military secrets should be published in the newspapers or that anyone has a right or duty to see that military secrets are made public. I believe that everyone, including Members of Congress and newspaper editors, should think twice before advocating a theory that would lead to that result.

Whether it be treason or not, it does the United States just as much harm for military secrets to be made known to potential enemies through open publication, as it does for military secrets to be given to an enemy through the clandestine operations of spies.

[Here he said that there wasn't any difference at all.]

On the other hand, I do not believe that protection of military secrets should be made a cloak or cover for withholding from the people information about their Government which should be made known to them. I believe that everyone, including Government officials, should try to prevent this from happening.

It is easy to agree on these two objectives, but it was difficult to establish the means for accomplishing both of them.

In those agencies of the Government primarily concerned with national-security matters, such as the Department of State and the Department of Defense, we have had for a number of years a system of classifying information to prevent its disclosure to unauthorized persons when it would be dangerous to national security.

This system has worked reasonably well, although it has not in all instances prevented the publication of information which aided our enemies against the United States, and in other cases it has been used to classify information which actually had no particular relationship to national security.

[Here he paused and said that those were the two things that we were faced with—how to prevent our military secrets from becoming the possessions of our enemies and how to be sure that in doing that we don't cover up information that ought to be made public.]

In the present defense mobilization period, it has become necessary in an increasing number of cases to make military secrets available to executive agencies other than the military departments in order that these other agencies might effectively perform their functions that are necessary in supporting the defense effort.

It is also necessary for some of the civilian agencies, such as the Central Intelligence Agency and the Federal Bureau of Investigation, for example, to originate and protect some information vital to our defense.

It should be readily apparent that military secrets in the hands of these agencies should be protected just as much as when they are in the hands of the military departments. It would also seem to be sensible to provide that different agencies take the

same kind of precautions to protect this information.

It would not make any sense to have a paper containing military secrets carefully locked up in a safe in the Pentagon, with a copy of the same paper left lying around on the desk of a lawyer in the State Department.

Now, the purpose of this Executive order is to provide a common-sense answer to these problems. It is to provide that information affecting the national security shall continue to be protected when it gets out of the hands of the military departments and into the hands of other agencies.

The purpose is to provide that these other agencies shall provide the same kind of protection that is provided in the military departments.

An important purpose

Another purpose of the order—and it is a most important purpose—is to provide that information shall not be classified and withheld from the public on the ground that it affects the national security, unless it is in fact actually necessary to protect such information in the interests of national security.

In other words, one of the purposes of this executive order is to correct abuses which may have grown up by use of overclassification of information in the name of national security.

I think this Executive order represents a reasonable approach to a very difficult problem. I think it will work in the public interest and I expect to watch it closely to see that it is not used as an excuse for withholding information to which the public is legitimately entitled.

It may well be that experience under the order will indicate that it should be changed. In that case, I will be glad to change it—and I will be glad to give consideration to reasonable suggestions for changes that are advanced in good faith.

I would like to suggest to those who are seriously and honestly concerned about this matter that they consider it objectively and with the interest of the United States uppermost in their minds. I would like to suggest that they consider how we can best accomplish objectives which all of us should be able to agree upon.

I do not believe that the best solution can be reached by adopting an approach based on the theory that everyone has a right to know our military secrets and related information affecting the national security.

[After ending the reading of his statement, Mr. Truman said that now he was going to hand reporters this in mimeographed form and he hoped every one would take a good look at it, that they would give it to their editors and publishers and remember that 95 percent of our secret information had been revealed by newspapers and slick magazines, and that is what he was trying to stop.]

DISCUSSION WITH REPORTERS

Question. Mr. President, can you give us examples of what caused this order?

Answer. The President said yes, the most outstanding example was the publication in Fortune magazine of all the locations and maps of our atomic energy plants, and then in this very town, in every town in the country, were published air maps of Washington, New York, Chicago, San Francisco, Seattle, and other of our great cities, and with arrows pointing to the key points in those towns.

Question. I think that information was given out by the military department.

Answer. Mr. Truman said he did not care who had given it out, and that the publishers had no business to use it if they had the welfare of the United States at heart.

Question. I don't know whether it was the military or the atomic energy department.

Answer. The President replied he did not care who had given it out, that publishers ought to be as patriotic as he was and he wouldn't give it out.

Question. If stories came over the wire—

Answer Mr. Truman said he did not care.

Question (Continuing). Would you attribute it to a military agency?

Answer. If the military agency gives it out and an atomic bomb falls on you on account of it, who's to blame? Mr. Truman demanded.

Question. As I understand it, the editors did not make up these maps.

Answer Mr. Truman said he meant civil defense maps. They were the air pictures of all those cities, and it was terrible. He wished he had them of Russia and their manufacturing plants. He could use them.

Question. When was that Yale survey made?

Answer. Just a short time ago, Mr. Truman said.

INSTANCE OF OVER-ZEAL

Question. Along the lines of your effort to safeguard military and security information, what safeguard is there that the military officer will not be over-zealous? As I recall it the first act taken under your executive order was a statement that security information is anything that embarrasses the OPS.

Answer. He got the carpet pulled out from under him, said the President.

Question. You are the one man to watch those things and it is not possible for one man to watch everything.

Answer. That is correct, that is correct, said Mr. Truman, adding that he hated censorship just as badly as they did and would protect them against that as far as he could but the safety and welfare of the United States of American came first with him.

Question. There was a suggestion on Capitol Hill by Senator BAXTON that if each department had a security officer, it should also have a man who fights for release of information.

Answer. Mr. Truman said he did not know about that.

Question. Mr. President, have you weighed the importance of a free press in relation to military security as both important to this country?

Answer. The President replied yes; a free press was just as important—a free press was just as important as the Bill of Rights and that is what was contained in the Bill of Rights.

A DANGEROUS POWER

Question. But do you not think you are giving dangerous power to agencies to decide what should be given to the people?

Answer. He said he was not so sure, that we would have to wait and find out. If that was the case, he continued, we would change that, as he said.

Question. Do you not think that censorship is always abused?

Answer. Mr. Truman replied he did not know. He had not had any experience with it.

Question. I have, sir, and I think it is always abused, even by the military.

Question. Is there any program for giving the agencies uniform standards?

Answer. Mr. Truman said he hoped there would be.

(At this point Joseph Short, presidential press secretary, spoke in a low voice to the President.)

Question. What did Joe say?

Answer. The President answered that Mr. Short had said there was a provision in the order for a training program for these men and for uniform standards and that the training would be carefully supervised.

Question. Did I understand you to say that 95 percent of our secret information had been revealed?

Answer. The President replied yes; 95 percent of all our information had been revealed in the press one way or another.

Question. I think what was in Macon's (Macon Reed, Jr., Trans Radio Press) mind was your statement that 95 percent of our secret information has been revealed in newspapers and slick magazines and that is what I am trying to check. Is that it?

Answer Mr. Truman said that was right; that was correct, that was the answer.

Question. Mr. President, on this question of the maps, I wonder if we could recapitulate that just a little. Do we understand you correctly that in the event a newspaper or magazine gets some information from, say, the Defense Department, do you think, sir, that the primary responsibility for publishing it rests on the publishers or the originating agency?

Answer. The President said there was no question about that because they were very careful not to publish a lot of things that he said.

WASHINGTON AIR MAPS

Question. This is just a technical question, what maps have we been referring to?

Answer. Mr. Truman said air maps of the cities of the United States.

Question. Are you referring to any one in particular, or just to some that have been published?

Answer. The President said that if they would look back through the magazines they would find, in the daily press, in the newspapers in Washington, that they published air maps of Washington and pointed out the key places, and that was what he was worried about. He was not trying to censor information. He was trying to prevent us from being wiped out.

Question. To get the record clear, those maps, indicating vital points in those cities, were those issued by the Civil Defense Agency?

Answer. He said he did not know where they came from. All he knew was that he saw them in the papers.

Question. I would like to clear up that 95 percent secret information that has been disclosed. You would not have that 95 percent disclosed that has been disclosed?

Answer Mr. Truman replied. No; there was a lot of it he would not disclose, but 95 percent of it had been made public.

Question. I know that Central Intelligence says that 95 percent of their information comes from magazines and newspapers.

Answer. That was absolutely correct, said the President.

THAT 95 PERCENT

Question. As I understood your statement, you said that 95 percent of our secret information has been disclosed. We are talking about two different things.

Answer. Maybe, said the President, adding that the Post-Dispatch and he were usually on different things, Pete (Brandt of the Post-Dispatch).

Question. Not on military matters. But this 95 percent of our secret information which you wanted to keep secret has been disclosed?

Answer. That was the information he had from Central Intelligence, Mr. Truman said.

Question. Who classified that 95 percent as secret?

Answer. The military and State, the President replied.

Question. What is the unit of information? What percentage is maps, stories, and so forth, out of the 95-percent figure?

Answer Mr. Truman said it took into consideration all of the things mentioned.

Question. I am a little confused. Was that the Yale survey you were talking about that said that 95 percent of the secret information has been revealed?

Answer. Yes, yes, said Mr. Truman.

A CASE IN POINT

Question. I would like to raise a case in point. Yesterday Mr. Short announced on your behalf that another atomic bomb had been exploded by Russia and said that fur-

ther details would not be given because they might adversely affect the national security. Right afterward the Associated Press came through with a story quoting an unidentified but authoritative source that there had been two explosions, one of them had fizzled, and quoting a Congressman, also unidentified, as saying that the explosions had taken place in the last 3 or 4 days. Could you give us some reaction to that as a specific example of information over and above what was released by the White House?

Answer. Mr. Truman thought that was an example.

Question. Of what?

Answer. An example of disclosed information that should not be disclosed, Mr. Truman said.

Question. Don't you think the Russians know it? I mean—

Answer (breaking in) Mr. Truman said they had exploded it, of course, they did.

Question. Then why would that hurt our national defense?

Answer. Because we have got to find out what they are doing, the President said.

Question. You mean disclosure of our means of detection?

Answer Mr. Truman said that was exactly right.

Question. How far does this Yale survey figure in your decision to put out these new rules?

Answer. Mr. Truman said he had not signed the order until he got the survey.

Question. When this information comes out of Congress, when it is released by Congressmen, then that Executive order doesn't apply to information released by Congressmen?

Answer. Mr. Truman said he could not answer that.

Q. I may be simple-minded about this—

Answer. The President said you are not, Smitty (Merriman Smith, of the United Press).

HOW DID YALE KNOW?

Question. But how did Yale know? How did they know all this secret information?

Answer. They made the survey, said the President. They got it out of all the newspapers and magazines and came to the conclusion that they knew 95 percent of what was going on.

Question. Does Central Intelligence Agency agree with Yale on that 95 percent?

Answer. Mr. Truman replied "Yes," they had made a report to him on it.

Question. That story about the Matadors and those guided missiles, and so on, that was published practically by every newspaper in the land. Was that the publishers' responsibility not to publish that?

Answer. The President said he thought so, asking wouldn't it be better to defend the country? He said that was what we were doing and that was what they were fussing about.

Question. If they wanted to protect the country, you think they should not have published them?

Answer. The President answered that they ought to think about the welfare of the country the same as he did, and that he thought most of them would if they stopped to think about it.

Question. I don't want to defend editors, but those maps were used as part of a civil defense program to make people alert as to the danger of atomic attacks.

Answer. Yes, Mr. Truman agreed, but he didn't think they should be made available to the Russians.

Question. Do I understand that you were confirming the reports that there was a third A-bomb experiment in Russia that fizzled?

Answer. The President was making no inferences at all. He made the announcement yesterday—the only one he could make.

THE ROLE OF EDITORS

Question. I would like to ask a question that I am afraid my editors will ask me if I

don't ask it. Are you suggesting that perhaps the editors and publishers that we supply news stories to should ask some agency in the Government whether they should be published?

Answer. No. Mr. Truman was not. He was asking editors and publishers to take the same viewpoint of the safety of the United States as he took and he was not asking them to ask anybody to help them do it. They ought to know.

Question. I know many times we receive statement from Members of Congress, for instance. We go ahead and write stories about those statements. Perhaps many times a reporter feels that that information might be of a security nature, but if it is on the record up on the Hill there is nothing we can really do but go ahead and put it out.

Answer. The President commented, Well, that was up to them. The safety of the country was in their hands the same as it was in his.

Question. Do you think everyone in this town talks so much?

Answer. The President wouldn't say that.

Question. In your reading of the written statement you said that 95 percent of the information had been made public.

Answer. Of our secret information, the President corrected.

Question. Mr. President, what will happen to a reporter that prints something the Government doesn't want printed?

Answer. Nothing, came the answer. They printed things that caused our men to be shot in the back and nothing was done to them right during the war.

Question. Do the security rules apply to what is telecast just the same as published?

Answer. The President said this was certainly so. He had heard a lot of broadcasters talk about visits they had had to Korea and reveal what our strategy was going to be, and you can't fight battles on that basis.

(Mr. Short stepped to the President's side and spoke to him.)

Answer. The President explained that Mr. Short wanted him to make it perfectly clear that his Executive order referred to Government workers. But his comments applied to everybody who gave away State secrets.

Question. As I remember, the release about the Matadors was given out by the Pentagon and the question was asked at the White House later: Was that one of the secret weapons that you referred to in San Francisco?

Answer. Mr. Truman did not know what the questioner was talking about.

Question. When the Department of Defense hands us photographs and a story, are we supposed to censor that ourselves?

Answer. The President asked whether the questioner believed in saving the United State from attack.

Question. I do not think it should have been given out at the Pentagon.

Answer. That is your opinion and you are entitled to it; the President observed.

Question. Are you asking publishers to impose voluntary censorship?

Answer. No, Mr. Truman was asking them to use good judgment for the safety of the United States. He was not asking them to use censorship at all.

Question. Would not that require a security officer in every newsroom?

Answer. The President did not know how they could, but he was just telling them what he thought, that patriotism and the welfare of the United States was the first thing to think about.

Question. You told us that those planes were some of the weapons that you talked about at San Francisco.

Answer. He did not remember it.

Question. To get back once more to that 95 percent, may we quote you when you said: Remember that 95 percent of our secret information has been revealed in newspapers

and slick magazines and that's what I am trying to stop?

Answer. Permission was granted.

(After the news conference, Mr. Short issued the following statement:)

The President has directed me to clarify his views on security information as follows:

1. Every citizen—including officials and publishers—has a duty to protect our country.

2. Citizens who receive military information for publication from responsible officials qualified to judge the relationship of such information to the national security may rightfully assume that it is safe to publish the information.

3. Citizens who receive military information from sources not having the necessary responsibilities and qualifications to evaluate such information should, as loyal Americans, exercise the most careful judgment in determining the safety of publishing such information.

4. The recent Executive order on classified information does not in any way alter the right of citizens to publish anything.

Broome County Must Be the Sphere of Influence in Any New Congressional District

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, October 1, 1951

Mr. EDWIN ARTHUR HALL. Mr. Speaker, the avowed determination of State Republican Chairman Pfeiffer to throw the weight of his position behind political axmen who want to abolish the congressional district I represent is the greatest set-back the Republican Party could possibly receive in the face of its long-awaited chance to regain national supremacy.

Up-State New York can be made into several more safe Republican districts instead of subtracting from the present number, thus strengthening the party in Congress. Personally, I would like to see the Republicans carry the House in 1952.

They cannot do so if the first consideration is to be eliminating Abraham Lincoln Republicans with whom I have always been identified. The race will be too close, and dissensions in the ranks just will not win an election.

The proposal to eliminate my district, while aimed strictly at me, would also seem to indicate a lack of respect for the Broome County Republican leadership, unless, of course, its ace courier of shady missions, Charley Kress, is now so powerful an influence, that his advice is being taken by the high command in Albany.

Be that as it may, the writer of a friendly letter to me from home states flatly, and I quote:

Billy Hill could put his foot down and stop the proposal, if he wanted to.

Knowing the prestige that our county Republican leader has with the powers, I agree with that observation.

In view of Mr. Hill's past campaigns against your Congressman, I realize an appeal to him on my part to prevail upon

Pfeiffer would be futile. However, I will try to have enough faith in his sense of decency and fair play to believe that he would protest the wanton elimination of Broome County as the sphere of influence of a new congressional district.

It takes a heap of political offal to quiver the stout nostrils or to violate the sensibilities of the Binghamton Press. But even they have not been able to tolerate such obvious and lewd display of tyranny on the part of those bent upon squeezing me out of Congress without due election by the people.

While they are rough on your Congressman, I would probably have died a thousand political deaths without their coverage of subjects they want to touch on regarding my career. Although they want to beat me, they are jealous of the mission they consider to be theirs and they do not want outside gaudiers invading our section to take credit.

In spite of the underground professionals who will stoop to any depth to accomplish the demise of the people's representative, I believe the consensus in Broome is best summed up in a recent editorial from the Binghamton Press as follows:

BEATING HALL BY SPLITTING OUR DISTRICT IS MUCH TOO DRASTIC REMEDY FOR US

Fantastic though they seem, these stories that the Thirty-seventh Congressional District is to be cut up like a paper doll in the approaching reapportionment of New York State continue to pop up with frequency.

The latest version of what Representative EDWIN A. HALL calls the great gerrymander of 1951 is the most ridiculous of all—the report that Broome County will be divided between the Twenty-ninth and Thirty-ninth Congressional Districts when New York's congressional map is redrawn.

As we said in December, when the proposal was first reported, the idea is so unfair to the populous Triple Cities area that it is hard to take seriously. Repetition of the reports in one form or another, however, is sufficient cause to voice the strong opposition to any plan which would bury the interests of the Triple Cities in another remote congressional district.

It would just not be possible for a representative whose home is in Bath or a representative who likes at Tuxedo Park in the Hudson River Valley to do justice to the industrial and agricultural interests of Broome County.

In Republican circles last week it was reported that the proposition to divide Broome County between the two congressional districts was based on a strong desire on the part of Congressmen from New York to retire Representative EDWIN A. HALL, of Binghamton. If this is the objective, we say the cure is much worse than the disease.

To dispose of him by reducing Broome County to an impotent attachment to one or more congressional districts is much too drastic a remedy for Mr. HALL.

The reapportionment job is to be done by a joint legislative committee headed by Senator Phiny W. Williamson, of Westchester County. Committee spokesmen scoff at the reports that Broome County will be cut in two or attached as the tail of some elongated district which has little in common with our interests.

We hope that the committee spokesmen are right, but we also are aware that responsible portions of the Broome County Republican organization give sufficient credence to the reports to be greatly disturbed by them.

As we said at the outset, the reports are so fantastic that it is hard to believe they are substantially true. Whatever may be the fact, it is the responsibility of all Triple

Cities groups to make plain to the Williamson committee the great damage any such carving job would do to this community.

Broome County has a population of close to 200,000. It should not be sandwiched in with a number of other counties in such a way that its influence could not be exercised effectively in the congressional district.

Civil Air Patrol Operation Bloodlift

EXTENSION OF REMARKS

OF

HON. EDWARD H. JENISON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. JENISON. Mr. Speaker, many of our citizens are rendering outstanding volunteer service to the Nation's national defense effort. One of the most important of these has been inaugurated in the city of Washington by an organization already widely known for courageous service and close cooperation with the military. I refer to the Civil Air Patrol, and particularly in this instance to the National Capital Wing of the Civil Air Patrol, commanded by Col. Donald T. Webster. This organization composed of both men and women volunteers has inaugurated regularly scheduled blood delivery service by air to cities and military bases northeast and northwest of the Nation's Capitol.

In this unusual service, members of the organization furnish their own planes, with all others in the unit cooperating to coordinate the work of handling the blood on the ground and in the air. Quick deliveries by air greatly reduce the handling problem, and in addition, the service established creates an emergency service instantly available at any hour of the day or night. This unusual program already has won the commendation of the American Red Cross.

Under permission granted me by the House, I am including in the Record the official announcement of the newly established service, a letter of commendation from the American Red Cross, and a comprehensive news report of the first flights written by Peg Sonenfield, reporter for the Washington Post, and published in that newspaper Sunday, October 7.

I am sure all Members will be interested in this further evidence of the great value of the Civil Air Patrol and the indication of willingness and readiness to cooperate with every agency in meeting our present crisis.

The above-mentioned follows:

CIVIL AIR PATROL INAUGURATES FIRST SCHEDULED BLOOD DELIVERY SERVICE BY AIR IN THE UNITED STATES

The National Capital Wing of the Civil Air Patrol today inaugurated the first regularly scheduled blood delivery service by air in the United States with weekly flights from Washington, D. C., to cities and military bases northeast and northwest of the Nation's Capitol.

Col. Donald D. Webster, commanding officer, National Capital Wing, Civil Air Patrol, announced that scheduled flights would leave every Saturday morning for cities in the northeastern region from Washington, D. C., and would include blood deliveries to

the United States Army base at Fort Meade, Md.; Phillips Army Base, and Edgewood Arsenal, Aberdeen, Md., and the United States Navy Training Base at Bainbridge, Md. Colonel Webster added that weekly scheduled blood delivery flights into the northwestern area, also leaving from Washington every Saturday morning, will include Hagerstown, Md., and Martinsburg and Charlestown, W. Va.

The weekly blood delivery flights will be conducted under the direction of Lt. Col. Donald T. Speirs, operations officer of the National Capital Wing, Civil Air Patrol. Colonel Speirs stated that the blood-delivery flights will be flown by various types of light civil aircraft owned by Civil Air Patrol pilots. The Washington Regional Red Cross Blood Center will provide the blood supplies for the weekly scheduled flights.

Colonel Webster also disclosed that the National Capital Wing, CAP, expects to inaugurate similar blood deliveries by air in the near future from Washington, D. C., to cities in the southwestern area such as Front Royal, Harrisonburg, Culpeper, and Fredericksburg, Va., and to the United States Marine Air Station, Quantico, Va., and the United States Naval Air Test Center at Patuxent, Md.

Col. DONALD T. WEBSTER,
Capital Wing, CAP.

Washington, D. C.

DEAR COLONEL WEBSTER. I am writing this letter after the first few weeks of cooperation between the Civil Air Patrol and the Washington Regional Blood Center of the American Red Cross. Your organization has already proved of inestimable value in helping us to get blood, in emergencies, to patients who have been in great need of it.

The missions your pilots have flown so far are as follows:

July 16: Four pints to Cambridge, Md.

July 20: Four pints to Roanoke, Va. for Abington, Va. Hospital. The Virginia State Police took the blood from Roanoke to Abington, as your pilot could not get there before dark.

July 25: 12 pints to Baltimore, Md., four for United States Marine Hospital and eight for Mt. Sinai Hospital.

July 28: 12 pints to Norfolk, Va., for the Tidewater Regional Blood Center.

As you probably know, I am discussing with Colonel Speirs the possibility of combining training flights on Saturdays and Sundays with our regular deliveries of blood to Hagerstown, Leesburg, Winchester, Charlestown, Aberdeen and Fort Meade. I believe a practicable plan will come out of these discussions.

Very truly yours,

WASHINGTON REGIONAL BLOOD CENTER,
KENNETH R. NELSON, M. D.,

Medical Director-Administrator.

By M. M. BAKER, Assistant Administrator.

[From the Washington Post of October 7, 1951]

CIVIL AIR PATROL OPERATION BLOODLIFT BEGINS DELIVERING PLASMA TO THREE CITIES BY AIRPLANE

(By Peg Sonenfield)

A dozen single-engine airplanes lined up single file at Hybla Valley Airfield yesterday, October 6, loaded 120 precious pints of blood aboard and took off over the white rail fences of Virginia on Operation Bloodlift.

The planes were manned by a dozen Civil Air Patrol pilots and inaugurated a regular blood delivery service to be flown weekly to replenish hospital blood supplies in Hagerstown, Md., and Martinsburg and Charlestown, W. Va.

It's a brand new idea—a sort of airborne pony express operated jointly by the Red Cross which supplies the blood and the Fairfax-Falls Church-Herndon Squadron of the

CAP, which undertakes its safe and quick delivery.

PREVIOUSLY USED CARS

Prior to yesterday's special delivery flight, the blood had been driven to hospitals in the three cities—a slow and cumbersome, nineteenth century delivery service.

The flight yesterday, led by Col. Donald Webster, commanding officer of the National Capital Wing of the CAP, split up shortly off the ground with three planes bound for Hagerstown and the other nine, clumped in a rainbow of colors against a misty blue sky, bound for Martinsburg.

In Hagerstown, a 25-minute flight over countryside barely touched by autumn, the planes were met by Miss Lucille Miller, Volunteer Red Cross Motor Corps driver, and Mrs. Nathan Raskin, chairman of the Red Cross blood program.

Forty-five pints of whole blood were transferred from planes to station wagon and the first batch of life-giving fluid began the last lap to Hagerstown hospitals.

In Martinsburg, 15 air minutes away, the operation was duplicated. Under the direction of Maj. Hunter T. Butts, group commander of group 4 of the West Virginia Wing, the insulated boxes of blood were transferred to waiting cars and another small batch was air expressed to Charles Town, 15 miles distant.

Yesterday's inaugural flight was a celebration and Malcolm Baker, assistant administrator of the Washington Regional Blood Center, and Mrs. Baker went along to watch from the cockpit of one of the dozen "freight" planes. Henceforth, however, the weekly delivery will be flown by CAP Sgt. E. E. Lyons, of Vienna, Va.

FIRST CALLED IN JULY

According to Col. Donald Speirs, who when not flying is an aeronautical engineer, the new delivery service idea has been simmering since early summer. In July the CAP was called on for emergency blood deliveries to outlying districts. The missions were completed successfully.

Shortly afterwards, Speirs says, a simulated air lift to fly blood plasma from Frederick, Md., to Washington was set up to test the efficiency and organization of the squadron. "We called in Mr. Barker to watch," Speirs says, "and in three hours time we flew 3,300 pints of simulated blood plasma in 34 planes."

Baker says he was impressed. Shortly afterwards Speirs was asked if the CAP could make blood transportation a regular operation.

For the past few weeks trial runs have been made and the Bethesda Squadron of the CAP has been flying blood from Fort Meade to the Aberdeen Proving Grounds. Success of the venture is being watched by Red Cross and CAP officials, interested in the possibility of expanding the service to a nation-wide operation.

As Speirs says, "We're the pioneers."

Pioneers on the first flights included: Lyons, C. G. Cox, H. F. Jones, Rober Lyons, Garland Farris, J. C. Mayhew, R. M. Smith, Claude Davis, C. B. Boyd, Wallace Lewis, A. Eleanor Davis, Colonel Speirs, Ada Mitchell, and Colonel Webster.

An American Creed

EXTENSION OF REMARKS

OF

HON. RICHARD M. NIXON

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Monday, October 8, 1951

Mr. NIXON. Mr. President, I call to the attention of the Members of the Sen-

ate a statement entitled "An American Creed," which was prepared by a group of Sierra Madre, Calif., business and professional men who believe that a restatement of the moral principles of the men who founded the United States of America may well be of value to the people of this country in these times. I ask that the statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

AN AMERICAN CREED

I believe in the unlimited power of God and I believe that we, as members of the human race, have full access to that power.

I believe in the destiny of America as the hope of freedom for all mankind.

I believe in the sanctity of the individual.

I believe that my own courage is no less than that of the founding fathers of this Republic who, in signing the Declaration of Independence, pledged their lives, their fortunes, and their sacred honor.

I believe that it is my duty, as an American, to work, to fight, and to pray for the preservation of American ideals of freedom to the end that those privileges I enjoy because of the efforts of those who have gone before me, may be passed on, unblemished, to those who come after me.

I believe that it is my duty, as an American, to see to it that American Youth be well informed on American history in all its phases dating back to the settling of America by the early colonists, and I believe that it is my duty to see to it that American youth be given—in home and school—an abiding appreciation of those moral and spiritual values which have made America great.

I believe it to be my duty, as an American, to see to it that those who are elected or appointed to positions of public trust and responsibility, conduct themselves in all their dealings in a moral, spiritual, and ethical manner. Should I be asked to serve in such a capacity, I pledge myself in advance to conduct myself likewise.

I pledge myself, as an American, to raise my voice in support of these beliefs in all my individual and group associations, and to work with and cooperate with other Americans of like belief regardless of race, color, or religious affiliation.

When Is Congress Going To Act on the Bill To Remove Racial Discrimination From Our Immigration Laws?

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 8, 1951

Mr. JUDD. Mr. Speaker, do we really think the Japanese are going to fight valiantly on our side when our laws still officially insult them as inferior beings? All our millions of aid will be in vain until we correct this act of injustice.

Under leave to extend my remarks, I include a press release reporting the action on this question of the American Chamber of Commerce in Japan:

THE AMERICAN CHAMBER OF
COMMERCE IN JAPAN,
Tokyo, September 12, 1951.

At the annual meeting held yesterday in Tokyo, the American Chamber of Commerce

in Japan unanimously approved a recommendation urging early congressional action toward authorizing Japanese immigration into the United States.

This action was taken upon a recommendation of Mr. Frank Ale, chairman of the chamber's liaison committee. The annual meeting closed the third year of this organization's activities and was attended by over 100 Americans engaged in business in Japan.

The American Chamber of Commerce is the first chamber of commerce to take steps urging Congress for early action upon such a bill. Three bills whereby Japanese immigrants would be permitted into the United States are understood to be currently pending in Congress. These bills were submitted by Senator PAT MCCARRAN, Democrat, Nevada; Representative WALTER H. JUDD, Republican, Minnesota, and Representative FRANCIS E. WALTER, Democrat, Pennsylvania.

One of the revised bills before Congress enables all far eastern peoples to become eligible for United States citizenship and their admission to the United States to be placed on a quota basis.

The American chamber's resolution to this effect has been sent to appropriate Senate and House committees. Japanese immigration into the United States was banned by Congress in 1924.

Youth Is Smarter Than Some Elders: Anti-Hall Propaganda Fails To Work on Bright Young Lady

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, October 1, 1951

Mr. EDWIN ARTHUR HALL. Mr. Speaker, it is indeed satisfying to discover that the savage opposition now stepping up their barbaric attacks upon your Congressman as the campaign approaches has not been able to propagandize the clear-thinking youth of the Triple Cities.

The writer of the letter below is a young lady of discernment, who is interested in her Government, interested in Americanism, and desirous of seeing your Congressman survive in the jungle of local communistic outrages upon his good name.

Some sophisticates, such as those who sneer at duly elected officials, say that our youth of today are not as responsible and not as keen as they were when they were young. After reading this letter, I am sure you will agree that our young people are far ahead of the usual run-of-the-mill-haters of your Congressman in Broome County.

I am proud to be the recipient of such a wonderful letter and I would make public the young lady's name but for the fact that she might immediately be made the target of the same ridicule and derogatory defaming that Triple Cities' parlor pinks and ravenous Reds hurl daily at me.

Her support is treasured by me and I feel certain the thousands of other young Americans in our section, who love our

great country, are likewise impervious to the gigantic propaganda campaign now being promoted against your Congressman preparatory to the 100-percent Communist assault upon EDWIN ARTHUR HALL in the 1952 Republican primary.

The letter reads as follows:

HON. EDWIN ARTHUR HALL,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN HALL: I was so very glad to receive your letter today, asking my help in the coming election. I thought, by now, you would have forgotten me, the girl that wanted the information on the SPARS last year. Well, I am very glad that you didn't forget me and I am very anxious to help you.

Since I am only a high school student and 17 years of age, I can not vote for you but I can help in many other ways. I don't know if you are informed on this or not, but your answers to my previous letters caused a lot of talk in our high school. Remember, I told you that I was writing to you because of an English assignment which we were supposed to write to a famous person. Well, I had to hand my teacher a copy of the letter I wrote you and your answer.

My teacher was so thrilled and happy about your letters that she read them to all her students and all the other teachers. Soon it was all over school that I had political influence and some kids even said that I was planning to run for Congresswoman in the future.

There was an article in our school paper and my English class published a story and there was an article about our correspondence in there also.

Before I knew it, all the fellows and girls were coming to me with their troubles. They asked me to write you and ask to have some teachers resign and ask for a teen canteen for teen-agers in the Triple Cities. I almost died laughing when a fellow in my social studies class told me that his mother told him to ask me to write you about the margarine question and some other bills that she wanted passed.

This year I plan to do all I can to help you in your campaign. I'm sending my parents, relatives, friends' parents, neighbors and teachers to the polls.

I am taking public speaking now, in school, and plan to make one of my speeches a campaign speech in your behalf. Mr. HALL, you'd be surprised what I can accomplish by this. People can think whatever they want about high school students and teen-agers, in general, but they certainly have a great influence on their parents and their relatives, who are the voters.

The teen-agers of today will soon be the voters of tomorrow and I think they should be exposed to politics. They should have ideas of their own and have as much, or even more, interest in the Government as their parents.

The reason I am a supporter of yours, Mr. HALL, is because you try to do all you can for the common person. I've heard so many instances where you did something thoughtful and kind for a common, factory worker. Why, take my situation. I was just an average high school student, doing her English assignment, and you were so willing to help me. I never considered myself as anyone so important that such a busy man, such as yourself, should take the time to help.

All I can say, Mr. HALL, is please don't change and keep up your wonderful fight against communism. I could write another page and a half about the terrible thing communism is, but I'd probably bore you. I'd like you to know that I read all I can get hold of about you and your work in the newspapers, though.

I will say goodby and good luck in your coming election and close now.

Your teen-age supporter,

JERPY.

**Investigation of William M. Boyle, Jr.,
and Guy G. Gabrielson**

EXTENSION OF REMARKS

OF

HON. RICHARD M. NIXON

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES
Monday, October 8, 1951

Mr. NIXON. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a statement I have prepared concerning the investigation by the Senate Committee on Expenditures in the Executive Departments into the activity of Mr. William M. Boyle, Jr., and Mr. Guy G. Gabrielson.

There being no objection, the statement was ordered to be printed in the Record, as follows:

There has been an understandable amount of confusion, contradiction, charges, and counter-charges growing out of the investigation into the activities of Mr. Boyle and Gabrielson. The committee report will attempt to resolve some of these conflicts and to appraise the entire record. However, on the basis of their own testimony, both Mr. Boyle and Mr. Gabrielson should resign their positions as chairmen of the Democratic and Republican National Committees.

The basic issue is whether a high official of the national committee of either major political party should be in a position where he can profit financially from the influence which he may be able to exert with Government agencies. And as President Truman has indicated, in judging the propriety of such conduct it makes no difference whether the official is paid or unpaid by the party for his work.

In the case of Mr. Boyle, there has been a tendency to emphasize unduly the controversy which has developed over whether he received \$8,000 or \$1,250 from the American Lithofold Corp. The following facts in the record are uncontroverted:

While Mr. Boyle did not become a paid party official until April 1949 he served as acting chairman of the party from approximately February 15 until the time he went on salary in April. During this period, he admits that he received a total of \$1,250 in fees from the American Lithofold Corp. The only work he did for his client during that period was to make an appointment on February 28, 1949, for company officials to see Chairman Hise of the RFC. Three days after this appointment was arranged, a loan was granted to the company, a loan which up to that time Mr. Boyle intervened had been turned down by every examiner in the RFC to whom the case had been referred, by the agency review board, and by the board of directors.

Mr. Boyle says that in making the appointment he was only doing what he would do for any person who came to Washington and asked the national committee for assistance in obtaining a hearing of its case. He says that he sees no difference in the fact that the appointment in this instance was made for a client. The answer is that when the national chairman of the party in power intervenes in behalf of a client, such action—having in mind the fact that he has the power of recommending appointments and promotions in the Government service—is influence in itself regardless of whether he goes further and advocates the merits of the case.

In any event the record is that Mr. Boyle did arrange an appointment at the RFC for

his client, that his client got its loan, and that Mr. Boyle got \$1,250 in fees—all while he was acting chairman of the Democratic National Committee.

Since becoming paid chairman of the party, Mr. Boyle makes much of the claim that he has severed his connection with his law firm but the facts are undisputed that he has profited to the extent of approximately \$100,000 from what he says was a sale of his law practice since he became paid chairman, that a great proportion of this amount was directly attributable to \$158,000 of legal business which came into his office while he was acting chairman without pay between February 15 and April 30 and that the law business which he says he sold to Mr. Slakind involved almost without exception clients who were engaged in actions with Government agencies. While Mr. Boyle and Mr. Slakind both have denied that Mr. Boyle has attempted to influence the outcome of any of these cases since Mr. Boyle became paid chairman, it is now well known that he has a financial interest in these cases and no one can be so naive as to believe that that fact could potentially have no effect in influencing the action of the Government agencies involved.

Finally in Mr. Boyle's case it is necessary to consider the facts just brought to light this week that during the past 4 years he has paid over \$11,000 in fees and expenses to a \$10,000 a year RFC employee and that during the year 1949 he continued this relationship while he was serving as paid National chairman for the Democratic Party. Again taking at face value Mr. Boyle's and Mr. Gratz' explanation that Mr. Gratz was rendering bookkeeping services and advising Mr. Boyle on financial matters and that none of the work was done on Government time, the fact that Mr. Gratz was known at the RFC to be on Boyle's payroll indicates the possibility of influence and regardless of the nature of the employment it would seem highly improper for the chairman of either national committee to have on his payroll for any purpose a full-time employee of a Government agency.

The Gabrielson case differs in many respects from the Boyle case but the same conclusion must eventually be reached. Mr. Gabrielson was unpaid at all times in his position as chairman of the Republican National Committee. The only client he represented before the RFC was the Carthage Hydrocol Co. of which he was president and general counsel. The loan for the company was granted long before he became chairman of the national committee. The only major action he sought in behalf of the company after he became chairman was rejected by the RFC. As far as the record is concerned there is no evidence of improper influence in behalf of his client by Mr. Gabrielson during the time that he has been chairman of the Republican National Committee.

On the other hand, Mr. Gabrielson's statement to the effect that he has no influence cannot be accepted. While it is true that the Republican national chairman has less influence than the Democratic national chairman, it must be remembered that he has the power of criticism and the potential power of recommending appointments and promotions. In other words, the opportunity for influence exists and where the opportunity for influence exists charges of impropriety are bound to follow.

Mr. Gabrielson owes a duty to his company if he continues to represent them to advocate their position as vigorously as he can. If he fails to attempt to influence the RFC to make decisions favorable to his clients, he will not be doing his duty by his clients. If he does attempt to influence the RFC in behalf of his client, he will subject himself to criticism because of his position in his party. To put it bluntly, Mr. Gabrielson is not in a position to do an adequate job

both for the company he represents and his party.

The fault does not lie with Mr. Gabrielson—the predicament he finds himself in is due to the action of the national committee which elected him with knowledge that he would have to deal with the Government in his capacity as president of his company.

The chairman of the minority party has a duty to expose and to criticize improper conduct on the part of the administration in power. Regardless of the merits of Mr. Gabrielson's position and regardless of how many times he reiterates his innocence of any wrongdoing, his effectiveness as chairman of the minority party has been irreparably damaged because the charges against him will constantly be used to camouflage and confuse the issue and to protect those who are really guilty of corruption in high places in the Government.

I see no evidence of illegality or moral turpitude in the actions of either Mr. Boyle or Mr. Gabrielson insofar as the facts developed to date in the investigation are concerned. But the Nation has been shocked by the evidence of widespread corruption in the Internal Revenue Bureau, the RFC, and other agencies of the Government. The paramount need in the country today is to restore public confidence in the integrity of our national leaders and Government officials. The resignations of Mr. Boyle and Mr. Gabrielson will serve to aid in attaining this objective. The top officials of both major parties should set an example of propriety and ethics which goes beyond the strict legal minimum required by the law.

In replacing Mr. Gabrielson and Mr. Boyle both parties should select as their chairmen men who are in a position to profit neither directly nor indirectly from any dealings with the Federal Government.

Is There Need for a Southern Democrat-Northern Republican Political Alliance?

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES
Monday, October 8, 1951

Mr. MUNDT. Mr. President, so many Members of Congress have made inquiries about the recent developments leading to the creation of a Committee To Explore Political Realignment and the basis upon which this committee is studying the causes and cures for present trends toward socialism in America that I am asking consent to have printed in the Appendix of the Record a short summary of some of the background data which lead to the decision to devote continued effort and study to the proposal. The information in the summary outlines the reasons for this approach to an analysis of our political and economic problems, and it indicates how interested citizens can get in touch with the committee of distinguished and informed Americans who have undertaken to explore areas of political activity and cooperation which are beyond the immediate concern of either of America's two major political parties.

Many Americans are beginning to realize that our traditional two-party system, which means so much to the continuance of our free way of life, is in

danger. We are approaching a situation—if we have not already reached it—in which we are operating with a two-party system in name and a four-party system in function.

This grows out of the fact that differences between segments within each of our two major political parties are actually often greater than the differences between the two major parties themselves. It also reflects itself in a similarity of stated platform purposes in the planks of national party platforms—"me-toolism"—and subsequent repudiation of these planks and purposes by many, perhaps a majority, of the Members of Congress to whom most of them are directed. As a consequence of the lack of realism which is thus manifesting itself in present political groupings, which appear to be based much more upon geographical, traditional, or historical factors than upon a grouping around basic economic, social, and political concepts—Mr. and Mrs. John America, the voters to whom the country belongs and who are supposed to direct its destiny, find themselves confused, frustrated, and disillusioned when they have their opportunity one Tuesday in 4 years to vote for or against a candidate for President and a set of policies to be followed for the next 4 years.

In 1948, over 40,000,000 Americans stayed away from the polls and refused to vote in a national referendum in which they were given no clear-cut choice between platform promises and between the pronouncements of the Presidential candidates. Either way, the voters figured, they would get about the same foreign policy, about the same trends toward more boards, bureaus, and coercive commissions in Washington, about the same shirking away from a bold return to the concepts of home rule, private enterprise, individual initiative, and the reward-of-merit opportunity system which has made America American.

In a great speech which has been widely quoted and frequently reread, Donald R. Richberg, of Charlottesville, Va., once executive director of the NRA and now a member of the law faculty at the University of Virginia, highlighted the foregoing and many other facets of the political phenomena which today in America keep like-minded Americans from voting for the same candidate for President, and in support of the common ideals and objectives which they share and hold. Speaking on September 11 before a New Haven, Conn., audience comprised in large part of the members of the industrial and business fraternity of Connecticut, Donald Richberg took as his theme *The Murder of a Candidate*—see CONGRESSIONAL RECORD, September 14, 1951, page A5605—and warned America how our entire way of life was in dire danger because of the political unrealities and shackles involved in the present picture. Richberg is a prominent member of the executive committee of the Committee To Explore Political Realignment and his address at Yale merits careful study by all citizens desiring to do something more effective toward stopping our drift toward

socialism than merely to curse their misfortune or to cry out in futile consternation at the future they confront.

On September 14, 15, and 16, a 3-day conference was held in the Mayflower Hotel here in Washington to determine whether like-minded voters whose party registrations differed but whose affinity to principle was identical could work, plan, and vote together. The question considered at this conference, which was attended by about 100 important Americans about equally divided between southern Democrats and northern Republicans, was this direct and simple one: Is it desirable and can a way be found for Americans who think alike to have a method for voting alike effectively regardless of how they are registered politically and of where they live geographically?

The 3-day conference answered the first part of that question decisively and affirmatively. Unanimously it was agreed that it is desirable. The creation of the Committee To Explore Political Realignment was the result of the determination of the conference to find an equally decisive answer to the question, "Can a way be found?"

I ask unanimous consent to have printed in the Appendix a digest of an address which I delivered at the closing banquet of the conference which organized and set in motion the Committee to Explore Political Realignment. I hope serious students of what is being undertaken by this committee will read Donald Richberg's speech entitled "The Murder of a Candidate," but the background data and information set out in my digest may be helpful in suggesting some of the causes and some of the cures for the present dangers as they are developing in America with steadily increasing speed and potency. This digest also helps to clear up any misunderstanding about what the new committee proposes to do or not to do.

Most emphatically, it is not the plan of the committee to organize or promote or propose a third party in America; rather, it represents a determination to strengthen our two-party system by giving new strength and significance to each of two major party groupings.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

SHOULD NEED FOR A SOUTHERN DEMOCRATIC-NORTHERN REPUBLICAN ALLIANCE IN 1952 BE EXPLORED?

Several times in our earlier American history, we have had a realignment of our political parties and a regrouping of American voters around the most urgent and significant issues of the era. Each time this has occurred, it has provided a good tonic for our country, our people have forged ahead to new levels of economic opportunity and individual freedom.

There are many in America who think that political and economic trends over the past 15 years and the current basic issues confronting our voters today indicate that need for another regrouping of political adherence. It has been suggested that for the election of 1952, at least, steps be taken in that direction by exploring the possibilities, the potentialities, and the practical procedures involved in developing a workable political formula which would enable Americans who think alike to vote alike for

President and Vice President in the next election.

Prior to 1936, the so-called two-thirds rule operating in the convention of the National Democratic Party gave the 11 traditionally Democratic States of the South a near veto in the nomination of party candidates and, as a consequence, in the formation of dominant party policies. At the 1936 Democratic National Convention in Chicago, however, that two-thirds rule was abrogated. The results of the elimination of the two-thirds rule have been significant and prophetic in both the Democratic and the Republican Party positions on the new issues that have arisen in our country. In the Democratic Party, elimination of the two-thirds rule has shifted the balance of power away from the States of the traditionally Democratic South to the States of the North which, whether or not they vote Democratic in November, have power enough and votes enough in the convention to enable the large city delegations which predominate in those States to write the platform and nominate the Democratic candidates.

In each successive Democratic convention since 1936, the southern delegates have consequently played a smaller and smaller role in determining convention decisions. As a result, the traditional allegiance of the Democratic Party to States' rights has been abandoned. Platforms have been written containing planks repugnant to the people of the South. Candidates are chosen who ignore or openly defy the opinions of southern voters. No effort is made to meet the wishes of southern citizens. Convention speakers actually castigate and criticize southern voters and viewpoints as "reactionary"—or even worse.

After the convention, the major candidates do not campaign in the South, relying upon the conviction that "the South is in the bag"—"it will vote Democratic regardless"—there is no other place for the South to go. In recent campaigns, except for four States in 1948, that attitude has paid off in votes for the fair deal high command. The Democratic machine has won—even though the objectives and principles of a large majority of southern citizens have lost.

As a consequence, each succeeding Democratic convention courts the North and evidences contempt for the South more and more openly and flagrantly. The result has been a steady shifting to the left—toward the concept of completely centralized Government in Washington—toward an American brand of socialism—toward the death of all the rights of all the States. Put in its bluntest terms, many northern Democratic voters are vehemently and vigorously anti-southern.

How did the abrogation of the two-thirds rule in the Democratic convention of 1936 affect the Republican Party and its attitude? Viewing the statistics of their humiliating defeat in 1936, as Republicans met in convention in 1940, party leaders realized that the new political alliance of the big city Democratic machines of the North who play politics for profit and the left-wing pressure groups who play politics for power with the unhappy but traditionally and habitually Democratic voters of Dixie had evolved a vote-getting if not a public-serving formula which could control the country. Recognizing the great obstacles involved and the inevitable delays in building a Republican-winning party in the South, the Republican convention in 1940 started turning its eyes to what appeared to be the only available votes with which to win a national campaign. Consequently, "me-toolism" in Republican circles was actually born at the Democratic National Convention of 1936 and the successful Democratic campaign which followed. In 1940, the Republican platform and the Republican Presidential candidate moved in the direction of what the New

Dealers (Democrats) were offering to present voters True, the Republican strategy of "me-tooism" failed—but it gained votes over the disastrous results of 1936. In 1944, and again in 1948, Republicans felt compelled to move even further in the direction of offering a platform and a campaign designed to appeal to northern voters of our metropolitan cities and the organized pressure groups to whom it had been demonstrated the new strategy of the New Dealers (since 1936) was so successfully appealing in each succeeding campaign. Believing itself to be unable to garner sufficient votes to win in the South, the Republican Party began offering almost identical appeals to the same group of voters that the Democrats had wooed and won in the North—especially in our industrial States with the largest metropolitan cities. In 1948, more than half of our American voters stayed home from the polls because they felt themselves deprived of a clear-cut choice of issues and objectives in that political campaign.

Thus, American political history has witnessed some striking and basic changes since 1936. Tragically, organized political and pressure groups in some 11 vast metropolitan cities of the North have thus come to have the balance of power in political campaigns and are largely calling the tune to which Presidential candidates of both parties are compelled to dance. The results are today clearly apparent in the trends of our national policies which are veering away from basic American concepts of limited government, individual freedoms, and States' rights toward various shades and degrees of some type of European socialism and centralized power.

Only an informal, unorganized, intermittent alliance comprised in the main of southern Democrats and northern Republicans in Congress has prevented these trends from becoming even more destructive and disastrous. In each Congress since 1936, this congressional alliance between North and South has operated with increasing effectiveness and frequency but it—alone—has been unable to stop the continuing extravagances in both fiscal and political policies. Trying to direct the destiny and direction of Government from the congressional level against the resistance and over the objections of a determined President is like trying to operate a railroad train from the caboose.

If more is to be done than to apply the brakes, slow down the trends, and bring about minor economies in Government, it is necessary to elect an engineer to man the White House locomotive who agrees in principle with the trainmen in the caboose. Election of such an engineer is what is made exceedingly difficult by our prevailing unrealistic, unrepresentative political party groupings in which geography, tradition, and comparatively meaningless political labels combine to defeat that objective.

The importance of allying like-minded voters in America by some political formula enabling them to give effective expression to what is the major viewpoint of our citizens is highlighted by the tragic experience of Great Britain from which intelligent Americans should draw a realistic lesson.

Great Britain is now in the throes of socialism precisely because in that country the opposition to socialism is divided into two political groupings by unrealistic devices just as today is the case in the United States. Both the Conservative and the Liberal Parties of Great Britain oppose socialism. This is evidenced by the fact that all Members of the House of Commons from both of these parties voted against the nationalization of steel which is a step that breaks the back of private enterprise and individual ownership wherever it occurs. The Socialists had a bare majority in the House of Commons which enabled them to

put through that nationalization of steel by a narrow but effective margin. However (and this is the important point) had there been no Liberal Party candidates for the House of Commons in the last election and had the voters thus had to decide definitely between Conservative or Socialist (Labor) candidates, it is a reasonable assumption that the vast majority voting Liberal Party (against socialism) would have voted Conservative Party (also against socialism). Had this occurred in the large number of British constituencies in which all three parties had candidates in the field and in which Socialist candidates consequently won, there would now be a majority of 29 Conservative Party members in the House of Commons. In that event, steel would never have been nationalized in Britain and the Socialist scourge would have been ended in that country in the last election.

The British experience is almost an exact parallel of what is happening in America. It is a stern warning to us all as to what may happen and as to what seems likely to happen unless we find a way so that those who think alike can vote alike for President here in the United States.

If nothing is done to change the political thinking and performance of leaders in the ranks of our two major political parties, it is now entirely probable that again in 1952 we will find neither political platform providing American voters with a consistent pattern of opposition to totally centralized government, current trends toward socialism, bureaucratic extravagance, and that neither political party will raise the standard of States' rights which of and in itself has done so much to prevent the total centralization of power in Washington which is an essential prelude for any form of totalitarianism.

How then is it possible to regroup political strength in the United States to give those who oppose the welfare state here the maximum opportunity for success and to preserve our 2-party system as an effective device for registering realistic political convictions?

At the start it should be noted that there are various approaches, methods, and degrees of change and modifications in established procedure which might be employed in the next election. The merits and demerits as well as the practical application of these various methods should be carefully surveyed. At this time, no single source has available sufficient factual data to suggest the adoption of any one specific form of procedure. There is, however, the maximum method and the minimum method (and several methods in between) for approaching an effective combination of like-minded voters in determining the decision this country confronts in 1952.

The maximum method would be to have the southern Democrats and northern Republicans, who have been cooperating in Congress, evolve from their informal alliance a formal, continuing, and cohesive organization. This would mean a courageous reorganization of both Houses of Congress before next year's political conventions. It would mean that these like-minded legislators (representing in large part Democrats of 11 Southern States and Republicans of Northern States) would elect leaders of both Houses, select committee chairmen, and form themselves under some such name as the southern Democrat-Republican alliance to designate the group. If this were done, some southern Democrats and some northern Republicans might prefer to move out of such a regional regrouping of congressional legislators as here suggested and find their place among the Members of the loyal opposition. Once such adjustments were made, however, this southern Democrat-Republican alliance could then call upon the country to elect a President and Vice President whose

position on political and economic issues would be in harmony with it, and those preferring to support the doctrines of the Fair Dealers and left wingers would be forced to hold a convention to nominate an opposition ticket whose standard bearers would share platform convictions with those who would then be in a cohesive minority in both Houses of Congress.

Such action in Congress might well require more political courage and risk than it is realistic to suppose will be demonstrated, but it is one direct and clear-cut method for making the election of 1952 a definite choice between two clearly conflicting philosophies of government. From such action could come a permanent, political realignment in America which would give every voter in his own precinct a clear-cut choice between philosophies of government and which would give the members of each party a cohesive quality which now is sadly lacking. Such a regrouping of American sentiment into homogeneous, realistic, operating party units would provide America with an effective and responsible two-party system with sufficient room between the positions of the opposing parties to attract a substantial group of independent voters whose allegiance would intelligently be sought in each election by each major party as then constituted.

It is extremely unlikely, however, that this maximum method will be employed by Congress under prevailing circumstances. Before Congress would break with tradition and with existing majority and minority alignments, it would probably require one or more of the following eventualities: (1) The emergency of a vital, urgent issue virtually requiring a permanent rather than a temporary alliance of cross-party members to resolve the issue; or (2) a great ground swell of grass-roots sentiment reflecting itself clearly in Washington as an indication that the home folks behind both parties to such an alliance were insisting upon it; or (3) the impetus of many resolutions and expressions by groups of citizens, associations, organizations, and possibly even official urging by conferences of governors or other elected public officials. Hence, it seems probable that if the North-South political alliance is to operate effectively for the 1952 election one or more of the minimum methods will be employed.

The minimum method, which would at this time seem to be more realistic and probable than the maximum method, would involve only comparatively safe steps to be taken by delegates at both of the major political conventions.

For example, Republicans at their convention would: (1) Adopt a platform consistently and clearly opposing further centralization of power in Washington and dedicating the party to a rational and realistic implementation of the great American doctrine of States' rights and limited government; (2) faithfully pledge themselves to meet the so-called civil-rights issue within the purview of the doctrine of States' rights by encouraging an improved economic status and equality of opportunity for minority groups through utilizing State governments and State-appointed boards and commissions to implement and enforce constructive State laws and regulations; (3) nominate a President and a Vice President willing to fight a hard-hitting, honest campaign on basic American doctrines and who are personally popular and acceptable to the voters of the South.

Southern Democrats at their national convention should: (1) Seek the restoration of the two-thirds rule; (2) endeavor to have the convention pledge itself to the rational and realistic application of the doctrine of States' rights; (3) induce the convention to avoid committing itself to a compulsory national FEPC and other coercive and authoritarian

steps in the field of civil rights and economic endeavor; (4) nominate candidates who will faithfully pledge themselves to stand on such a platform and to conform with it when elected.

Should both conventions write such platforms and nominate such candidates, the trend toward national socialism would be stopped regardless of which party won the election because collectivism cannot engulf this country if States and individuals are permitted to exercise their independent judgment on political, economic, and social issues.

Should the Republican Convention write such a platform and nominate such candidates and the Democratic National Convention, because of domination by big city, northern Fair Dealers, write a Fair Deal pro-Socialist platform and nominate Harry Truman or somebody to the left of him, southern delegates and other States' rights minded delegates might walk out of that convention and thus set the stage for other steps and activities leading to the formation of an effective southern Democrat-northern Republican pattern of cooperation in 1952 either in the November election at the electoral college level, or in the determination of the presidential contest in the House of Representatives should that be necessary.

What are some of the steps and tactics that might be employed in such an eventuality to bring the effective voting strength of like-minded Americans together (regardless of geographic location or political preference) at either the electoral college level or at the level of the House of Representatives should the election be decided there?

Some steps and methods for evolving such a pattern of effective cooperation on a working alliance for 1952, include the following:

1 Preconvention conferences between leading southern Democrats and northern Republicans might determine in advance of the conventions that the Fair Deal crowd and Trumanism will again (for the fifth time) control the Democratic National Convention. By that time, it might be clearly indicated that the Democratic National Convention moved by the compulsion of pressure groups and big city machines is certain to offer America a platform and a slate of candidates dedicated to the superstate, an American version of Fabian socialism, and the complete destruction of the rights of States and perhaps of private enterprise and our established financial structure. In that event, Republicans might well consider nominating as a vice presidential candidate a Jeffersonian Democrat, selected through consultations with southern leaders to run with a Republican candidate for President who is personally acceptable to Dixie and who will run on a platform adopted by the Republican convention which is consistent with the viewpoint of sturdy Americans in both South and North who believe in the rights of States, the rights of individuals, and the American concept of limited government; or

2 Following nomination by the Republican convention of Republican candidates for President and Vice President who on their records and by their personalities and convictions are acceptable to the South, these candidates might early in the campaign pledge themselves to select three or four prominent, capable, and popular southern Democrats for some of the more important Cabinet positions. In that way, the electorate, both North and South, would be offered an all-American team selected from both sectional majorities as a choice against the Fair Deal team now in control or seeking election on the so-called Democratic ticket. In that way, too, the identity of the membership of both teams would be in large part known to the electors so their choice in November could be based on complete information and a clear-cut idea of what to expect from each team; or

3. Either separate State Democratic conventions or an all-South Democratic convention could be held in Dixie after the frustrations and disappointments at the National Democratic Convention. Out of such activities could come southern Democratic candidates to run on the ballots of Southern States under the Democratic banner, or, as an alternative, a series of favorite-son candidates each of whom would appear as the Democratic candidate for President on the ballots of his particular State. Either technique would subtract from the Truman ticket substantially more electoral votes that the States' rights movement received in its surprisingly successful effort in 1948 which demonstrated to America that there is a limit to the insolence, derision, and abuse that the voters of the South will countenance and accept from the leadership of the National Democratic Party. This method could easily give the southern electors an effective balance of power at the electoral college level or in the House of Representatives—wherever the election is decided, if the northern Republicans won a minimum of 138 votes of the 403 outside the South, an achievement they have not made alone since 1928. It could very probably result in either a Republican or a southern Democrat ending up as President—possibly with a President from one party and a Vice President from the other. It seems clear that electors who are pledged to oppose Trumanism but who are unattached to either major candidate would determine the final choice for President unless without the votes of the South to help bolster the forces of Truman, the Republican candidate should win in the November voting. Some people have referred to southern electors selected by either of the foregoing methods as free electors. Certainly they could contribute historically to a free America; or

4 Southern Democratic convention action—by individual State parties or an all-Dixie convention—could select Democratic electors running in the Democratic column with the regularly nominated Democratic candidates for State and local office, but pledged openly to support the Republican nominees for President and Vice President. This would add southern voters to the ticket opposing Trumanism rather than simply subtracting southern votes from the Truman ticket. Either course or some modification of suggestion 3 or 4 would give individual voters in the South a clear-cut choice in November between candidates favoring States' rights or candidates favoring the police-state concept included in the welfare state.

Other suggested courses of action are open to southern Democrats and northern Republicans sincerely eager to mark 1952 as the end of our trends toward total centralized political power and economic socialism. All of them recognize that to make such an effort of "allied political forces" successful in 1952 both parties to the alliance (North and South) must be treated as equal partners. Seniority status in Congress, patronage considerations, et cetera, for participating southern Senators and Congressmen must be respected and protected. The goal of such a regrouping and realignment of voting forces in 1952 is to make neither the southern Democratic Party nor the Republican Party the sole beneficiary of ensuing victory. The real beneficiary must be America, and those Americans who want to reinstate and reinforce our American success formula of individual initiative, private ownership, free enterprise, and the safeguarding of the rights of States and the rights of individuals. This is the essence of personal liberty, the operation of which has made our country great and kept it strong; this is also the essence of the great American concept of limited government in contrast with the European concept of limited freedom for the individual as per-

mitted by an all-powerful central government.

To this end, a Committee To Explore Political Realignment might well be created from among representative and respected southerners and northerners, equally included, so that the full possibilities and potentialities of various courses of action might be studied and appraised and so that a single course of action could be recommended if the committee's research develops a formula which promises success.

It might be possible for a Jeffersonian Democrat or a Republican advocate of the limited Government concept to win a Presidential election under existing unrealistic political groupings even though they virtually confine Republican vote-getting opportunities to 36 of the 48 States, and at the same time virtually deny Constitution-minded Democrats of the South any effective voice in either the National Democratic Convention or the November election. However, to maintain in power a national administration dedicated to American concepts of limited Federal Government, private ownership, individual liberties, and solvent fiscal policies, it is highly desirable, perhaps necessary, to find a method for offsetting and defeating the existing alliance by which pressure groups and northern Democratic city machines utilize the voting strength of Southern States in the electoral college to support policies antagonistic to the American pattern of economic and political behavior. Exploration of all practical procedures by which southern voters who support our constitutional concepts can use their votes to reinforce those precepts rather than to reject them would, therefore, seem to be in the public interest.

Few should disagree with the objective of evolving political procedures whereby the same political and economic concepts can be represented both in the Congress and in the White House and its associated departments of government. It has been many years since this situation has prevailed in Washington. Only as this situation is recreated and implemented can an effective two-party system bring to this country the great advantages and dividends which are inherent in our cherished two-party political system.

Mr. MUNDT. Mr. President, neither the Senator from Maine [Mr. Brewster] nor I myself is a member of the Committee To Explore Political Realignment, although both of us attended the Mayflower conference in mid-September and although both of us for many months have been conferring with people from throughout America who are earnestly searching for an effective formula by which to provide every American voter with a clear-cut choice and an effective ballot in 1952. We declined membership on the committee roster in the conviction that nobody presently active in the political life of our country as an officeholder of important public trust should attempt to influence the decisions and deliberations of the committee. The committee's exploratory activities must not and will not be in support of any specific candidate, either Republican or Democrat. The committee is equally divided between Democrats and Republicans—it is truly a bipartisan, objective, determined public-serving effort to study, analyze, and report on the political practices of our times and to recommend to the country in due course the steps it believes Americans can take between now and that important Tuesday in 1952 when the whole destiny of human liberty may well be determined by

what happens at the polling places of America.

For the information of all interested Americans, however, who may want to correspond with the committee members or its staff, or who may want to have a part in the great task of constructive service it has undertaken, I submit a statement of facts which I ask to have printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Officers of the Committee To Explore Political Realignment:

Co-chairmen: Albert W. Hawkes, Montclair, N. J. (Republican), and Edward A. O'Neal, Florence, Ala. (Democrat). (Mr. Hawkes is a former Senator from New Jersey, a former national president of the United States Chamber of Commerce. Mr. O'Neal was for 16 years the national head of the American Farm Bureau.)

Executive secretary: Joe T. Lovett, Columbus, Ohio, past State commander of the Kentucky Department of the American Legion.

National treasurer: John W. Finger, 960 Park Avenue, New York City, recent past president-general of the Sons of the American Revolution.

Members of the executive committee: Albert W. Hawkes, chairman, Montclair, N. J.; Edward A. O'Neal, Florence, Ala.; Edward R. Burke, former Senator from Nebraska; Donald J. Cowling, former president, Carleton College; Charles Edison, former Governor of New Jersey; Horace A. Hildreth, President, Bucknell College, ex-governor of Maine; Felix Morley, author and educator; Donald R. Richberg, University of Virginia Law College.

Headquarters of the committee is in Washington, D. C. Address: Suite 302, The Kass Building, 711 Fourteenth Street NW., Washington 5, D. C. Telephone: RE 7068.

A long time ago Mr. Justice Chase put it well when he defined the United States as "An indestructible Union of indestructible States." It is the hope of the Committee To Explore Political Realignment that it may make a constructive contribution to the indestructibility of a free America and of the home rule authorities and rights of each of its States and all of its citizens. The committee seeks support and counsel as it forges forward toward that goal.

The Charter of the United Nations the Supreme Law of the Land

EXTENSION OF REMARKS OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, October 9, 1951

Mr. ROBERTSON. Mr. President, on behalf of my colleague, the senior Senator from Virginia [Mr. BYRD], who is detained from the Senate by the illness of his wife, I ask unanimous consent to have printed in the Appendix of the RECORD a statement entitled "Wake Up, America," by Fred Brenckman.

There being no objection, the statement was ordered to be printed in the RECORD as follows:

WAKE UP, AMERICA

(By Fred Brenckman)

Congressman USHER L. BURDICK, of North Dakota, one of the most level-headed men in the House, asks the question, Is the Char-

ter of the United Nations the supreme law of the land?

Specifically, what Mr. BURDICK has in mind is a decision of the Appellate Court of California, handed down a year ago, in which the court held that California's alien land law was null and void because it came in conflict with certain provisions of the Charter of the United Nations. Reference was made to this case in an editorial contained in Pennsylvania Grange News several months ago.

It has been held that the fourteen most ominous words of legal meaning uttered in our time were contained in the decision of the court in this case when it unanimously declared: "The Charter of the United Nations has become the supreme law of the land."

HOW THE CASE ORIGINATED

A Japanese person, insisting on his right as an Asiatic to own land in California, had appealed from the State law to international treaty law and was upheld by the court. In justification of its action, the court cited article VI of the Constitution, which reads:

"This Constitution and the laws of the United States made in pursuance thereof; and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land; and the judges of every State shall be bound thereby, anything in the Constitution or laws of any State to the contrary notwithstanding."

Commenting on this provision, Congressman BURDICK makes a strong case when he declares:

"This provision of the Constitution never contemplated that in approving a treaty and recognizing it as the supreme law of the land, that any such treaty would go beyond the affairs between nations. It was never contemplated that any such treaty could reach down and control the affairs of States within the United States. That was never the intention of the framers of the Constitution, as the debates in the constitutional convention clearly indicate."

Continuing, Mr. BURDICK rightly asserts:

"All the State's rights we have ever known, North, East, South, and West, can be set aside and annulled by merely having the United Nations pass what they call a convention, and, when approved by the Senate, such law becomes the supreme law of the land."

Under the Bill of Rights, which is contained in the first 10 amendments to the Constitution, the people are guaranteed, among other rights and immunities, freedom of speech, the right of public assembly, and freedom of worship. Congress is forbidden to pass any laws about them at all. But how these cherished freedoms might be diluted and frittered away is indicated by the International Covenant of Human Rights, which President Truman has asked the Senate to approve. The Covenant says:

THE LANGUAGE OF DICTATORS

"Freedom to manifest one's religious belief shall be subject only to such limitations as are pursuant to law and are reasonable and necessary."

The Covenant says:

"Everyone shall have the right to freedom of expression . . . subject to certain penalties and liabilities and restrictions, but these shall be only such as are provided by law and are necessary."

The proposed Covenant further says:

"The right to peaceful assembly shall be recognized. No restrictions shall be placed on the exercise of this right other than those imposed in conformity with law and which are necessary."

That was probably about as far as it was possible to get countries like Russia and her satellites to go in framing a bill of rights, which, of course, amounts to nothing at all.

If the Senate should ratify the International Covenant on Human Rights, would the

language above quoted supersede the provisions of our own Bill of Rights, which is a part of the Constitution? If so, would not some of the most sacred rights of the American people become a mere sham and a mockery?

These are questions which the American people have a right to ask before the Senate ratifies any more treaties which the courts may construe as having changed or modified the Constitution. In our laudable eagerness to share the blessings of liberty with the peoples of other lands, we must make sure that we do not lose our own freedom.

WRITING A NEW CONSTITUTION

A former president of the American Bar Association declares that lawmaking by treaty amounts to a blank check for writing a new Constitution. His views on this question were set forth in an article appearing in the official publication of the association for September 1950.

The American Bar Association has appointed a commission to consider an amendment to the Constitution to forbid the invasion of domestic laws by treaty unless specifically authorized by Congress, and to forbid Congress to ratify treaties effective by laws not otherwise authorized by the Constitution.

While such an amendment might do good, the fact remains that it would not be necessary if the State Department would use a little common sense and refrain from entering into any treaties that plainly violate the provisions of the Constitution, and if the Senate would refuse to ratify any such treaties into which the State Department might blunder.

Congressman BURDICK is on the right track in the stand he has taken on this subject. He deserves the united support of the American people in his effort to preserve the integrity of our fundamental law.

Loyalty Investigations by Civil Service Commission in Lieu of Federal Bureau of Investigation

EXTENSION OF REMARKS OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, October 9, 1951

Mr. WILEY. Mr. President, I send to the desk a statement which I have prepared on the subject of turning over the function of routine loyalty clearances from the Federal Bureau of Investigation to the United States Civil Service Commission, so that the FBI can carry on its more vital roles. I ask unanimous consent that its text and appended letter be printed in the RECORD.

There being no objection, the statement and letter were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR WILEY ON BEHALF OF
BILL S. 2077

Every patriotic American is interested in the continued success and effectiveness of the great Federal Bureau of Investigation. Why? Clearly because upon this Bureau's success depends in considerable part the national security of our country in this time of grave international peril.

It is for this reason that many of us in the Senate and House have sought to relieve the FBI of routine loyalty clearances which we felt to be an important but secondary function as compared with the basic anti-espionage, antisabotage, antisubversive re-

sponsibilities of this famed agency. There is, fortunately, legislation pending right now before the Senate and House Civil Service Committees which would enable the FBI to continue to do its main jobs and to continue to do that job superlatively as it has always done in the past.

CONGRESS SHOULD TAKE ACTION SOON

The sands are running out in this first session of the Eighty-second Congress. It is my earnest hope that before we wind up our affairs, this legislation to relieve the FBI of these routine clearances, can be passed by both Chambers and sent to the President.

Let me say by way of background that I, for one, had hoped that in connection with the mutual aid program (on which conference committee I served), we might have retained the Senate provision turning over that clearance function to the Civil Service Commission. That would have covered the agencies in that bill like the point 4 set-up. However, the final version of the bill, H. R. 5113, unfortunately knocked out that Senate provision.

Now, over-all legislation like S. 2077 provides for an orderly and systematic turn-over of the over-all FBI clearance duties to the Civil Service Commission. S. 2077 lists a long series of agencies whose employees would thereafter be cleared by the Commission.

As an elaboration of this view, following this statement there is the text of a letter which I wrote last week to the distinguished chairman of the Senate Post Office Committee, the Senator from South Carolina [Mr. JOHNSTON]. In this letter, I reiterate the unanimous views within the executive branch and the strong views of many members in the legislative branch necessary for this delegation of authority.

The great chief of the FBI, Mr. J. Edgar Hoover, has respectfully asked for this legislation, the executive agencies have asked for it; many of us in Congress ask for it. We hope that it can be accomplished.

FBI'S GREAT SUCCESS MAKES IT NO. 1 IN CONGRESS' ESTEEM

It is a fact that so high is the Bureau's prestige that Congress is reluctant to turn over its duties to any other agency. Here is an instance therefore where the sheer success of an agency—the FBI—has elevated it so high in the Congress' esteem that this very success is almost a handicap to its concentration on its main functions. I trust, however, that Congress will recognize this situation and see the need for relieving the FBI of this immense clearance task.

FBI HELPED MAKE THE ANTICOMMUNIST CASES

One need only glance at each day's newspaper to note the tremendous job which faces the FBI. Barely a day goes by without some new facet of Soviet espionage being opened up or, fortunately for us, being closed. Just yesterday, for example, the United States Supreme Court rightly rejected the pleas of the 11 top Communist leaders for a second review of their conviction on charges of advocating the overthrow of the United States Government. Thus, the final curtain was rung down on the stormy 9 months' trial which had been presided over by the great Judge Harold Medina in New York.

No one who followed the presentation of that case by the United States attorney's office in New York could fail to appreciate the tremendous amount of FBI spadework which must have gone into assisting the United States attorney and his staff in the preparation of the indictment and the ultimate prosecution of the trial. Nor for that matter could one possibly overestimate the tremendous job performed by the FBI in other significant antiespionage cases which have been prosecuted so successfully in that very diligent United States attorney's office, let alone the anti-Communist prosecutions now

under way in other districts throughout the country.

I am thinking particularly of the prosecution of the atom spies there, as presided over by another great judge in the southern district, the Honorable Irving Kaufman. I am thinking of the FBI spadework for the Hiss trials, the Remington trial, and so on down the line. Evidence in cases like these does not grow on trees. It must be dug up, tediously, laboriously, painstakingly, in months and years of patient undercover work against the slippiest group of rogues that ever threatened a nation's security. The atom-spy case in particular represented a masterpiece of investigation and prosecution work. One cannot praise too highly those public servants who brought it to a successful conclusion.

J. EDGAR HOOVER SHOULD BE ALLOWED TO CONCENTRATE ON TOP PRIORITY

And so let this vital work continue unhampered. Let us not tie down the FBI's staff in relatively routine work. Let us allow J. Edgar Hoover and his aides to continue to do the basic top-priority job they have done for us so well and for so long.

The letter to Chairman JOHNSTON follows:

UNITED STATES SENATE,
COMMITTEE ON THE JUDICIARY,
October 1, 1951.

Hon. OLIN JOHNSTON,
Chairman, Post Office and Civil Service
Committee, Washington, D. C.

MY DEAR MR. CHAIRMAN: I am writing to you to convey my endorsement and respectful suggestion for action on S. 2077, which you had introduced by request on August 30. As you know, this bill was designed to turn over to the Civil Service Commission the responsibility for routine security clearances in specified Government agencies in order that the Federal Bureau of Investigation might be freer to handle the investigations of espionage, sabotage, and subversive acts.

I realize what a tremendous job has been done by your committee in various other legislative fields, and no doubt your heavy workload has served to delay action on this particular bill.

I hesitate to present a suggestion to expedite a particular bill's consideration to an industrious committee which has been doing so energetic and faithful a job; but I know that you will appreciate that it is with the interest in mind of the security of the American people that I submit these respectful thoughts to you.

The specific reason that I, for one, am writing to urge all possible speed in your committee's consideration of this bill is as follows:

As you undoubtedly know, in connection with the Mutual Security Act of 1951, H. R. 5113, the Senate had decided to turn over the security-clearance function to the Civil Service Commission so as to relieve the FBI of that task. However, the House conferees had insisted on retaining the House's opposite version in this particular field; and, unfortunately, to my way of thinking, the conference committee went along with the House's judgment. Thus, the FBI still has the responsibility for action in this area.

You and I both recognize that the FBI is ready, willing, and eager to handle any job which Congress and the President see fit to assign to it. However, we both realize that the crucial nature of antiespionage, anti-sabotage, and anti-subversive work is such that the Bureau is in a far stronger position to meet that more urgent responsibility if it is relieved of the routine clearance function.

The FBI, unlike practically every other Government bureau with which I have had any experience, has constantly sought to concentrate on its principal responsibilities, rather than have its jurisdiction constantly expanded and its limited staff overextended. Its great chief, J. Edgar Hoover, is virtually

unique in Federal Government personnel in his amazing fidelity to the principal responsibilities of his agency and his unswerving resistance to all attempts—well-meaning or otherwise—to place in his Bureau jurisdiction either larger than it can reasonably handle or jurisdiction which should not be allocated to the Bureau at all.

I understand that the executive branch thoroughly approves of S. 2077 and I am indeed hoping that it may be possible for you to report it out in a few days to the calendar without hearings so that at the very minimum it might clear the Senate before adjournment.

I write this letter at my own instance and with all due respect to yourself and to your able associates who have been laboring so long and so well.

I am taking the liberty of sending a carbon of this message to various other members of the committee.

Thanking you and with kindest regards, I am

Sincerely yours,

ALEXANDER WILEY.

The Truman Administration Road to Ruin

EXTENSION OF REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 9, 1951

Mr. MARTIN of Iowa. Mr. Speaker, under permission to extend my remarks in the Record, I include herewith my speech at Fairfield, Iowa, Wednesday evening, September 12, 1951, at a public meeting sponsored by the Jefferson County Women's Republican Club:

The House of Representatives has taken a brief recess until September 12 while the Senate is catching up with the House on legislation. It is indeed a pleasure to return home and to discuss with you some of the most important issues confronting our Nation today. In my opinion, the bulwark of our American Government is the interest and active participation of the people of America in shaping the laws of our Nation. I commend and congratulate you on your manifest interest and your study and your discussion of the great issues before Congress and our Nation today.

THE TRUMAN ADMINISTRATION ROAD TO RUIN

With the unsettled international situation now confronting our Nation we must study preparedness fairly and thoroughly, and we should analyze America's position in the family of nations as well as analyze the factors important in our defense of America. It is most important that we build America for the purpose and to the end that our strength may enable us to prevent our involvement in world war III.

It is highly necessary that we know our adversary and that we be alert to every danger.

There have been growing up in this world over the past 150 years two great rival nations—Russia and America. Notwithstanding development in the middle 50 years of this period that obscured their basic rivalry we need to be especially alert today to its existence. This rivalry was recognized by world diplomats, historians, and military leaders soon after the pronouncement of the Monroe Doctrine in 1823. It is worth our while briefly to look back to the writings of

the period immediately following the pronouncement of the Monroe Doctrine because it may help us to understand some of the cross currents in world affairs of today.

Alexis de Tocqueville, of France, in 1831 visited the United States to inquire into what was then hailed as the great experiment in constitutional liberty. Coming to North America shortly after the pronouncement of the Monroe Doctrine, de Tocqueville was acquainted with the major currents of national developments in Europe, which, in view of subsequent events, he described with remarkable precision.

Writing about 1835 in his *Democracy in America*, he summarized his views with unusual clarity.

"There are, at the present time, two great nations in the world which seem to tend toward the same end, although they started from different points. I allude to the Russians and the Americans. Both of them have grown up unnoticed; and whilst the attention of mankind was directed elsewhere, they have suddenly assumed a most prominent place among the nations; and the world learned their existence and their greatness at almost the same time.

"All other nations seem to have nearly reached their natural limits, and only to be charged with the maintenance of their power, but these are still in the act of growth, all the others are stopped, or continue to advance with extreme difficulty; these are proceeding with ease and with celerity along a path to which the human eye can assign no term. The American struggles against the natural obstacles which oppose him, the adversaries of the Russians are men; the former combats the wilderness and savage life, the latter, civilization with all its weapons and its arts, the conquests of the one are, therefore, gained by the plowshare; those of the other by the sword.

"The Anglo-American relies upon personal interest to accomplish his ends, and gives free scope to the unguided exertions and common sense of the citizens; the Russians center all the authority of society in a single arm, the principal instrument of the former is freedom; of the latter, servitude. Their starting point is different, and their courses are not the same, yet each of them seems to be marked out by the will of heaven to sway the destinies of half the globe."

Just before the outbreak of the Crimean War in 1853 between France and England on the one hand and Russia on the other, Lord Palmerston, British Foreign Minister for many years and Prime Minister for nearly 10 years, spoke of the czardom and its methods as follows.

"The policy and practice of the Russian Government has always been to push forward its encroachments as fast and as far as the apathy or want of firmness of other governments would allow it, but always to stop and retire when it was met with decided resistance. In furtherance of this policy, the Russian Government has always had two strings to its bow, moderate language and disinterested professions at Petersburg and London, active aggression by its agents on the scene of operations."

Abraham Lincoln in a letter to his friend, Joshua F. Speed, of Springfield, Ill., dated August 24, 1855, stated:

"As a nation we began by declaring that 'all men are created equal.' We now practically read it 'all men are created equal, except Negroes.' When the know-nothings get control, it will read 'all men are created equal except Negroes and foreigners and Catholics.' When it comes to this, I shall prefer immigrating to some country where they make no pretense of loving liberty—to Russia, for instance, where despotism can be taken pure, and without the base alloy of hypocrisy."

In the light of events in our time, the significant thing in this letter is, that when

Lincoln thought of the quintessence of enslavement, despotism, and hypocrisy, he immediately thought of Russia.

During his famous Asiatic cruise Commodore Perry not only visited the Japanese Empire and other islands of that region but also the mainland of eastern Asia. He was thus able to interpret realistically the movements he discerned.

Commodore Perry presented a paper before the American Geographical and Statistical Society, at a meeting held March 6, 1856, in New York City, from which I quote as follows:

"It requires no sage to predict events so strongly foreshadowed to us all; still westward will the course of empire take its way. But the last act in the drama is yet to be unfolded, and notwithstanding the reasoning of political empires—westward, northward, and southward—to me it seems that the people of America will, in some form or other, extend their dominion and their power until they shall have brought within their mighty embrace multitudes of the islands of the great Pacific, and placed the Saxon race upon the eastern shores of Asia; and I think, too, that eastward and southward will her great rival of future aggrandizement—Russia—stretch forth her power to the coast of China and Siam, and thus the Saxon and the Cossack will meet once more, in strife or in friendship, on another field. Will it be in friendship? I fear not. The antagonistic exponents of freedom and absolutism must thus meet at last, and then will be fought that mighty battle on which the world will look with breathless interest, for on its issue will depend the freedom or the slavery of the world—despotism or rational liberty must be the fate of civilized man. I think I see in the distance the giants that are growing up for that fierce and final encounter; in the progress of events that battle must sooner or later inevitably be fought."

It is my sincere hope that we can avoid this fierce and final encounter between Russia and America that was predicted so definitely by Commodore Perry in 1856. To do so we must know and understand our adversary and we must know our own strength and our own weaknesses. Then we must build a sound economy and develop to the utmost the strengths of our country. In doing this we must rely on the understanding and sound judgment of the American people themselves.

There are six great factors that must be developed and steadfastly maintained if we are to protect America's position of leadership in the family of nations.

The first of these factors is the stockpiling of strategic and critical materials and the development of our production of as many of those materials as possible within our own land and within the Western Hemisphere.

In natural resources Russia and America are the two great "have" nations on this earth. No small part of our strength lies in our natural supply of strategic and critical materials. Both Russia and America are today vigorously locating, producing, and developing these materials.

Another great factor is industrial production and inventive genius. In that field America has developed overwhelming superiority, due most of all to the capable and loyal service of industry and labor.

A third great factor is the general development of our economic strength and trained manpower to maintain our agricultural and industrial production.

Another great factor is military preparedness. Developments over the past 6 years in Russia give us ample warning of Russia's determination to build her military might to the utmost in preparation for any possible future war. This warning should cause us sufficient concern to build our defenses strong enough to discourage Russia from attacking us and to maintain our position in

the family of nations. In doing this we must zealously guard against plunging headlong into militarism and against destroying our own fiscal stability.

Our fiscal strength is the fifth great factor, but here our Federal budget does not give us much ground for optimism unless we quickly reduce wasteful and extravagant Federal spending.

The sixth and greatest factor in building our Nation is our spiritual strength. It is in this field that America shines out in the family of nations in contrast to the godless despotism of Russia.

Russia and America have provided very different roles of government within their lands. The Russian Government promotes despotism and degrades the individual to serfdom. America, on the other hand, places supreme power in the individual.

The strength of our Nation in the family of nations in comparison with Russia will depend on our ability to maintain the six great factors I have briefly discussed. Weakness in any one of these factors can quickly undermine our strength to the point that Russia may decide she can successfully challenge us in that fierce and final encounter predicted by Commodore Perry.

Proceeding in order from strongest to weakest of these factors in America's position compared with Russia's, we might summarize our comparative strength as follows:

In two of these factors, namely, industrial production and inventive genius and in our spiritual strength, America has no fear of successful challenge by Russia.

America is definitely a "have" nation in strategic and critical materials, but America's strength as a "have" nation can quickly be dissipated through our failure to strengthen our natural resources through adequate exploration, prospecting, and development of them.

As to military preparedness, the Korean war has brought us to timely realization of the importance of rebuilding our forces of defense and America need no longer fear Russian supremacy on that score.

There is not a clear-cut rating for America's economic strength due primarily to America's extremely limited manpower. Without strong allies America may be considered a "have not" nation in manpower compared with the more populous areas of the world.

America's chief weakness is the threatened instability of our fiscal position. I will hereinafter discuss the trend in America's fiscal position more fully because America's fiscal position is in greater jeopardy than her position in regard to any of the other factors.

One of the greatest threats to our strength is decay and collapse from within through the loss of interest by the people in maintaining the six great factors on which our strength depends. The infiltration within our own land of Communists and fellow travelers recruited from our own people and directed from Moscow within the past 20 years is a dire warning to us.

During some of my travels I had occasion to visit Egypt, Babylon, Greece, and Rome and to view the remnants or physical manifestation of the mighty developments of earlier days indicative of the powers of past generations. As I viewed these silent historic sites the thought came to me with startling clarity that not one of these great powers was crushed from without. Rather they each crumbled and disintegrated from within.

In order to appraise more accurately the threat to America's fiscal strength today, it is fitting that we study present-day developments in the light of the history of the great nations of the past.

For 13 years I have studied budgets and taxes but more especially has my time been given to spending and tax problems during the past 5 years because of my membership

on the Committee on Ways and Means, starting in January 1947. Annual Federal spending today exceeds the total spending of any 10 successive years up to 1943. And Federal taxation for this year likewise exceeds the Federal revenue of any 10 successive years prior to 1943. We have, indeed, reached dizzy heights of spending and taxation far beyond the experience of any other nation. The best available estimates are that President Truman's Federal spending record from the end of World War II to the end of his present term will exceed \$400,000,000,000, and his total tax exaction in 8 years has already exceeded the total Federal tax collections from the Revolutionary War to the beginning of his service as President. Still higher taxes are demanded even though taxation has already approached confiscation. If all personal incomes over \$4,000 were confiscated today and all annual incomes up to \$4,000 were taxed at present rates, the total additional revenue would be only \$9,720,000,000. With the American dollar today worth only 53 percent of its 1939 value, the taxpayers are really having a most difficult time to meet the increased cost of living and pay their taxes. Notwithstanding this dire situation, Federal spending goes on far beyond Federal revenues and our Federal debt on August 31, 1951, stood at \$256,700,000,000 which is also an all-time record for any nation known to history.

During the past few years I have been impressed by the marked resemblance between the present-day political developments in Britain and America with those of ancient Rome. Some of the policies that are creeping into our modern life proved fatal to that great world power nearly 2,000 years ago.
